3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which can, from that time onwards, be historically studied in continuous successive stages, extending over more than 1000 years. Such faculties are afforded by no other source. The light given by the ancients to the antiquity or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from scantly and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character formed a very small part of the total. It must, however, be borne in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, unconnected by traditional practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even in that early stage of their development the belief in magical power independent of the gods is to be found. Thus in one hymn (x. xviii.) the sacrificing priest Devāpi begins with the intention of offering a pair of calves (tirātra śaukāna) in the belief in the magical power of the gods of his sacrificial act: ‘the sage Devāpi sat down to the

There can be little doubt that only food eaten by men originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (kāhā) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the kāhā was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to profane contacts. To the kāhā correspond, in the ancient Persian ritual, the barikā (a bundle of twigs; see art. BASSA) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the obligation in fire was an idea, which has, then, not been entirely lost in the burning of the kāhā not improbably formed the transition to the sacrifices.

The ritual literature furnishes innumerable examples of sacrifice receiving a magical turn by the employment or addition of a non-estable substance; as when a man wishing for cattle offers the dung of cows (pañcāla cauḍārthā); or when poison is added to an offering in order to destroy ants (Kauśika Sūtra, cxv.). On the other hand, objects suitable for direct magical manipulation could easily be used by the practitioners who had become habituated to the sacrificial idea in order to invest magical acts with the garb of sacrifice.

Thus the
burning of injurious substances would become a sacrifice; for instance, arrow tips might be offered in order to destroy an enemy (ibid. xvi. 44). In this way the sacrifice came to assume the role of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies; or of producing the longed for results of producing many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifice to assume this character in the later Vedic period.

Vide Krishna Chandra Das, The belief in the divine presence at the sacrifice, and in the mysterious success produced by the sacrifice, encouraged an increasing application of magical practices as the ceremonial system became more elaborate. Secondary observances of the sacrificial ritual might already have belonged to the sphere of magic from the beginning. Efforts to explain accidental features of the ceremonial would lead to the discovery of effects allied to magic. Priests would also foster belief in the magical power of sacrifice in order to secure their own indispensability. The magical tendency wound up. Increased by the mixture of prayers and spells; if in the prayer accompanying the sacrifice the magical effects of such acts would naturally be attributed to the sacrifice also.

5. Predominantly magical ritual.—There are several groups of rites which, though belonging to the Vedic period, are essentially magical in character. They are partly connected with family and partly with public life. The most important of these are:

(a) Initiation.—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (ashwamedha-yajna). As already mentioned, the Rigveda goes back to prehistoric times, as is shown by the parallel Avedic ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as bringing into a new life, for he who was initiated was made a priest. The ceremony involves a number of observances and involves various tabus in regard to food, some of which will be noticed below (see also Vedic Rituals, § 6A, and cf. Initiation [Hidu]).

(b) Public rites.—The public ceremonies of Vedic times were performed in behalf of the clan or tribe of which, but of an individual, who in those cases was the king. The most prominent of these, shining at the attainment of certain definite pur- poses, are magical in their main elements. At the royal consecration (abhisheka) the king sit on a throne made of wood from the utumbara fig-tree, which to the Indian was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The contents of a cup made of utumbara wood, filled with butter, honey, and rain-water, were poured over the king in order to communicate to him their strength and abundance. The royal inauguration (rajyaasana) is a further series of rites, chiefly of a symbolic character, which were intended to ensure a prosperous reign. A still more imposing ceremony was the Vajapeya, the two main features of which, a conventional race and another symbolic observation, have a magical purpose (as (b)); cf. further, art. Antusana). Finally, the horse sacrifice (asamatha-puja) was the highest expression of royal power, which was undertaken for the fulfillment of all the most ambitious wishes of the king, and in which the victims indicated the desire to transfer the swift might of the horse to the sacrificing monarch.

6. Priest and magician.—The magician of prehistoric ages, who manipulated only the lower ritual concerned with demons and natural forces, had long been a part of the Vedic religion (at least as early as the Indo-European period) developed into the priest, who dealt with a higher cult in which he invoked and sacrificed to gods. In the later Vedic period of the Yajurveda, however, we find the priest to a still greater extent in the role of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells or other forms of magic. In various lesser rites the priest acts quite in the style of prehistoric times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he produces an imitation of the lightning, probably to the effect here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffective and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of magic in the Rigveda, which, although late, form part of its canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession, devotion, or worship. Those associated with evil spirits and the use of malevolent magic were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: ‘May I die to-day if I am a sorcerer (gautakhamaha), or if I have harmed any man’s life; then may he lose his ten sons that falsely call me “sorcerer”; he who calls me, that is a sorcerer, a practiser of sorcery, or who, being a demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature’ (VII. civ. 15). It was because the Atharvaveda contained a body of malevolent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigvedas. On the other hand, in the Atharvaveda itself (e.g., v. viii., VII. lxx.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrifice who is the victim of an enemy, in particular, when he desires to give as such a magical turn for the purpose of inflicting injury.

The post-Vedic Code of Manu even contains the express statement (xi. 35) that the magic spells of the Atharvaveda are the Brahman’s weapon, which he may use without hesitation against his foes. In the Upanisads the magician-priest has become a philosopher who has passed from the path of ritual (bramham) to that of knowledge (jñāna); but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. Of such a nature are his conceptions of the world-soul (brahman [g.v.]) and of the identity with it of the individual soul (atma [g.v.]), as well as his speculations on the sacred syllable om (analogous in sense to ‘amen’). Such, too, is his doctrine of karma (g.v.) as an impersonal power which, free from any divine influence, rules future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises of Yoga, which is an inextricable blend of philosophy and magic. By the aid of Yoga he believed himself capable of acquiring the ability to make himself minute and invisible, to increase his size infinitely, to multiply his body, to remember his past lives (at least as early as the Indo-European period) ceased to exist.

7. Asceticism and magic. — There is evidence that from the earliest Vedic period ascetic prac-
MAGIC (Vedio)

Rites (tappas, lit. ‘heat’), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstention, and silence, were regarded as a means of attaining various supernatural powers, resulting from the ecstatic condition induced by them. Thus the Rigveda says (X. cxxvi. 2) of those who are in such a frenzied condition that ‘the gods have entered into them.’ A thought prevailing in Ax. 6 is, how, in one vision produced by austerity (tappas), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages associating similar powers: dream is born from the soul filled with austerity (Atharvaveda, XIX. vi. 5); speech born of austerity penetrates to the gods (Taittiriya Aranyaka, V. vi. 7); he who has practised great austerity reaches the sun (Rigveda, X. cliv. 2); after practising austerity Indra won heaven (X. clxv. 1); the magical power of austerity peculiar to the Brāhman will bring calumny on the man who injures him (X. cliv. 4). Austerity confers the power to produce the mightiest creations: the goddess Asātā, performing austerity, produced the greatness of Indra (Atharvaveda, III. x. 19); the seers were born of austerity (XI. 1. 20, X. 19, X. 19). In making sacrifices the Brāhmaṇas the creator Prajapati is described as gaining by the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in the Apātapha (‘the apathetic’; Rigveda, X. iv. 4. 2) Yama appears as practising such asceticism that from all his pores came forth lights, which are the stars. The Brāhmaṇas also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is required as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (dikṣā) of the sacrificer in which he practises austerity lasting, according to some authorities (ib. XII. 1. 7. 2), till complete physical exhaustion causes.

8. Magical conditions and agencies.—Magical effect is largely, if not altogether, based on contact (very often impalpable), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the execution of magical rites is generally a lonely one. A temple, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divest oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. Thus the south is the home of demons and maras; hence performers of rites connected with them face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other uncanny ceremonies the direction is invariably reversed. The performers moving from north to south.

(a) Spirits and demons.—Some of the lesser spirits are concerned only with one activity, such as presiding over the fields and helping at harvest; others are connected with the Vedic god Indra at whom they direct their efforts to spread terror and death among enemies on the field of battle (Atharvaveda, xi. ix. 1 ff.). The characteristic of most of the rest is to cause disease and destruction of all kinds, as, for instance, the sickness known as tāpeśvara, spreading among the human, animal, vegetable, and vegetable life. These demons are usually called by the generic name of rakṣas, yātu, or pītākha, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they not infrequently have an animal or demoniac shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they intrude in the form of the demon Rudra, and at the moment the sacrifice is offered; they approach women in various disguises. The sorcerer himself (as well as the spirits serving him) might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as becoming birds and flying about at night (VII. civ. 18). Setting demons in motion is regarded as letting them loose against an enemy. Thus in the Rigveda (X. ciii. 12) the demon of disease Apā ṣa is let loose against a hostile army with the spell: ‘Go forth, Apā, to confuse their minds, to seize their limbs; attack them; burn them with thy heat in their hearts; let the foe fall into deep darkness.’ Such spells might be accompanied by magical acts, such as letting loose a white-footed cow, in which case the supposed to be embodied, against the hostile army.

Evil spirits are thought to be everywhere—in the sea, in the air, and on the land. They are always demons and are never mortal. They particularly injure the human dwelling, usually infect the place where four roads meet. The time of their activity is chiefly evening and night; at night they seek to kill the sorcerer who has undertaken their business; but they are particularly active during the night of new moons. Their usual mode of attack (mentioned in both the Rigveda [XV. xlix. 20] and the Atharvaveda [VII. xxiv. 6-8, X. lxxxv. 6]) is to enter into a man, especially through the mouth: they then eat him up, and suck his marrow, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—at births, weddings, and funerals. One of the main objects of their attack is the sacrifice; the Rigveda speaks (XV. cliv. 2) of the Vatas that seize the sacrificial food, and the Atharvaveda contains (VII. xxxi. 4) the spell of a magician desiring to destroy the sacrifice of an enemy through the wiles of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formula directed to defence against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity.

(b) Injurious substances.—Closely allied to these demoniac energies are the numerous substances—the most general expression for which in the Vedic language is atman—of which it is claimed that they are Thus the sacrificial ceremonial is, from beginning to end, accompanied by formula directed to defence against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity.

(c) Injurious substances.—Closely allied to these demoniac energies are the numerous substances—the most general expression for which in the Vedic language is atman—of which it is claimed that they are thereby transformed into the nature of demons to be driven away. Examples of impalpable agencies are the ‘substance’ of disease, of hunger and thirst, of guilt, even of such abstractions as evil, and the intangible influence proceeding from auspicious or harmful stars and from the waxing or waning of the moon. These are supposed to fly about in the air and to affect man by various forms of destructive action. The influence of such agencies is greatly extended by the belief that, if a ‘substance’ or power is embodied in any creature or object—e.g., irresistible strength in a tiger—that power is inherent in all its parts, and is also connected with the whole. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants, and is said to be embodied in aquatic animals like the frog; the nature of the boar is present in the soil.
MAGIC (Vedic) 315

that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been felled; one's native land exists in a clod taken from it; a man is connected with the earth by his footsteps; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent. Powers, real or imaginary, are communica
ted by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, for thus the beneficial power of the sacrifice is transferred to them. In fact, it is observed, for instance, the skins of various animals communicate the characteristic quality attributed to them; one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a he-goat, plenty; on that of a tiger, invincible power.

9. Magical procedure.—The operations of magic are mainly directed against hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, are often only another aspect of offensive magic, and are, in fact, distinguished from the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. Defensive magic.—This type of magic, though it may employ the same powers as offensive magic, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (i. xii. 2) determent homage is paid to a demon of disease: ‘These lurking in each limb with burning, we, paying homage, would worship with oblation;’ lightning is similarly addressed (i. xii. 2): ‘Homage to thee, child of the height, whence thou gathered heat; be merciful to ourselves; do kindness to our offspring;’ also instruments and ministers of death: ‘To those weapons of thine, O Death, be homage; homage to thy benefaction, homage to thy male
diction; homage to thy favour, O Death; this homage to thy disfavour’ (vi. xiii. i. 2). Again, sacrifices to demons are often mentioned (Baudh
dayana Dharma- mana), and in the general sacrificial cult they receive their share, which, how
ever, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often accompanied by spells expressive of homage. Hanuman grating stones is directed to a direction (i. xvi. 204.) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, ‘Thou art mighty, thouarest away.’ In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (Sarpasahas., xi.). A ceremonial intended to ward off ants (Kutaki Sûtra, exvii.) begins with propitiatory offerings and spells; but, if these fail, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

11. Preventive magic.—On the principle that prevention is better than cure the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) Avoidance of contact.—The touch of beings in which malevolent spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirrti, the goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus owing to impious sounds in valued conscription, by the man about to set up the three
sacrificial fires, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that incantations of various kinds had to be undergone by one preparing to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect their purpose.

(5) Concealment.—Another means of guarding against the attacks of hostile powers was concealment of one’s person or of its parts, as inclusion in a shed and covering the head during the observances of the sūkṣma rāja or putting on garments to make oneself unrecognizable; or hiding the hair of the head and beard or nails cut off at sacramental rites, such as the initiation of the Vedic student (cf. § 8 (6)).

(6) Amulets.—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one’s person (amanita) and for the positive purpose of attracting prosperity (talisman). Sometimes the same charm serves both purposes; thus the pearl destroys demons, disease, and poverty, and at the same time serves as an impartment by the gods, as they are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, whereas the gods themselves are described as having once been successful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, X. ii. 9). An amulet made of this wood is thus addressed in the Atharvaveda (X. iii. 14, 11): ‘As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this tree upon my breast, the kindly, divine tree, slay sinners and make my foes, as Indra the demons.’ One of the amulets most frequently mentioned in the Atharvaveda is that made from the jāngada tree, which protects invaders. Perhaps the most famous of all is a long hymn of the same Veda (VIII. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the svarātī tree, which destroys foes, demons, and sorceries. Cf. further, art. CHARMs AND AMULETS (Vedic).

ii. REMEDIAL MAGIC.—Magical operations are performed not only to ward off maleficent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedy which is used in their accomplishment; but the evidence of the Sūtras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of diseases are the following: ‘As the rays of the sun swiftly fly to a distance, thus do thou, O cough, fly forth along the dold of the sea’ (VI. ev. 5); and ‘The bow now is made in ashes and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to the far distance, overcome by my charm’ (V. xxxix. 9). Curative spells are, however, more usually accommodated by the express employment of material objects, chiefly plants. The hymns of the Atharvaveda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magic and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were described as efficacious as the hair-restorers of modern times). The following are two charms from the Atharvaveda intended for this particular cure: ‘That hair of thine which drops off, and that which is broken off and all fallen strings, I sprinkle with all-healing herb’ (VI. cxxxvi. 3); ‘Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head’ (VI. cxxxvii. 3). The Atharvaveda contains many spells in which the kuṣātha plant (probably Costus speciosus or arabicus) is invoked to drive out fever; two of its hymns (I. xxii. 1) are meant to cure leprosy by the use of a dark plant; one (VII. lvi) operates with a herb that destroys snake poison, and another (VI. xvi.) with a plant against ophthalmia. Fractures are cured by the plant amṛtaniya (cf. Text xxvii. 5). Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of repulsion inherent in them, and is not infrequently spoken of as imparted by the gods, as they are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, whereas the gods themselves are described as having once been successful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, X. ii. 9). An amulet made of this wood is thus addressed in the Atharvaveda (X. iii. 14, 11): ‘As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this tree upon my breast, the kindly, divine tree, slay sinners and make my foes, as Indra the demons.’ One of the amulets most frequently mentioned in the Atharvaveda is that made from the jāngada tree, which protects invaders. Perhaps the most famous of all is a long hymn of the same Veda (VIII. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the svarātī tree, which destroys foes, demons, and sorceries. Cf. further, art. CHARMs AND AMULETS (Vedic).

11. Offensive magic.—Aggressive operations against malevolent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expediency adopted are to some extent the same for both purposes.

1. MEANS EMPLOYED.—(1) Fire.—Fire was one of the chief direct means of driving away demons and all hostile sorcery. Thus in the Rigveda Agni, the god of fire, is frequently invoked (e. xii. 5, xxxvi. 20) with such verses as: ‘Burn, O Agni, against the sorcerers; always burn down the sorcerers and the allies of the demons.’ This use of fire, probably the earliest in cult, though overlaid with its later and much more extraneous sacrificial associations, still survives in the Vedic ritual. Thus a special fire called the ‘lying-in fire’ (ṣāttrāṃgha) is introduced into the lying-in chamber (āvākha-grha). Of this fire-turm the author of one of the domestic Sūtras remarks (Hiranyawakṣaṇa Gṛhyaṇāśtras, ii. iii. 61):
MAGIC (Vedic) 317

'Sacred rites, except purification, are not performed with it; it fertilizes the child with small grains mixed with fire, and in some it produces a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and kidneys. A light is kept burning during the cutting of the child's hair, a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it is generally employed for warding off demons. Of similar significance were the fire employed at the investiture of the Brāhman student, behind which both he and his teacher stood, and that kindled when the pupil entered upon his course of Vedic study. That this was the simpler efficacious means of repelling hostile agencies, as is indicated by the statement (Maiträya Samhitā, vi. i. 4. 6) that Agni is hence appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispersing demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them approach. In the funeral ritual a brand was taken from the southern fire and laid pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

A second efficacious means of repelling hostile agencies, as is indicated by the statement (Maiträya Samhitā, iv. viii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A further priest is thus employed entering on various ceremonies, as the Dikṣā, to remove supernatural substances that might be inimical to their success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to obviate the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dikṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to uncanny beings, such as the dead, demons, or Indra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (tapas), along with a mixed meal of mustard seeds; hence grounds a number of spells as being magically efficacious.

(3) Plants.—We have already seen that plants were frequently used along with spells as a magical cure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the effect of promotion or destruction of vitality; of both these classes of charms the Atharvaveda contains many examples. They are but also resorted to other objects, as they are employed to attract love, to charm and sorcerers, others to counteract curses, and several are associated with battle-charms. Aquatic plants, together with frogs, as representing water, are combined with grains of mustard (māndūcalī), the sticky exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) Stones, etc.—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clad of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against calamity,' was pronounced (Kāraṇīka Śītra, lxxxi. 14). A wooden fence was placed round the sacrificial fire, the purpose being 'to strike away the demons' (Taittirīya Samhitā). A stone is also used as an implement.

(5) Lead.—This metal was frequently employed in magical operations, as, e.g., in wiping off dangerous substances. The Atharvaveda contains a hymn (i. xvi.) in which lead was used against demons and sorcerers, this being one of His spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) Weapons and stones.—Those appear on various occasions as a protection against demons. Thus a man who wos a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little stakes are planted at both ends, and it is said: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (Mānavā Grhyasūtra, i. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (Kṛtyāgama Śrāvasūtra, xv. vii. 6). The staff is a part of the ritual equipment in the Dikṣā ceremony, its significance here being explained by the Satyapatha Bṛhadāraṇyaka (i. 10. 7. 10): 'This thunder-bolt to drive away the demons.' The Vedic student, as peculiarly liable to the attacks of evil spirits, is provided with a staff at the rite of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hostile enemies on every side' (Hiranyaśeśa Grhyasūtra, i. xi. 8). A wooden implement shaped like a sword, technically called ekhya, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the ekhya is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (Śukhāyana Śrāvasūtra, iv. 2).

II. MAGICAL ACTION.—Certain types of actions are regarded as producing a magical effect in various rites. They may be grouped as follows.

(a) Hostile.—(1) To make a noise is believed to be an efficacious type of magical action. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to
be especially powerful at the time of the shortest day. A song was sounded at the ritual for exorcising the demon of epilepsy. At the funeral ceremony a din was produced by shattering pots.

A frequent method of removing injurious influences is to *wipe* them off. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apāmārga* (Aṣṭādhyāyī, a popular interjection to mean 'wiping out') was most variously employed in this sense. The Atharvaveda contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (Ⅳ. xvii. 8): 'Having wiped out all sorcerers, and all grudging demons, with thee, O Apāmārga, we wipe all that evil out.' The *Sata-pātha Brāhmana* remarks (Ⅶ. ii. 14) that by the aid of this plant the gods wiped away fiends and demons. Among other magical applications of this action may be noted the requirement that one who has seen an elephant should wash his hair with its urine.

(3) Another method of getting rid of demons or injurious powers is to *shake, cast, or strip* them off. The black antelope skin used at a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken out is the demon.' (Apāmārga Sāmkhit, i. 14). After feeding the souls of the dead, the officiant shakes the horn of his garment in order to remove the souls that may be clinging to it. At the conclusion of the *saṃskāra* the bundle of twigs, used to effect the footsteps of death, is thrown away for fear of the dangerous substance which it may have derived from those footsteps.

For similar reasons clothes worn at unclean rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the Rīgveda (Ⅶ. lxx. 7), where Indra is said to have cured the girl Apālā, who suffered from skin disease, by drawing her through an opening in a car. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere rite, but is often also a *transference* to remote places or to other objects animate or inanimate. The Rīgveda and the Atharvaveda contain several formulas or spells to enable evil agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety streams (Aṣṭādhyāyī, 318-19); the disease Tanman (a scour of fever) is sent away to far-off peoples, such as the Teli, the Magadhas (Ⅵ. xvi. 14); evil deed and evil dream are banished by hurling them into the ships of Teli Aptya in the remotest distance (Rīgveda, y. xivii. 13-17). Injurious agencies are also transferred to the corpse of the deceased, especially to roads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, xvi. ii. 491). Snake-poison is removed to a fire-brand, which, being then thrown at a snake, returns the danger to its source (Kaunika Sītra, xxix. 6). Fever is transferred to a frog as an antidote representing water (Atharvaveda, vai. xxvii. 3); while 'purification is conducted in a homely fashion to a yellow bird (Ⅹ. xvi. 4).

(6) *Auspicious.*—(1) A very prominent part is played by *eating* in the communication of beneficial influences; contact with injurious substances, which would, of course, be equally well effected by eating, is avoided by fasting (cf. § 101: 2). The Vedāic ritual contains innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrifice is by no means the essential kind of magical power implied in a particular sacrifice. Thus, when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula: 'This is the place of eating in the body.' On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the same colour and dung, bellium, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard seed of whom has been laid on each side of it (as symbolizing male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater (cf. p. 317, the importance of sex, colour, and other qualities between the victim and the god to whom it is offered. To Indra a bull (or less often) a buffalo, to which he is often compared, is sacrificed; to the Asvins, twin gods of the morning, a reddish he-goat, for 'red' colour, as it were, are the Asvins (Sātpatīcī Brāhmaṇa, v. x. 4.1); to the goddess Sarasvatī a ewe of certain qualities; to Agni, with his columns of dark smoke, a he-goat with a black throat; to the Sun and to Yamu (god of death), two he-goats, one white, the other black. A cognate magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the nature of rain; with that which is its nature he will rain' (Tadtrīya Sūkṣhā, n. i. 8. 9). When the destruction of enemies is intended, a blest-red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several ceremonies in which *anointing* is applied for the attainment of auspicious ends. In the Dīkṣā the sacriifer is anointed not just with fresh butter to give him unimpair'd vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blemish from the standing. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicate to him the powers and abundance inherent in the ceremony. At the coronation the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the Sāstrānāmi rite, an expository part of the Soma sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essence of cattle, with the highest kind of food, he thus sprinkles him' (Sātpatīcī Brāhmaṇa, x. xlvii. 3. vii).

(3) *Charms*, made for the most part of wood, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wood from the parpa-tree (*Butea frondos* was worn in order to strengthen royal power (Atharvaveda, III. v.); a bridgework, while reciting a hymn of the Atharvaveda, fastened to his little fingers; a vajra (the thunderbolt) when eaten with tea, a talisman made of liquorice wood to secure the love of his bride (Kaunika Sītra, xxv. 8); at the full moon ceremony the sacrificer tied on his person talismans made of lance, food, various branches and leaves, for the attainment of prosperity; while sowing seed, the husbandman puts on a talisman of barley. The Vedē student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of *buddha* (Uzulzuliga jihud) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skirt of his garment, and finally inserts them in his ears. A talisman of gold secures long life; 'He who wears it dies of old age,' in the words of the Atharvaveda (xxix. xxvi. 1). To ensure conception a woman puts on a bracelet with the spell, 'An acquirer of wealth and wealth this bracelet has become' (vi. lxxx. 1).

(c) Indifferent.—(1) *Burying* was a frequent secret method of conducting magical substances to others, who are not present. The belief that the Atharvaveda is full of spells expressing fear of magic buried in sacrificial straw, or fields, or wells, or cemeteries. Objects belonging to a woman who is to be injured by a sadhuk, hair, a twig for cleaning the teeth—together with other efficacious inferences of misfortune are placed between three stones
in a mortar (a symbol of crushing) and buried. The stone thus being restored might be restored by digging up the objects, while an auspicious spell was uttered. The Sangeetha Brilhama relates (III. v. 4. 2.) a myth how the demons buried charmed in order to overcome the gods; but the later, by digging them up, defeat them operative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This is known as the depositional, or sacrificial medicine, consisting, after the removal of the left hand and the l adam up, of deposits on the offering under the grass in the same direction (cf., further, art. CIRCUMAMBULATION).

1. Sacrificial medicine has a double object: one is that which has been called 'sympathetic, being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficial or injurious.

(a) Esseys.—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by transfixing his shadow. His death is also produced by melting a wax figure of him over the fire, or by killing or burning a chamelleon as representing him. The elephants, horses, soldiers, and chariots of a hostile army are imitated in dough, and sacrificed piece by piece so as to bring about its destruction. The magician annihilates worms and vermin, and is aided by the ceremony at the sacrifice of the soma plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn their faces with fire' (Atharvaveda, vii. xxix. 7). Against the use of the field vermin called taru, a single taru, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its effecting harm (Krihakesh Sutra, i. 19). With a view to smashing the limbs of evil spirits pegs are driven into the ground. One who punishes the soma-shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation. The sympathetic connexion is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an exiled prince receives food rendered magical by being cooked with the wood that has grown from the stem of a tree, symbolizing the restoration of fallen fortunes. At a ceremony for the renewal of troublesome arts a sacrificial ladle of bithaka wood is employed simply because the name of the tree means 'remover.' At a rite to destroy demons the digging spade is made of wood from the palasa (Dacta Frondosa) tree as representing the magical spell (dhwani) by which the spell is performed. When the sacrifice for the restoration of an exiled prince is performed, earth and other materials from his native country are employed. A sacrifice for the destruction of a robber in battle, for which the head of a other of a horse is taken for the altar (tala), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made.

(b) Imitative processes.—The higher cult concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dripping of the soma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain for him speed and victories. On various occasions in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the solstitial ceremony an Arany and a Sudra (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the blood sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure
MAGIC (Vedic)

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, new trees, as a frog and the aquatic plant *vamalā* are deposited on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the ritual form of rain-making. Such is the purpose when, at the solstitial festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra’s release of the waters by piercing the forehead of the elephant (cf. xvi. 37). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is *divination*, the aim of which is to find out what is hidden or future, largely from the result cor-

responde between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be supported by spiritual persons who possessed inner illumination, strengthened by the power of asceticism and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in the hilly country between two armies about to fight, prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an unborn child will be a male, the son of a Brahman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain whether a bridegroom is good or bad, she is bidden to choose between various elods taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognostication is the foretelling of weather by old Brahmins from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolical process is that derived from gods or spirits, by interpreting the movement, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hounds, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with angry, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious times.

Again, in one of the Sūtras, the owl ‘that flies to the abode of the gods’ is addressed with the words, ‘Flying round the village from left to right, portend to us luck by thy cry, O owl’ *(Hiranyakśiṇa Grhyasūtra, i. xii. 1).* The direction from which the owl will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the symbolical method of divination by isolating a single feature of a complex process.

15. Oral magic.—Magical formulæ are usually accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical power by itself.

(a) The spell.—The spell has generally a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being invoked or invoked in it; e.g., ‘Between the two rows of Agni Vaisvānara’s teeth do I place him that plans to injure us when we are not planning to injure him’ (Athravaveda, i. 510). The ninety-nine spells, O Night, shall help and protect us’ (XIX. xlvii. 3-5). It is, indeed, characteristic of the hymns of the Atharvaveda to contain the names of numerous deities, while the panegyrics of the Rigveda are addressed to one only; e.g., ‘Heaven and Earth have anointed me; Mitra has anointed me here; may Bhṛṣpati anoint me; may Śarāti anoint me’ (VIII. xxxi. 1). The magician very usually threatens or commands in his own person; e.g., ‘I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge’ (IV. xxxvi. 6); ‘As the lightning so ever instantly strikes and wearies, so would I to-day beat the gamesters with my dice’ (VII. i. 1); ‘Swift as the wind be thou, O steed, when yoked to the car; at Indra’s urging go, swift steed, as the infant slays the elephant, shall place fleetness in thy feet’ (VI. xxi. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; e.g., ‘With the light with which the gods, having cooked porridge for the Brāhmans, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light to the highest firmament’ (XI. i. 57); ‘As one pays off a sixteenth, an eighth, or an entire debt, thus we transfer every evil dream to our enemy’ (VI. xvi. 3); ‘As the rising sun robs the stars of their brilliancy, so I rob of their strength all the men and women hostile to me’ (VII. xiii. 1); ‘The cows have lain down in their resting-place; the bird has flown to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station’ (VII. xvi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is aimed at, is the enumeration of a list of organs: eyes, ears, nose, mouth, heart, brain, neck, back, arms I drive the disease’ (II. xxxiii. 1. 1). If, however the demon is known, this knowledge is emphasized by bestowing magical power over it; e.g., ‘This is thy name; I know thy birth; this thy father, this thy mother.’

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described *(Pāṇḍubhūra Grhyasūtra, iii. xiii. 6):* ‘If he should think, “This person will do evil to me,” he addresses him with the words, “I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me.”’ Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the mouth from his sacrifice, he has only to exclaim ‘Adoration to Vipasa’ as an expiation. The daily repetition of the single sacred syllable *bhūḥ* averteth evil or injury from him who utters it, or to him who is to fear from serious diseases or from sorcery *(Gobhika Grhyasūtra, iv. 3).* Again, the more magnificently a prayer is uttered, the more efficacious, the *prayer* meant for a totally different purpose may have a magical effect. Thus, the celebrated Gayatri verse of the Rigveda (ii. xii. 320)—‘We would attain to the Word of Savitri the god, that he may stimulate our prayer’—if
G. C. Horne, Zauber-Bibliothek, Mainz, 1822, iii. 70.
2 Livy, xiv. 12; Cicero, Phil. vii. 52; Vell. Pati. i. 10.
3 R. C. Thompson, The Elements, Cambridge, 1898, pp. 185, 189.
4 This seems to be one notion in the use of the pentagram or pentacle (see Thompson in SBE xiv. 1898, xxx, ix. 1985; Green, 1897; V. Henry, La Magie dans l'Antiquite, Paris, 1913, p. 182). In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried about the house.

The Leicesters had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after child-birth. In Abyssinia the bed was surrounded by incantations and prayers, while the mother herself was held in the circle by 'stout young fellows.' In moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried about the house.
The circular priest recited over the sick an incantation: 'The man of Es, the messenger of Shazuk am, ... the circle of Es in my hand.'

In more detail, the sick person was safeguarded by an enchanted circle, as the nature of a tapir (a large, herbivorous animal) made of flour or other material, 'as a kind of haras through which no spirit could cross.' The priest first performed a ceremony of aloement, in which a kid was sacrificed. He flung the kid away, and then described the circle. He enclosed the man with knobs (four knobs of lime) round the groot, the right, and left. The ban is loosed.' A mixture of meal and lime seems to have been prepared and was embedded in an incantation (see Nisala) for the protection against vampires and witches. The Babylonians described the mixture as 'the stones of the greatest virtue.'

The Japanese used 'the circle as the act of the corn-god.' In another ceremony, before the god Nergal, the priests described with lime a circle round seven winged graces, and in yet another flour and water were used for drawing the circle. Here Thompson compares the medieval use of the Host as a protection against vampires and witches. The Babylonians burned the body in a circle around a desert-plant, with plucking it up before sunrise, and tying it on the head. When the plant was removed, the head-ache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then casting this away, along with the ends of the threads.

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun, were bound up with Semitic animism, or rather demonism, if the word be used. The causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the invariable employment of the magical circle for the protection of spirits is typical of the culture of those ages.

The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants whom he called up. At the symmetrical possibilities of the circle appeared to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. The circle was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the universal character of the figure, makes it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, the astrological elements of the zodiac were applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal Powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a Heptennas circuitus, 'Heptennas episcopus,' calls for notice, though its meaning is confused. He writes:

1 Thompson, p. xxii.

3 Ib. p. lix.

The circle of Heptennas is a golden sphere, enclosing a sapphire in the centre, turned by a thong of bull's hide, and having characters engraved around it. The characters were written by the priests, and the priest was supposed to recite the names over the sapphire, and the sapphire through the whole of it. They made confessions by turning this; and they were wont to call such things lower, whether they had a round, square or triangular, or any other shape whatsoever. Shaking these, they uttered uninterlinguible or hieroglyphic sounds, lifting and striking the hands, which taught the operation of the rite, or the notion of such a circle, as possessing secret power. And it is called Heptennas because it is dedicated to Heptennas, and adored by the divinity among the Chaldæans. If the magical circle is a golden spherical, enclosing a sapphire in the centre, turned by a thong of bull's hide, and having characters engraved around it. The characters were written by the priests, and the priest was supposed to recite the names over the sapphire, and the sapphire through the whole of it. They made confessions by turning this; and they were wont to call such things lower, whether they had a round, square or triangular, or any other shape whatsoever. Shaking these, they uttered uninterlinguible or hieroglyphic sounds, lifting and striking the hands, which taught the operation of the rite, or the notion of such a circle, as possessing secret power. And it is called Heptennas because it is dedicated to Heptennas, and adored by the divinity among the Chaldæans.

The circular priest recited over the sick an incantation: 'The man of Es, the messenger of Shazuk am, ... the circle of Es in my hand.'
This account may be simply confusing the Babylonian magical circle with the Greek magical wheel (λργεία, torquilla); but, just as the medieval circle was made material and portable in the form of a tent, so this latter idea is an interesting hint in the direction of the pentagrams and other figures with which the magical circles were filled. Psellus notes that the object of the "invocation" was oracular, the idea, no doubt, being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the λργεία, wryneck, was tied, there is considerable doubt as to its nature.

The magical circle of medieval occultism had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operators. The following may be considered typical examples of the method of description and formula of blessing and of invocation. The magician, after purifying himself, collected his paraphernalia, and then, going into his consecrated place of ground, surrounded himself with a ring of dressed candles and holy water, magical sword and knife, and so forth, and traced the circle, usually 9 ft. in diameter, with his wand or sword. He then blessed the circle, saying:  

"In the name of the holy, blessed, and glorious Trinity, proceed we to our work in these mysteries to accomplish that which we have agreed on, in the name of the spirit, consecrate this place of ground for our defence, so that no spirit whatsoever shall be able to break these boundaries, neither be able to cause injury nor detraction to any of us here assembled; but that we may be compelled to stand before this circle, and answer truly our demands."

More elaborate forms include such terms as:  

"Sanctify unto myself the circumference of nine feet about me, from the East, Glorabon, from the West, Garbon, from the North, Cabon, from the South, Berith."

A good spirit seems to have been invoked but rarely; necromancy was also rare, though two forms of this were used, one in which the body and the other in which the 'shadow' of the dead was conjured. Evil spirits of power were the usual object of conjuration, and extraordinary precautions were taken in the process.  

"Now, if any one would call any evil spirit to the circle he must first consider and know his nature and to which of the planets it agrees; it is agreed that offices are dedicated unto him from the planet. This being known, let there be first sought out a place, where the circle is described, according to the invocation, following the exorcism according to the nature of the planet and the quality of the offices of the same spirit as near as it can be done; as if their power may be over rivers or floods, or the sea-shore, and so forth. Then choose a convenient time for the operation, as the air is calm, quiet, clear, and fitting for the spirits to assume bodies. Let the circle be made at the place elected, as well for the defence of the invocant as the confirmation of the spirit. And in the circle write the divine general names and all those things which do yield defence to us; and with them those divine names which do rule his planet, and the offices of the spirit himself; likewise write therein the names of the good spirits which bear rule in the time you do this and are able to kind and constrain that spirit which we intend to call."

We may add characters and pentacles, frame an angular figure with the inscription of such convenient numbers as are congruent amongst themselves to our work. Furthermore, we are to be provided with lights, perfumes, unguents, and medicines, compounded according to the nature of the spirit and planet which agrees with the spiritual reason of their natural and celestial virtues; holy and consecrated things necessary not only for the use of the operator, but for his companions, also, taking care for bonds to bind and constrain the spirits; such as holy papers, lampas, pictures, pentacles, swords, sceptres, garments of convenient colour and matter. Then let the exorcist (sic) and his companions enter the circle."

If, after a prayer to God and an invocation to the other deities to appear, 'reiterate the same three times, from stronger to stronger, using consecrated, powerful, and surpassing words, from his power and office, and the like.' If the spirit make a doubtful assertion, it must be tested by oath; the operator stretches his sword and says: 'Lead the spirit to laying his hand on the sword.' At last, when the operation is beginning to have effect, there will appear infinite visions, apparitions, phantastes, etc., beating of drums, and the sound of all kinds of musical instruments; whatever is done by the spirit, that with the terror they might force some of the companions out of the circle. At this point, 'having the pentacle in his hand let him (the operator) say, Avoid these iniquities. The spirit invoked would now normally appear.

A plain circle was the exception. In some, two diameters were drawn in the form of a cross, but, as a rule, the circle included a pentagram or combination of pentagrams. Two intersecting pentagrams, viz. two equilateral and equal triangles cutting each other so that their segments are equal, constituted Solomon's Seal; this seems to have been often regarded as more efficacious than the circle itself. These triangles were described before the circle, a frequent method being to draw a 9 ft. square, then the diamas, and then the circle round them.  

"A circle was described at a distance of a foot from the outer, and between these were inscribed various names of power, or injunctions to the spirits, Alpha, Omega, On, Alpha, On, Elohim, Jehovah, 'I forbid thee, Lucifer, to enter within this circle,' 'Obey me, Frimost,' being examples of these. The mystic combination Agla was a favourite. Dove's blood, especially that of a white dove, was sometimes used for writing these names and formula. The circle, figures, and names might be described with holy water, charcoal, or consecrated chalk; when the magical knife was used for the drawing, the lines were sprinkled with holy water. This knife, which also served to frighten the spirits, should have a black handle of sheep's horn, and the steel should have been tempered in the blood of a black cat and the juice of hemlock. For more important operations, especially in black magic, as when using the 'great kabbalistic circle,' the tracing should be done with the magical stone Emalit. A curious refinement was a gate in the circumference, by which the operator and his associates might go out and in; on leaving the circle, they closed the gate by inscribing the character of the spirit. More elaborate circles were filled with names and kabalistic figures and characters. Candles and vervain crowns were placed within the circle, and the operator had with him gold or silver coins to fling to the spirit when evoked, the 'seals' to be shown to the spirit, and talismans, generally made of coloured satin embroidered with silver. Incense was burned within the circle, or it was perfumed with musk, and holy water was sprinkled over it. When the preparations were complete, the operator and his associates stood or sat in the centre of the circle, often in small circles marking their places, and the operator began his invocation of the spirit required."

The 'great kabbalistic circle' was made with strips of the skin of a sacrificed kid. These were

fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective circumference. A triangle took the place of the pentagram, and three small circles were described for the stations of the operator and assistants.

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno writes: `The circle is time, and is eternized by an angel sensibilis dominum occulta. Con caput Draconis in Sagittario occidenti, discido lateps ponit in aqua, naturatuer spiritus ad daemonius respondit vocum."

Consultation of the stars and seasons was essential.

1. **Oedipus** in **Constitutio circulorum consideranda quatuor tempora anni, quas hora circulum facias, quas spiritus advocavee vis, cui stellae et regioni præsent, et quas functiones habebant.**

2. For summoning chance spirits or seeing visions generally, a circle was made (probably at crossroads) and perfumed, and the operator had to walk round the circumference, east to west, till he was giddy. For necromancy the churchyard was an appropriate site. The operator wore elaborate vestments, and was anointed with holy oil.

3. The circle was invariably obliterated on the conclusion of the operation. A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive culture.

4. The talismans, pentacles, or seals, used freely by the magician, depended largely upon the magical circle which was described round them. Here, as in the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, *presiding with powerful influence.* They were exhibited to the spirit on its appearance; by their means the operator bound the spirit, and was able to prevent it from departing without a licence. The issue of the licence was an important detail; if it was omitted, the death of the operator might result. The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold if the planet were the sun, or of iron, if the planet were Mars. Seals of the names of God were most powerful. Others had the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those whose names may be distinguished as pentacles proper had a Solomon's Seal surrounded by a circle. The most usual form had enclosed within the circle the 'table' of a planet or a planet and some of its figures. It is interesting to note, there were 'magical squares' in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical squares. The Seal had an obverse and a reverse, and was the size of a large medallion. In connexion with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points. The 'characters' of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described in another circle. When a spirit appeared, it was asked to place its hands on its 'character' and swear.

5. Medieval amulets for general use were frequently stamped with the magical circle in its numerous varieties, as also were talismans of various make. The latter were effective, as a rule, only in cooperation with the circle.*

6. This was worn on the finger, and the talisman on the arm or body. The magician's wand was sometimes planted and could be made into a circle, the ends being joined by a gold cord. When described on parchment, the magical circle served as a basis for astrological calculations. This use was prevalent wherever Arabic culture penetrated. Thus, in Malaysia a deadly weapon was painted on either hand of the object, employed for all kinds of divination. To select a lucky day for a journey or business, a circle enclosing a heptacle is used, but every alternate day is skipped, the lines of the continuous heptacle running from, e.g., Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on. This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.

7. As a mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic science. The latter is a square divided into smaller squares in each of which a number is written, so that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radii to other circles, possessing the same property as the rows in the magical square.*

11. **MAHABAN (Skr. mahā, 'great', evam, Hindi ben, 'forest').**—A sacred town in the Mathurā District of the United Provinces and Oudh, on the left bank of the river Jumna; lat. 27° 27' N., long. 79° 45' E.; famous as the scene of the adventures of Kṛṣṇa as a child.

12. Here and at Gokul (q.v.), as might have been anticipated, the places where the young god was attacked by the witch Pātānā, where he played his pranks in the dairy and was saved from the falling wooden mortar, and where he overcame the demon Tyāpana and Sakajñā are now shown. Mahāban, was, in reality, only the water-side suburb of Gokul, which has now appropriated much of its sanctity, possibly because Mahāban never recovered from its sack by Mahāñu of Gzhāni in A.D. 1017 (H. M. Elliot, *Hist. of India*, London, 1867-77, ii. 458, 460). In the fort are found fragments of Buddhist sculptures, and it is believed that Mahāban was the site of some of the Buddhist monasteries which, in the time of the Chinese pilgrim Fa-Hian, stood on both banks of the river. The existing temples are modern and mean. Only one is of any importance, that dedicated to Mathurā, and Kṛṣṇa is the most interesting building, however, that is known as Asī Khaṁbā, 'the eighty pillars,' which also has the name Chhaṅdi Pātānā, so called because women came here to be purified on the sixth day (chhatā) after child-birth, and here the cradle (pāndu) of the infant god is exhibited. In its original form it seems to have been a Buddhist building, afterwards used for Hindu ceremonial, and finally converted into a Muhammadan mosque.

The style of the columnar lists closely resembles that of the more famous lists of the same date near the Ghat Minar at Delhi (g.v.), and both buildings have been ascribed to the same age, the close of the 12th cent. A.D. The most remarkable feature in this building is that its southern end consists of the shrine of a Hindu temple almost undisturbed, with the original roof still in position.

W. Crooke.

**Mahābhārata**—The Mahābhārata is an epic poem of India in eight books, A. Sati. It consists altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into stanzas (called *ślokas* and *trishtubh*) of four verses each, so that the Hindus call it a poem of a lakh (100,000) of stanzas. The books are of very unequal length, varying from a few hundred to several thousand stanzas, and there is also a supplementary book—the *Harivaṃśa*—of 16,000 stanzas. The matter of the poem is partly narrative and partly didactic. The epic proper contains about 20,000 stanzas embedded in and embellished by moral, poetical, religious, and metaphysical dissertations, the whole forming a heterogeneous mass of tale and teaching, which gradually accumulated around the epic kernel. As a tale the Mahābhārata ("Great Bharata" story) represents in its epic part a story of their ancient tale, in the distinction from the *Kavya*, or studied, elegant poem, of which the other epic, called the *Rāma-yāna* (g.v.), is the representative. It is probably older in its oldest parts than the *Rāma-yāna*, and yet in its entirety much later. It belongs rather to western ("Midland") India, while the *Rāma-yāna* belongs to the east. It celebrates Śrīna as representative of Viṣṇu on earth, while the *Rāma-yāna* celebrates Rāma. Finally, it has not the unity of the *Rāma-yāna*, nor was it written by one poet, as was the *Rāma-yāna*. According to a tradition still extant in the work itself, the Mahābhārata at first contained only 8800 stanzas and was subsequently increased to 24,000, after which it was again enlarged by the addition of numerous episodes till it reached its present size. The chief incidents in the plot of the poem are known in part in ancient literature, but not the popular characters, the heroes of the winning side in the story as now extant. The war waged was between the old and the new; the date of the poster rather than the epic narrative itself, and this mass, being largely didactic, led to the theory that the epic was originally didactic only, the narrative of human events being added later to hang impenetrable sermons. This theory, put forth by Dahmman, was further burdened with the thesis that the encyclopedic epic dated from pre-Buddhist times and was the work of one author; but neither this improbable hypothesis nor the basis theory on which it is merely ancillary to the didactic mass—has held the general recognition. It is merely the exaggeration of a truth not denied by any one, viz. that moral and religious teaching of the southern part of India has less commingled in it. If the hypothesis of Dähmmann could be established, it would, of course, tend to show that Buddhism had been very much over-rated as an influence in the popular teaching. Very simple critical tests show, however, that no such great antiquity can be assigned to the Mahābhārata; the metre alone proves that it belongs to a period much later than that of Buddhist beginnings. The epic first mentioned in the *Gṛhya-sūtras*, withal not the earliest (Āśvalā- yana Gṛhya-sūtras, iii. 4), to which there is no cognate reason to assign an antiquity greater than the 3rd cent. B.C., and it is not impossible that even this reference may be interpolated. In the 2nd cent. A.D. the Greeks refer to an Indian Homer (Die Ceryostom, Orat. liii. 6), and this perhaps implies the supposition of authorship or compiler Vyāsa, to whose activity the Hindus give the name of authorship of the epic, as they say that Vyāsa compiled or arranged the Vedas—a story without any historical evidence, which, as the Vyāsa- śāstra, has been the counter-theory of Holtmann, who holds that the epic was much later than the Christian era. He would date the Mahābhārata from the 9th to the 9th cent. A.D., and thinks that the story as we have it is an inversion of an older epic, in which not the Pāṇḍus but the Kurus were the characters originally besog by some earlier poet, and that it is due to the retention of older material that was ascribed to the Pāṇḍus and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find recognition, in part because it ignores the weight of inscriptive evidence, which shows that before the Mahābhārata, according to this theory, had been completed, it was already of the size it is now.

The completed Mahābhārata represents an age well acquainted with foreign nations, even Greeks, Scythians, Persians, and Chinese being occasionally referred to in it (e.g., v. 19); it represents also a time of empire, when, however exaggerated, the individual was conquered by the whole state, which was a fest. It shows a superficial knowledge of the extreme south and north and a very intimate knowledge of Middle India. Castes are recognized as orders of society nowhere else in more or less as established (e.g., xii. 72, 297). Heterodox beliefs are freely discussed; outlandish morals are gravely reproved (e.g., viii. 45). Sati is approved, but is not regarded as imperative; the highest standard is high. Buddhist remains and Hindu temples are mentioned (e.g., iii. 190). Different epochs have amalgamated their beliefs in regard to the gods. In one episode the Veṣa gods are paramount; in another the authority of Brahmā is supreme; elsewhere Viṣṇu is the one great god, or Siva alone is God and Viṣṇu is his representative. Only one late passage recognizes the Trimūrti, or triad of Brahmā, Viṣṇu, and Siva, as three forms of one god (iii. 272).

The Mahābhārata begins with an Introduction, or Book of Beginnings, which tells how the childhood of the heroes was passed and gives their origin, and also, incidentally, the origin of gods and men in general. For the story, it may be compressed into the following statements. Two brothers, Dhruva and his twin, come on white horses to hang impenetrable sermons. This theory, put forth by Dähmmann, was further burdened with the thesis that the encyclopedic epic dated from pre-Buddhist times and was the work of one author;
death; the other, Pṛithā or Kuntī, survives Pāṇḍu
and brings up his five children, called the Pāṇḍus, who are really sons of the gods, whom Kuntī and Mādri had invoked. These sons are Yudhishṭhira (son of the god Dharma, or Right), Bhīma (son of the wind-god), Arjuna (the chief hero of the epic, son of Indra), and the twins Nakula and Sahadeva (so-called 'Twins') of Discomposing. After this Introduction, which, like most childhood-recitals, is in general late, comes the 'Sāthi', the title of the second pārva (book), taken from the assembly in the sixth of the twenty-four books of the great drama. This begins. At Hastināpur (about 60 miles north of Delhi) the Kūr very hold an assembly, to which they have invited the Pāṇḍus, who, after various adventures, has taken (Vesāvatī in the north-eastern Delhi; the Kūr intended to cheat the Pāṇḍus out of their kingdom by a game of dice, since they were afraid of the waging power of their cousins. Yudhishṭhira plays away all his wealth and kingdom, and finally his brothers and himself. Then he plays Kṛṣṇa, the daughter of Drupada, polyandrous wife of the five brothers, and loses her. One by one the rest of all that he has lost against a term of exile, and on losing again he and his brothers and wife are driven ignominiously forth to live for twelve years in the forest. The third book is called 'Vana' ('Forest'), and narrates the history of the life of the Kūr in the forest, the monstrous of legend and tales, such as the story of Sāvitrī, and that of Nāla and Damayanti, told to relieve the of exile. The fourth book receives its name from the name of the boy with whom the Pāṇḍus take refuge at the close of the twelfth year. They stay in town collecting allies and assisting Viṣṇa against attacks by the Kūr. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a later part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). It tells of the entrance of the Kūr, disguised, upon the side of the Pāṇḍus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named from the leaden in the battle which now takes place, 'Bhīma,' Drona, 'Karna,' and 'Sālyu.' Bhīma and Drona are the uncle and teacher respectively of the cousins now at war. Into the 'Bhīma Parvan,' at the beginning of the battle, is inserted the legend of the god俱 (called by the poet Avasadhita), who descend from Soma, the moon-god, himself the son of the seer Atri. Budha, son of Soma, had as wife Ila, a daughter of Ikṣvāku of the solar line. Their son was Parvana, the ancestor of the Pāṇḍus, and his descendant, Sāntana, was the father of Bhīma (above) by the goddess Gangā (the river Ganges). Sāntana's wife, Satyavati, was also the mother of Vyāsa and of Vichitravīrya, who, without children; but Vyāsa raised up children for him, and these were Kṛṣṇa and Pāṇḍu. If these legends be reconstructed historically with the aid of the Purānic lists of kings, they show that a real historical character, i.e., a living person, is the of the Pāṇḍus. The polyandry of the Pāṇḍus is a trait of certain hill-tribes, and is not unknown on the plains; it is undoubtedly a genuine bit of tradition which serves to mark the Pāṇḍus as a ruder race than the old and long-respected Kūr.

An attempt to group the participants in the great war according to their place of origin has been made by F. E. Pargiter (JRAS, 1908, pp. 280–336, and 1910, pp. 1–56), who seeks in this examination to determine whether the theory of successive invasions leaving inner and outer rings of Aryans in India can be substantiated thereby; but the result seems to leave considerable doubt as to such invasions having left traces in the poem, though the theory of successive invasions may be substantiated on other grounds. The didactic teaching of the epic is not confined to any part of the work, and from a general view of this teaching it is evident that a later pantheistic system has become amalgamated with the dualistic and materialistic doctrines of the Hindu philosophy. In its later theistic tendency as represented by the Yoga. This mixed system is represented not only in the Bhagavad-Gītā, but in the Avasadhita and in the Avasadhita philosophical current of ethnical and mythological books. The outcome of the systematic speculation in accord with the teaching of the Vedanta, but the terminology and basic ideas are those of the
Sākhyā system throughout. The chief interest of the religious doctrine lies in the insistence upon the loving devotion of the worshipper and the saving grace of the supreme spirit (see BIARETTI, MARA). Kṛṣṇa as a form of Viṣṇu is not revered (as later) in his child-form, nor is anything made of his being the lover of milkmaids, though both traditions so familiar, that of planet worship, appears only in a few late passages. As this aspect cannot be in itself a late feature, it must have acquired the seal of respectability only by degrees, beginning probably with the授 priestly caste of Brahmacā. The special sectarian cults or forms of cults as advocated in the Purāṇas are unknown in the epic. The cult of Viṣṇu is that of the theistic All-god; the cult of Siva is that of the only One God. But, with the opposing claims of each sect, each god gradually assumes the distinctive attributes of the other. Viṣṇu is the one theistic god and Siva is the theistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brahmacā also, though originally creator-god, becomes destroyer as well, till all three, the sectarian Kṛṣṇa-Viṣṇu and Siva and the older Brahmacā of Brahmanism, coalesce into the ‘one god with three forms’, or, as the Hindū says, ‘three gods and one form.’ Beside these great gods it is noteworthy that a revival of sun-worship leads to strange exaltation of the sun as supreme god (but only in late passages), probably because of the identification of Viṣṇu with the sun on the one hand and the later Persian sun-worship on the other; for, though the one might probably have revealed in its present size by the 2nd cent. of our era and was virtually complete in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous episodes and laudatory hymns have been added at all times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to Durgā and probably also the exaltation of Skanda as the great army-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the Bhāratīya war may also have been of priestly rather than of popular origin, though ‘hero-lauds’ sung by hired minstrels are not unknown in early literature. But it was part of the business of the king’s-chaplain to recite laudatory invocations in his honour, and it is not impossible that some chaplain of the epic kings may have exalted the theme, for not only the king living but ‘dead kings and their glory’ formed the topic of lays and collections. The completed Mahābhārata was intended for recital, but this was in dramatic form, so that even to this day it is acted as well as recited by the purveyors of amusement at country fairs.

MAHĀRĀJ, MAHĀRĀJ.—See GĀYĀ.

MAHĀRĀJ, MAHĀRĀJ.—One of the menial or depressed castes of West India and Deccan, numbering 3,342,680 at the Census of 1911. Their name is very doubtfully connected by R. Oppert (Orig. Inhabitants of Bharatavarṣa or India, London, 1856, p. 28 ff.) with that of the ancient Hindu Mahāra, and, according to Williams (Indian Caste, Bombay, 1877, ii. 48), they gave their name to the country of Mahārastra, from which the Marathas take their title. They are practically all Hindus by religion. Another caste, the Dhod or Dhar, is sometimes included with them, and, if not identical, they are allied, with the Holeyā menials of the Madras Presidency (E. Thurston, Central and Tribes of S. India, Madras, 1909, ii. 220 ff.).

In the Central Provinces the Mahārāj say they are descended from Mahāman, who was a foundling picked up by the Hindu Presbytery, Farvati on the banks of the Ganges. At that time beef had not become a forbidden food; and when the divine cow, Tripāl Gavati, died, the gods determined to cook and eat her body, and Mahāmanī was set to watch the pot boiling. He was as insatiable as Rāma, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahāmanī ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the flesh of dead cows (R. V. Russell, Central Provinces Ethnographic Survey, pt. ix., Allahabad, 1911, p. 94; cf. K. J. Kita, Census Report, Bhor, 1884, p. 114 n.).

Their religion is of the primitive animistic type, with a veneration of Hinduism. In the Khandesh District they have the regular practice of performing feasts, and worship the popular gods of that country—Viṣṇu, or Vithoba; Sava as Khandobā; Mahābābā, an evil spirit who abides in an unclean stone smeared red with bat's blood, and Sathī, Sājī, or Sāji, a god in his terrible Bhairava form; and the Mother-goddess in the form of Aī Bhāvāni, whose image they keep in their houses. Besides these they worship snakes and the spirits of their dead ancestors (BG xi. [1880] 118 ff., xvii. [1884] 172 ff.). At a temple in Kāthiāvar the Dhevā worship what is really an image of Viṣṇu reposing on his serpent Śeṣa as Ḡanī, who is said to have been a faithful woman of their race. Women who are unable to nurse their babies and owners of cows which give a scanty supply of milk vow to wash this image in milk if their milk be increased (BG xii. [1884] 415).

In the Central Provinces the great body of the caste worship the ordinary deities Devī, Ḡanī, Dhīli Deo, and others, though, at times, in the temple of Satī Temple. They principally observe the Holī and Dashāra festivals and the days of Taber and full moon, and fast on them. They have a sacred stick, the Nagpachāni; they make a image of a snake with flour and sugar and eat it. The temple of the sacred Amītā is a temple of the Mahārāj. They have a special bathing-place set apart for them, and they may enter the citadel and go as far as the least step leading up to the temple only when they worship there and only then they accept their offerings. They are thus permitted to
traverse the outer enclosures of the citadel, which are also sacred. In Varanasi the Mahârs may not touch the shrines of Mahâravâds, and before entering them wash their hands three times. They may sometimes deposit offerings with their own hands on these shrines, like a devoutly devoted god, and Mata Devi, the goddess of smallpox.

In Berar they worship a curious collection of deities. These deities are included in the archangels Gabriel, Azrael, Michael, and Anâîd, all of whom, they say, come from Pandia-pur. In Berar the worship of these archangels was probably borrowed from the Mahârvâns, but the Mahârvâns themselves say that it was apparently taken from Christianity.

"It seems that the attraction which outside faiths exercise on the Mahâravâns is the hope held out of ameliorating the Hindu theory of caste. Hence they turn to Bhrista or to what is probably a degraded version of the Christian story because these religions do not recognize caste and hold out a promise to the Mahâravâns, who, by their co-religionists, in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahârs are the warmest adherents of the Muhammadan saint Sheikh Firdusi, and flock to the fairs held in his honour at Girâr in Bihar and Prâbhârâksh in Kâshâla, where he is supposed to have slain a giant of giants' (Russell, p. 903).

LITERATURE.—Besides the authorities quoted in the art. see Census Report, Central Provinces, 1903, p. 132; Bombay, 1911, p. 287; A. Baines, Ethnography (=GLAP ii. 5), Strassburg, 1912, p. 761. W. Crooke.

MAHATMA.—See THEOSOPHY.

MAHAVASTU.—The Mahâvastu, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends on the origins of Buddhism, on the persons of its founder [up to the gift of the jetavana] and his first disciples—"in a word, on that ensemble which, with infinite varieties of detail, crossed and ramified in every way, is the common property of all Buddhists." Besides all this, it includes a gnomic treasury, is the hope held out of ameliorating the Hindu theory of caste. Hence it is a vast store of legend and folklore, which, when compared with Paul literature, supplies immemorable documents on the nature and primitive state of Buddhist tradition; (3) the Mahâvastu, from the point of view of dogmatic ideas, marks a period or a transition stage between the Hinayâna and the Mahayâna; and (4) its language, too, deserves attention.

1. History and contents.—The Mahâvastu, or, according to the colophon (which is open to suspicion), Mahâvastu-avadâna, claims to be a part of the Vinaya-pitaka, of the "recitation" (i.e. the canon) of the Lokottaravâdins Mahâsâṅghikas of the Madhyâdesa.

(1) The Mahâsâṅghikas are one of the old sects or branches of the Order, the other branch being the Mahâmâyânas (the Prôhà-saṅghikas; the Basket-Vinaya); from the beginning it probably had special rules of vinaya, or discipline. (2) The expression Lokottaravâdins, "believer in the supernatural character of the bodhisattva (see below, § 3, and art. BODHIKATVA), indicates a dogmatic school. It is possible that there were Mahâsâṅghikas who were not Lokottaravâdins. It would not be difficult to eliminate from the Mahâvastu the passages which have habitually been attached to the Mahâyânas, but it is difficult to eliminate from the Mahâvastu, and the manifest contradiction between the title and the contents raises a delicate question. Such a title comprises N. India, Magadha, Kosala, and Videha; but there were Mahâsâṅghikas outside of the Madhyâdesa, notably the Purvâvâsias and the Arapâulis, who were also Lokottaravâdins.

In order to understand the word mahâvastu and to see how the Mahâvastu, in which discipline takes only a very small place, can belong to the section on "discipline," it is necessary to go far back.

The disciplinary literature (Vinayasa) was from the beginning composed of two parts: (1) the formula of ordination (pratimokkha), a list and classification of grave and venial faults, to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvâstivâdin school this commentary is called Vihâra, in the school of the Pâli language Vibhavana; and (2) the statutes of the Order, a collection of the texts (formavaipikas, vamaavaipikas) relating to ecclesiastical acts (ordination, fortnightly confession, etc.) and of rules referring to ordination, confession, the cenobitic life during the rainy season, to parishes, medicines, beds, and schisms. These two are treated in the first group: ('point of discipline or doctrine,' 'story'), corresponding to the Chullavagga, and the Vinaya-vagga, which, although it does not bear the title 'Great,' corresponds to the Mahâvagga.

One of the characteristics of the Mahâvagga (and the Vinaya-vagga) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly justified as an introductory can to the vasta of ordination: it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha, his illumination, his first sermon, etc. The editors of the Vinaya-vagga (which is, as we have said, the Mahâvagga of the Sarvâstivâdins), who came long afterwards, have far more liberally spread the ten chapters their work preserves the character of a historical treatment of monastic discipline; but the last chapter (devoted in principle and in title, like the corresponding chapter of the Mahâvagga, to the internal strife of the Order) contains not only a fresh statement of the biographical elements of the first chapter, but also the history of Sakyamuni from the beginning of time, related in a continuous account down to the schismatic intrigues of Devadatta; a list of the chakrawartin kings, the creation of the universe and life of primitive men, and the history of the Sakyas (ancestors of Sakyamuni); legends of the birth of Sakyamuni, his education, his departure, his mortifications, etc.—a summa of ancient traditions among which are to be found documents which have habitually been attached to the Mahâvagga. It is possible that there were Mahâsâṅghikas who were not Lokottaravâdins. It would not be difficult to eliminate from the Mahâvastu the passages which have habitually been attached to the Mahâyânas, but it is difficult to eliminate from the Mahâvastu, and the manifest contradiction between the title and the contents raises a delicate question. Such a title

implies that the book was, like the Mahāvagga and the Vinaya-pāda, meant to be a history of disciplinary rules. As a matter of fact, of thirteen hundred pages about twenty treat of discipline (excepting the beginning on ordination), and certain parallelisms with the Mahāvagga cannot be mistaken; e.g., there is a series of stories in the Mahāvāstu, in the Pali Mahāvagga, and in the Tibetan Vinaya which hold together, and are minute in subject; and especially the famous eighteen chapters, or the sexaginta octo protopodia' (Barth, loc. cit. p. 464). But, on the whole, the Mahāvāstu is a collection of legends without any connexion with discipline.

One cannot easily understand the literature of a primitive Mahāvāstu, a historical treatment of discipline, would be fed (Barth says novum) by a mass of heterogeneous materials, differing in date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present Mahāvāstu. This task of enlarging and of "feeding" was carried on in all the Buddhist schools, for a longer or shorter time, with more or less moderation; and what is true of the literary units is still more true of the canonical collections. Although we at present know nothing about the libraries of the Mahāvāstu, we may suppose that it had no shelves in which the jātakas, sūtras, and stanzas would be arranged. The only course was to gather together in the Mahāvāstu all that seemed precious. The decision to make the Mahāvāstu, therefore, if it had remained to any extent a history of discipline, and if some pieces of the framework of the Mahāvagga were perceptible, would seem quite simple. Must it be admitted that the last compilers of the Mahāvāstu systematically cut away the elements of vinaya already sunk in the legendary mass? Or that, in the federal view which the life of the Mahāvāstu was wetting, these elements fell into oblivion? Or that the Mahāvāstu was never in any respect, except its title, a replica of the Mahāvagga? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the Divyānāma. R. Hovhe (and after him B. Løvås) has proved that this book is, above all, a collection of anecdotes and legends taken from the Vinaya of the Sarvāstivādinś. The extracts have not always been made very consistently, and some fragments of vinaya proper—disciplinary rules—are to be found in the Mahāvāstu in connexion with the history of the Mahāvāstu, and a probable connexion with the Mahāvāstu is pointed out. The colophon gives the name of Mahāvāstu-sūtraṃ: is this to be translated 'the narrative part of the Mahāvāstu' or 'the Mahāvāstu as a whole'? In the Pali Vinaya the various episodes are added to the history of the Vinaya by explicit references or allusions; these, without any evidence down to the Mahāvāstu, show those same episodes in which the Mahāvagga and the Vihāra-vinaya are more or less prolix and discursive chapters of a treatise on discipline, the Mahāvāstu, therefore, if it can be taken as the Mahāvāstu a book of stories.12

However this may be, the materials which have entered into the composition of the Mahāvāstu are of widely different ages; the source of the compilation is certainly ancient, since it forms part of the canon of one of the ancient schools. It must be admitted, therefore, that it took a long time to be formed, for it is certain that it was not compiled until very late. The mention of astrologers under a Western name (kārttikeya) and that of the writings of the Chinese and of the Huns, Pehlevāsa (Felix X), Ujjibe (Zebek X), indicate the 4th or 5th century. At that date, however, the persistence, in the prose, of the ecclesiastical jargon, which still endures (§ 44), is an outstanding fact.13 We must, therefore, accept in full interpolation and carry the date of the compilation a little further back. In order to realize the character of this compilation, it must be noticed that the editors do not allow themselves to invent anything, and do not dare even to correct the most flagrant contradictions.14

2. Comparison with Pāli canon.—There are numerous parallels between the Mahāvāstu and Pāli literature. Minaya, Oldenberg, above all Senart and Barth, and, lastly, Windisch, have called attention to many, but not to all. Differences which seem to marks of sect are rare, and when they stand out are the result of the complexity of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials. In these examples, the amount of similarity is at all degrees, from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attained, and is perhaps, for long. The similarity, especially in the verse, is to a large extent an exterior one; it is shown in mode of expression, in general sonority, in words more than in matter, in sounds more than in words; the stanza is the same, when the meaning is sometimes quite different, like an egg of which nothing remains but the shell . . . . They all go back to one original. . . . The probabilities are not always in favour of the Pali edition. But for the ensemble of the fragments as well as for the detail of their rendering, it is the Pali that is the best in the whole and that gives the best representation of the original version.15

It is well known that all the comparisons set up between the Pāli canon and the other canons arrive at the same conclusion. The Pāli writings were fixed and codified, the others were not.

3. Relation to Mahāyāna and Hinayāna.—The Mahāvāstu may be said to form the bridge between the Old Vehicle and the New. As is seen from the Mahāvāstu, the two Vehicles are not incompatible, and the book away from certain characteristics peculiar to the Great Vehicle while remaining unacquainted with the others. (1) The 'Buddhology' of the Mahāvāstu marks a stage between the conception of Buddha as a simple mortal (Little Vehicle) and that of Buddha as a quasi-eternal god sending illustrious images down to this world (Great Vehicle). The Buddha of the Mahāvāstu is a supernatural, an immortal, not hungry nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the外境 (lokottaras, 'superior to the world').12

(2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānist tendency. It must be noticed, however, that the Sarvāstivādinś, who are reputed to be free from Mahāyāna influence, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

(3) Much more marked is the tendency of one of the chapters of the Mahāvāstu, entitled Sāngha-bhānīka,16 'the book of the ten bhānīs'—successive steps by which the future Buddhas have to mount up to the state of Buddha. ‘It is to the beings who aspire resolutely to the condition of Buddha that the Sāngha-bhānīka ought to be set forth . . . for they will believe; the others will only env.' (I. 193).

The Mahāvāstu, therefore, has incorporated a book which is addressed, in so many words, to the men who wish to become, not arhats, but Buddhas, i.e. to the men who enter the Vehicle of the future Buddhas, the Mahāyāna.17

1 Barth, loc. cit. p. 624.
2 Io. p. 627.
3 The text says that his body is mensonge, 'falsehood.' This expression has been discussed by B. Senart and A. Barth (see art. Boumyavātṛī). According to it means, not 'mental body,' but body created by the mind, without intervention of seed and blood. Such is the body of the objects called "cittasatputram," 'incarnational,' one of whose characteristics is that, on dying, they leave no trace.
4 Several other instances of Mahāyāna tendencies are discussed by Senart and Barth (loc. cit. p. 526). Different interpretations may be suggested from that of these two scholars for
On the other hand, Aṃṭātāya, Abhavakta, Mahāyāna, Udbhava, and the khaṭā (‘spell’), and the bhadra (‘voidness’) —and, we may add, karunā (‘compassion’) —are unknown. Of those who mount it to the same goal, ‘the town of nirvāṇa, the island of nirvāṇa.’

The first metaphor has been adopted by primitive Buddhism; the second one by the new Buddhism. The adherents of this latter Buddhism found fanatics with the earlier Buddhism; and, accordingly, while styling their own creed mahāyāna (‘great vehicle’), true, great, and profound (gandhāra) doctrine of salvation, they characterized the creed of their predecessors as hinayāna (‘little vehicle’), an inferior, imperfect, inefficient doctrine of salvation. Another name for the former Buddhism, a more polite one, is ‘śrīvajrayāna;’ in the old scriptures the discipul of the Buddha who have entered the path are called śrīvakṣa (‘disciples,’ ‘auditors,’ or ‘preachers’ of the Law), or āryavajra-vaṇu (‘noble disciples,’ ‘true disciples’). The term śrīvajrayāṇa conveys the idea that the old doctrine is nevertheless an efficient means of salvation. Moreover, it marks a contrast between the two Buddhist creeds; for the adherents of the new Buddhism style themselves bodhisattva (future Buddhas) and employ the term bodhisattvayāna (‘vehicle that conveys the bodhisattvas’) as a synonym of Mahāyāna.

(4) The Mahāyāna asserts that salvation can be quickly gained; it is a vehicle drawn by deer (bṛṇartha). It professes to lead, by duly practised, to nirvāṇa in this existence (ājñā-Śūrana). It has to become an arhat, i.e., a sāvakamukta (q.v.), a man freed even in this life. In fact, the arhat has already obtained nirvāṇa, the nirvāṇa called sāpadeśa; the liberation from desire and lust, the machinery of life continuing automatically until it runs down. When dying, he says: ‘I have nothing more to do. I shall not be re-born here again,’ and he enters into nirvāṇa. In this connexion, the doctrine of nirvāṇa is the same as the doctrine of sāvatīrtha, as the doctrine of sūtra, as the doctrine of the sūtras. It is my belief that nirvāṇa is an absolutely certain mystical fact.

It involves no elements that are foreign to the end which it has in view, viz. the destruction of desire or thirst, the suppression of all activity (karma) liable to induce a new existence. It consists essentially in contemplation (śānti-dhyāna ‘sight’) and meditation (bhadra-dhyāna) on the four truths: everything is painful, etc. These four truths may be summarized in the following dogma: what we call the ‘soul,’ or the ‘ego,’ is only a complex of incongruous, transitory elements (skandhas), which endures by means of desire (or thirst) alone; and an ethical dogma follows: that action, the consequences of action can be suppressed by meditations which emanate and deliver from existence.

(2) This method of salvation (the method of supramundane meditations) cannot be practised except by a person who observes, and has observed for some time, ‘morality’—i.e. the laws that make an action or a thought good (see art. KĀMA)—and, what is very important, a person who practises continence (or the religious life brāhmaṇa) as a Buddhist monk.

(3) Although the Buddha is neither a god nor a supernaturally being, he is nevertheless acquired from the other saints. The saints, like the Buddha, have attained nirvāṇa in this life, because they have attained bhūti (‘illumination’); but it was the Buddha who annoyed to the same truths of salvation which potentially contain bhūti, and who showed the ‘path’; and he was able to do so because in the course of his innumerable existences, with a body he is never weary of acquiring good works and gained this acquired knowledge.

(4) The cult of the Buddha is not distinguished by what is properly called ‘devotion’ (bhakti)—
this sentiment implies a living god—though the Akhikdharmaoka upholds the term. Veneration of relics, stūpas, etc., is useful and recommended; it is good, it is helpful, as penance (lāpas) is, but it is not divine. (3) The Three Vehicles are defined: (1) the Vehicle of the Śrāvakas, (2) the Vehicle of the Pratyekabuddhas, (3) the Vehicle of the Bodhisattvas. The first two are termed the Little Vehicle; the third the Great Vehicle. We see that by B. E. Bumford, Le Lotus de la bonne loi, Paris, 1902, pp. 55, 315, 399; B. Kern, Studien über das A. V. S. N. E., PP. (1891); 17. Jahn, Mandala-phenomena, ed. F. Max Müller and W. Wenzel, Oxford, 1885, p. 227, of the other two categories. The first two, the Śrāvaka vehicle of the Little Vehicle, the third the Great Vehicle (see E. Bumford, Le Lotus de la bonne loi, Paris, 1902, pp. 55, 315, 399; B. Kern, Studien über das A. V. S. N. E., PP. (1891); 17. Jahn, Mandala-phenomena, ed. F. Max Müller and W. Wenzel, Oxford, 1885, p. 227). It is essential to the little vehicle, but the Śrāvakas preach (prasangika; śrāvaka, translated ‘teacher,’ means rather ‘preacher’ (see SBE, XXII, Saddharmapundarika, I, 255), the Pratyekabuddhas do not convert by precept alone. There are still other differences, but they are of no importance to the Vehicle of salvation (see Abhidharma, I, xxxi). There are also two higher, and, we will note, closely related, sects: Chandrakīrti, Madhyamikavādins (Fr. tr., Cruson, and others, An Introduction to the Madhyamika), etc. The two sects are here not natural, then, for the Vehicle of the Śrāvakas and the Vehicle of the Pratyekabuddhas to be fused in the Little Vehicle (Hinayāna).

2. Great Vehicle.—The new Buddhism adopts the name of mahāyāna (‘great vehicle’). The word yāna (‘vehicle’) is used to express the same idea as that conveyed by the ‘supramundane path’ (bodhicaryā, shrine), the ‘cosmic path’ (bodhipathā, temple), the cosmic vehicle (bodhiputram, temple), etc., (2) the wisdom or knowledge of viyākhyā, (3) the path leading to nirvāṇa. But, as we shall see, there are various kinds of Mahāyāna, and this fact explains the diversity of definitions and the evident difficulty in which early writers entangle themselves. The problem is to explain the difference between the Little and the Great Vehicle.

The Great Vehicle consists of (1) the practice of the virtue (pāramitās) of a bodhisattva or future Buddha (i.e. pāramitāyāna [naya] or bodhisattva-yāna); by it one becomes a Buddha (buddhayāna); (2) the wisdom or knowledge of viyākhyā (pāramitāyāna); (3) the path of devotion (bhaktikarika).

(1) Career of the bodhisattva.—The books which profess to belong to the Great Vehicle (Mahāyāna-sūtras) tend to assert that nirvāṇa cannot be attained by the ancient methods. To obtain deliverance from desire, ignorance, and existence it is necessary to practice all the virtues and acquire all the knowledge of the Buddhas, to enter on the career of a future Buddha (bodhisattva-charya) and pursue it for centuries. Instead of ‘Great Vehicle,’ it may therefore be called ‘Vehicle of the future Buddha’ (bodhisattva-yāna), or ‘Method of the perfect virtues, charity, patience, etc.’ (pāramitāyāna).

Now the Buddha Sākyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the Vehicle of the future Buddha (bodhisattva) although married. Nothing, however, prevents monks from making the vow to become Buddha; by this vow they mount the ‘Vehicle of the future Buddha,’ but by their monastic observances they belong to the ‘old Buddhism,’ and form part of one of the disciplinary schools of the Śrāvakas. Young laymen often take the vows of monks, and, after acquiring merit in this way, remove them in order to take the vows of a future Buddha.

(2) Vacuity.—The books that treat of philosophy explain that the ancient dogmas, ‘the soul is nothing but a complex of transitory elements (abhandha),’ is perfectly accurate, but unsatisfying; they would add that these elements themselves do not exist in themselves, but are ‘void’ (śūnya). For (the two ways of understanding vacuity, and the two schools of the Great Vehicle, see artt. Madhyamaka and Viśnusāvanā. The doctrine of vacuity (anetavāda) is the second characteristic of the Great Vehicle. But a layman or a monk can perform the vow to become a Buddha’ without thinking out the doctrine of vacuity. Thus, the orthodox themselves declare that, as the beginning of the saintly career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e. to universal nothingness. On the other hand, an adept of the Little Vehicle who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of vacuity and become imbued with it, in order to attain nirvāṇa as an arhat, i.e. in this present life. As long as he lives, according to the doctrine of vacuity is really indispensable to the attainment of nirvāṇa, it is sufficient, without the career of the future Buddha.

3. Vedic and Tantric Vehicle.—The Mahāyāna, as analysed above, is, from the philosophical point of view, a phenomenalist system, and, from the religious and mythological point of view, polytheism with monarchical and devotional tendencies. From early times phenomenalism and polytheism led to conceptions of immemorial and polytheistic gods, in the days of Asinaga (A.D. 4th cent.) men believed in an Ādibuddha (q.v.) who would play the part of Brahān in his various aspects as Brahān, or Kṣana divine, or Kṣana tharanā. These speculations upon immemorand and emanation, which often mingle with the doctrines of the Mahāyāna proper, 1

1 For the combination of the cult of the Buddhas and companions, or charitable, see the meditation of the Bodhisattva.

A. Barth, ‘Leopoldichulis’s lexicographical contributions,’ Journal of the J.E.S., 1898; c. the remark of Winternitz, Geschicht, ii. 157, on the Buddha in Buddha-ophoga: ‘eine Art Halbgöttin wie den Mahāyānasishtra.

are the basis of the 'Vehicle of formula' ('mantra-yāna'), the 'diamond method' ('vajrayāna'), also called the 'Tántric Vehicle' ('tantrayāna'). This Vehicle is Ī-tsin's 'Diamond Vehicle' ('bodhicharyavatāra'), which was to give rise to a whole new philosophy of the Great Vehicle. The doctrines connected with the 'career of the future Buddha' ('bodhisattvaupākārya') are treated in art. Bodhrattva. Many details might be added on the technique of meditations; but the works on this subject ('Abhisamatālañākādāloka, Bodhisattvabhūmi') have not been published, and present very serious difficulties.

5. Speculative doctrines of the Mahāyāna.—These are examined in the art. Madhavakara and ViśMāra, where the views of the various chief philosophical schools of the Great Vehicle. The doctrines are connected with the 'career of the future Buddha' ('bodhisattvaupākārya') are treated in art. Bodhrattva. Many details might be added on the technique of meditations; but the works on this subject ('Abhisamatālañākādāloka, Bodhisattvabhūmi') have not been published, and present very serious difficulties.

6. Discipline (Vinaya) of the Mahāyāna.—The Indian schools of devotion ('bhakti') are often not strict as regards morality and discipline. There existed, accordingly, lax Mahāyāna, inclining to Tantrism, which preached salvation and the re—mission of sins by the recitation of formulas, etc., independently of rules of conduct.

But there is also a rigid Mahāyānist 'monasticism', sometimes adhering to the ancient Vivaya, sometimes introducing new ones.

(a) The Abhidharma-sūtras says:

'the adept of the Great Vehicle will never give his hearers the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulas, while abandoning the rules of conduct.'

One fully realizes Ī-tsin's statement:

"Which of the eighteen schools of [Mahāyāna] should be grouped with the Mahāyāna or with the Hinayāna is not determined. . . . Both [Mahāyāna and Hinayāna] adopt one and the same discipline (vinaya)." Monks and convents practising the strict monastic observance of the ancient Vivaya adopted the dogmas and worship of the Mahāyāna; Ī-tsin accordingly mentions monks who were Mahāyānists of the Śāhavara-school and all perfect in Vivaya observance. It has been supposed that the Vinaya of the ancient Mahāsaṅghika sect was the most popular in Mahāyānist convents; but Ī-tsin qualifies this as a Mahāyānist convent that Ya Hian found the Mahāsaṅghika Vivaya, because the Mahāsaṅghikas seem to have been the forerunners of the Mahāyāna.

(2) The Mahāyāna apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvāstivādins (Hinayāna) allowed the use of meat under certain conditions; the Mahāyānists condemned it. Ī-tsin tells a touching story of a young Mahāyānist, Chitta-varman, who was refused ordination in a Mahāyāna convent until he renounced, in tears, his principles of diet. Soon or later, however, the Mahāyāna created a new Vivaya for itself—a Vivaya that was independent of the ancient Vivaya, that had a different purpose in view and that could be, and was often, or through ignorance, of all the Noble Path and meditation on the truths. They say that the little Vivaya, thus understood, leads to re—birth in the very inferior paradises of the world of Kama (see Cosmology and Cosmology [Buddhist]); it is therefore a Vehicle of salvation for those who regard its discipline, and Śaṅkara and Saṅkara as regards its mythological representations and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his inner disposition, a Buddha, and (2) every being can, by meditation, spells, (śādhanas), and theurgic practices of all kinds (often erotic), 'realize' this Buddha nature at little expense (see TANTRISM).
expected to be, used together with the ancient Vinayas. The ancient Vinayas were for the use of monks; the Mahāyānī Vinaya is the 'Vinaya of the future Buddhas,' or, more exactly, 'of in-

expected future Buddhas' (ddhakoramā dharmadāna).

(a) It was while making the vow to become a Buddha that Sākyamuni, prostrating himself at the feet of a Buddha, became a 'future Buddha';

this vow is what today will fill our existence, but also for numerous future existences; like the vows of a bīkṣu (see KARMA), it creates 'discipline' (sīvanīrata), the obligation and, to a certain extent, the 'grace' (the moral power) to perform certain duties.

We have no longer a Buddha in our midst to receive such a vow from us; we must be content to take the 'discipline of a son of Buddha' (angutānāṣeṣenābīkṣa) before a qualified person (sīvanīrata), or, in the absence of such, before all the Buddhas of the quarters. (b) The future Buddha must practise the perfect virtues (pāramīs); theologians have therefore to explain how he is to fulfil the virtues of giving, in 

meditation. (c) He commits errors; he must know how to confess them, before whom (i.e. Buddhas of confession), and how to obtain pardon. (d) The Bhikṣu

distinguishes, help, providing and aiding, the saṅgha, the stūpas, etc., are not sufficient for devotees of Avalokita, Amitābha, and Tārā; fixed rules of worship must therefore be made.

This is the human regarding the oldest forms of the Vinaya for bodhisattvas. But documents which give an accurate idea of the rules of life of the Mahāyānist monk will be found in the Vinaya of the future Buddha (code du Mahāyāna en Chine), and in the Daily Manual of the Shāman (S. Beal, A Catena of Buddhist Scriptures, London, 1871, p. 239). The ritual of the office in honour of Avalokita (Beal, Catena, p. 338) indicates the nature of the cult.

(3) The Mahāyānist monks belonged to one of the Hinayāna schools, and fulfilled the obligations of future Buddhas in addition to those of their own school. Later, there were monks who adhered solely to the monastic code of the Mahāyāna (the type given in de Groot, code du Mahāyāna en Chine), which became a complete code in itself, a conglomeration of different Vinayas. Finally, it is always possible for a monk to renounce his vows and return to the world; the Great Vehicle favours this tendency insensibly as it had a special 'career-like' existence in the Middle Ages.

The relative importance of duties for monks who are at the same time 'future Buddhas' is not always clear. I-ising declares that he is not writing concerning those who claim to follow the prac-
tice of a Bodhisattva rather than the Vinaya rules. 1

Śāntideva cites an extreme case—the story of the monk who had practised continence for a long

time (84,000 years) consenting to satisfy the desires of a woman so that he might fulfil the benevolence and kindness that is the essential law of future Buddhas. 2 For them the sins of their

Sanskrit are very serious, while the sins of desire are venial. The very spirit of the Mahāyāna, therefore, may perhaps be responsible for the singular development of Kashmir monasticism, viz. married monks. 3

II. HISTORY AND ORIGINS OF MAHĀYĀNA DOCTRINES.—As we have seen, the Mahāyāna differed from the ancient Vehicle in three points:

(1) the substitution of the 'career of a future Buddha' for the 'conquest of the quality of arhat';

in other words, the substitution of the bodhisattva, who might be a layman, for the bīkṣu, 'monk';

(2) the creation of a new ontological theory, 'the doctrine of the void' (śānyātā) or of 'the non-

existence in themselves of the constituent elements of things and of the human ego' (ächarmanairāt
taya), superimposed upon the doctrine of the

non-existence in itself of the human ego (pratītya

nairatmya); and (3) the transformation of the Buddhas into great mythological gods, almost eternal; the dedication of 'future Buddhas' as also of the bodhisattvas, to the development, the prac-
tice of devotion (bhakti) towards these 'great beings' (mahāsattvā) instead of the respect and meditation practised by the ancient Bodhisattvas towards the Buddha. What was formerly venerated in the Buddha, what men 'took refuge in' (sāraya
gaman) when taking refuge in the Buddha, was the complex of the moral and intellectual qualities in virtue of which a certain person is Buddha. To admire and meditate on these qualities is an excellent means of gaining morality, tranquility, nirvāṇa. The Mahāyānist addresses himself to living, gracious, paternal gods.

There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development and inter-relation of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view.

We may safely attempt to give the scheme of the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the bodhisattva.—Ancient Buddhism holds that Buddhas are very rare, but the Mahāyāna invites all who desire salvation to enter on the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a corresponding change in morals; in short, the monk believed that the quickest way to reach nirvāṇa was by meditation; he worked entirely 'for himself' (svārtham); the activity of the future Buddha, on the contrary, is, above all, altruistic (purārtham).

Our literary evidence on the stages of this trans-

formation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

(1) The ideal of ancient Buddhism, the arhat useless to others and an utter egoist, to the extent of insensibility and insensibleness, and who could not help the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while

still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of his own existence, was no longer possible. The world, reveals tendencies in ancient Buddhism towards the doctrine of the 'career of the bodhisattva,' open to all.

The position arose, further, whether the arhat actually obtains nirvana. Formerly the arhat was required to show, not only 'morality,' 'harmlessness,' but also 'feelings of benevolence' for the future Buddha. He was to renounce the ego and the animal needs of his body; and the most important of all, he was to declare that he had reached a spiritual condition giving him a high rank among deities. This teaching is almost certainly the oldest in the Mahayana, and psychology has made progress. Many existences are necessary, they may have said, to obtain 'knowledge' sufficient for deliverance; just as, in order to achieve deliverance from love, self, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in nirvana was shaken, or that, not knowing exactly what nirvana was, a few bodhisattvas were afraid of it, and devoted their attention rather to the acquisition of celestial powers and the bliss of the Buddhas (now transformed into very happy and long-lived persons of the universe). 

The Mahabodhisattva, a very technical work on the 'career of the future Buddha,' was translated into Chinese between A.D. 295 and 418; the Bodhakarana (or 'Buddhasattva') of the Mahayana, however, gives a thorough account of the stages or degrees (bhumi) of this career. According to Chandrakirti (Madhyamakavatara), the Mahayana knows nothing of the 'Vehicle of the Future Buddha,' which is the characteristic trait of the Mahayana.

2. Vacuity.—We have more extensive information on the philosophic doctrine. Here we are concerned with the great Indian theologies constituting the Mahayana, and with their transformation: (1) the principles of analysis and speculative annihilation applied by ancient Buddhism to the ego and the great unities (the body, the heart, the universe), were now applied to the dharmas ('elements of things'); the minute elementary realities constituting the ego and the great unities; this is the Madhyamaka system [see note, Madhyamaka]; and (2) the ancient idealist tendencies were developed which in the end taught the causality of all: 'All that we are the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts' (Dharmapada, 1. [SBE x. (1898) 3]). Hence the conclusion that matter does not exist; thought alone exists.

The two philosophical schools of the Mahayana (Madhyamikas and Vijñānavādins) are both in line with the most ancient tradition. Nāgārjuna, the great master of the former, is placed in the 2nd cent. A.D. ; but there is a great deal of Madhyamika philosophy in the Pali canon, and the sutras of the Prajñāpāramitā, where this philosophy is predominant, are ancient. Chandrakirti establishes the fact that the true doctrine of the void was known to the Hinayana, or, to be more exact, that the Buddha had already taught this doctrine in his first revelation, dedicated to the arhat. But, it will be asked, if this Vehicle, the Vehicle of the Sravakas, teaches the non-existence in themselves of the elements of the ego (dharmabairāmagta), where is the doctrine of the Mahayana, replies Chandrakirti, teaches not only the dharmabairāmagta, but also the stages of the career of the future Buddha, the perfect virtues (pāramitā), the knowledge of the order of the attainments, the application of merit to the acquisition of the quality of Buddha, the great compassion (Madhyamakavatāra, tr. in Nisthon, new ser., viii. 272), whence the Mahayana was necessary.

3. Devotion.—As regards the deification of Buddhas and worship of Buddhas and bodhisattvas, we have a sure date in the Chinese translation (between A.D. 145 and 179) of the Sūtrāvatīvyākhyāna, the book in which the sacred role of Amitābha (see above, I. 2. (3)) is formulated. The Gandhāra monuments, the exact date of which is not known, but which can hardly be later than the 2nd cent. A.D., may be the earliest date of the Chinese translation. They show, or at least may be held to show, the worship of the bodhisattvata associated with that of the Buddhas.

On the other hand, we know that the doctrine of the Hymn of the Buddha that the worship of the Buddha is of great antiquity. In the art, ADIBUDDHA the present writer has mentioned some of these documents, and that a long series of inscriptions which passed the quasi-deification of the Buddha which he saw in 1903 shows that the Buddhists, or at least certain Buddhists, came to the conclusion that Sakyamuni did not descend from the earth, but was content to send his image (cf. DOCTRINE [Buddhist]). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the Kathāvatthu as a whole are compelled to locate this belief before the time of Asoka. Without believing in the authenticity of this very composite book, the present writer would willingly admit that the deification of the Buddha and his 'almost' eternity belong to a period long before the formal documents.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on Hindu soil. The resemblance between the Buddha religion and especially in a pantheon of Sakyamuni, the supreme ruler of himself down to this world, on the one hand, and, on the other, Greek, Gladdenings being in his own world (Goloka) and appearing in a human form, is striking, and contains a valuable lesson.

But it must be noted, that although Sakyamuni plays an important role in the Lotus of the True Law and in the Mahayana literature of which he is the revealer, he does not seem to have such a leading part in the religions of the Great Vehicle. In the first rank are Maitreya, the future Buddha, more living than Sakyamuni, and especially personages of obscure origin, Avalokitesvara (see art. Avalokitesvara), Amida, Vairocana, Vajrapani, and many others, whose Buddhistic character is not very marked.

Several scholars, moreover (and so many men, regard the origin of the devotion to the Buddha as a real 'puzzle' (Max Müller), and believe that it is to be found in the influence of the 'barbarians,' notably the Scythians, or other languages which were exercised especially in Northern India, the Pāli, and Kushan, where religions stagnated reached such high development. The prehistoric mythology of the Great Vehicle is veiled in obscurity, and future researches perhaps may perhaps confirm this hypothesis. The comparisons to which attention has been called up to the present have little value and do not prove that Amida is an Alter Maitreya. In any case it is useless to explain the worship of the Buddhas by the influence of Greek sculptors, who is believed, were the first to create images of Buddhas. The whole 'theology' of the

1 The Charitragītā, not one of the most ancient books, is the first to Pali literature to mention the doctrine of the pāramitā, 'perfect virtues' necessary for making a Buddha, a doctrine that plays no part in the older books (Ravivāra, Buddhītīna, London, 1903, p. 171). The doctrine of the bodhisattvata, the theory of his charity, merit, etc., is relatively highly developed in the Abhidharmakosā and some other early works, and it is supposed that it was developed especially in Northern India, the Pāli, and Kushan, where religions stagnated reached such high development.

2 It but its existence is not para-nārakā, 'absolute'; it is of the same nature as the mātrikā, 'cosistent,' as will be seen in art. VINAYAVADIN.

3 I. Odendhr (Buddhism, Stuttgart, 1914, p. 232) disagrees with the present writer on this point.

4 The Prajñāpāramitā was translated into Chinese between 265 and 266. It is said there are told that the Prajñāpāramitā and the Apanikās possessed a Prajñā in Parāsit (Wasillief, Buddhismus, p. 291), which is quite possible. They were Lokottaravādins, a sect of art. ART, OMOATAVATA, vol. II. p. 719). But what is the date of this Prajñā?

1 See the tr. of Max Müller and Tolkhim in SBE xiv. (1894).

2 See A. Foucher, L'Art gréco-bouddhique, ii., who treats of the difficult identification of the statues of Gandhāra and their date.

religion of Amāvīśa is Indian; the belief in the providence of Amāvīśa and of Avalokiteśvara, the beliefs in their saving grace, has been delivered to us in common with ancient Buddhism, but is in
excellent contradiction. The paradise of the west (Śūkhavāra), and the paradise of the east (Śīlaśūkra), both of which, probably or not, are in reality 'solar,' have not up to the present been sufficiently studied and explained. The idea of multiple universes, however, was a feature of the Buddhist religion, and is very common in the modern Buddhist literature (see, e.g., the Mahāvihāra).

II. HISTORY OF THE SCRIPTURES OF THE MAHAVĀJĀNA. — 1. Controversy on the authenticity of the books and legends concerning them. — We know that the books of the Mahāyāna appeared somewhat late, and are very rich in ecclesiastical history. Whatever may be the value to modern scholars of the tradition referring to the Councils (e.g., K. O. Franke, Digambaraśūtra, Göttingen, 1913, p. xii), the Buddhists of the Mahāyāna and of the Hinayāna admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayāna did not recognize the books of the Mahāyāna for the simple reason that these books were unknown in ecclesiastical history: This is the word of the Buddha which is found in the Śūtra, which appears in the Vīna, which is in harmony with religion, with Truth (dharma). This old text of the Dīgha is, according to them, the condemnation of the Mahāyāna, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahāyānists is the speculative argument. The Mahāyāna, they say, is the only valid religion; it is the only vehicle of nirvāṇa. The Hinayāna is indeed authentic, but the Buddha taught it only as provisional truth, taking into consideration the weakness of mind of his hearers. Besides, if the doctrine of the Hinayāna is not found in your śūtras, it is found in ours; if you do not admit our śūtras, we admit them. But, the Hinayānists reply, our śūtras are authentic since you admit them; yours are not authentic, and that is why we reject them. To this the Mahāyānists answer that there are far more reasons for admitting the śūtras of the Mahāyāna, since they are the true path to salvation.

The Mahāyānists further maintain that the Mahāyāna is not new, and that the Hinayānists tradition shows that the Mahāyāna is authentic. (1) The Svāhutattvakhāya (II. 17 and ill. 142) proves that even in the Hinayāna the Buddha taught the same tantric and yogic elements of the eon (see above, II. 2; Madhyamakāvatāra, p. 22). (2) The doctrine of the multiple teaching of the Master, of his accommodation to the ideas of the Hinayāna, of his teaching of the Caves of the Pārvattais, a sect of the Hinayāna (Madhyamakāvatāra, Fr. tr., Minto, new ser., xl [1910] 134); which is also (3) said to have possessed the śūtras of the Prayājāpāramitā edited in Pāṇḍava. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the 'reserved questions' (see art. Anekāntism [Buddhist], vol. i, p. 221; Madhyamakāvatāra, p. 251). (4) The Mahāvihāra (a book of the Hinayāna) teaches the stages in the career of both bhūtakarma and the perfect virtues.

4 Arguments of the Mahāyānists: the Śūdrakāyavāda, the Śūdravāda, the Śūdraśāstra, the śūtras of the Mahāyāna are the highest revelation of the Buddha, because in form they are not śūtras, but mere treatises (kārīvikā, mnemonic verses, with a

If the whole of the Mahāyāna was not known to the ancients, it was because the doctrines were too sublime to be understood by the compilers of the Hinayāna. The ancient Mahāyāna was the Buddha who taught them, and they were revealed by the Tantric Samantabhadra, Mañjuśrī, Guhyasvāra, Vajrapāṇi, and Maitreya. In fact, immediately after receiving illumination, the Buddha preached to the gods (in the heaven of the Thirty-three) and to the bodhisattvas (J. Edkins, Chinese Buddhism, London, 1889, p. 18; A. Foucher, Iconographie bouddhique, p. 86).

The bodhisattvas, throughout the course of the ages, have revealed the Mahāyāna to men; Mañjuśrī took the form of a bhūka and, it is said, made known the Prayājāpāramitā in 60,000 articles (Tāranāthac., tr. A. Schiefner, Petrecrad, 1869, p. 58). It was Maitreya, the future Buddha, who explained the Prayājāpāramitā to Asanga, and who is the author of the treatises of the Vījñānavādin school (Mūkṣa, vi. [1914] 42). According to a Japanese tradition, interesting as an example although without historical value, Mañjuśrī and Maitreya had published the Mahāyāna in the year 116 of Nirvāṇa: 'If these books had not existed before, whence would they have been obtained?'—a very childish argument. This Mahāyāna is said to have been completed in 230 of Nirvāṇa, notably by the publication of the Avatattvavaksa (Śrāvakaṃśāga). All these revelations took place before Nāgārjuna (R. Fujishima, Le Bouddhisme japnois, Paris, 1888, p. 54).

Nevertheless, it is to Nāgārjuna that our most trustworthy documents give the honour of the revelation of the Mahāyāna. The Laṅkāvatāra and a Mahāmahanāya were put into the mouth of the Buddha, and the words like the following:

'Four centuries after my nirvāṇa this Land will be the bhūka called Nīga; he will teach the Great Vehicle.'

It is said that Nāgārjuna obtained the Prayājāpāramitā of the Avatattvavaksa from the Nāgas (Wassieleff, Buddhismus, p. 118 f.). We cannot give an account of all the legends referring to the revelation of the books of the Mahāyāna (see Tāranāthac., p. 61 f.); what has already been said will give a sufficient idea of the beliefs that arose in the Buddhist world concerning the origin of these books. As a part from a few ancient partitions of the Hinayāna, all Buddhists readily believed all that appeared as the 'word of Buddha.'

2. Criticism of the legends and conjectures. The library of the Mahāyāna appears to be very rich in the measures of the Śūdrakāyavāda, which the Tibetans have carefully distinguished:

First, the śūtras, divine works, uttered by Bhagavat himself, which are arranged in the Kāṇḍā (ekhā Mahāyāna, 'word of the Master'); and, secondly, the commentaries on the śūtras and the treatises (dīrghas) properly so called, human works, the greater number of which were written by the scholars to whom tradition ascribes them; all these literary forms part of the Tanjār (śrāvakagṛha, 'instruction, scholasticism'). This distinction has not always a historical value. Many śūtras are frankly scholastic works, and it is probable that some of them are later than the treated themes whose doctrine they contain and authorize.

We know that Asanga wrote five treatises which he gave as a revelation of Maitreya. Although revealed, these treatises are included as part of the Tanjār, because in form they are not śūtras, but mere treatises (kārīvikā, mnemonic verses, with a

1 Maitreya-Asanga believes (Śrāvakacāra, l. 7) that the two Vehicles are contemporaneous.

3 We must confine ourselves to a few remarks here. This subject will depend for a long time yet upon monographs.
invent, preaching vacancy or the career of a bodhisattva, they make use of old models, reason in the manner of the Abhidharmikas and the Brahmins, and model the career of the bodhisattva on the path of the arhat, and the new meditations on the canonical meditations.

MAHDI.—The title Mahdi was first associated with 'Ali's son Muhammad b. al-Husayniyayah, and, apparently, given him by the adventurer Musa b. Abi 'Ubaid, who, after the death of Usain at Kerbelah, ostensibly championed the claims of this personage to the khilafate. The word is ordinarily interpreted, 'the divinely guided,' from a verb which frequently occurs in the Qur'an in the corresponding sense, though this particular derivative is not found there; yet this explanation did not give universal satisfaction; it is accepted by some, but rejected by others (see Yaqut, Geographical Dictionary, ed. F. Wüsttenfeld, Leipzig, 1866-73, iv. 693. 4). Makhtar clearly used it as analogous to a title attached to the name of 'Ali, calling him the Mahdi, son of the 'Abbas b. Zawah, whose name is also used in the same manner (see Ya'qub, Historia Prophetica, ed. E. de Lustbader, Leipzig, 1879-1901, ii. 534), where the latter title means 'the legate,' i.e. he to whom the Prophet had bequeathed the sovereignty; it is, however, often interpreted as representing a word which has been lost. He himself never called himself by this title (see Ya'qub, Geographical Dictionary, ed. F. Wüsttenfeld, Leipzig, 1866-73, iv. 693. 4). After the death of 'Ali's two sons by Fatima, the Prophet's daughter, it would seem that some Muslims were ready to recognize the claim of this Muhammad, 'Ali's son by another wife, to the sovereignty, but he himself acted with extreme caution in the matter of asserting it; he was, however, imprisoned for a time by the partisans of Abbas b. Zubah, who wrested the throne from the Umayyads; but, when their supremacy was restored, he accepted a governorship, and appears to have ended peacefully. Some uncertainty existed with regard to both the time and place of his death, and a sect arose called the Kasiainiyah, who declared that he remained alive in his supposed tomb in Mt. Radwa, whence he would one day emerge; and the poet of this sect, the Sayyid Sunnari, fully expected this occurrence, though the Mahdi had disappeared for sixty years (Afdhari, Cairo, 1285, viii. 32). The poet Kusayyir asserts that his reappearance had been foretold by Ka'b al-Ahmar (I 34. A.H.), whose name is often mentioned in connexion with matter drawn from the Jewish Scriptures. This prophecy may well owe its origin to that of the return of Elijah, but it is not altogether clear whether for that prophet is not clear; if the reference to Ka'b be genuine, we should gather that the word had been used before Makhtar's time with a religious import. This further asserts that this Mahdi's book was studied by the Kasiainis in Mecca, but such a work must assuredly have been a forgery.

With this personage the idea of an awaited deliverer in the Near East connected in a peculiar manner with a political hope is expressed by the name Maîté, to which the partipals 'expected' (muntajar) is sometimes attached. The various pretenders from the house...
of Ali received the title—e.g., Zaid (after whom the Zaïdis are called); he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Umayyad satirist said that he had never seen a Mahdi hanging on a tree (Mas'udi, ed. and tr. C. Barbier de Meynard and Paul de Courteille, Les Précieux des Or, Paris, 1861-77, v. 471). When the pretender Muhammad b. 'Abdallah first made his appearance, the people of Medina cried out: 'The Mahdi has come forth' (Tabari, iii. 159 [A.H. 141]). It was to be expected that prophecies of the appearance of such a personage should be attributed to the Prophet Muhammad, and such were current, though of questioned authenticity, the best, according to Mutahhar b. Tahir, who wrote about 325 A.H. (Le Livre de la création et de l'histoire, ed. C. Huart Paris, 1899-1903, ii. 161), being:

"The world shall not pass away until my nation be governed by one of my house whose name agrees with mine."

This tradition is also found in the collection of Tirmidhi (†279; ed. Cairo, 1922, ii. 39), where it is followed by another in which the Mahdi is mentioned:

"We were afraid of some trouble occurring after the Prophet's death, so we asked him, and he said: In my nation there is the Mahdi who shall come forth; he shall live five (or seven or nine) years; the Mahdi shall call me!"; and the Mahdi shall pile unto his lap as much as he can carry.

The author of this fiction appears to have interpreted the word as 'the giver,' which should rather be Mahdi. Somewhere more information is to be found in the contemporary collection by Ibn Majah (†273; Cairo, 1313, ii. 299): the tradition just given is repeated with some variations, indicating that under the Mahdi men would enjoy greater benefits; and it is prefixed one to the effect that certain persons with black standards (i.e. the 'Abbasids) would come from the East,

"who shall ask for good and not be given it, and shall fight, and be victorious and be offered what they asked and not accept it until they have done (the sovereignty) to one of my house who shall fill it with justice as they filled it with injustice."

Another tradition states that the Mahdi is to be a descendant of Fatima; another gives as the list of lords of paradise the following members of the family: the Prophet, his uncle 'Umar, his cousins 'Ali and Ja'far, and his grandsons 'Abdallah and Husain and the Mahdi. The last is:

"Men shall come forth from the East, and shall prepare the way for the Mahdi."

It seems clear that the authors of these fictions had somehow heard of an expected Mahdi, and may have been encouraged by the munificence of princes or to win adherents for some political party. Mutahhar adds another, that the only Mahdi to be awaited was 'Isa b. Maryam, i.e. the Christian Saviour; and, since orthodox Islam looks forward to His returning to judge the world—according to the law of Muhammad—it is not quite easy to find room for another Deliverer. One of the etymologies suggested for the name, viz. the man of the mahdi, 'cradle,' favours this view, the reference being to Qur'an, xix. 30ff., where Christ speaks 'in the cradle.'

There is little reason for supposing that the Prophet Muhammad contemplated the appearance of a Mahdi, however interpreted; but the outbreak of the civil wars within a generation after his death gave the seed of Islam which followed, led to the adoption of the idea from Jews or Christians, who look forward respectively to the appearance and reappearance of the Messiah; why the title Mahdi should have been adopted for the blind Deliverer is, as has been seen, an unsolved puzzle. To the etymologies suggested we should be inclined to add one more, viz. from hada in the sense to give, making the word mean 'He to whom has been given,' as in Mt 29:28 the Risen Saviour says, ἐκδόθη με ἡμῖν οὕτως εὐαγγελία ἐν ὅλην καὶ τοῖς γίνεται, and a similar interpretation was current for the name Shlih in Gn 49:6, until Shiloh come, viz. sāhel, 'who comes.' This is, thus the Shi'ite author of the Fathārī (ed. W. Alwardt, Gotaha, 1860, p. 58), speaking of the Mahdi Zaid (executed in 122 A.H.), curses those who deprived him of his 'right.' However this may be, the function of the Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islam, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and many persons, who had been accredited as the Mahdi by various writers up to his time Mutahhar (loc. cit.) mentions Ali himself, the pious Umayyad 'Umar II., and the 'Abbasid al-Mahdi, who reigned A.D. 775-785.

About the signs whereby the Mahdi was to be recognized when he appeared there were differences of opinion; a common theory was that he should have the name of the seventh Mahdi was, according to Abū 'Ali-Qasim, and that he should belong to the Prophet's house; yet not all demanded the fulfilment of these (not very difficult) conditions. To the former—save the few who suppose the Mahdi has come already—he is ḍnpun unwav, 'he that shall come'; and, on the whole, the Sunni view is that his appearance will be that of an ordinary man whose career is that of a reformer and conqueror, while the Shi'ite view is that he is in hiding somewhere, and has been concealing himself for an unlimited period. In our times there were in the Sudán two Mahdis simultaneously, representing these different opinions. The line between the two is not quite easy to draw, except where some definitely historical personalage is expected to reappear; for it has been found possible to adopt the theory that the Mahdi is some one in hiding, without any suggestion of supernatural concealment. In more than one case of a successful revolution the victory has been won by a commander in the name of an obscure individual, who has been brought forward only when success has been assured. Thus the author of the Fokhri (p. 171), describing the rise of the 'Abbasids, remarks that, while the Khuráshites under the brilliant Taimur were master of Asia, the Mu'tazils believed to be near, and, indeed, the head of the 'Abbasids, was himself in retirement somewhere in Syria or Arabia, attending to his devotions and the affairs of his family, the greater number of his adherents being unable to distinguish between his name and his person, i.e. knowing nothing at all about him.

The rise of Mahdi from time to time, then, was due to the disordered state of Islam in normal circumstances, but also to the wide-spread sentiment that the sovereign should be a descendant of either the Prophet or 'Ali, for with some communities the latter was regarded as the more important personage, and indeed the master whom the former betrayed (see Yaqūt, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1915 ff., i. 392). The pretenders of the house of 'Ali were repeatedly supposed by their adherents to have escaped death, notwithstanding their ostensible execution, and the Shi'a sects to a certain extent divided by these legends. Different pretenders were regarded as relatives, by whom they expected. Such pretenders were Muhammad b. 'Abdallah, executed 145 A.H., whose return was awaited by some of the Jarādiyyah sect; Yahyā b. 'Umar, executed
Mahdi doubtless coming dynasty bear, (Mas'ud b. al-Qasim, 920-983), but Muhammadan sector Prairies "Bismillah," then, likely sect al-Qasim (983), the city of Cairo, (232 AD., 848), has been the capital. The sect, Khurasan. prayer cellar, appear in the 1st century. A.H., a character there have, the majority of the inhabitants has begun to believe, there have, been played to the sword; he is likely then to have been influenced by the prophecy of the appearance of such a reformer, which, as we have seen, had already taken its way into an authoritative collection of traditions. The pedagogue which brought him into connexion with 'Ali may well be an invention later than his time, and as such his biographer appears to regard it. Some stories told by Ibn Khaldun are characteristic of contemporaries, though not perhaps true in this case; he got access to the Book of Jafar, in which 'Ali had prophesied all that was to occur till the end of this period (see art. DIVINATION (Muslim), whence he obtained the letters which formed the name of the person destined to be his chief helper and successor, with a description of his appearance. In order to appear with a miracle, he persuaded a learned associate to feign illiteracy and ignorance of correct Arabic; one day this person claimed to have learned the Qur'an by heart in a dream, and this miracle convinced the most stubborn; the confessor then proclaimed the Mahdi, whereas he had previously been called 'Alid. According to Ibn Khaldun (History, Cairo, 1284, vi. 229), the only heresy of which he could be convicted was his agreeing with the Imamiyyah sect that the sovereignty was infallible. In his treatment of opponents he appears to have been as ruthless and intolerant as any religious leader; but a singular feature of his career as a prophet besides asceticism in diet, he observed strict chastity. His creed, which has been published (Masnavi al-arasid, Cairo, 1328, p. 44 ff.), does not appear to differ from the orthodox kalim.

The prophecy of a Mahdi assumed special importance at the commencement of the century preceding the first millennium of Islam, especially in India. According to the details collected by H. Blochmann (Ann. t.-Abharter, i. (Calcutta, 1875) p. iv ff.), the Mahdist movement started in Badakhshan, where one Sayyid Muhammad Nubakhsh gained numerous adherents, defied the Afghan government, was defeated, and fled to Iran, where he maintained himself till the end of his life. In India it assumed a definite form through the action of Mir Sayyid Muhammad of Jaunpur, who found an adherent in Gajarat in S. and Mahmud. Apparently this personage was, like Ibn Tumart in his early days, a preacher and reformer, whose doctrines gave offence, and who was forced to leave one place after another. Ultimately he declared that the burden of Mahdi-ship was too heavy for him to bear, and that, if he returned home, he would recant; he died in 911 (=1505) at Feroz in Baluchistan, where his tomb became a place of pilgrimage. The Te De Scheffer, Chrestomathie persane, Paris, 1838-38, i. 165, the propaganda of this sect began at least a century before, and proselytes to whom the mysteries had been communicated were forbidden to divulge them until the Mahdi appeared. Probably with this community (in theory at least) the Mahdi, called also, as has been seen, 'the Lord of the Age,' was the legitimate occupant of the Fāṭimid throne; when the sovereign al-Hakim disappeared, the Mahdi, doubtless in vain, sought manifestation of existence and future reappearance became the dogma of a sect.

Another Mahdi whose efforts resulted in the foundation of this dynasty, was H. of Tumart, (Kitab al-Fuzul, Cairo, 1521, i. 1791). The sect called Qaṭiyyah got their name from making sure of the death of this Mahdi, al-Sarraf, without having ascertained, it (Mas'ud b. al-Qasim, 983) in the district of Kafidah, in the mountains of Taberistan and the Dailam, and the districts of Khurasan. The person ordinarily acknowledged to be the 'expected Mahdi' is Muhammad b. hassan al-'Askari, whose father died 306 A.H. There was, however, great doubt as to the age of this Mahmid at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahristani locates him in Samarra (ed. W. Cureton, London, 1842-46, p. 128); but at some time or another he appears to have taken up his abode at Hillah. The traveller Ibn Batuta († 780 A.H.; ed. and tr. C. Defrémery and R. B. San- guineti, Paris, 1853-58, ii. 98) gives a weird account of the ceremonies which he heard there, and which seem to be relics of some pagan cult.

There is a mosque with its door covered by a silk screen, called the 'door of the Lord of the Age.' Each afternoon a hundred of the inhabitants come out of their houses armed with drum and trumpet, and go to the governor, they obtain from him a horse with saddle and bridles, or else a mule; bearing drums and playing musical instruments, they then proceed, fifty of them in a column, armed and fifty behind. Others array themselves on either side. Coming to the mosque that has been called, the Mahdi appears. 'Bismillah,' O Lord of the Age, come forth. Michelle is lenient, and wrong abundant; this is the time for thee to come forth, that God may distinguish thee between the true and the false.' This time continue till the prayer of sunset, playing their musical instruments.

Ibn Khalidin, a contemporary of Ibn Batuta, who has no high opinion of his veracity, tells the same story, with some variation. According to him, the people of Hillah hold that their Mahdi entered a cellar in their habitation, and every night they appear with a mount before the entrance to this cellar, and keep eulogy to him coming out, from the prayer of sunset until the stars are all shining (Prolegomena, Beirut, 1900, p. 199). It is surprising that in the Tarikh-i-Guzidah (compiled 730 A.H., ed. E. G. Browne, London, 1910, p. 208) the connexion of this Mahdi with Hillah appears to be unknown.

In his ninth year he disappeared in Samarra, and was never seen since: the people of the Shah, however, believe that he is the Mahdi of the end of the world, is still alive, and will come forth when the time arrives.

Probably even the revised version of Ibn Batuta's story requires further redaction.

The majority of the Mahdists have thus played a larger role in the imagination than in reality; they have, however, been cases wherein the character has been assumed with very considerable and even permanent success. The first capital of the Fāṭimid in Africa was called Mahdiyyah after the Mahdi who founded the dynasty (297 A.H., A.D. 909). The scenes which prepared the way for his sovereignty were all achieved by an agent to whom he had now addressed his aid; and, according to his statements of his enemies, the person produced was an impostor, suddenly called to play the part, the real Mahdi having perished on his way to Africa. According to an author of weight (Niccolò da Conti, 496), the propaganda of this sect began at least a century
MAHDI

(339)

(tr. G. Ranking, Calcutta, 1898, p. 507 ff.) This person was named Shaikh 'Ala'i, and was born in Bāiāna in Hindustan. To the same place there came one Miyaan 'Abdullah, who had come under the influence of Muhammad of boat-builders; and at the age of 22 he was already a shaikh with a good reputation for faith and became a powerful preacher; he denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdi, with whom he proceeded to identify himself, and, indeed, in the Shi'ite sense; he claimed to be the twelfth imām, the son of Husain 'Askari. His claims were first recognized in 1851 at Abba Island, 130 miles south of Khartoum, where a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdi. News of his 'issuing forth' having come to Khartoum, the governor sent to have him arrested, but he declined to obey, and, when troops were sent to enforce the order, he succeeded in annihilating them. He evidently possessed some skill both as an organizer and as a military leader, for he soon enrolled among his followers tribes after tribe of Sudíanne, and proceeded from victory to victory until, at his death on June 22, 1856, shortly after the historic fall of Khartoum, his empire extended from int. 5 to 21 S., and from Jonga to 17°13' E. of Greenwich. He suggests as an epitome of Mahdian the sentence 'Your money or your life'; in practice it was an enforced communism, maintained by plunder, divided arbitrarily by the Mahdī himself, which also appears to have made of the Mahdi a coarse voluptuary. Like some of his predecessors, it seems to have aimed at reproducing what were supposed to be the conditions of early Islam, and to have insisted on a sort of asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Darwish ('poor'), for which at a later period the Mahdi substituted the appellation Anšar ('helpers'), which had been given by the Prophet. Mahdī also entertained in Medina. The Mahdi himself clearly aimed at reproducing the career of the Prophet, since he had a hijrah, or 'migration', viz. from Abba, where he first came forward, to Masat in the Nuba mountains, to enroll some 5000 persons representing the eminent associates of the Prophet who became the first successors. The chair of Abā Bakr, the first khalīf, was filled by 'Abd Allah al-'Abbās, who was subsequently one of the most famous as the Mahdi's successor, or khalīf, and is said to have suggested the title of Mahdi first to Zubair Pasha and then to Muhammad Ahmad (Muqtatif, xxiv. [1900] 5).

The asceticism of the Mahdi, like that of the Wahhābis, included the tabu of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leanings towards Safiism, and would gladly have obtained recognition from the head of the Sunnīs; this being refused, he abolished all 'orders' except his own.

After the fall of Khartoum the Sudān was gradually evacuated by the Anglo-Egyptian government, and the khalīf extended the Mahdi's empire by fire and sword till it reached the bounds of Egypt; in 1886 the reconquest of the country began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The new State had achieved nothing but devastation and destruction.

The success of this Chinese Mahdi encouraged many others to play the part. It seems that the title 'al-Mahdi' in the case of the head of the Sunnī community was originally a proper name; its holder, however, gave it the familiar applica-
MAIMONIDES

1. LIFE.—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, born at Cordova, 30th March 1135, died at Cairo, 18th Dec. 1204, is known in Jewish literature as 'Rambam' (the letters r, m, b, being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Abû 'Imran Mâwûn ben Maimûn ibn 'Abî Allâh. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to emigrate to the Island of Jerusalem. He, together with his father, chose the former course, and settled at Fez. Here they lived for a time the dual life of Muslim and Jew. But, the Muslim authorities growing suspicious of the Jew's Bene Jews, father and son determined to leave Fez. Accordingly, in April 1150, they boarded a vessel bound for Palestine. Acre was reached after a month's stormy voyage, and after a short stay there they went on to Jerusalem; but, as Palestine had just been the scene of the Second Crusade, and the Jews there were few in number and poor in goods as well as in culture, Maimonides fixed upon Egypt as his new abode. From a religious point of view, a house was made in Fostat, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Maimonides died, and, becoming financially reduced, he took to the practice of medicine as a means of livelihood.

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undaunted while following out the duties of his profession. The eminent position which he has ever held in Jewish estimation is expressed in the popular Jewish saying, 'From Moses to Moses' there was none like Moses.'

2. WORKS.—Maimonides' works can be considered under the following heads.

i. PHILOSOPHY AND THEOLOGY.—(a) Dalail al-Ha'irat (Guide of the Perplexed) known in Heb. as Dal'at al-Ma'adîk. The Heb. tr. was effected in 1304 by Samuel Ibn Tibbon, and another and less popular Heb. tr. was made by the celebrated Hebrew poet Al-Ha'irat (Isa, 1290) is based on the Heb. of Ibn Tibbon. Maimonides wrote a few tr. of the Arabic original entitled Guie des égarés (Vols., Paris, 1556-60), and there are two Latin tr. of the whole work as it is divided into 72 parts, the rendering of pt. ii. was brought out by J. Towsen (London, 1827) under the Title of The Reasons of the Laws of Moses. The standard Eng. tr. in 8 vols. (with an introduction and notes) is that of M. Friedlander.

(b) Mabâhîth fi-Talâ'î'îd, on the unity of God, known in Heb. as Ma'amar ha-Talâ'îd.

ii. COMMENTARY ON THE TALMUD AND MIDRASH.—(a) Commentary on the Midrash known in Arabic as Sir'aj (Light'). The component parts of this work were translated into the Arabic of the general mediaval scholars. W. Surenhusius rendered the Heb. into Lat., and E. Pococke published parts with a Lat. tr. (Oxford, 1664). The second known as 'The Eighty-Sixth Letter' of Marmar (Suredas) was edited with an excellent Germ. tr. and valuable annotations by H. H. Colenso (Leipzig, 1853). A French tr., by J. H. W. Drut, was published in Paris in 1870. A third, to the younger Haggid, is almost identical with that of Gorkine (Columbia University Press, 1912). Various ed. of entire or part works have been brought out by other scholars; and there is much that still awaits the light.

(b) Kitâb al-Tawâd, rendered into Heb. under the title of Sefer Ham-Megueth by Ibn Tibbon. Moses Bocch brought out a complete ed. with a Fr. tr. (Paris, 1859), entitled 'Livre des provoques.' The book will also be similarly classified under (ii).

iii. HALLAKH ON COMPILEMENT OF HEBREW LAWS.—Mi'nahush Turâh (Repetition of the Law), known also as 'The Strong Tract.' It is divided into 72 tracts, each of which contains a dozen or more elements, and was meant to be an easily intelligible compendium of Jewish ritual law.

iv. LETTERS AND OCCASIONAL ESSAYS.—(a) Iggerat hash-Sh'mâdah (Letter on Conversion), written in Arab, and translated anonymously into Hebrew. It deals with the subject of forced conversions. Maimonides maintains that a Jew who, outwardly through compulsion, professes to embrace Islam, has not really forsaken his fellow's claim to be considered a righteous Jew. But the authenticity of the 'Letter' has been doubted by scholars.

(b) Iggerat ha-I'âmâr (Letter to Xinnah, a converted Jew), written in Arab, and translated into Heb. by Ibn Tibbon and others. The Jews of Xinnah were given advice as to how to conduct themselves in times of religious persecution.

(c) Mi'ulam P'h'îyush ha-Ham'îlûn (Essay on the Reproduction of the Dead), written in Arab, translated into Heb. by Ibn Tibbon and also by Al-Ha'irat (see Steinshneider, Hebrewische Verhältnisse, p. 49). He maintains a spiritual view of resurrection as opposed to the largely prevalent material view of the resurrection of a united body and soul.

(d) 'Letter to the Jews of Marseilles,' written in Arab, and translated into Heb. by Ibn Tibbon, a dissertation on astronomy and astrology, in which Maimonides upholds the truth of the former, but rejects belief in the potency of the stars.

(e) 'Letter to Rabbi Jonathan of Laval,' in which Maimonides, while replying to certain queries on ritual topics, discloses much of his private and personal life. A similar note is struck in a letter to Ibn Tibbon (tr. into Fr. by H. Adler, in the Miscellany of Hebrew Literature, i, 1872).

v. MICHAEL—An Aramaic.—An Aramaic, calendar, called Egerâh Bâbirân (written at the age of twenty-three), composed in Arab, and translated into Heb. by an anonymous tr., and accepted by the rabbis of Babylonia (Sanh. 10b).

(b) 'Jewish history as understood by the people of Jerusalem.'

(c) 'Maimonides' correspondence embraced nearly all the Jewish communities of the Middle Ages. These were translated at an early date into Heb., and comprises the collection known as Kibbûl Tôbakoth ha-Rambam.

3. PLACE IN PHILOSOPHY.—Maimonides holds a place in philosophy as if you were reading it naturally.
significant place both in Jewish and in general philosophy, his importance in these respects resting mainly on his three larger works—the 'Guide of the Perplexed,' the *Sīrāj*, or Commentary on the Mishnaih *Toraḥ*. The most essentially 'Jewish' of the three is the *Mishneh Toraḥ*. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the whole Jewish ritual and ceremonial.

What prompted the author to write it was the fact that the Talmud and the Rabbinical literature generally are a large, unwieldy, unorganized mass of opinions and rules, laws, censures, prescriptions, permissions, and prohibitions, with no vestige of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of these intricacies, he is puzzled to know what is, and what is not, Judaism as laid down by the Rabbis and sanctioned by orthodox tradition. Maimonides felt the necessity of aiding Jews in this cardinal respect. Judaism appeared to him to be in danger of losing itself in masses of its own invention; he therefore planned a work in which both the letter and the spirit of the Talmud should reappear in a simple, orderly, and systematic manner, with doubts, dispositions, and doubtful points in the original are omitted. The faithful Jew who wishes to know the settled Rabbinical view on any subject of ritual or belief longer waits for the information through oceans of unnecessary details. It is given him in definite, clear-cut, and brief language. As can be understood, this good service rendered to Judaism was not without an admixture of evil. Talmudic law, once flexible, became rigid. Maimonides, by aiming at laying down opinions which were to be the norm of all future religious practice and belief, was felt to have exercised a too arbitrary dogmatism. He made development impossible and chained Judaism to the letter, instead of leaving it free to the eternally unfolding life of the spirit. The numerous attacks—very often virulent and abusive—which were hurled against him both in life and after death on account of this dogmatism, and on kindred grounds, constitute a substantial chapter in Jewish medi eval history. On the other hand, the book was well received in many Jewish communities, though the hope of the author that it would one day become the authoritative code for all Israel was never realized.

The object of Maimonides was to enable the layman to understand the Mishnah—the technical phraseology as well as its general drift—without the necessity of working through the involved disquisitions of the Talmud. The Talmud is par excellence the commentary on the Mishnah, but its elaborations and criticisms of the Mishnah, instead of throwing light on the latter, often render the darkness all the greater. Further, Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignores these glosses. He incorporates them—and largely too—in the commentary. But he sometimes adopts an independent view; and this is just one of the facts that make his work deserve as a really valuable introduction to the study of the Talmud. It is also very valuable for the many long dissertations which it contains on points in theology, philosophy, history, and exegesis. Thus, commenting on Mishnah xi, in the Treatise *Sanhedrin* on the words 'All Israelites have a portion in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see *ERE* iv, 246), being the first 'Rabbinic' (i.e. as opposed to ' Karaite') Jew to ask the Synagogue to accept a set, formulated creed of Judaism. For the adoption of a fixed dogma by a famous 15th cent. Jewish philosopher, Hasdai Crescas, in his *Or Adonai* ('Light of the Lord').

But, as subsequent history proved, there was no necessity for attaching any really serious importance to these 'Thirteen Principles of Faith,' seeing that the Synagogue at no time did, and even at the present time does not, attach any canonical validity to them. In all probability Maimonides promulgated them with no other object than to be useful as a literary monument of the often-forgotten fact that Judaism emphasizes inward belief as well as outward conduct.

Another remarkable excursus is that known as
Maimonides' greatest contribution to metaphysics, however, is his 'Guide to the Perplexed.' It is designed, as he himself says, 'for thinkers whose studies have brought them into collision with religion,' for men who 'have studied philosophy and have acquired sound knowledge, and who, while still preparing a way for them to bear in mind and to apply, are bewildered on account of the ambiguous and figural representations employed in the holy writings.' Thus the book is not meant to convince the unbeliever, but to comfort the believer. Its introductory motto is, 'Ye who have seen astray in the field of the Holy Law, come hither and follow the path which I have prepared. The unclean and the foul shall pass over the bridge.'

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the standard of his book? Aristotle. What is faith to Maimonides? Belief in the Torah, which is for all time the one true embodiment of the divine word. There is no contradiction between divine revelation as entrusted to the Jews and the metaphysical truths given to the world by the brains of the philosophers. For not only is it a fact that both in the last resort emanate from God, but it has also to be borne in mind (so argued Maimonides) that the prophets of the OT received a twofold divine message. Besides the message which is manifest to us in their written prophecies, they received oral revelations of a philosophical kind. Thus the first literary product of the Divine mind were these oral philosophies; and Scripture enshrines, in various and degrees which can be detected only by the student of philosophy, a body of metaphysical truth. As the average Jew, through the distorting effect of the repeated persecution of his race, fails to grasp this metaphysical truth, Maimonides conceived it his duty to devote the major portion of the first book of the 'Guide' to an exhaustive examination of anthropomorphic expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysics, viz., that God is incorporeal, and that all the Scriptural passages which talk of 'the eye' or 'the hand' or 'the foot' of God, or which describe divine movements such as 'passing,' 'dwelling,' 'coming,' 'standing,' etc., must be understood symbolically, and with an eye to the transzendental metaphysical truths about the deity. But there is another leading consideration. What about the Scriptural attributes of God? Is not the belief in them absolutely alien to us, and is this not an infringement of both the incorporeality and the unity of God? Maimonides saw real danger here, and, therefore, after a severe examination of the meanings and inter-relations of the different attributes of God, he proved that all of them lead to and are predicated of God is that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, power, wisdom, eternity, will, is inadmissible. But hence, then, can we justify Scripture? By assuming, he says, that the writer of the sacred language these terms must be understood as describing not a positive quality but a negative of its opposite. Hence to say that 'God is one' is merely tantamount to saying that there is not a plurality. Hence the deity can be described only by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unquestionably active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimun, or philosophers of the kalām (q.v.). As against Aristotle, who maintained the eternity of the universe, these Arabian philosophers defended the creatio ex nihilo. Maimonides, while as a Jew differing on this fundamental point from his teachers, did not perplexed as they were by the kalām, but differed from the latter again on several other fundamental propositions of theirs. Maimonides' originality of mind as well as his fearless liberality in his treatment of religious truths can be clearly gauged in this connection. He rejects, as has just been said, the propositions of the Mutakallimun—but only as propositions, i.e., theories or methods of proof. For he accepts their results. He believed, just as much as they believed, not only in the creatio ex nihilo, but also in the existence, incorporeity, and unity of God. He even opposing Aristotle on the question of the creatio ex nihilo, he practically employs the whole paraphrastic analysis of the Aristotelian cosmology in order to prove the creatio ex nihilo. The latter came about through the work of a Primal Cause, who is identical with the Creator alluded to in the Scriptures. From this Primal Cause there emanate the intellects of the spheres (these 'intellects' are identified with the angels of Holy Writ). All changes on earth are due to the revolutions of the spheres, which have souls and are endowed with intellect. God created the universe by producing the first of these intellects; hence, in the spheres the faculties of existence and motion and are thus the fons et origo of the entire universe. It is of deepest interest to both the theologian and the mystic to note in this connection the quaint Maimonidean exegesis of Gn 1 (Mal'āsh Bit'rahā) and Ezk 1 (Mal'āsh Merkāḇāhāh). His whole theory of emanation (hashav'ā) is a wonderful combination of what are usually regarded as two diametrically opposite frames of mind, viz., rationalism and mysticism.

Aristotle believed in the eternity of matter. Maimonides argues against this at great length in chap. ii. of the 'Guide,' in favour of the creatio ex nihilo—not that he believed that the latter thesis was really provable from Scripture, but because he felt it a necessary peg on which to hang the whole of his essentially Jewish conception of the universe and prophecy. On the latter subject his views are strikingly original but highly debatable. There is a strong element of passive existence in prophecy. The prophet's heart or mind is the passive medium in the divine hand. Imagination is an essential element in all prophecy. Prophecy is an impulse descending from the Active Intellec to man's intellect and imagination. Can any man become a prophet? Not, because while it is in the power of many a man to bring himself to the high pitch
of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will. Goodness may be intellectually and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

Can we now recognize the subsequent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical narratives, on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unravelling optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 1:1, 'And God saw everything that he had made, and, behold, it was very good,' the Midrashic comment upon which is, 'No evil thing descends from above' (Bréchith Rabba, xviii, 9). Divine providence extends to include evil. Biblical passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the fact of divine omnipotence, seeing that the latter must imply predestination? Numerous passages from Scripture are quoted in illustration of the difficulty of the problem. Maimonides bases his answer on the words of Is 55,' 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake that men always make is that they persist in thinking and speaking of God's knowledge in the same sense as they think and speak of man's. It is identical with His essence, and is independent of existence or of time—past, present, and future are all the same to God.

The object of the divine precepts is 'to give man true knowledge, to remove wrong knowledge, or to continue a correct order of life, to remove oppression, or to give a training in good morals or to exhort against bad morals.' Man's final consummation of 'knowing' God can come about only after man has perfected himself, not only inwardly, but in all his external relations to society, to the State, to the world. Maimonides discusses every precept of the Torah with the object of showing how their rightful understanding and practice lead to this goal. By an ingenious adaptation of Scripture he shows that the reason why God 'led the people about, by the way of the wilderness by the Red sea,' (Ex 15), instead of leading them straight to the Promised Land, was in order to give them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of danger, and in all the social and martial qualities which a self-governing nation needs. Even so, says he, it is with man. Before he can live on the high level of knowing God, he must live on the lower level of obedience to all the divine precepts which give the training-ground for his more exalted role. 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding generations by his doctrine of what we nowadays call the 'scientific spirit' into the study of Judaism. Henceforward an anthropomorphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the cultus of the OT as interpreted by the Rabbis—is of an intellectual and mechanical performances, but a movement of the human spirit towards its divine source. Man's intellect is his greatest asset. Hence Judaism, rightly understood, can never rely on a rationalized, seeing that the application of the intellect to it cannot but result in a continuous chain of development in consonance with the changing phases of human thought. As a consequence many of the substance of the 'Guide' is now obsolete, its encouragement to a freedom of spirit in the handling of religious problems will always, unlike the Kabbalist, be understood, make its appeal to the thinker and the moralist. Maimonides the liberal philosopher will live on long after Maimonides the dogmatic ritualist is forgotten.

The influence of Maimonides on general European thought has not yet been adequately appraised. The Latin translations of the 'Guide' in the 13th cent. affected the great Franciscan, Alexander of Hales, as well as Aquinas, Thomas, and Albertus Magnus, and the general philosophical view-points of Maimonides. What debt, if any, Spinoza's philosophy owes to him is a moot point, but that the reading of the 'Guide' influenced Spinoza's mode of life is certain.

LITERATURE.—The editor princeps of the Mahzor Tiberias is unknown, and the first publication is unknown. The first known and subsequent eds. are those of Soncino, 1699; Constantinople, 1862; Amsterdam, 1907; and London, 1890-98. The editor princeps of the 'Guide of the Perplexed' appeared first without place or date; then in Heb., Venice, 1551; Berlin, 1793; in Lat., Paris, 1562; Basel, 1629; in Germ., Breslau, 1843; in Arab, Fd, p. M., 1846; in Paris, 1858; in London, 1852, 2nd ed. in 1 vol., do. 1854. The commentary on the Mishnah was first published at Naples, 1842, and is accessible in the Lat. tr. of W. Surenhusius, in his Mishnah, Amsterdam, 1848-1850.

MAJHWAR, MĀNJHI—MAL, MALE, MAL PAHARIA

Majhwar, usually Maimonides', is the name of a tribe numbering Majhwar 14,210, Mānjhi 4353, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces, Berar, and Assam. The name is usually derived from Skr. mañjhay, in the sense of 'headman,' and etymologically they are closely connected with the Gonds and Khārwārs (qq.v.).

In the United Provinces the Majhwar possess a well-marked system of totemic exogamous divisions, some being named from animals, birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of the forest by a tortoise; they therefore worship the tortoise, and will not injure or kill it. Their death rites recognize the survival of the soul after death, and they take measures to prevent the return of the malevolent spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be re-incarnated in their descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spirituous liquor are offered to ancestors, and in their honour the potāri, or tribal priest, offers a fire sacrifice (homa). Among the special tribal deities of the Majhwar may be mentioned Dañtha Deo, the spirit of a broodgoose who in the olden days perished in a specially tragic way. As is the case with the cognate tribes, there is, in their belief, no distinction between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former worship, under the title of Mahādeva, 'the great god,' a name of Siva, as does the present cycle of gods, who seems to be, or identical with Bara Deo, 'the great god' of the Gonds, both of whom are believed to use the ox as a 'vehicle' (vahana). This cult has a basis of philiation of their forests clearly seen in the worship of Lingo or Lingā (Skr. ῥिङ्ग, the phallic symbol). The potāri, at his periodic visits to his parishioners, worships Mahādeva by rattling a number of iron rings fixed on a staff. The collection of iron rings is termed Diha (Pāra. dhi, 'the village'), whose name at least is of modern origin, while his female counterpart is known as the Deohārī (Hindi denkhārī, Skr. dvarghāra, 'house of the gods'), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the sal (Shorea robusta). More advanced members of the tribe identify her with the Hindu Devi. The shrine contains a water vessel, over which a red flag is hung, and the seat of the deity is a little mud platform on which offerings are laid and a fire sacrifice is performed. The officiants at these rites is the baiṅgh (q.v.), the village medicine-man, who does not worship the deity but sits facing the east and sacrifices it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest then and there cook and eat the flesh. No blood sacrifice is offered to ancestors, but flesh cooked by the wife of the eldest son (perhaps a survivor of another right) is offered in the fire sacrifice. This is followed by kindred offerings, of which the mourned dead are supposed to live. When they eat they throw a little food on the ground for the earth-goddess. Women may be present at the worship of the high god, but not at that of the village-god. They also propitiate a number of demons or evil spirits, such as Turkin, the ghost of a Turk or Muhammadan woman, and her consort Barwata, who rule all the mountain-spirits of the neighbourhood. Other spirits inhabit streams and waterholes, and with these are joined the snake-gods—the Nag and his consort, the Nagin. The tribal rite is the worship of the sacred karuna tree (Nauclea parvifolia), which is ceremonially cut down and brought into the village, where the people dance and drink to its benefit. The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (OP, pt. i., The Magic Art, London, 1911, i. 247 ff.).

The name of these tribes, almost all of them Hinduized, is usually traced to Gonds, Deo, Manji, Manjhi, and those in the Rajmahāl Hills in Bengal are closely allied to the Oriaos (q.v.). The Māl, a cultivating caste in W. and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-goddess, Manasa, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rajmahāl Hills is that by Shaw, which has been supplemented by Risley and Dalton.

LITERATURE.—W. Crooke, Tribes and Castes of the North-Western Provinces and Oudh, Calcutta, 1896, ii. 121 ff.

MĀL, MĀLĒ, MĀL PAHARIA—A non-Aryan tribe, containing various groups, numbering Māl 2,185,329, Māl Paharia 54,063, at the Census of 1911, and found in the greatest numbers in Madras, Haidarābād, and Bengal.

The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, on the large extent, either Purūsū, and those in the Rajmahāl Hills in Bengal are closely allied to the Oriaos (q.v.). The Māl, a cultivating caste in W. and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-goddess, Manasa, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rajmahāl Hills is that by Shaw, which has been supplemented by Risley and Dalton.

'Shaw describes various gods inferior in rank to the sun-god. Whenever a tiger, snake-pox, or any other plague attacks the village, Ruksey or Rākṣa is supposed to desire that a shrine should be raised for him. Accordingly the demāno, or tribal priest, is directed to search for the god. He gets a branch of the zig tree, and gum benzoin is burned, which he smells. He is then enabled to point out a place where he directs the people to dig, and the god, in the shape of a sacred black stone, is discovered. The mānjhī, or headman, then carves a hole in the stone, and into it pours the blood from his head, and little by little the stone is filled and the god is said to be in it. They offer sacrifices to it, and in this way the tribe is cured of the pestilence.' (Shaw, Travels in North Bengal, iv. 46 f.)

This god at the present day is the tutelary deity of strong drink, who is worshipped by the headman before he begins to distil liquor from the fresh crop of the zig tree (Zizyphus jujuba) (Risley, ii. 57). Chal, or Chahād, presides over a group of villages, but he is not worshipped until some
plague attacks the people, when the *domén* dreams that a shrine should be raised, and the god, when found in the shape of a stone, is placed under a muon tree. Near the village, the stone undergoing no change in form from the first (Alc.; *L.L.,* 48 f.). Goats and pigs are usually offered to him, but the triennial sacrifice of a cow, mentioned by Shaw, now seems to have fallen into disuse (Riley, ii. 58).

The first worship performed by young men is offered to Pâu Gosân, god of the road, but it is not undertaken till some accident has induced the worshipper to consult an exorcist, who decides whether a sacrifice will be acceptable.

On the day of thanksgiving at harvest he proceeds to a high road, and clears a space under the shade of a young betel tree (*k切割* or *kudur*), in the centre of which he plants a branch of the toddy palm. Round it he makes marks with red paint and, laying some rice and an egg decorated with three streaks of vermilion near the sacred branch, he invokes the god of the high road to protect him on his journeys. A cock is sacrificed, some of the blood being dropped on the branch, and the offering is cooked and eaten by the worshipper and his friends. The rite concludes with the breaking of the egg, and is never repeated unless the person concerned should meet with an accident in travelling (Los.,*i.* 53). At present the offering prescribed for the god is a white goat, and the sacrifice is very expensive, owing to the large amount of rice-bee which must be provided, and the goat and the conch are shelled by the assembled worshippers (Riley, i. 58).

The tutelary deity of the village, spoken of by Lieutenant Shaw, is called, as we may imagine, *Bāra-Bārā,* the doorways, is now called Bārā-Bārā, as he is supposed to live in a temple with twelve doors. The whole village worship him in the month of Biyâgh (Jan.–Feb.). Colonel Dalton suggests that this god may perhaps be the same as the Oron Bârâ; Kul Guosân, the Center of the mountains; and A'^âl, the god of hunting, appear not to be known at the present day. Guo Gosân, or the god of the pillar, is represented in every house by the wooden post (pâh) which supports the main rafters of the roof. On this the blood of a slain goat is sprinkled to propitiate the god in the house. The blood that this god is common to the Mâles and Mal Pahârsâ, and is worshipped by both in the same way, seems to tell strongly in favour of the common origin of the two tribes. As in Lieutenant Shaw's time Chamnds Gosân still ranks high among the tribes, and demands offerings on a larger scale than any other god" (Riley, ii. 58).

At the present day the priests of the tribe are said to be the *dôméns,* who were originally diviners, but it is declared that generally the *dômâno* does not officiate as priest, but merely directs the village headman, head of the household, or other influential person chosen for the occasion (ibid.).

The religion of the Mal Pahârsâ is of much the same type. Their chief god is the sun, who is addressed as Gosân, "Lord," and to whom an offering of rice and salt is made, a post which is decapitated by a blow from behind. The meat is cooked, and served up at a feast, of which the neighbours partake. The head alone, which is reserved for the god, is cooked, and carefully reserved for the members of the family. Next in honour to the sun are Dharti Màtâ, Mother Earth; her servant or, as some say, her sister, Garâmi; and a third goddess, "who rides on a tiger," who rules tigers, snakes, crocodiles, and all manner of noisome beasts. The tribe also performs the kâra, a rite, dancing round the sacred tree (see MAHR). Chôundi, the "thief demon," is a malevolent spirit, which must be placated by sacrifice and the offering of the firstfruits of the crops, which, as usual, are under tabu (J. G. Frazer, *GP*, p. v., *Spirits of the Corn and of the Wild, London,* 1876, p. 33). The goat and eggs and the appropriate offering. Guo Gosân, the head pillar, represents the lords of the household, and every village has its own tutelary deity, which lives in a pillar. This is periodically daubed with red, and may on no account be cut down.

**MALABAR JEWS.—**See JEWS IN COCHIN (MALABAR).

**MALAY ARCHIPELAGO.**—The religious beliefs and customs of the natives of the numerous isles of the Malay Archipelago, all of them belonging to the great Malayo-Polynesian family, were certainly in the negroid age, but, owing to historical facts and foreign influences, by far the greater part of the population have forsaken their ancestral creed. The native population, with insignificant exceptions, of Java, and Sumatra, except most Battak profess Muhammadanism, as do the Macassars, Buginese, Mandarines, Binames, and some other tribes of the West and North coast of Celebes, and of Borneo; the small islands of Ternate and Tidore are also peopled by Muhammadans. The Balineese in Bali and Lombok are Savites, with a sprinkling of Buddhists, whereas the Batak of Lombok are followers of Islam. Christianity is the prevailing religion in Ambon, the Minahassa, the Sangir, and Talahut Islands, and an increasing number of adherents among the Battak, Torajas, Sawunnes, and Rotones. The Roman Catholic natives are chiefly found in the Eastern part of Flores. Some small communities of converts to Christianity are also found in Java.

1. **Animism.**—The religion of the pagan tribes of the Archipelago is wani, and is generally denoted as animism. In speaking of the beliefs prevailing in the Malay Peninsula, Sleight rightly says: "The root ideas seem to be an all-pervading Animism, involving a certain common vital principle (animatud) in Man and Nature, which, for want of a more suitable word, has been here called the Soul. The application of this general theory of the universe to the requirements of the individual man constitutes the Magic Art, which, as conceived by the Malay, and, certainly as conceived by the Jew, may be said to consist of the methods by which this soul, whether in gods, men, animals, vegetables, minerals, or what not, may be influenced, captured, subducted, or in some way made subject to the will of the magician." All this applies to the pagan Indonesians, and, in many respects, also to the natives who have adopted another religion and, in their own opinion, are sincerely attached to it.

2. **Sumanhart,** with dialectical variations, is the general word for the Melanesians also in Indonesia for 'soul,' 'vital principle,' 'god,' (see PAPUANES). This is the word is used by the natives as it is identical with the same word. The Melanesians use the term *teologi,* *tondi* for exactly the same idea; and the Duyaks have *hambuakam,* *amurue,* *amiroi,* blue, and other dialectic variations of the same word. With the Torajas in Central Celebes the usual word is *tamona,* properly 'another,' another expression is *uwayo,* or *limugyo,* i.e. 'shadow' (Jav. *sangkaya, Mak. banggong*). When the soul temporarily leaves the body, it assumes the form of a homunculus or an animal. A man whose soul thus goes forth in order to feed upon the souls of others appears in the shape of a deer, pig, crocodile, or buffalo. Like many other Indonesians, the Torajas believe that there are witches who can separate their head and entrails from their body in order to suck the blood of other beings, and these beings may be compared with the Mal. *penanggolanes,* 'vampires.'

1 With the doubtful exception of the people of Ternate and Tidore, Halmahera (1796); 2 Malay Magic, London, 1890, p. 579 f.
The word for 'soul' in Nias is *nasa*, which, like Skr. prāṇa and Gr. πνεῦμα, is properly the 'breath of life,' and then 'life,' 'vitality.' The same may be said of Sawa (Groe, Mal., etc.). There are several other Indonesian words for 'soul': — e.g., Tontembau *imukur*, nimmukur, Sangir *himukul*, Bentenan *himukul*, Ponosakan *dimukur*.

The beliefs6 of many men, but also animals, vegetables, and minerals have a soul. The Ngaju Dayaks make a distinction between *hamburan* and *guna*, the former belonging to men, animals, rice, montebun, the latter to slaves, some trees, and things. The *guna*, like the *hamburan*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to the abode of the ancestors indirectly, into another human body, an animal, or a plant. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called 'soul' among the Ngaju Dayaks, and *dian*, *anduw*, among the Olo Dusun. It is commonly believed that the *dian* goes forthwith to Lewu han, the spirit land, which is supposed to be in the woods, or haunted burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The Ngaju word for 'spirit' in Battak is *begêr*, Nias *begâh*, which not only denotes the spirit of the departed, in which case we may translate it by 'ghost,' 'spectre,' but is applied also to superhuman beings, demons, and gods.

The Torajas use the term *anga* for the spirit of the dead, and, in particular, *anitu* for the spirits of chieftains and heroes. This word *anitu*, or *aniu*, so wide-spread throughout the whole area of the Malayo-Polynesian, in Formosa, the Philippines, and the isles of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Totti. The Rottinese use it also for demons; whereas the Hill Torajas apply it to their gods, who, in fact, are deified ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of the higher beings or gods.7 The Torajas, who use the term *lamos*, find that a distinction is made between higher and lower *lamos*.

According to R. H. Coddington (The Moluccans, Oxford, 1897, p. 35), it must not be supposed that every ghost becomes an object of worship. A man in danger may call upon his ghost, begging it to guard him and keep his enemies at a distance; but his source of aid is not sufficient for it. The ghost who is to be worshipped is the spirit of a man who in his lifetime had means to him.

The same may be said with reference to the people in the Malay Archipelago, and not the heathen exclusively. The ghosts of different kinds are not equal in power. The Karo Battaks hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Sempu-Isles believe that the ghosts of those who have died a violent death are most powerful and zealous to help their kinsfolk. In Halmahera the ghosts of persons killed in war or by accident are called *dikëco* in Galoalarea, *ditikëi* in Toelorese. They are more powerful than other ghosts, protecting the living, especially in battle, and are worshipped in the village temple. The Torajas also honour the ghosts of those who have fallen in battle.

To another category of ghosts belong the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *tyaksal does*, with frequent offerings. The tutelary deity of a place is called *dahayyang*, i.e. 'the god'; as the name implies, he is not a ghost, but a supernatural being. The worship of the reputed founder of a settlement is very common in the Moluccas. The Galearrese call the genius of a village and the forefather of its people *woong*.

The Indonesian peoples generally live in constant dread of incorruptible ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *ponionak*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *ponionak* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird; but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for older means see Kruijt, Het Antimisme, pp. 245-251).

All sorts of diseases are ascribed to the baleful influence both of ghosts and of other spirits. Especially it is said we find several ghosts who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening attacks. In apprehension of the danger which may accrue from the dead, the Malays take care that the dead body is so treated that the ghost may not return. With many tribes one of the symbolic means of doing this is to scatter ashes, as if to blind the ghost.8 The relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain prohibitions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiation.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former houses, and are present at the usual customs of erecting a hut in which to place the necessary offerings. With some Indonesians it is usual to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Ambon and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *tioho*9 of the Ngaju Dayaks and the *tengka* and the *mompate* of the Western Bare's Torajas.10 For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, The Nature of Sarawak, i. 208-210.

In the primitive belief of the less civilized Indonesians there is a bond of connexion between a dead man and his body, chieflv his bones. It is usually the teeth that is used as a medium for

10 Described in Adrius-Krujt, De Bare's sprechende Torajas, p. 117.
communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miracle-workers. Another medium of communication is found in idols representing the defiled ancestors; these are held to be inspired after due initiation. Such images are very numerous in the islands, where they are also in Ceram and in some parts of Borneo. The Battak have no idols of particular ancestors, but keep two puppets in their houses, one male, the other female, called Silion (‘the primeval ones’), or Debata ibup (‘deities of life’). They seem to represent the primordial couple from whom mankind is sprung. Among the Ngaju Dayaks these puppets called kompetong represent the ghost (pemot) of the slaves of the deceased at the tiwah, but the term has also the more general meaning of ‘puppet.’ The Toraja tribes, on the other hand, except the To Lage and To Oundé, have no images, but wooden masks (pemot). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired.

2. Shamanism.—The belief that persons, during the so-called sleep of the shaman, enter abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal conditions in order to get into contact with spirits to learn from them what medicines to apply or how to effect cures. The person through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality by artificial means, the rites employed for this purpose being multiform among the peoples of Indonesia, but, in general, similar to what we find elsewhere—e.g., among the Burials (g.e.). The Battak distinguish the shaman (siboso) from the priest (data). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decision, based upon his knowledge of the books of his craft, in full consciousness. With the Dayak tribes it is a priest or priestess who acts as medium. The dayong of the Kayans is a priestess who sends her own soul to bring back the soul (dua) of a sick person, or to conjure up the ghost of the dead. The manang, a word properly meaning ‘one who exercises power,’ is with the Sea Dayaks the man who can also be a shaman. The same characteristic belongs to the wajaton, belatan, biser, or dayang of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally seem to cause ecstasy caused by their being inspired. A peculiar kind of shamanism, which, however, is of foreign origin, is found in Halmahera.

3. Fetishism.—Various substances are supposed to conceal a powerful soul within themselves. They are therefore held sacred and worshipped in one way or another in the hope that by their power of a desired object may be attained. All over the archipelago we find the use of so-called thunder-stones, chiefly as a means of gaining invulnerability in battle or as a preservative against lightning. Not less common is the belief in the wonderful effects attending the possession of the bezooa. A high sacredness is attached to stones of a certain uncommon shape, especially in the eastern islands of the archipelago. In Timor the finder of a stone in a certain fashion, that is to say, a spirit, puts it on a sacred place (voio) and brings sacrifices to it. It looks as if such a sacred stone is a rude form of idol, for idols also are inhabited by the deity. Various other fetishes are used as amulets, and a prophylactic fetish called mutulas is in common use. It consists of a collection of leaves and sticks, which are hung in fruit trees to repel thieves. With the Torajas and Dayaks the suspended medallions are mostly of a sympathetical character.

4. Mythology.—In general it may be said that the pegan Indonesians recognize the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishing the transgressors of his laws. In the Moluccas and the South-Eastern Isles the supreme deity is generally known under the name of Upu Lero (with dialectic variations). The word means ‘Lord Sun’—a sufficient proof of his origin. Upu Lero may be identified with Upu Langi, i.e., ‘Lord Heaven.’ The earth is a female deity, and represents the female principle, who, in the West monotheism, is impregnated and fruitified by the male principle, Lord Sun-Heaven. Similarly, the Torajas recognize two supreme powers: Hái, ‘the Man,’ and Indara, ‘the Maiden’; these are the supreme spirits or priests of the Misamasa Hantumuntu is the sun and lawgiver. In the confused mythological lore of Nias we find Lovo Lango represented as the creator of men, though he himself is not primordial, but came forth from the bottom of the sea. His brother, Nia Lature, the chief of the evil spirits, who, curiously enough, is said to have his seat in the sun; he is the master of all that is perishable. The highest spirit of the Toja Battak is Orang bulu jadi na bolan, ‘the Great Lord Origin of the Creation’; and his subordinates are the three gods Debata nato tulu: Batara guru, Soripuda, and Mangala bulan. The use of the so-called corrigendum is sufficient proof of foreign influence, but the name of the highest god is original. Bhatara Guru is a title of Siva among the Saivites in ancient Java. Among the Karo Battak he is the highest god; and likewise among the Macaasars and Buginese in former times. The Sanskrit word bhattachara, in some more or less changed form, is found in many Indonesian languages in the sense of ‘god’ or ‘divine being.’ So the Ngaju Dayaks call the creator Mahatara, but also Hatalla or Mahatalla, borrowed from Arabic Allah ullah; and the same name is used by the Manyan Dayaks. The shape of the god’s head is also to be taken for higher beings. Thronghly original is the word for the supreme being in Halmahera, viz. Galelarese Giki-moi, Tobelorese Gikiri-moi, the ‘First Being.’ The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Rawololai, the war-god, has his seat in the moon, with nine female ministers. The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The sungaiangs of the Ngaju Dayaks are benevolent demi-gods related to men. The most powerful of them is Tempon telon; his principal function is to conduct the ghosts to the land of spirits. The djaus (from Skr. devatā) are water-gods, whose ministers are the crocodiles. The land spirits are called tagahac-muqer in Nias. The hantus and hantuens of the Ngaui Dayaks are malignant spirits, or demons, whereas the antu is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons take human form in the shape of snakes, dogs, pigs, crocodiles, tortoises, and men is very general. The Kayans have a great number of gods—e.g., a god of war, three gods of life, a god of storms and thunder, of fire,1

1 See van Baardt, e.g., ‘Djilab.’
2 For the ideas of the Malaya in the Peninsula see Skelat, pp. 385—397, 278; see also following articles.
of harvest, of the waters, and of insanity, and the gods who conduct ghosts to the subterranean world. Above all these gods or demons stands Laki Tenagan, whose wife is Liti Tenangan, the patroness of this division. Laki Tenangan is identified with Pa Silong of the Klementans, and Bali Pony-long of the Kenyans.

5. Nature-worship.—Nature-worship in its wide sense is expressed in the sacred character of mountains, volcanoes, seas, and rivers, all of them being inhabited and ruled by superhuman powers.

The Malay Peninsula.—I. Geography.

The Malay Peninsula, a long, thin, narrow-shaped piece of land, stretches from Burma and Siam to Sumatra. In length it is the northernmost extremity to the southern confines of Johor, immediately to the north of the island of Singapore, is rather under 1000 miles; its breadth varies from 35 at the very south to 300 at the northern end.

The result is that the peninsula, though distinctly a part of the mainland, is insular in character rather than continental. At a comparatively late geological period its southern half was indeed actually insular, being at this time joined to the island of Sumatra, and entirely separated from the northern part. To the east, the narrow, cleft division ran, somewhat roughly, from Singora on the one side to Perlis on the other, and it may be observed that at the very point where this line traverses the peninsula a marked difference in flora and distinct ethnographical differences occur. The lower and more properly Malayan portion of the peninsula is separated from that to the north by a low divide. The backbone of the peninsula is formed by ranges, mainly of granite formation, the source of numerous rivers and streams which drain the country. The ranges are steep and precipitous, rising to 7000 or 8000 ft. and containing stunted and sporadic auriferous deposits. The wild aborigines make their homes chiefly on the foot-hills, but they are also found on the main mountain complex to a height of upwards of 6000 feet. The upland valleys are narrow and covered with dense jungle. They offer little attraction to any but the scattered aboriginal population who still find shelter in their fastnesses and, in some districts, to-day, in swapping the trade in spices and other products for rice. In time of drought the coast the valleys become larger and more fertile, and their loamy soils have long been cultivated by the Malays, and in recent years by numerous Chinese, and their presence is indicated from the fact that one finds in the sea on either side the soil tends to become more and more a clayey or sandy alluvium. Often the rivers are tidal for a great many miles inland. On the east coast, for some four months of every year, the steady boat of the Chinese monsoon seals all the river-mouths with a sandy bar, and during the height of this monsoon all trade is effectively prevented. The entrance to the peninsula, as it is, by a colossal breakwater, by the neighbouring island of Sumatra. Here muddy mangrove flats are found, but with magnificent expanses of sandy beach at intervals. The light breezes that prevail have led to the evolution of quite different types of bonts and canoes from those on the China Sea.

The peninsula is rich in tin ore. It produces an amount estimated, roughly, at three-quarters of the entire world's supply. The revenue derived from this industry has been largely ably applied by the governments of the native States to their development. Out of this income a railway has been built from the coast to the interior, called the construction round the main mountain mass on the east coast, and will be continued to meet the Siamese railways from Bangkok, while the railway from Penang is also to be extended to meet the same railway system. Together with a most excellent road system, second to none in the East, these modern means of transport have changed entirely the old conditions of life, and have brought this part of British Malaya, in one generation, into vital contact with our own economic world. Besides the mining industry there are now large agricultural industries dealing with rubber and coco-nuts. In the main these industries are worked by a non-indigenous population from China and the south of India, for whose sustenance large supplies of rice are imported annually.

The Federated Malay States of Perak, Selangor, and Negri Semban on the Straits of Malacca, and Pahang, on the China Sea, form a compact core dominating the centre of this part of the peninsula.
MALAY PENINSULA

Trengganu on the east coast, all of which have really been taken by British protection, and also the State of Patani, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection, which may be considered of the units of the British sphere as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populated island of Java, and which is more accurately extended to include the island of Labuan, British N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. Ethnological affinities and history. — The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out observations deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have served as a caucway for migrations from the Asiatic continent, while the protected character of the west coast and the richness of this part of the peninsula in minerals and other products, have favoured its economic development, and made it not only attractive to higher civilizations, as the study of its entire history shows, but also a rendezvous of merchants and workers from many far-separated countries. At the present day not the least important element in the population consists of a congeries of alien races, Chinese from the southern provinces of China, Canton, Fu-kien, and the island of Ho-nan, Tamils from S. India and Ceylon, and, in a lesser degree, Siiks, Panjabis, and Pathians from N. India, and Javanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Krav Divide, overlapping the ancient ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the Perak valley, the defences of which were strengthened with a breastwork, which is not indigenous in this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in comparatively recent times.

(a) Malay. — The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal of at least two different types, and Malay) Indian and Islamic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a great extent, if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongoloid group of peoples found in Formosa, Sumatra, Java, and throughout a great part of the Malay Archipelago. When the Palæmbang immigrants first began to arrive from Sumatra, about 900 to 1000 years ago, introducing a Hindutized civilization into the peninsula, it is probable that they found some Indo-Chinese race of superior culture already in possession. This is suggested by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some centuries, the earlier Palæmbang colonists, are still in the patriarchal stage as distinct from other Sumatran settlers, by whom customs of a patriarchal type are followed. In the Malayan phrase, the people of the Negri Sembilan follow the 'adat perpatih,' or Peranakan type, as 'Peranakan' or Peranakan, whereas the other Malays of the peninsula follow the 'adat Temenggong' ("custom of the Temenggong"), these two contrasted bodies of custom being based on mother right and father right, respectively.

These Sumatran settlers, who were agriculturists, amalgamated with the aborigines, at any rate in some districts,—e.g., in the State called Negri Sembilan,—but the conversion of the Malays from tolerant Hinduism to Muhammadanism from the late 14th to the 16th cent. began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Sunni Muhammadanism of the Shafi'ite school has remained (as in Java) the official religion of the peninsula, although among the less educated of the Malays it is the merest veneer covering a vast body of traditional practices and beliefs which can be traced either to the influences of Hinduism or to primitive shamanistic beliefs, such as are still held by the aborigines. Malay Islamism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs, geographically and ethnographically, to Indo-China, a name which well expresses the fact that, with hardly any exception, the congeries of races inhabiting the peninsula from time immemorial represent strata of races belonging to one or other of the two chief families of nations in various parts of Asia, viz., a Mongoloid and a non-Mongoloid, both types being used broadly. Belonging to the latter family we have (1) Indonesians (defined by A. H. Keane as the pre-Malay 'Caucasian' element, of which the Veddas and Kermans, and one at least of the Australian aboriginal races, are typical), often called 'Dravidian' (though, like 'Malayo-Polynesian,' this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same great family, (2) a more highly developed or specialized type, possibly the tall brown-skinned Polynesian. These two main Indonesian types are said to be represented in the peninsula, the pre-Malay 'Caucasian' element of the late Sembilan, the Vedda type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language,9 while to the pre-Malay Oceanic ('Caucasians') (of the Polynesian or Miurai type) belong the latter east coast 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat lanky, large-limbed men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongoloid family of nations is represented both by the Siamese (or Thai) in the northern portion of the peninsula and by the Malays themselves in the southern part, the Malays proper being perhaps best regarded as a highly specialized offshoot of the southern or 'Oceanic' Mongoloid race, immediately immigrant from central and southern Sumatra. They have long, lank, bluish-black, straight hair, of circular section, and are almost beardless, with skin of a dark yellow-brown or olive hue (or the 'colony of newly-fallen leaves'); they are round-headed (brachycephalic), and often have more or less wide

---

2 R. W. Wallace, Malay Grammar, 1893, p. 12. This connection was first definitely asserted by Prof. Schmidt of Mödling, Austria, and is now generally accepted; it establishes an ultimate prehistoric relation between the Malay and the languages of the aborigines in the Peninsula (167).
and flattened noses, and somewhat thick ears, and on the average are about 1'50 m. in height. The women are usually much shorter than the men. Both sexes have rather short, often almost stumpy, feet, with toes that are to some extent pointed and free thereby willing up at the instep leading to a raised platform or house-floor by gripping it with the hands and at the same time holding it between the great toe and remaining toes of the outer edge. The joints are remarkably fine and small; the dagger-ring of a well-developed old-style rebel chief, which was worn on his forefinger, was too small for an average-sized little finger of a European. A jungle Malay can commonly perform a feat called with his limbs that are impossible to a European unless he has been specially trained as an acrobat.

In Sumatra the race was moulded by Indian influences into a comparatively civilized condition before they crossed to the peninsula. When they arrived, they found the country occupied by the three pagan races (see below, (6)), whom they drove before them into the fastnesses of the mountainous and jungle-clad interior. It is thought that they also found some branch of the Môn-Khmer or Môn 1 races holding the coast-line and other points of the eastern coast, and thus occupying almost the same relative position towards the aboriginal races as the Malays do at the present day, and that they then partly absorbed the Môn, by thinning them of their women, and partly drove them into the jungle. This hypothesis is, however, a lost chapter in the history of the peninsula, although some such theory seems evidently necessary in order to account for all the actually extinct conditions.

The Malay proper are but partially civilized, a graft upon a savage stock, allied not only to the Central and Southern Sumatrans and Indonesians, but also perhaps ultimately to the Chams of Champa and Cambay, or even to the Cambodians.

The hereditary savagery of the Malay nature, for many years after the introduction of the British Residential system (introduced to curb the turbulent Malay Rajas, who were fostering piracy), continually broke out, the commonest form in which it showed itself being perhaps the bálok, the national Malay method of committing suicide, until the gradual strengthening of the right arm of the British rule made it risky to indulge in it, and when by degrees it became unfashionable. Other striking evidence of the high-strung excitability of the Malay temperament is still to be seen in the form of the mystic disease called latah (corresponding to what has been called 'arctic hysteria'), which also has not yet been thoroughly investigated.

(6) Aborigines.—Various theories have been put forward as to the ethnological character of the several wild races which form the substratum of the population. It was held by the older ethnologists that they belonged to a homogeneous group—a Negrito race modified by admixture with the Malay population. This is what has been termed the 'Pan-Negrito' theory of A. de Quatrefages, N. von Miklucho-Maclay, and others. This hypothesis, however, has proved untenable, and the result of later researches has established the fact that at least three 1 types are to be found among these primitive tribes. Of these tribes two, at least (the Semang and Sakai), can be found in a relatively pure state, though only in very limited areas, and the third (the Jakun) is probably nowhere near as pure. Among the aborigines of the peninsula, this fact has taken place in varying degrees throughout the peninsula, and the only satisfactory procedure anthropologically is to compare each tribe with the nearest of the three to which it is most closely related. By no other method can any really useful conclusions be reached, or, indeed, the drawing of the most fallacious inferences avoided.

(1) Semang.—The Semang are a nomad Negrito race—comparable with the Negrito (Pygmies) peoples of Central Africa, and probably most closely connected with the Andamanese, whose group of islands lies off the Burmese coast at its southward end—belonging to a primitive group of peoples found to a greater or less extent as a rule of the aboriginal population as far as New Guinea and the Philippines, although it is remarkable that no traces of any such race have yet been quite proved in Borneo midway between these two Negrito centres. The physical characters of these people are tall and slender, broad-shouldered (male); brachycephaly, skin varying from dark copper or chocolate to shiny black, hair woolly, nose broad, lips everted, beard scanty. They extend from Patani to Kedah, and from Kedah to Mid-Perak. They are called 'Malaya' or 'Malava.'

In view of the fact that the Semang (or, as they are called on the east coast of the peninsula, Pangan) are so frequently described as being of Negro character—like African negroes seen through the reverse end of a field-glass 2—it cannot be too strongly stated that this is a mistake. At the utmost, it may be conjectured, with W. H. Flower, that they are representative, with the true Pygmies, of an original undeveloped stock from which the Papuans, like the Negroes, may have branched off. But even for this theory there are many difficulties, and it cannot be said to have been in any respect established. Hence the Negrito and the Negro must be regarded as totally different races—the former having short or round heads and the latter being long-headed.

(2) Sakai.—The Sakai were at one time regarded as Semang, simply called Malay, but are now clearly differentiated as a separate and independent type 3 most nearly akin to the Dravidian group of peoples. They are taller than the Semang (average height 5 feet 9 inches, 1'437 female), dolichocephalic, skin very variable, light to dark brown, hair wavy, nose fine and small, cheek-bones broad, mouth small, lower lip full and projecting, beard as a rule non-existent. The habitat of the purest Sakai is S.E. Perak and N.W. Pahang.

(3) Jakun.—The Jakun are a mixed group inhabiting especially the south of the peninsula, probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more remarkable since a relatively important element running throughout all the aboriginal dialects in

---

1. Wilkinson has recently suggested that five aboriginal race types should be recognized. When, therefore, the new elements, which would be required in order to form the two proposed new types, have been differentiated, and these elements are all shown not to be possible to either one or both of the other types already identified, the problem will have reached a further stage of development. Certainly, as there are still some unexplained points, it is probable that some further racial element may eventually be isolated (see F.M.S. Govt. Paper on Malay Subjects: Aboriginal Races of S.E. Asia, 1907, 1-437 female).

2. Hugh Clifford, In Court and Kampung, London, 1897, p. 172. But this is a microscopic slip for an author who has done as much as any English publisher to familiarize the English public with the peoples of Malaya.

3. This all-important peculiarity was first clearly established by R. Martin; see his magnum opus, Inlanddame der malaiischen Halbinsel, Leipzig, 1900.
varying degrees consists of some Malayo-Poly-
nesian tongue, the vocabulary of which shows
affinities with the northern language of the Far
Eastern Archipelago, unlike modern (peninsular)
or standard Malay. The reason for this is not
apparent, unless we may conjecture that at some
remote period a race whose national speech was of
this Malayo-Polynesian type prevailed in the
peninsula. The Jakun may be classified as consisting
of at least three related groups, blended as above.
In the south of Malaya, the Jakun Halla should
be to that extent regarded as aboriginal Malays.
In physical character they are a little taller than
the Sakal, the head is brachycephalic, the skin
dark coppery, hair long, straight, and smooth,
nose thick, flat, and short; the eyes show little
tendency to obliquity, and the mouth is large and
broad, with well-formed lips. The Jakun proper
are divided by the Malays into Hill Tribes (Orange
or Jakun Bukit) and Sea Jakun (Orange Laut).

The surest test in regard to these tribes is the
hair-character; hence we may distinguish the
two main racial groups as ulotrichi ("woolly-
haired"), eumontrichi ("wavy-haired"), and lisso-
trichi ("smooth-haired").

There has undoubtedly been a considerable ad-
mixture among all the tribes, but, owing in parti-
cular to the close contact with the Hindus, it is impo-
sible that they have been materially affected by
intermixing with the Malays, since nothing could
be rarer than that a Malay woman should
descend herself by marrying a heathen husband.
The case is rather the other way about, since a
Malay marrying a woman of the wild tribes would
see that his children were brought up as Muslim,
and in many districts, especially in Kedah, it was
considered a religious duty to receive a large part of
the aborigines Semang element has caused them to be reckoned as part of the
recognized Malay population.

3. Culture.—(a) Malaya. — Apart from such ten-
dencies as have already been mentioned, the Malay
character may be regarded as a softened and more
civilized form of the Mongol, since under ordinary
circumstances he may be relied upon to show him-
self a peaceable, quiet, civil, and loyal subject,
though he still retains much of his old proud
sensitiveness, and in inland districts he is still
reserved in his ways of life, and to some extent
suspicious of strangers. In so far as he is not
less trammelled by civilization, the Malay is
frequently of a bold and even savage character
and makes an excellent soldier; there should, there-
fore, be no doubt that with training he would soon
develop first-rate soldierly qualities. His alleged
laziness is due in part to his natural reserve, which
allows more pushing races to outstrip him, and in
part to the simplicity of his life, and to the absence
of any spur to industry in a land where the climate
supplies out of its own superabundance the greater
part of his few simple wants—a land which to him
is a veritable "island of fruits," of howey hollows
waved by summer sea. 1 It must be remem-
bered, too, that before the advent of the British
the employment by his rulers of the broh or oreke
system, as well as the wide prevalence of debt-
slavery, made it difficult for the average Malay to
reap the reward of his labour.

Among the institutions of the Malay race which
it shares more or less with other races in the same
region are the use of so-called prahus, 1 once
associated with piracy), the building of houses
on piles (inland as well as on the border of tidal

1 These prahus, being lowly boats paddled by large numbers of
oars, are capable of great speed, and it is difficult for the average
Malay to escape from pursuit by non-of-war's boats by sailing over
the impenetrable river-bar of the peninsula, and escaping into the
network of swamps and water-courses which is not till the second half of the 19th.
cent. that the prahu was vanquished by the paddle-wheel.

rivers), the use of the blowpipe with poison-tipped
darts (now practically confined to the aborigines),
and the kris, the traditional Malay blade, a skirt-like
garment, closely corresponding to the kilt of our
own Highlanders, though worn somewhat longer on the western seaboard of the pen-
ninsula, the filament, gold-plating, and blackening
of the teeth (now but all but completely obsolete customs), the use of the balei, or council-hall (now confined to Rajahs), and a strong belief in animism. In the southern part of Malaya the Malays are not infrequently more or less bigoted
Muslims, being in this respect at the very
antipodes to the Battak of Sumatra, who have a
literature of their own, and who are still to some
extent inclined to be cannibals.

The Malay traditions and romances contain dis-
tinct references to human sacrifices, which would
appear to have lasted until only a few years before the
British. The men show mechanical skill of a high
order, and would probably respond readily to a
more advanced training especially in engineering.
Many are still adept in manual arts, notably in
those belonging to the jungle and the sea.

The material culture of the Malay is of the in-
visible Malayan (chiefly Sumatran) character. It
has never been influenced by Hindustan to such an
extent as, for instance, the other big tribes, as
the Chinese. The Malays are skilled and artistic
workmen in certain arts, though in others they are
somewhat conspicuously backward. Their textile
work reaches a high standard, and they display
considerable ingenuity in their weaving processes
and in combining their dyed threads to produce
elaborate and original patterns, which the modern
things can be compared. In metal-work, especially
in the working of silver, their taste is, under favourable circumstances, less florid
than the Indian and less coarse than the Chinese.
In ornamenting metal and damascening, in inlay-
ing, and especially in niello-work, their work, both
in design and in technique, is excellent of its kind.

The manufacture of blades for their krisses, and other
weapons, is rare, though not non-existent; a high
degree of skill in the adornment of the hilts of
the weapons and the sheaths in which they are kept
is, however, appreciably common. Attention is paid
also to the manufacture of waved kris-blades, and their
cumbersome work is a technical process of consider-
able elaboration, the more so because the propor-
tions of the blade are determined by an elaborate set
of rules governing the dimensions and intended
properties of the various portions. These rules are
not entirely technical, though compliance with
them requires some degree of technical skill, but
are in part magical, and designed to secure excel-
lence in the blade and success in its employment.
Similar rules are sometimes applied in a lesser
degree to the porang (woodman’s knife). Metal
casting by the cira perdus process is known and
employed not only for copper but also for white
metal also tutenagis (sometimes popularly called
tooth and egg metal). Coins (round cash) were
formerly cast on the east coast in the form of
‘cash-trees,’ from which the cash were snipped off,
and before the British entered the country the
superfluous tin was run into ingots shaped like
elephants, crocodiles, cocks, etc., which were used
as currency. 2 Time was reckoned by water-clock
(as in India and Ceylon and also, it may be men-
tioned, in ancient Egypt), a method of time
keeping in Kedah it was kept by means of a

2 R. C. Temple, The Obsolete Tin Currency and Money of the
Federated Malay States, Mazagun, 1914 (reprinted from LA).
perforated half coco-nut shell set aloft in a water-bucket, and timed to sink in a definite period. Pottery is made both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases, Indian influence is traceable, the types being both graceful and artistic. In some cases hemmatite, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm clothing and furniture is, no doubt, responsible for the lack of a more extended de-
velopment of textile ware, in spite of the great abundance of chays suitable for porcelain. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malays, as shown in the ornamentation of household utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heart-breaking effect of the superficial Muhammadan veneer which has been imposed on the Malays from without. The further from such influences, the commoner such ornament becomes, and the better its quality. The Malays are especially in-
gredient in their clothing is conformity in confor-
ing to the conditions of their surroundings; their houses are well adapted to the conditions of life of a jungle-dwelling race, whilst the seaworthy qualities of the Malay prahu, or sailing-boat, bear witness to the reputation of the Malay as a sailor.1

(b) Aborigines.—The culture of the wild tribes presents generally many features of similarity. The inland tribes are still nomads to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them practice a primitive agriculture, living in a rude way small patches of rice or millet; their method of cultivating their half-wild orchard-trees, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sea Sakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in snaring and snaring their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their clothing consists of a girdle of leaves or barkcloth, or, on festive occasions, a belt of shining black strings, made of the rhizomorph of a tonstool. Their typical habits are of a primitive character, consisting of mere loafs or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. Their diet consists of the jungle and sea-food; they neither chew betel, nor do they taru or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in the two tribes of the pagan tribes the bow is, in the present writer's opinion, good prima facie evidence of Semang admixture; the northern Sakal, who also possess it, have most likely taken it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakal, the idea of which has been copied, in all probability, from their Sakal neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages were settled by meetings of these chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishment more rigorous than elsewhere.

The Sakal, a mountain race, are still largely nomadic. Their habits consist of tree huts and temporary shelters; their clothing is a loin-
cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They cut the face and practise scarification and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their dis-
tinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their im-
plements, more especially the blow pipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type. The chief functionary is the penghulu (Mal. 'head-man'), who has every right over his tribe. Except when enforcing his position, however, he is only the equal of his fellow tribes-
men. The head-man of the Semang, as he is called, like the heir, the penghulu may appoint his successor during his lifetime. In their laws the penalty of death is reserved for murder, the relatives of the victim being the executioners. Cases of this kind are rare. For theft, also rare, the punishment is exclusion from the tribe. For other crimes the delinquent makes compensation, or pays a fine. Individual property does not exist, its place being taken by family property. The family as a unit cultivates the land, and the produce is shared between the members. The limits of the family property are designated by the penghulu, and abandoned land may not be taken up without his consent.

A more highly developed social order exists among the Jakun, or aboriginal Malays, as represented, e.g., by the Southern Sakal, who show strong Malay influences.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing consists of a girdle of leaves or barkcloth, or, on festive occasions, a belt of shining black strings, made of the rhizomorph of a tonstool. Their typical habits are of a primitive character, consisting of mere loafs or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. Their diet consists of the jungle and sea-food; they neither chew betel, nor do they taru or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in the two tribes of the pagan tribes the bow is, in the present writer's opinion, good prima facie evidence of Semang admixture; the northern Sakal, who also possess it, have most likely taken it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakal, the idea

1 See H. Warington Smyth, 'Boats and Boat-building in the Malay Peninsula,' in Journal of the Soc. of Arts, 1902 (reprinted in Ta xxv. [1906] 97 ff.).

1 penghulu—Mal. 'head-man' (from obs. Mal. halu or ubs, 'head'). On the other hand, pelawas or penghulu—Mal. 'band-
man' (from obs. Mal. lama, 'band'), i.e. executive officer.
who represent or act for him upon occasion. Thus, among the Besis of Langat, the batin is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in case of illness of cattle, and the judge whose duty it is to punish wrong-doing. Its substitute is the *pijang*. Their subordinate, known as the *pahngalu batin*, has charge of the tribal feasts and ceremonies. The *pahngalu pulakr* (proverb-Mal. *jaruk* or *corvée officer*) is the summoner of the tribe; the *pahnglima* is the batin's executive officer. Among the Dames each batin has authority within his own domain, but difficult or unusual cases are referred to a council composed of all the batins. In this division of the Jakun, as indeed among all, crime against personal property is rare, and is expiated by payment of fines in the form of cowries or Chinese money. On half of the fine goes to the batin and one half to the injured person. The office of batin descends, as a rule, from father to son, except among the J侯er Jakun, where the identification points to be accepted by the tribe, and, if his brothers as well as himself are rejected, a stranger to the family is elected. If suitable, the sons of minor officials would be appointed by the batin, oftentimes with their father's consent. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons and daughters or to wife and other relatives. Property was held by man before man among the Manns who assigned on his death to his parent's brothers and sisters.

4. Languages.—(a) Malay.—The Malay language belongs to the *Nusian* or *Niasian* family, related to which occur sporadically over an amazingly vast insular area, extending from the northern New Guinea coast, and from Madagasgar in the West to Easter Island in the Eastern Pacific. Malay itself, however, is a very considerable and important language, and seems to have spread over a great part of the same region. In recent years a connexion has been sought between the Malay-Polynesian family of languages and a family of languages *of* 'Austronesian' languages, including S.E. Asia, Malay Peninsula, Micronesia, Polynesia, New Guinea, and the aboriginal dialects of the Malay Peninsula; this connexion is now generally accepted.

This connexion actually draws on the Malay language in prehistoric times with the corresponding element in the Sakai and Semang dialects of the peninsula. This theory is entirely the work of Schmid[31] and, on the other hand, is well supported by the various elements in these aboriginal dialects first created this identification.
more interesting element has been proved to show a very close affinity with the Mōn-Rinmēr or Mōn dialects of western Indo-China. The identifications, though casual and numerous, and even striking, are rather disappointing, if considered as a whole. Only a very small number of the words could be identified, about 20 per cent of the entire vocabulary. The question is, what is the remaining 80 per cent?

To reply, we must study attentively both the Semang and Sakai syntax and structure, and a considerable percentage of the vocabulary, and especially, as regards Sakal, the phonology; the modern Jakun dialects are of no less importance. In each group we can find a very small number of unidentifiable words. The Semang embodies a number of words which are confined to the Negritos and which are completely and exclusively. It is clear that the Semang dialects did not originally belong to the Mōn-Annam groups. These words relate to matters of everyday life, and presumably they represent the older original dialects of the Negritos. The relationship with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Semanese is recognized in the Andaman dialects, and this fact is one of the many and great puzzles of the Semang problem. For the unidentifiable element in Sakal no suggestion as to origin has been made, though it is possible that many of the uncertain words may yet be traced to a Malayakan not to a Mōn-Annam origin. In the case of the Jakun it is pointed out that some of the words of unknown origin occur in Semang, but not in Sakal, and they are mostly of sufficient number to support the view that Jakun dialects were originally allied to Semang; on the contrary, a large number of words are allied to Sakal, and with Wilkinson, treating as Jakun certain southern Sakal dialects, agrees with the Semanese linguistic basis, but leaves some of the cases unexplained. Both Rōkōbō and the common element in which Mantri, Redunda, and Jakun differ from every other known language.

5. Religion: greater gods.—(a) Malay. — The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and customs are to some extent based on an older type of religion, which is said to have been introduced by the Semang and Sakali, and to have been followed by the Malay races. This pre-Islamic religion may perhaps be compared to the religions of the ancient Indo-European peoples, which are known to have existed in other parts of the world. In the Malay Peninsula, the ancient religions were probably mixed with the beliefs of the Semang and Sakali, and to some extent with the beliefs of the Semanese, who are said to have been the original inhabitants of the region.

The Semang were a primitive race, who lived in the rain forests and mountains of the Malay Peninsula. They were a peaceful and contented people, and they had a deep respect for the Deity, or the god of the world. They believed that the world was created by a great god, who was called the Father God, or the Creator. They believed that the Deity was everywhere present, and that He was the source of all life and prosperity. They believed that the Deity was a great and powerful spirit, who could protect and defend His people, and who could also punish them for their sins.

(a) Malay. — The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and customs are to some extent based on an older type of religion, which is said to have been introduced by the Semang and Sakali, and to have been followed by the Malay races. This pre-Islamic religion may perhaps be compared to the religions of the ancient Indo-European peoples, which are known to have existed in other parts of the world. In the Malay Peninsula, the ancient religions were probably mixed with the beliefs of the Semang and Sakali, and to some extent with the beliefs of the Semanese, who are said to have been the original inhabitants of the region.

The Semang were a primitive race, who lived in the rain forests and mountains of the Malay Peninsula. They were a peaceful and contented people, and they had a deep respect for the Deity, or the god of the world. They believed that the world was created by a great god, who was called the Father God, or the Creator. They believed that the Deity was everywhere present, and that He was the source of all life and prosperity. They believed that the Deity was a great and powerful spirit, who could protect and defend His people, and who could also punish them for their sins.
The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any comparison be made, it is the more so. What has been maintained, it is overshadowed by the cults of demons, ghosts, and spirits. The Jakun afford more certain evidence of a belief in a supreme deity, although, in their conceptions, the best are vague and shadowy. The Mantri say that Tukan Di-Bawak, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Bonak, in one god, Pitung, who dwells in the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johor know and acknowledge a supreme being whom they call by the Malay-Arabic name of Tukan Allah; the grotesquely slight influence, however, that is really exercised by Muhammadanism on the wild races of the Malay jungles is best evidenced by the statement of these tribes who believe that Muhammad, the prophet of God, is the wife of the supreme deity.

5. Lesser gods, spirits, and ghosts.—(a) Malay.—Subordinate to the great gods are lesser gods or spirits whose place in Malay mythology is due to Muhammadan influences; their inferiority may in part be due to the fact that the gods of the autochthones are usually considered by an invader more powerful than his own deities, but they are gods and spirits are the jin, or geni. The Malays, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Genii (Sang Gada Raja) appears to rise on occasion to the level of the great deities, when he is regarded as a manifestation of Batara Gurn in his destructive aspect as Siva, or Kala, though later he became to be considered a separate personality. This would also explain the difficult problems of how the Black and White Genii come to be regarded as brothers, the latter being identified with Maharaja Deva, 'great king of the gods.' The genii are also subdivided into good and faithful (jin isian) and bad (jin kafir), this nomenclature being obviously a Muslim accretion. In addition to these subdivisions they are also regarded as attached to special objects—e.g., the powerful jin of the royal musical instruments. The genii are able to do infinite harm to mortals, and choose as their dwelling-places hollows in the ground or places of human habitation, or the epiphytes on trees, etc. They are sometimes said to derive from the dissolution of various parts of the anatomy of the world-snake Sakatinuna, the first great failure at man's creation. The Malays have also adopted into their popular religion the Muhammadan belief in angels (Azrael, Michael, and Gabriel), prophets (Solomon, David, and Joseph), and chieftains, four in number named in the four corners of the earth.

Ghosts and spirits are known by the generic name of hantu. Of these there are many varieties. Hantu kubor are grave-demons who, with the spirits of murdered men, prey upon the living wherever they see an opportunity; hantu jeli is the storm-lion; hantu moyor and hantu laut are water- and sea-spirits; hantu rimbau, deep forest demons; hantu bérök, the baboon demon; and hantu gong, the 'smoosung' demon, who interferes with ropes-napes and traps for wild animals. In addition there are giant and 'tall' demons (bote, goa-posti, and hantu kingi) as well as the evil one (poor péri), who are of foreign origin; echo spirits (orang buman), spirits of whom little is known except that they are good

1 But this name (= Firtmis, 'Word of God') is clearly borrowed, like Allah, from Muslim sources.
2 Possibly from daikara, 'beneficent,' an epithet of Siva.
3 Or 'hidden.'
the semangat is distinctly referred to as being sevenfold, and, as a similar multiple division is found elsewhere among savages (PC i. 391 f.), this may be taken as original, although seven is a somewhat favourite number in Malay magic.

The belief in the existence of semangat does not confine them to human beings. Animal, vegetable, and mineral semangat are clearly recognized. While in the case of animals the semangat is a concept firmed by the embryo of its embodiment, in the vegetable and mineral kingdoms the tree semangat or the ore semangat is usually an animal, whereas the rice semangat is treated as resembling a human infant. The semangat of the enewood tree, e.g., takes the form of a bird, the tin-ore semangat that of a buffalo, the gold-ore semangat that of a deer, and so forth. A box or a treasurejar may also have a semangat until clipped or broken, when the semangat escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the semangat of a particular kind of boat is called by a special name, marred, as opposed to the usual soul-name, semangat. But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This belief is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral kingdoms.

Animals, vegetable, and mineral ideas intermingle and complete in extending the belief in the semangat to all nature, animate and inanimate, side by side with the purely animistic belief that is abroad in evidence among the Malay's Ciree-like theory attributing animals, birds, fishes, reptiles, minerals or magic (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomoropshic ideas is to be found not only in the folklore but in many magical ceremonies and charms of the Malays (on the semangat see further, Indonesian).

(b) Pagan races.—Of the conception of the semangat held by the pagan tribes very little is known, and, lacking definite statement, their beliefs must be inferred from their methods of burial and treatment of the dead and their views of the life after death.

According to the eastern Semang (Pangan) of Kelantan, each man has a semangat shaped exactly like himself, but 'red like blood' and 'no bigger than a silver coin'. When a mother bears a child, she gives it to the child's grandmother, who keeps it in a box until the child is three years old. After this time, the semangat of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and such of the Semang as are scared by him fall into a vast boiling lake beneath, in which they swim for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutcher, and in this comtempous fashion pulls them out. The old and wise men for this reason were buried in a manner that he could fly over the demon's head. The Western Semang believed that not only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea to a land of screw-pines and thatch-palms, wherein was the home in which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two months of day and one month of night, and there lived a man of the demon. He is the deponent who said that semangats proceed to a Hades (Nirah) where they are washed clean by one 'Granny Long-Breasts,' and made to walk across a boiling cauldron on the sharp edge of a chopper. Bad semangats fall in, good ones escape to an Island of Fruit, where they stay until a friend comes to show them the way to the 'Husks of the Clouds.'

The Mantri possesses peculiarly positive faith in the continued existence of the semangat after death. If, in the event of his being buried at Lasa either to Ngangnari or to Fruit Island (Pulas Buah), far away in the region of the setting sun, where all semangats dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (Tanah Merah), a desert place and barren, returning thence to Fruit Island to get their nourishment. The Penun, on the other hand, believe that after death the semangats dissolve into nothingness again, having been fashioned from air by Pirmani. Notwithstanding this, they hold that the semangats of medicine-men, while their animate bodies remain behind, are conveyed or carried to Heaven in music.

8. Animism.—Although it would in any case be justifiable to regard the attitude of the Malays towards the tiéwun, or holy place, as a survival from an earlier stage of religion, and the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the view that not only Mahometan and Hindu beliefs, but those of the indigenous animism of Java and Borneo (pawang and bomor), the language of the immerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—even in some cases the most trivial—would in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by the relations of the Malays with animals, with trees, and with the crops, and especially by their remarkable beliefs with regard to mining.

(a) Animals.—To nearly all animals, but especially to the larger, the Malays attribute anthropomorphic traits and, in some cases, superhuman powers. The elephant is a god, e.g., are believed to possess cities or districts in which they assume human form and live in houses. According to a legend which comes from Labu in Selangor, a man tracked an elephant to her home and married her in human form. She resumed her animal form when, on returning to his country against her express directions, he gave her food which included certain young tree-shoots. The tiger, which is an object of especial fear, is believed to be a demon in the form of a beast; in the legendary 'Tiger Village' the roofs of the houses are thatched with human hair, men's bones are the rafters, and men's skulls the hut-walls. The original tiger of the day is said to have been found in the forest who changed into a tiger when beaten with many stripes by his schoolmaster. The latter placed a ban upon him to compel him to 'ask for' his pray. The tiger therefore uses divination by leaves (of certain forest trees) to ascertain whether his petition for a victim has been granted. It may be added that he is also believed to 'doctor' himself; it has been said that the belief in werewolves is one of the most deeply ingrained of Malay superstitions, but the power to become such a being is believed to belong especially

1 See also W. W. Skuse, Malay Magic, London, 1900, pp. 50, 51, etc. It is surprising to find among Malays this sevenfold division of the Earth.

2 N. Armande, 'The Theory of Souls among the Malays of the Malay Peninsula,' JIAS, Sarawak Branch, v. 3 (1903).

3 Skr. naraka, 'hell.'
to one tribe of Sumatrans, the Korinchi Malays, of whom there are a number living in the peninsula. In one case a dead wer-tiger was identified by its possessing a gold tooth derived from its human original (see Lycaanthropy). Both ghost-elephants and ghost-tigers are strongly believed in. They are distinguished by having one shrunken foot, are harmless, and are the tutelary spirits of certain regions of sacred localities. The most famous ghost-tigers of the peninsula dwell on Mount Ophir (4000 ft.), near Malacca; in Selangor they were the guardians of a shrine on the summit of the Jirga Hill. The latter were formerly reputed to be the pets of the princess Malacca; thus the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both claws and whiskers of the tiger are greatly valued as charms; the latter are sometimes twisted up with a man's moustache, to strike terror into his enemies, and in old times are imitated in the tiger's claw knives worn on their fingers by the men who pretend to be wer-tigers.

Equally significant are the stories and beliefs connected with the cat. The cat, W. I. Bungee notes, is a complete cembangan of the Malay folklore; 1 it figures in numberless proverbial sayings and proverbs, and is honoured by the title of Meniru Belukar, 'the Vizier of the (secondary) Forest-growth.' 2 In the fire-getting ceremony it is said to ask for fire wherewith to 'sing its mother-in-law's feathers' (a biri). Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is unlucky to see them in the jungle, unless the person meeting them barks after the manner of a wild dog before they have time to do so. Cats, in addition to possessing supernatural powers (e.g., in the rain-making ceremony), are lucky because they wish for the prosperity of their owners. On the other hand, cat-killers, when in purgatory, will be required to cut and carry coco-nut logs to the number of hogs said to have been killed; therefore cats are 'not killed,' but only set adrift on rafts to perish of hunger. 3

The flesh of swine is now regarded as unclean by the majority of (Mohammedan) Malays, but there are indications that this was not always the case; thus a wild pig's paunch is required in a Malay recipe for turning brass into gold; the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The earth itself is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping no skill can avail unless it is supported by magic, by special charms supplied by the medicineman, and by formula to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as a protection. Like the Siamese elephant-wizard, the Malay deitier-wizard must first enter the toils before a hunt begins, in order to influence the deer magically to enter the deer-anores. If this were omitted, the ropes would fail to hold the deer, nor would the deer enter. The marks on the legs of the sanubhar deer (reras) are due to unpropitious ones on the deer's itself.

Fish and other inhabitants of the water, like land animals, are regarded as having human or superhuman qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is, according to one account, a boy who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally a cat, another a monkey, another a human being drowned in the river, and so forth. The Norse myth of the rivers sprang from the teats of the cow Audhumla is recalled by the Perak story of a large snake, the guardian of the mud called aruan. Many magical or semi-magical beliefs cling round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat charms and take precautions to secure capture by symbolic actions such as striking the water with his club. When the crocodile has seized the crocodile's tail; or, when eating curry, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will take the bait; or (by avoidance) by not taking the bones of curry-meats for fear that the wooden fragments buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes notification by three huts cries to the land-spirits that offerings, consisting of rice, beef, parts of a goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial attitude. After their acceptance by the spirits, the bodies of two similar trays, one in shallow water and one, containing the past's head, at the seaward end of the fishing stakes. Miscellaneous offerings from a basket are scattered when a cat's boat is rowed out to the stakes, and, when they are reached, saffron-coloured and parched rice is scattered on the water, while the 'centralizing rice-paste' ceremony is performed on the stakes and the boats. A number of tabus, such as seven days' abstinence from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boats, or culling the fishing-stakes with boots on, are strictly enforced. The use of a tabu language by the fishermen is also de rigueur.

Among the Malay tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious dead. The elephant, the largest and most important of the animals, is the one into which the simangats of Semang mythology, having anthropomorphised, has assumed the form of the god of the forest. In consequence, it has euphemistic and proprietary names. The same applies to the tiger. Monkeys, snakes, and birds play an important part in Semang mythology, while among insects the stick-insect is the most important. The list of animals to which the simangats of chiefs are supposed by the Besi to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mentri the tigers are the slavest of the wizard, or peyang, and are supposed to be immortal, while the Jakun believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of unnatural history associated with animals is, indeed, quite remarkable: the supernatural nature is so complete as it is among real up-country Malays. The case of the large caterpillar which is believed to metamorphose into a squirrel is typical.

(6) Birds.—The belief of various birds and their semi-mystic or anthropomorph in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and boots, it is said that

1 W. W. Siant, Fables and Folktales from an Eastern Forest, Cambridge, 1903, Intro., p. xiii.
2 Clifford, p. 47.
there will soon be a 'tearing of cloth' for a shroud. If the badoehok, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant brings out a wooden platter, bents it with a knife, and adds sand thereto in the hope of deceiving the birds, of the belief that he forms one of the train of the Spectre Hunterman (hantu penaram) which these birds accompany, and must therefore not be attacked by them.

The argus pheasant (kluang) is said in Perak to have been metamorphosed from a woman; the female pheasant, fathered, is believed to reproduce its kind by swallowing the male bird alive. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (rhinoplax) to have been a man who slew his own mother-in-law. The toh katampli (a variety of horned owl) is believed to enter the fowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-bin, ensures a good harvest to its owner; a ground-dove, kept in a house, is a prophylactic against fire. If any other bird should form part of a crowd of birds, it confers upon him the power of invisibility. But the list of birds to which it has been recorded that the Malays attach magical attributes and significance may be said to be limited by the varieties indigenous to the peninsula.

In fowling, as in hunting, sympathetic magic plays a large part, while every operation has its appropriate charm for repetition. In catching wild pigeons, constant reference is made to their semangats, and the aid of the pawang is required to perform the rice-paste ceremony in the space in front of the conjurer's hut, enclosed for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-boat or pigeon-call. During the operation great care is taken that no part of the latter's paraphernalia is called by its proper name (which might be understood by the pigeon); everything is called by some euphemism—e.g., 'the Magic Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

(c) Vegetation.—The Malay beliefs in relation to trees and other forms of vegetation follow to a great extent the animistic concepts in relation to animals. It is not clear that they hold that all trees have a semangat, but it is certain that some trees, such as the durian, the coco-nut-palm, the trees producing eagle-wood, camphor, and gatta-percha, and others are supposed to possess semangats. This belief extends even to dead and seasoned wood, as is shown by the invocation addressed to the timbers used in the ceremony of launching a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian graven images in order to address them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said that the coco-nut should be addressed to them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said that the coco-nut should be addressed to them verbally. Thus the illegal act of tapping the butt of your neck and roll up your hair; and here is my ivory Todd's knife to help the washing of your face.

1 The malaca can is regarded from the same animistic point of view, and it is believed that a can with a long joint will protect the owner from harm by snakes and animals, as well as bring him good luck in everything. In Selangor the stick-insect is supposed to be the embodiment of the malaca-spirit. In Kedah the tualang tree (apparently not a specific tree, but a generic term for all trees containing a bees' nest)—a matter in which great reluctance is shown—it is necessary to obtain the services of a pawang to drive away the bees by incantation. In some of the incantation the heads of two white owls are cut off and the blood is sprinkled upon the tree-trunks. The lime is another tree of which the spirit is the owner; it is regarded as a special tree of themegh-spirit and looked upon as their chief patron by the theatrical players of Penang. In searching for the diseased and perfumed wood known as kbaru, or eagle-wood, the services of a pawang are required to burn incense and repeat the appropriate charms. According to one account, the pawang uses a shelter near the selected tree (which is indicated by a low whispering or singing in the tree), and then repeats a charm which induces the kbaru-spirit to appear to him, generally in a dream, and to inform him of the kind of sacrifice required. When the tree has been felled, any one passing between the trunk and the stump will die immediately. The pawang uses and carries with him a piece of eagle-wood, the kbaru mampaa (or shaped eagle-wood), which possesses a natural resemblance to some animal or bird. This is to prevent the spirit of the eagle-wood and to assist in the search for that product. Similar beliefs are entertained, and similar ritual is followed, in the collection of camphor and gutta-percha. It is interesting to note that in the collection of camphor a special language must be used, pantung kapor, which, so far as known, is Malay in part only. A portion of any food eaten during the search, and of the wood obtained, is thrown into the jungle for the biosan, or camphor-spirit.

Many rules followed in planting the crops are based upon sympathetic magic and animism. In the first place, the propitiatory season for each operation must be indicated by the pawang. Sugar-cane must be planted at noon; this makes it sweeter by drying it up the juice and leaving the saccharine matter in the cane. Maize should be planted with a full stomach, a thick stick, and thick dibble; this will swell the maize ear. Plants should be planted after the evening meal, as they fill out better; sweet potatoes, to ensure their having plenty of eyes when they begin to sprout, should be set when the night is starry.

Of all agricultural pursuits, however, the cultivation of rice exhibits most completely the animistic ideas of the Malays to nature. At every stage of the procedure precautions are taken to ensure the well-being and prosperity of the rice-soul, upon which the success of the cultivation depends.

The time of the sowing is determined by the pawang; prayers are read over a portion of the seed at the mosque (replacing an earlier ceremony at the holy place, or krama); in. sowing, the mother-seed is placed in a specially-prepared bed in one corner of the nursery-plot, before the rest of the seed is scattered. When the rice is ready, it is transplanted with proper prophylactic ceremonies, and occasionally, say once in three or four years, these were accompanied by a ceremony—a sort of mock combat (sabatau)—to drive evil spirits. When the rice is ready for reaping, in order to begin the harvest, the reapers must first obtain the pawang's permission. The first operation was to take the semangat out of all the plots, and before cutting the rice it was usual to sprinkle it with the neutralizing rice-paste. From the spot where the rice is finest and where there are seven joints to the stalk, seven stems are clipped ceremonially. Thus I bend your neck and roll up your hair; and here is my ivory Todd's knife to help the washing of your face.

The semangat is made into the rice, and it is believed that it is present in the rice planted, placed in a basket with a Malay umbrella to shade it from the sun, and laid on a new sleeping-mat, with pillows at its head, in the house of the rice-soul. For three days after reaping the rice must observe certain tabus: e.g., rice, salt, oil, money, etc., must not be brought into the house, provided the hair must not be cut, and so forth. These tabus were practically identical with those imposed on the new-born children. For three days after the taking of the semangat the
mother-sheaf was treated as a young mother; i.e., young shoots of trees were ground up and scattered over the ground every evening and on the evening of the third day coco-nut pulp and goat-flowers were mixed together and placed in a little ejection from the mouth on to the sheaf—an analogus of the salut administered to a mother. A woman, when entering the clearing, usually addressed the child as a child, saying, 'Come, come, and show of my child, as if embracing one of her own infants. Ultimately the rice of the male child was taken over by a child of the same sex. The receptacle representing the mother is mixed and placed in the receptacle in which rice is stored, together with a wreath of the rice, a present of a colossal pounder of the padi, the ears first pounded being those cut immediately after the taking of the harvest. Some are used up to the next year's seed, and some is used to make the taping taring. From all that has been said it will be clear that the gift of the Malayans harvest ceremony consists in the attempt to simulate, on behalf of the vegetable rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may stimulate the productive powers of the rice-plant for the following harvest.

(d) Mining.—In the western States of the peninsula tin-mining was, and still is, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the opening of a mine are purely Malay. Formerly a lucrative and highly important post was that of mining wizard; some of these magicians work under one's protection; some possess the power of bringing one to a place where it did not exist, and of turning into grains of sand, or of sterilizing, such ore as existed. The ore itself was regarded as endowed not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble a buffalo, and in this shape could travel to and fro underground. The gold-spirit in one case (at Raub in Pahang) was believed to take the form of a golden roe-deer—a phenomenon obviously based on the imaginary shape of some large nugget. Beyond tin, gold, and possibly a little silver and galena, no metals are worked in the Peninsula.

The natives, however, have a great reverence for iron. The Lamp of Iron in the royal regalia, when placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the newborn child and the rice-soul; betel-nut scissors (also of iron) or a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any chance demons. Bezoar-stones and stone implements alike are said to be endowed with magic properties and powers; a unique east-coast belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being hurled down from the sky in the form of thunderbolts. The objects of the charms employed by the mining wizards seem to be to clear the jungle of evil spirits, to banish evil spirits from the ground before starting excavations, to propitiate the local spirits and induce the tin-ore to show itself when the tin-bearing stratum is reached, and to persuade the spirits to partake of a banquet spread for them in the receptacle intended to represent the royal ball of audience. The spiritual 'audience chamber' is usually two or three feet square and furnished with offerings similar to those normally placed on the afflicted body, with certain articles, such as sugar-cane, plantsains, yams, etc., supposed to be specially characteristic of the food eaten by miners. The chief talus is the killing of any sort of living creature within the mine, except in cases when a white lady may be slain upon the brink of the mine, the head being buried and small portions representative of each part being deposited in the 'audience chamber.' Other talus are the burning of a tamping-bag, burling any skin of a beast in the mine, wearing shoes, and even carrying an umbrella; the last is particularly offensive to the spirits, since it is the insignia of Malay royalty; a special language has to be used in so far as certain words and terms, no animal or thing not itself allowed in the mine (such as an elephant, tiger, or cat), nor even lime-fruit, may be mentioned by any but this substituted title. Nor may any one sacrifice or dress (a black coat) worn by the wizard in building the altar for the preliminary sacrifice, in performing the magical ceremonies, or in uttering the invocations (such as the attitude of standing with both hands on the hips or behind the back), nor may even the wizard himself assume them on any ordinary occasion.

(e) Water.—The Malays have been a seafaring race from time immemorial, and the rivers were also of great importance to them before the making of roads. It was by the rivers that they first penetrated the country; the old Malay settlements are all on river-banks, and the streams are still the chief source of supply for irrigating the rice-fields. To both river and sea many superstitions and legends are attached. Their animistic notions include a belief in water-spirits, of whom precautions are taken for the protection of their boats. It was formerly the custom to fasten a bunch of sugar-palm twigs to the top of the mast to prevent the water-spirit from settling on the mast-head. The sea-spirits are invoked to point out shoals, etc., and sometimes in rapids or other difficult places offerings are made to the spirits of the river (kayak)." The tidal wave (deadly sea) on a river was formerly held to be caused by the passing of a fluvial monster, which ascends the river; one of these (on the bare ceasing) was described to the present writer as having been killed by being knocked on the head with a stick. Erede (A.D. 1613) says that the Malays attribute such boses to souls of the dead who are passing the ocean in coffins from one region to another, i.e., from the Golden Chersonese to the river Ganges. Ordinary river-floods (which were distinguished as male and female) were thought to be caused by similar agents.

9. Cosmology and natural phenomena.—(a) Malay.—In Malay folklore the theory of creation is that light emanating from the supreme being became the ocean, from which ascended foam and vapour. The earth and sea were then formed, each of seven tiers, the earth resting on the surface of the water from east to west, the mountains of the Caucasus being regarded as a chain put round the earth to keep it stable on the face of the waters. Beyond them is spread a vast plain, the sand and earth of which are of gold and musk, the stones rubies and emeralds, the vegetation of odoriferous flowers. Besides the Caucasus, which are known to the Malays as Bok, Kof ('Hills of Kaf'), and are of immense importance in popular lore, there is a great central mountain called Maha Morn, which is sometimes identified by Malayas with a hill in Sumatra. Another version of the Creation, in part obviously due to Muslim influence, describes how God, the eldest magician, pre-existing by Himself, created the pillar of the Kaba of which the four branches form the four corners of the earth, and the world was created by the work of an angel named by Gabriel and broke asunder, the head and fore part shooting up to heaven, the tail part penetrating downwards beneath the earth. The description of this serpent (the name suggests an animal of origin)
is remarkably anthropomorphic; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolves on its axis four times in the year, and that the sun was a body of fire moving round the earth and producing the alternations of day and night. Some at least imagined the firmament to consist of a perforated stone or rock, the stars being caused by the light which streams through the transparent apertures. Further, the earth is declared to be carried by a golden demonstrator, the tip of its horns—an obvious Malay parallel to the world-oliphant of the Rândâgyna and the bear-incarnation of Vîqû. When one horn gets tired, the other one is called into action, and so the earth continues to move. Sometimes, however, the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the nether ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called Nun (Arab. 'fish').

The universe is gilt round by a huge serpent which feeds upon its own tail. Peculiarly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the movements of a colossal crab that twice a day leaves and re-enters its cave at the foot of the world-tree Pauh Janggi (the sea-coco-nut-palm), which is torn up at high water in the ocean by the 'Navel' or Central Whirlpool of the Ocean (quest tâzek). The sun's name in Malay is Mata-hari, which means 'eye of day,' but on the east coast it is held to be a horse which is conducted in procession by a heaven-eyed god, the sun, during the day, and led back again at night-time to the place whence it started.

Eclipses of the sun and moon are considered to be caused by the tail of one of the bodies of a gigantic dragon (Râhu), or, according to some, a god. Malaya, like the Chinese and other more primitive races, endeavours to save the sun and moon by putting white thread or cotton on the temples in the form of string, and by pouring vinegar on their heads as a remedy. A more scientific attempt is made to touch the sun and moon with a burning pyre-dak ('the moon is great with the mouse-deer'), is doubtless explainable by the fact that in Sanskrit mythology the spots on the moon are thought to be a hare, an eagle, or a python, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often used when she is three-quarters full.

Landlips in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Rocks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the end is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as 'no one can ever arrive at the place' where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen drinking (sukum minum). On the east coast it is sometimes said to be the head and entrails of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula which has on one wall a huge mirror of metal (tâmgojag) which had been drained dry by a rainbow.

Sunset is a time of danger, since then all evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (wambang kuning, 'the yellow deity') is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house at sunset, kunyut têrû, an evil-smelling root much disliked by evil demons. Puluat Tionan, an island south-east of Pahang, is believed to actually be the body of a dragon, or nâga. The Malay who told us this to the present writer said that a long while ago an English Government official was drowned in the whirling waters of the river near the crew, catching sight of the then existing three points of the dragon's crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are stories said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilled, an earthquake follows, because the island is really the monstrous body of an enormous dragon.

(b) Pagan races.—The Semang endow both sun and moon with human form, both being female. Like the Japonesse, who have been credited by some authors with Malayan affinities, they associate the sun with a crow (Ag-Ag), whom they assert to be the husband of that luminary, whereas the husband of the moon is some monster, or serpent. When the sun sets, it falls into a cavern, which some Semang identify with a species of Hades. Eclipses are caused by a huge dragon, or serpent, which tries to swallow the luminary; in the case of the moon, a python is represented. When the sun rises, it is the moon's mother-in-law, who has assumed this form and is trying to embrace it—an act which is clearly referred to by the Semang with loathing and abhorrence. The spot on the moon is said to be a water mark, or serpent, and the spots where it touches the earth are feverish and bad to live near. During a storm of thunder and lightning the Semang draw a few drops of blood from the side of the body to drive away the skywards. As the ghosts of wicked tribemen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part downwards (Panggan).

Thunderbolts are supposed to be hurled as the result of one's evil-wayliness towards a mother-in-law. An unusual explanation of thunder and lightning from Kodab is that the latter phenomenon is the flashing of the top-cords of dead medicine-men. The thunder is the hum of the tops themselves when revolving.

The Keiath Semang hold that heaven consists of three tiers or layers: the highest is filled with fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pilgrayers by a gigantic baboon who robs any such would-be assailants with 'false durian-fruit' (the produce of a wild fruit-tree); 2 the third has nothing but the low brooding clouds which bring sickness to humanity.

Of Sakai beliefs little that is typical has been recorded, such information as is available witnessing to a close resemblance to Semang beliefs. Râ-hul (obviously the Indo-Malay Râhu), becoming a dragon, tries to swallow the sun and moon, but is driven away by the beating of drums and bamboo clappers. Kelang Bêlok, a world-eagle, at one time destroyed all human beings except a boy and a girl. With a misprint in the
eagle, and from this pair all mankind are descended. The Sakal are said to imitate in ceremonial exorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, which cause them to harm people, though the forces themselves are not demons. The earth is a thin crust resting on the bottom ocean, and the heavens possess several layers, or tiers; the inhabitants of the uppermost are said to include a female deity who has to wash the sin-blackened souls of the guilty.

The Blandas of Selangor say that the earth was originally the shape of a flat long betel-box (sudok-sudok), the nether ocean had the form of a globular tobacco-box (tujok-tujok), and the heavens were round and over-arching like an umbrella. The Blandas’ account of paradise resembles that of the Eeisii. The latter hold that the souls of the good (or wise) pass away to the Island of Fruit-Trees, which they identify apparently with the moon, or eclipse being the work of a spirit that wishes to annihilate their spirit ancestors, the moon’s inhabitants. This Island of Fruit-Trees is reached by crossing a fallen tree-trunk which serves as a bridge, and from which the wicked fall into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a big dog, and run away from the spirits by which the souls must go. The magicians of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gaffer Engkoh dwells in the moon, which he reached by a ladder now broken, and married the youngest dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and extent of their beliefs. The day spots in the moon they believe, however, to be a tree beneath which sits the moon-man Moyang Bertang, an enemy of mankind, who is constantly making nooses with which to catch them—a task which he is prevented from accomplishing by mice, who continually gnaw through the strings. Eclipses are not attributed to a snake or a dragon, but to a devouring evil spirit. The sky is a great [inverted] copper pot, suspended over the earth by a string, and around its edge the earth is constantly sending up sprouts which would join the stars if an old man did not cut and eat them. In addition to this, the waters of the sea believed by the viz, an idea that the sun is a woman tied by a string which her lord is always pulling, while the stars are the moon’s children. The sun once had as many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Benna Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beam, the north being twenty days’ journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

10. Origin of man.—(a) Malay. — What is now the most usual account of the creation of man, from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Muhammadan story. Adam was formed from the heart of the earth by the angel Azzard, not without strenuous opposition and protests from the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, is the idea of an indwelling spirit-origin, describes the supernatural origin of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which continually sent forth fresh shoots as it was cut down, and in which King Daśaratha, according to the story in Sri Loka (the Malay version of the Rāmāyana), found the princess, or, again, in the tradition of the discovery of Teh Purli in the river-foam.

(b) Bornean races.—The Semang story of the origin of the human race is more interesting. The first man, seeing that all other animals had children, was desirous of having offspring of her own, but did not know how to obtain them. She and her husband took to dressing a brown monkey over their arm-pits by way of make-believe. But one day the coco-nut monkey (Vro), on noticing what they were doing, gave them advice, as a result of which they had four children, two boys and two girls. These married and had children of their own, but the ring-dove (tekukor) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and ‘marry other people,’ in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin forms an incident in a group of myths connected with Mertang, the first medicine-man, and his younger brother, Bło, who came from a place called ‘Rising Land’ (Tanah Bangun) in the sky and returned there after a stay of three days, which the children of two people called ‘Drop of Water’ (Ayer Sá-Titik) and ‘Handful of Earth’ (Tanah Sá-Kêşal), the latter being their mother. Mertang took his youngest sister to wife, and from them the Mantri are descended. Mertang married this woman, but had no offspring. When men increased in numbers to an alarming extent, To Entah (or ‘lord-knows-who’), the first batu, a son of Mertang, drew his father’s attention to the circumstance. Mertang wished things to remain as they were, but Bło suggested that ‘men ought rather to die, after the fashion of the bananas, which itself expires, although its young scions survive.’ Thus it was decided, and so the old die now, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (angkos putih) who sent their young into the plains, whenceupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth, but which was found in the bamboo also occurs among the Mantri. She married the son of the first Raja, and she and her husband both live invisible to this very day.

Benna tradition says that a man and woman were created by Pirman when he formed the world. When the Luminut mountains, the oldest land, rose out of the water, a ship of pulai wood, completely enclosed, in which the man and woman were contained, was left floating on the surface of the water. After the ship ceased to move, they nibbled their way out, and from this pair men are descended. As the male child was born from the right leg and the female from the left, children of the same womb cannot marry. The Jakun say that God created a man and woman in heaven who came down to earth in the State of Johor.

11. Personality; the body and personal possessions. — Malays, in common with all peoples of a primitive civilization, have implicit faith in the magical possibilities of personality and of intimate personal possessions. This is very clearly shown in the beliefs relating to the spiritual or magical powers of the Rajas, the theory of the king as the divine man being strongly held and consistently adhered to. It is told to an initiated that the king originally had the right to slay any one at pleasure,

1 Altonia scholaris, which furnishes the Malay substitute for cork.
MHAMMADAN faith, or the first founders of the village, and persons of local celebrity; but, as a matter of fact, in many if not in most cases, they belong to an earlier state of belief than such an origin would imply. Many of these keramat are well known to all, but fall to the category of these holy places which the Malayans have been asked to interpret them, as being 'spirit places' (keramat jin). For instance, the keramat of Nakhoda ('shipmaster') Usain on Bukit Nyai, near the Jetty, near the kings are exhibiting no sign of any kind of burial. This (orthodox) jin presides over rain and streams and all kinds of water. Incense is burnt here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the keramat is a spring with a profusion on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Batu Tre, to which the Mantri have resorted from time immemorial. A similar rock is situated on the top of Gunong Berembun ('Berembun Crag'), while other mountain summits also have similar wishing-places, each possessing its good spirit. The supplicants bring in these mountains a couple of white fowls and samples of various articles of food in a tray, which is suspended from a tree or placed on the highest peak of the summit. After his wishes have been addressed to the spirit of the mountain, the petitioner sets a meal prepared on the spot for the purpose.

It may be noted, however, that such sacred places were not recognized by the Semang, possibly owing to their nomadic habits. The Sakai and Jakan appear to have set apart certain sites for the purpose of burning incense and registering vows, and to have collected clusters of stones, or medicine-huts, or solitary cells in the depths of the forest, in which the medicine-man kept a selection of his charms and spells, or diminutive shelters which screened him and his patients during the ceremony of exorcism.

13. Rites: prayer and sacrifice.—In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage. A claim is increased by repetition. Sacrifice, as is shown by the language of the charm, is, or was originally, regarded as a simple gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, 'if the deity demands a human sacrifice, a cock may be substituted'—a statement which points, moreover, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a woman a goat, for a goat a cock, for a cock an egg—a statement which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malays appears to be connected with votary monies or vows in which the votary's offering is not regulated by custom, but there is often a tacit understanding that he will sacrifice something of value to himself with a higher degree of sanctity. In theory they are the burial-places of holy men, the early apostles of the

---

1 Arab. marhum, 'one who has found [divine] mercy.'
2 From Arab. kirdamah, 'respect,' 'veneration,' 'miracle.'
shrimps; (d) the rite of burning the incense; (e) the scattering of the sacrificial rice; and (d) the application of neutralizing rice-paste to the heads of children and he-goats. The worshippers partake of the flesh of the goats and, in some cases at least, of the yearling rice-straws. The former rite is long since discontinued, which is laid on the shrine now becomes the property of the mosquito attendant (gado), though literally it is doubtless went to the pests.

(5) The burning of incense is the commonest form of burnt sacrifice in the rites performed by the Malays and the rice-straw, which is spread in the form of incense, is regarded as the spiritual nature of the rice-straw. The incense is generally used for scattering on the sacrificial tray after banana-leaves have been spread over it. The saffron-stained and the washed rice are specially with the rice-straw. Rice is generally used for feasts at high places.

(6) Lustration is accomplished by fire or water. Of the former the best example is the use of incense and the recurring practice of child-birth, and washing of the skin by water is an integral portion of a large class of ceremonies, such as those relating to building, fishing, agriculture, marriage, etc. It is called l'ongh tawar, or the neutralizing rice-paste (really rice-flour water) is in use. It consists of the application of the incense, by dabbing, sprinkling, or sprinkling, of a thin paste made of the rice-flour with water, taken up in a leaf-brush or similar instrument. The purpose of the neutralizing rice is to wash the body of the victim, the rice-straw, and the incense. The victim is washed, or the sick, with the result that the person is considered to be cleansed of evil. The materials and formulations vary, of course, with the object and occasion of the ceremony, and the quantities used or burned vary according to the customs of the village, or for the raising the sacrifice, etc.

Short rhythmic chants were often used to accompany the rites, but they were not repeated auditorily.

Developments of the idea of lustration by water are to be found in the following of the mother and child after birth and the washing of the skin on similar occasions, the ablution of the bride and bridegroom, and of village officers, and the annual bathing expeditions which purify the bathers and protect them from evil. Passing in the form of religious purification, or purification, or in a religious sense, is in many cases voluntary, and the victim's sick soul is considered to be cleansed of evil. The use of the royal colour, and the use of the royal or the king himself, ensures the ceremonial use and disposal of water, and of water's forms.

Other words and phrases are held to be dangerous. Other powers and attributes of the medicine-man, may which may appear to be identical with a spirit-medium and to give oracles in trances, and his practice of amnesties and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.

14. Magic and the medicine-man. (a) Malay. Although the office of the medicine-man, or magician (pawang), is falling into abeyance in towns, it was at one time of great importance; and this is still the case to a large extent in country districts. A patient may be taken to a medicine-man, between men and spirits, and, although he has no connexion with the Muhammadan religion, without him no village community would be complete. The office of the medicine-man is often hereditary, or at least confined to the members of one family. Certain properties, such as a peculiar kind of head-dress, as, for instance, the regalia or official insignia, and are handed down from one generation to another. The functions of the medicine-man are many and diverse. Few of the operations of life can be undertaken without his intervention. In fishing, trapping, and hunting, in the gathering of jungle produce, in the collection of natural materials, such as medicinal plants, in sowing, reaping, irrigation, and clearing the jungle, the medicine-man is consulted, as a guide, for the treatment of the. Not the least important of his powers is that of calling the rain. The art of calling the rain is of great importance, and is still practised in Malay weather charms. For his services in these matters he receives a small payment.

For the most part the pawang's instructions consisted of spitting out rice; e.g., it is pawang in some places to work in the rice-fields on the fourteenth and fifteenth days of the lunar month; certain instruments such as a small instrument consisting of a crescent-shaped blade, set transversely in a slip of bamboo, which will cut only one or two grains of rice at a time; must be used to begin the reaping. By these prohibitions, it may be concluded, the pawang preserves the traditional method of an older régime—e.g., in enforcing an absolute prohibition on the sale of all maximum prices for the sale of rice and other articles within the village, in contrast to the demands of a fair harvest.

The pawang is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal similarly with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. Such punishment is usually inflicted by a 'sending,' or 'pointing,' one form of which consisted in pointing a kris in the direction of the intended victim, the point of the dagger beginning to drip blood as soon as the victim began to work. Another form consists in burning the point of the cord of a newly opened bunch of bananas growing on the tree; this causes excruciating agony; the pain is afterwards succeeded by death of the victim dies vomiting blood, his heart having fallen out of its proper position. The Malay witch also commonly keeps a familiar, which may have as its embodiment a night-owl, a balinese, etc.

In certain respects, it is important to note, the magician stands on the same footing as the divine man or king; e.g., he possesses a regalia which is called by the same name (klbntarum) as the insignia of royalty, he may (at least in some cases) use the royal colour, and he may, like the king himself, ensure the ceremonial use and disposal of water, and of water's forms. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man which may appear to be identical with a spirit-medium and to give oracles in trances, and his practice of amnesties and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.

1 Although the office of magician is hereditary, the power may be acquired by certain recognized methods. One is the ability to raise the victim, the victim is the victim of a victim, by means of incantations and incantations performed at the grave-side.

The Malays themselves make some distinctions between the pawang and the borom, the latter being the medicine-man who is concerned especially with the curing of diseases. The two terms are, however, sometimes used as if they were interchangeable. The basic principles of the medicine man's art are identical with those of the pawang; they depend upon a belief in spirits, and the aim of his treatment is either to propitiate or to overcome their influence.

The borom's procedure in dealing with disease falls under two clearly distinguished headings. First comes the ceremonial inspection or diagnosis, when the character of the therapeutic treatment is determined by divination, by means of omens from the smoke of burning incense, by the position of the victim taken in a water-jar, or by the aspect of parched rice floating on the water's surface.

The therapeutic rites are various in character; constituting:

(1) Propitiatory ceremonies, the most popular of which is the use of the sacrificial tray called tondih, a small frame of bamboo or wood decorated with a trims, on which offerings of food are laid for the spirits to eat when it has been hung in a suitable spot outside the house.
As an alternative method models of certain objects are placed upon the tray, the evil spirits are invited to enter them, and the tray is then got rid of by being hung up in the jungle or set astride on the sea or nearest river.

(2) Neutralizing ceremonies—the use of counter-charms to nullify the evil influence of an evil principle of life, is found among the medicine-men to cure all cases where any evil principle (even a terrestrial spirit) is supposed to have entered a sick person's body. The ceremonies of appealing such evil spirit usually consists in making powder from a grazed bamboo-stalk or cnot with water and spreading it around the sick person, reciting the incantation.

(3) Expiatory ceremonies—rites intended to expel from the patient's body all kinds of evil influences or principles, such as may have entered him on his touching a dead animal or bird, or from meeting the "Wild Hunter." The evil principle known as the patient's "rind" or soul, has everything to do with what is sick, including inert objects such as trees, and even stones and minerals, which, in the Malay view, are animates. Of these evil principles or "rinds" there are one hundred and ninety, or, according to some, one hundred and ninety-three. To "cast out the rind" the patient is soaked down with a brush (made of certain prescribed leaves and plant-sprays) which has been dried in water in which woods have been grated or pieces of scrap-iron allowed to soak, or else he is rubbed with limes, appropriate charms being recited in either case. In another form of the ceremony the "mistimed" is driven from the patient on a long red thread, which the patient holds in his hand, until it reaches certain dough images of birds, beasts, and fishes, placed upon the anvil. A "disease-bolt," sometimes a mere reed, is also used as a vehicle for the spirit and set about on sea or jungle. The evil spirit may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger, or children's spirit, is supposed to be present, in which cases the spirit, acting upon the medicine-man, who, while in a state of possession performs some incantation over the animal-spirit summoned, expel the evil by its superior spiritual powers.

(4) Religious or sacrificial ceremonies—to recall the sick person's "rind" which has been rolled into a human figure, which is laid upon five cushions of white cloth, Red-dye is thrown on, and the person burned, and a cord connected to the image, the anointed to enter the dough image and be transformed into the soul-cloth, and thence to the patient. Similar ceremonies are used to prevent the "smaugat" of a swooning person from escaping.

(5) Pagan race.—The belian (shaman, or medicine-man) most prominent in any tribe among the Senasan. In normal circumstances the chiefs or head-men are always belians of more or less reputation. They observe certain prohibitions which do not affect ordinary members of the tribe; they may not eat the flesh of domestic animals like the goat or buffalo, and that of domestic fowls but rarely. They receive a special form of burial, traditionally regarded as specially honourable, consisting of a rude shelter built in a tree, in which are placed a modicum of food and water, a jungle-knife, etc. It is believed that they are able to proceed to paradise in trances to drive out disease, and that they are the "charmers" that never fail, and can slay men by "smaugats" at a distance of several days' journey. They alone have the power to change themselves into verticillae or verticillae-like objects, by means of which they enter the body of an elephant, tiger, or rhinoceros. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are demons, and have to be exorcized as such. They are abstracted sympathetically from the body by pulling up sapling stumps at or near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the bed in which the root grew, chewed betel is ejected on the body (in imitation of the Malay medicine-man), and the hurrying of dead saplings into the wood, so that the evil spirits may be made to enter the Christian service. The word is not used as a word which means to enter a ceremony. "Smaugats" or "paintings" are achieved by a minute dart or splinter of bamboo about two inches long, which is laid on the right palm and is ordered to "dry and play the violin." This dart or splinter flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees'comb is burned at the same time. Such "smaugats" were said by the Shah to be effective at "a distance of probably two days' journey."

The Mantri believe that all diseases are caused either by the spells of bad men or by spirits. Among the latter are the smallpox demon, which the Mantri regard even more mention than the dropped demon (hantu dembong), which haunts the abodes of men and afflicts them with pains in the stomach and head; the Demon Hunter (the hantu ci jakun, or spirit who, in lakes or pools, is black, and blackened by a certain plant which he will cause to chase a man in the forest; if they catch him, they will drink his blood. In every stream, in the ground, in trees, and in caves and crevices of rocks, dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and thus causing their death. When a person is wounded, the hantu pari fastens on the lesion and causes the blood to flow by sucking. The Berembun tribe believe that diseases are inflicted by the spirits of the rivers (hantu sungun), which are evil and feed on the human smaugat.

The Mantri's most noted form of 'smaugat' is the tijus, or pointing ceremony, which is achieved by the use of wax from an abandoned bee's nest.

When a wind blows in the direction of the victim, the magic takes a vessel of water and a lighted candle or two, and matters to an end. If the victim is a man, the man discards his image of his intended victim in the water, he throws the image of his intended victim to the sea. If the victim is a woman, he carries it to his victim. The latter feels as if struck by some unseen assailant, and is immediately seized by sickness, which may result in death, should the strength of the spell be great enough.

This attack may be averted if the victim has surrounded himself by counter-spells or charms of a prophylactic character. These may not only ward off the blow, but may prevent the magic from seeing the image of the victim in the water. Among the Jakun the magician is an order combining the offices of priest, physician, and sorcerer. They and the Besi medicine-men are much dreaded by the Malays, who believe them (as autochtones) to be more powerful than their own magicians, especially, e.g., in matters in which the performance of the Besi berasnan ceremony is likely to be effective. Not only can the medicine-men cure, but they can inflict disease and death also. This is usually inflicted by the 'pointing,' or tijus, ceremony. Even tigers are subject to these medicine-men, and every magician of repute is believed to have one in constant attendance. The smaugat passes directly into the body of the animal, or the magician's power are accompanied by the music of the gendong, a long bamboo stick by sticks, which are always made of wood of the merasan tree. Conjunctions are addressed to Jiwa-jiva (=Mal.-Skr. devos- dence), who resides in heaven and alone can approach Pirman. The incantations last all night for one, two, three, or four nights, until the medicine-man announces that he has received the medicine or that the deity is inexorable. The Berembun tribes, like the Malas, attribute the magician's powers to his command over spirits. Every shaman has disciples, who accompany him when he visits the sick. They also read divination, and other men's man's questions respecting the mode of treating the diseased person. The Jakun of Madek (Johor) believed that the great magicians (payang bêvar) of the tribe could reach heaven itself, and that they could appear without dying or else, on sickening for death, by arranging to have incense burned over them for two days after their apparent decease, they could return to life again.
A ceremony of exorcism known as søk, or, more commonly, as sarnu, is employed by the Bésii in case of illness or when an answer is required to a question concerning the welfare of an individual. The ceremony takes place in a hut in complete darkness. After incantations accompanied by the rhythmic drumming of bamboo-stamps, the central beam of the floor, the spirit denominated by one member of the company and questions put to him while he is in a state of trance or possessed, obtains a woman or a small boy, the chamber or cell (batu bolon) near the walls of the hut, in which he encounths himself while the ceremony progresses. The Blaanis employ spells and exorcisms to cast out disease and evil spirits. Spirits of tigers, elephants, and monkeys are summoned to enter the magician's body, and the sick man is then brushed with leaves seven times downwards from head to foot while a charm is repeated. In the blood-throwing charm water is used, and a charm against the Wild Huntsman is also recited.

15. Birth ceremonies and beliefs. — (a) Malay. — There are four spirits, or, rather, demons, which are especially feared by the Malays in relation to child-birth. The bejang, a demon which appears in the form of a civet-cat, is evoked by incantation over the grave of a still-born child. It may, however, enter the body of any small boy or girl, and the demon can send illness, usually in the form of convulsions or delirium, to an enemy. It is especially insidious to children, who are sometimes made to wear a black silk sash or piece of cotton around their neck, to protect them from its attacks. The languir, a woman who has died in childbirth, becomes a flying demon, or bannsee, who, through a hole in the back of her neck, sucks the blood of children. It is believed that these demons have on occasion become wives and mothers, but, when allowed to dance at village merrymakings, they will assume their original form and fly off again into the forest. The pontunak is the still-born daughter of a languir. As a precaution intended to prevent the dead mother or still-born child from originating these mischief, the languir and pontunak are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles in the palm of each hand (to prevent them from opening and shutting their hands in flight). The pontunak appears under the form of a species of night-owl, the békanggalan, a colossal flying head with hair matted by clots of blood, a species of monstrous vampire or bannsee that sucks the blood of children, six or eight inches long, and by jerking its body along its way through the floor, whenever a child is born, to attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called polong and pélésít, which also give rise to anxiety at this time, though they do not congregate to activities of newborn children. The polong originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually preceded by the pélésít, its pet or favourite, which is in the custom of eating or devouring for a victim and enters his body, when found, tail foremost. The pélésít is obtained by exhuming the body of a first-born child, a first-born mother's earring, or of an old person, who had to suffer an attack by the victim's tongue, with incantations in a spot where three cross-roads meet. It has been noticed that these demons belong to the spirit world, and that they are sent by the 'roasting-ghosts' to cause aberration of mind or even the death of the unfortunate patient. At the end of the forty-fourth day a purificatory ceremony takes place, wherein the floor is smeared with rice cosm...
and scratched over by the claws of a fowl held tightly in the grasp of the cleaner. At about the same period, of the forty-fifth day, the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been deposited in the water). A boy then, if the infant is a boy, is set in, up-stream to catch a fish with a casting-net, if a girl, the girl sets as the fisher. In Upper Perak the boy himself, with a number of other young children, is caught in the net; he will then never want for fish to feed on.

During the forty-four days' period there are only many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause flatulence, containing (except coco-nut sugar), coco-nuts themselves, and chillies are prohibited.

Both before and after child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or cut his hair until after the child's birth; he may not sit in or obstruct the doorway. Any untoward act may cause deformity: a child was born with no forehead and little finger on the left hand owing to the father having, previously to the child's birth, killed a crab with a cutlass. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any fish whatsoever.

In Perak any log marked by, or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and shorten the life of both mother and infant.

(b) Pagan races. —Superstitions and practices connected with birth, so far as known among the pagan tribes, or, rather, among those pagan tribes for whom the wild origin of the Malays is here claimed, strongly confirm the view that the popular beliefs of the more highly civilized natives of the peninsula are essentially primitive in character. The operation of roasting the mother, e.g., of course on a quite minor scale, is found among the Jakan, Besisi, and Mantri, while among the Blandias the charms used at birth are directed against the demons, the langkali (Malay longwir), polong, and poncunak—identical, at least in name, with those of the Malays.

Another incantation is repeated at the moment of removing the caul as a charm against the caul-demon, which licks up the blood of the child. The mezakhus, the umbilicus and placenta under human inhalations so that the rain may not beat upon them and turn them into birth-demons.

It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-soul which was carried by the expectant mother in a bamboo receptacle; but, although the conception of the simangai as a bird is certainly familiar to the Malays, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a sage-femme, who, among the former, has a special hut used by the women of the tribe for round labor, and administered to the mother. The sap of certain leaves is given to the child, and a charm is repeated. A name, which is retained until marriage, is given him,

when the umbilical cord is severed. The Benua Jakun fastened round the neck of the child at birth a string to which pieces of turmeric, and so forth, were attached. Jakun also observed a number of food prohibitions: while the child was unable to walk, the parents abstained from certain fish and animal foods, the latter including fowls and eggs, deer of all kinds, tortoises, and lizards.

16. Adoration of the Child (b) Malay. —Of the purely Malay ceremonies at adolescence the most important are the felling of the teeth and the cutting of the first locks of hair—the latter, of course, only when, owing to some vow of the parents, the ‘first head-shaving’ operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-wizard (papang gigi). Neutralizing rice-paste, charms, and the scattering of the several kinds of sacred rice and rings of precious metal is usually done by the waki, the ‘tooth-wizard’ (badi) from his instrument, as well as from the teeth of the patient. The medicine-man’s eyes are considered to be especially encharmed by the badi emanating from the teeth, while an unskilled performer may cause much pain to the patient if he does not know thoroughly how to ‘neutralize’ the evil.

The rings of precious metal which are pressed against the patient’s teeth at the act of extraction are usually used in the hair-cutting ceremony. The bride’s hair is arranged in seven long tresses, each one of which, on occasion, strands her head; to each of these is attached a ring of precious metal, and these rings, being on being cut, is allowed to fall with the attached ring into a coco-nut vessel (ornamented for the purpose with a chevron edging), which is used to contain the hair. As the ceremony also the proceedings are opened by the appearance of the bride with the hair-cutting rice-water, sprinkled over the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large, round, ornamental ear-ring, or ear-stud, is still the mark of virginity. Significantly, the ear-studs of a virgin bride are tied on to the ear-lobes of a widow who remedies the latter being regarded, so to speak, as a sort of ‘merry widow’, and being, in fact, actually called jeeringly ‘the widow adorned’ (jamala bbr-bhigans). Ear-boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the more accessible of the practice it seems to be entirely a non-Musulmanad rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant detail as to suggest that it has been grafted upon an ancient festival (probably the tamurah cerimoni) belonging to an older faith than that of Islam. 1

It is accompanied by the usual purificatory rites, and the ceremony is usually an occasion for a large gathering, at which the bride’s hair is dressed like a pilgrim and stained with henna like a bride-groom, after which the customary gifts are offered. In Pahang she is then taken aside and robbed in rich garments, her mouth filled with the sacrificial satroon-stained rice, and her body sprinkled with the purifying rice-dust. After this, two coco-nuts and two small packets of rice are slowly rolled over him from head to foot. A hen is then placed on his chest to pick up grains of the yellow rice from his mouth. This is done to drive away ill-luck.2 The boy’s teeth are next tapped with a stone by the operator, and, after feasting, a procession to the river follows, the object of which is to propitiate the water-spirits. The boy then takes his top-knot shorn off and returns to the house for the actual circumcision, during which he takes his seat either on a sack of rice or on the stem of a banana. In the procession the yondua are sometimes worn on the shoulders, sometimes (east coast) in a litter shaped like some strange bird or the head of an ox.

The girl’s ceremony is much simpler, much more private; it was formerly accompanied by ear-boring and tooth-filing, and by staining the teeth ‘black as a horer-bee’s wing’. Large round ear-studs were also formerly assumed by girls at this period, as ornaments, but, as not being permissible until sometimes worn on the east coast, they are now assumed, on the west coast, at the wedding ceremony, in preparation for the rite of discarding them a few days later.3

In the same part of the peninsula (east coast) the ceremony is still the morning the child ‘awakes from being born into Islam,’ but, most significantly, masak jai, 4

which means literally 'admission into the body of the Malay people'—the most usual meaning of jawi being the vernacular, or 'Malay,' language. Yet another term for the ceremony in these parts was 'Betrothal,' which, from the fact that it is used by the tribes, as the word for the act of 'marriage,' is a phrase which is also applied in the same parts of the country to marriage.

(b) Pagan races.—Of the various operations with which a marriage ceremony is crowned is the making of the attainment of maturity, neither inclusion nor circumcision is practised by the wild tribes except, in the case of the former, among the Semang, and the Jakus, of the Batau Pahat in Johor, and the Benua, and, in the case of the latter, as elsewhere, only where Musulman influence has penetrated. It may, in fact, be said that the rite is virtually synonymous with conversion to Islam, and that it may be taken as the broad dividing line between Musulman and mere pagan.

Nor, with the exception of a single record from the Perak Sakai, is there any tainting in the strict sense of the expression. Sacrification, however, is found among both Semang and Sakai, but not among the Jakus, and, judging both from distribution and from frequency, there is good reason to believe that this was among the Semang, and was introduced, though only to a limited degree, among the Sakai. The scarification consists of divergent lines on the cheek from the nose towards the ear, produced by the scratches of a file. The flesh is then made to bleed, and charcoal being rubbed into these scratches by way of pigment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakus, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. The designs are decorative and magical rather than tribal. Perforation of the nasal septum with a bone-bar, which is the practice in the Semang, is also found among the Andamanese kindred.

17. Betrothal and marriage.—(a) Malay. Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representatives of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle,' at which the offer used originally to be made, and the reply given, in rhyming stanzas. The term of the engagement is then settled. The amount of the marriage settlement is fixed by custom at two breaths of dollars ($22, about £2, 6s.) in Selangor, or $31-25 (about £3, 5s.) in Perak, etc. The sum is not usually mentioned unless a modification of the condition of the marriage is fixed by custom at two breaths or at a distance.
is then taken to the bride, and both are seated ceremonially side by side (dining). 5 On the day and partake of rice, each family distributes rice to their relatives (in the case of Selangor, Bicu), and then give the fruit, with dower and leaf, to the guests as wedding favours. On the third day of the instructions which follow the marriage ceremony of bringing good fortune take place in the evening. Later, at night, a henrope was formerly bound to the heads of the bride's father and mother. In many cases, the bride's parents were not present. He was escorted back to his house next day, and a water-fight with syringes called "water-bows" took place (presumably the Slip-knot) before the formally erected pavilion between the friends of the two parties. After this the bride and bridegroom each pulled one end of a slip-knot made of young coconut root, and the bridegroom broke through threads wound seven times round himself and the bride; in some cases (Patan) the threads were severed by burning. Seven days after the concluding feast-day the rice of the "discarding of the ear-rings"—the ear-rings to the ladies—takes place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the "bridal rice" (kasin-berat), in the "bridal thread" (Jakun panchari), and in the "bathing pavilion" (balasip panchari) are not only Indian names, but Indian names as well. In addition to this regular form of marriage with the consent of the girls' parents, the Malays recognized another form of marriage when the parents were not favorably disposed to the marriage. Among the Monogamy, the most distinctive feature, however, in theJacun marriage was the use made of a conical or, rather, half-spherical mound of earth, sometimes as actual and artificial "flowers," the latter being representations of the sun. The latter, with rays, etc., and other forms of symbolical parts. The union was consummated at this mound the bride was pursued by the bridegroom, in some cases three, in others seven, times; if he succeeded in catching her, they were regarded as married. In the case of Kuala Langat (Selangor) the bridegroom was conducted before the present was given seven times round the "nature of the rice of the marriage ceremony" and the bride once, before they parted with a common kiss, consisting of a dish of rice and drink from a horn of water which had been placed on top of the bride's head. This was, of course, a survival of the mound-race ceremony. In one form of this among the Matsa the bridegroom was not in the bridal procession, but the portable took place round a circle of varying size; in the case of the Jakun, the kisses and kisses were given by the bride and the bridegroom. The kiss is a mark of respect among the Matsa. The kiss (Orang Dara) was, it is important to note, among the Sea-Tribes (orang laut) of Johor a ceremony in which the bride had to be pursued by the bridegroom for a given distance on the river, in cases. Monogamy was generally, though not invariably, the rule. Although marriage was recognized as strictly binding by the Bési and other Jakun, yet at their drinking carnival (main jôö), which took place at the end of the rice-harvest, they were allowed to change their wives if they wished. Monogamy was generally, though not invariably, the rule. Although marriage was recognized as strictly binding by the Bési and other Jakun, yet at their drinking carnival (main jôö), which took place at the end of the rice-harvest, they were allowed to change their wives if they wished. This preparation of the body for the grave includes ceremonial washings, which should be performed while it rests on the stretched legs of four people (members of the family sitting on the floor. Allowing volunteers for this office, hanoa-stans are used as rollers. A final washing of "nine waters" is performed by the women (if accessible). The shroud of water being scattered to the right, three to the left, and three over the head, from head to foot. The corpse is then placed on the mattress. In the position which it is to occupy in the grave, lying, that is, the right side with the head to the north, and face looking towards Mecca, and Perak—"the entombment of the body." If the kiss before the shroud is fastened, they must be careful that no tears fall on the shroud, the ceremony is not completed. The position of the body in the grave depends upon the kind of coffin used. If it is a single-plank box, the body is placed in a recess at the left side of the grave, and the plank is fixed in a sloping position with pickets closing the aperture, so that the body itself may not allow the earth to fall upon it. Another kind of receptacle 6 1 "Wherever the old Falang (Sumatra) tradition exists—in Patang, Johor, Bako, Malacca, Selangor, and Perak—the documents or kossinings vary little. But if we look at the Romance of the world over, the ceremonies are quite different, the regalia are different. We see before us the ghost of the eastern Northern Celebes and the old high civilization that has been crushed out of existence by the Siamese" (Wilkinson, p. 70).

3 P. 28.

4 According to one account, the bride and bridal attendent
burial customs exhibit considerable variation, but they are especially significant as revealing the attitude of the various groups towards death, and particularly towards the dead. The Semang appear to have no special fear of the dead, although they do exhort their deceased friends to think of the spirits of their departed ancestors and not to trouble the living. The Semak, on the other hand, appear to have great terror of the spirits of the dead, and it is usual for them not merely to desert the house in which any one has died, but to abandon the whole clearing, even if the other houses standing nearby are not distinguished from both the Semang and the Sakai by the tender care which they show for their dead relatives.

The Semang method of interment is simple. Among the Negritos (Semang) practised tree-burial. The bodies of their medicated dead may still occasionally be seen exposed in trees in the forest—this being a more honourable form of burial. Among the Malays a tradition is current that the Semang used once upon a time to devour their dead. It is unnecessary to place any credence in this statement; its importance lies in the fact that it probably alludes to the existence at one time of a custom analogous to that of the Andaman Islanders, who disinter and dismember their dead after the_scores_of_days.

Of Sakai methods of burial little is known with certainty, the reason being apparently the fact that they threw the bodies of their dead into the jungle, or simply left them to rot away in their primitive hut-shelters. It is certain that they have always shown the utmost abhorrence and terror of the dead, abandoning their huts—and even clearing with growing crops—had happened to their encumbrance. A modified form or survival of platform-burial is found among the so-called Sakai of Selangor (Ulu Langat), by whom the body was exposed on a platform in front of the house for forty-eight or seventy-two hours, or even longer, as death occurred. Jakun (or Malay) ritual and practice are more elaborate than those of the Semang, and in the solicitude shown for the welfare of the departed imply an entirely different mental attitude towards death from that of the Sakai and the Semang. In many respects there is close affinity with Malay customs.

The body is carefully washed and prepared for the grave. It is covered with white cloth, and laid on a mat, which, in turn, is placed upon a tree-bark wrapper. This tree-bark is then lashed round the body and used for carrying it to the grave-side. Frequently the blade of a chopper (parang) is laid on the breast of the departed. The orang could cut a hole in any of the cloths in order that the corpse may 'breathe' more fully. It is customary also for them to make crosses on the palms of the hands and soles of the feet with a yellowish red which, on being bruised, leaves a stain behind it. By these marks the deceased person may recognize, on waking in the other world, that he or she is really lifeless. At the grave the tree-bark wrapper is removed, and the body is laid on its back, or sometimes facing east if an adult, and head of the child toward the sun. The covering, in accordance with the Malay custom, is formed from pickets covered with tree-bark or a similar material (also a Malay usage) to keep the earth from striking the body. The orangs (Men’s) place a dish of boiled rice at the feet for the spiritual needs of the one dead, but the orang (Men’s) is commonly the custard to lay in the grave some or all of the property of the deceased, usually among the daily duties of the sexes. An extremely interesting practice among the British consists in their erecting, a yard or two away from the foot of a grave, a small tree trunk but thatched with a big fan palm-leaf made to lean against it, fitted with a stick or it by which the grave may be opened. In the hut are

(a) Pagan races.—Among the pagan tribes the

placed models of domestic and other utensils and implements, such as distaffs, looms, tortoise, hand-sheets, and fish, and fruits, water, and sugar. When the grave has been filled in, the seeds are scattered about the grave, so that in order to provide the ghost, when the grain has grown up, and ripened, with suitable nourishment. Among these people it was traditional to take two or three to two or three men to scatter the corn on each side of the grave and simultaneously to let fall two choppers, horizontally. One represents the circle in which the brew would be, thus being done in order to fix the ghost in the grave and to prevent it from harassing the living. The Malays believe that the dead (no doubt the deceased) scattered the fragments on the grave mound. At each end of the mound they plant a banana plant. In a more common belief a banana plant is covered with white cloth similar to those used by the Malays, and, again like the Malays, they enclose the grave, when made up, with a framework of wooden planking.

The feeling for the welfare of the dead which is expressed among the Balais by the seed-rice sown over the grave is also responsible for the decorating of a number of offerings at or near the place of interment. The Belais themselves plant yams, sweet potatoes, etc., near by, while on the grave of a mahak (trivial chief) described by D. F. A. Harvey (JRAS, Straits Branch, No. 2 [1921], p. 140), were sticks to serve as ladders for the soul to climb up, coco-nut shells, a torch in a stand, and a cooking-pot, as well as the basket in which firewood is usually carried. This grave was also provided with a trench in which the dead man could paddle his canoe—apparently a link with heathenism of the Malay-Bornean. As his canoe was placed up-right near the face of a child, with one end projecting from the grave—undoubtedly a survival of an earlier custom of feeding the corpse through the bamboo, as is still done by the Dayaks of Borneo. It was not uncommon for a fire to be lighted near the grave, as the Malays believed that the spirits visited the grave on the third and seventh days and one month after interment. The spirits of the dead are used as weapons, though not weapons, abandoned house and clearing after a death; usually, however, this took place after a month's interval.

In Omens, divination, and ordeals. - Astrological calculations based upon the supposed values of signs and the promises of numbers are largely employed in divinatory ritual. Exhaustive tables of unlucky and lucky times and seasons have been compiled by the Malays, but are proved to have been largely translated from Indian or Arabic sources. The oldest and best known of the 'magic squares' founded upon these systems is that known as the 'five times' (katika timur), in which the day is divided into five parts, while five days form a cycle, the name of a Hindu divinity being assigned to each division. Mystic values are also attached to certain colours in connexion with these divisions. Another scheme is based upon the seven heavenly bodies, the divisions being, correspondingly, seven in number. Malayana astrological knowledge and the signs of the zodiac upon which the various systems are founded appear to be largely a West Indian-Chinese, and there can be little doubt that the original home of this lore was Babylonia (or Chaldea), and some part of it may have come into India-Persian channels. The day is divided into 360 rows, thirty in each, with a separate symbol, is based upon the twenty-eight nakshatras, or lunar mansions, of the Hindus, rather than upon the asaved of the Arabs. The Malays are especially partial to the magic square, which generally takes the form of the magic square once used in Europe, but sometimes works conversely—the latter being, doubtless, the older native form proper to the Malays. In this method, the Malays introduce both coloured squares and the names of five of the greater Hindu deities. Besides these squares, many other magic figures—pentacles, compass-lates, and the like—are much used by Malay diviners.

In interpreting omens from dreams the method usually employed is that the initial letter of the thing dreamt of determines the character of the omen. T is very unlucky, N indicates sorrow, H a visitor from a distance, and so on. In another system an almost entirely arbitrary interpretation is given to the subject-matter of the dream, or, in most, it is interpreted by analogy. In a third method, however, the nature of the thing dreamt does actually suggest its interpretation, with the proviso that so-called 'direct' dreams come only on the eve of a Friday, whereas on other days the dream works out in a different manner.

It may be added that the doctrine of luck plays a most important part in what may be called Malayan 'natural religion.' By certain signs and omens the Malays are enabled to predict both the good and the bad, and animals are either credited with the possession of luck or believed to be invested with the power of bringing it to others; in a fine passage the Malay door-guardian spirit (the house alma) is likened to a tom-cat-

From the seven Hills and the seven Valleys
Comes the intense barking of my Hounds.
My Hounds are Hounds of Luck,
Not Luck that is adventitious,
But Luck incarnate in their bodies.1

Even inert objects, such as krisives and other weapons, may be brimful of luck, or otherwise.

(a) Malay.—Omens and divinations play a part in the everyday department of life's activities in Malaya. Equal significance is attached to signs deduced from the acts of men and those taken from the events of nature.

Among the signs taken from natural events, the following may be mentioned.

A star in apparent proximity to the moon portends an approaching wedding. The entrance of an animal which does not usually frequent the house denotes ill-fortune. If the cattle are barked at by a wild jungle-dog is a fatal portent; a wild bird entering the house should be caught carefully and measured with oil and then released in the open air, a formula being recited which beds it fly away with all the ill-luck or misfortunes of the household. Omens are taken from the sight and cries of certain birds, such as the night-owl, night-jar, or emperor-pigeon, the crow, and certain kinds of wild dove, as well as from a bird called the 'rice a husband.'

Such prognostics are drawn from entirely fortuitous events, but they may also be the natural reply to actions initiated by the inquirer. In such cases we have the rite of divination properly so-called (tilik = Skr. tilaka, 'mark').

One form of divination is effected by means of a lemon which, after offerings have been made and certain ceremonies performed, is suspended with incantations over a brazer by seven strands of coloured cord, or is dropped into a receptacle through a needle. The motes of the suspended lemon answer questions as to the negative or affirmative, or whether the inquirer cover a shawl by indicating which of a number of names written in paper is that of the guilty man. The water is then boiled with water held in the palm of the hand, or saliva, or a bowl filled with water and covered with a cloth upon which the names of suspected persons are successively placed is employed to discover those who may have been guilty of stealing. In the last-named case, two men each place a finger in the bowl, which begins to turn when the name of the culprit is placed upon the cloth above it. Another method is the use of the medicine-man of a divining-end composed of one, three, or more rat-tat-tats, inscribed with magical devices, and connected at the base or head-end, which vibrate when the third approaches; these rods may also be used for treasure- or water-finding, as by our own 'dowsers,' and also even for exercising demons.

It is noteworthy that the Malays attribute the arts of the diviner to animals as well as to men; thus the tiger is said to employ divination when it wishes to secure a human victim, just as tigers are believed to poliute themselves with tilak tilak (the medicinally applied to the newly circumcised) when wounded.

An important and solemn ordeal was that by diving. This required the consent of the Sultan, and could be brought about by the pressure of the four great (west coast) chieftains.

In the case of a dispute, each of the adversaries in defence of his own case wrote a statement, or a malam, this document inscribed in a bamboo sheath or covering. One of these bamboo receptacles is given to each of the two

1 Skeat, Malay Magic, p. 182.
adversaries, who are escorted to the river and placed up to their necks in the water. A huge red pole, then made to rest upon their heads and, at a given signal, they are both pressed downwards. Each remains under the water as long as he can, but not more than three minutes. As the bodies rise to the surface, his staff is taken from him. The winner is led back, having his head, as it were, crowned with the beaten brass of the bystanders.

(b) Pagan races.—The savage Malays of Malacca also paid much attention to omens when a new clearing was to be made, and charms were used to expel the jungle spirits. The Mantri, in choosing a new locality for a clearing, paid strict attention to the attitude of the spirits toward his undertaking as signified by the dreams of the party. To dream of being chased by a dog or an enemy, entering water, or being flooded out, was an evil omen; to dream of felling or climbing trees, of ascending trees, or of growing plants was of good import.

Divination among the Sakai, so far as records go, is practically non-existent. Among the Jakun it is employed as a part of their medical diagnosis, but, whether used as a part of a tribal or group ceremony or by the medicine-man alone, it falls more properly under the category of sorcery.

20. Charms, amulets, and talismans.—(a) Malay.—Not only does the Malay attempt to foresee the coming of evil, but he endeavours to ward it off by charms and talismans. Charms in the shape of invocations are extremely numerous, and are addressed to every conceivable form of spirit on every conceivable occasion. But, in addition, free use is made of charms of a more material character. Examples of this class include a length of the semangat (Malacca cane) with a joint equal to the height of the owner, which protects him from snakes and animals; so, too, the ‘coconut-pear’ (apparently a form of ‘tabashee’), the ‘eyeless coconut’ (which confers invulnerability by ‘sympathy’), the ‘dragon’s blood’ rattan or cane, the tiger’s whiskers and claws, and many others are all, for various reasons, much sought after by warriors. Some of these are directly effective, others work only by influencing the volition of another mind, as in the case of love-charms, charms for securing conjugal fidelity, and so forth. In most cases the charm consists of a short Arabic or Malay and Arabic prayer or a few magical letters or figures inscribed on paper or cloth and worn on the person. The important use of a charm is to enable the devotee of this magic to abduct the semangat of a person from his (or her) body, for the purpose either of benefiting the operator or of harming the intended victim. There are many methods of obtaining these objects. In some the charm works without contact; in others contact is necessary. Although there is considerable variety, the principle in all cases is the same, and is based upon the Malay theory of the semangat. Thus, e.g., soil is taken from the intended victim’s footprint and treated ceremonially by wrapping in red, black, and yellow cloth; and this, when suspended from the centre of the magician’s mosquito-curtain, becomes the embodiment of his victim’s semangat. As such it is swatched with seven strokes three times a day for three days. It is then buried in the middle of a path where the victim is bound to pass; on doing so, he becomes distracted. Wood scraped from the floor where he has been sitting, parrings of his nails, and clippings of his hair are utilized in various ways; sometimes they are knitted into a wax figure, which is either transfixed with a thorn in the member that the enchanter desires to injure or burned to ensure the victim’s complete destruction.

Of the various methods of abducting the semangat without contact, the simplest is to go out when the sun clears or when the newly-risen moon glows red, and, standing with the big toe of the right foot resting on the big toe of the left, make a trumpet of the right hand, and recite the appropriate charm thrice or four times. At the conclusion, the invoked spirit appears on the left side of the victim’s head-cloth in the direction of the moon seven times, and so forth, the appropriate charm in each instance being, of course, recited.

With their customary logical thorunghness, the Malays attribute the use of charms and amulets in some cases to wild animals, and even to reptiles. The wild boar is believed to be under the protection of a Malay man of extraordinary power called ranta baba, ‘the wild boar’s chain,’ which is hung up on a neighbouring bush by the animal whilst he is occupied in wallowing, and which can therefore sometimes be stolen by a lucky native. Another talisman carried by the boar for defensive purposes is the kalum baba, ‘boar’s sucking stone’; the two together made a wild boar invulnerable. A similar ‘lucky stone’ was sometimes worn by serpents. Any magically potent object is called bar-tauh.

(b) Pagan races.—Amulets and talismans are common among the wild tribes. Coins are strung on necklaces and used as ‘medicine’ in cases of sickness, e.g., lengths of tufts of squirrels’ tails, teeth of apes, wild pigs, and monkeys, and bones of birds and animals, as well as the bristles, teeth, and claws of tigers, were first worn, as among the Malays, quite as much for magical purposes as for ornament. The Mantri string pieces of turmeric on strings of artoocarpus bark, and these were wound round the neck, wrists, or waist as prophylactics against demons, bad winds, and, generally, all kinds of evils. They also placed great reliance on the efficacy of spells to render them invulnerable. Semang women wear amulets of palas (Lonanai pedata) leaf, and men wear similar ornaments of the ‘rock vein’ (srot batu) fungus. It appears that among these tribes, as elsewhere, much of their personal adornment was intended to protect them against evil from the spirits in which they were on all sides surrounded. The elaborate patterns of the combs of the Semang and half-breed Sakai-Semang women were similarly designed to ward off accidents and disease, and the copper bracelets, rings, and other objects worn by the Semang and Sakai were in effect talismans which preserved the wearer from ill-health and misfortune. The Semang, when wearing the Malay strong, frequently still wear an underneath string girdle of ‘rock-vein’ fungus, possibly from habit, but more probably for magical reasons.

The most important class of charms or talismans employed by the wild tribes is undoubtedly the ornamental geometrical patterns with which they adorn various objects of common use. These designs are intricate and have as yet been adequately studied and elucidated only to a small extent. So much, however, is clear: the pattern, as it is symbolical of the use to which the object on which it appears is to be put, and its aim is to secure the successful attainment of that object. Exception to this rule may be made in the case of the women’s combs and other articles, the patterns on which are intended to ward off disease, the attacks of reptiles, animals, and noxious insects, and other accidents. The difficulty of comprehending and interpreting these designs is increased by the fact that, in the usual fashion of primitive artists, the wild tribes make a part stand for the whole. The slots of deer on a bamboo quiver, e.g., represent the whole animal, which, it is believed, is induced, by being represented as approaching towards certain wild jungle-fruits beloved of the deer, to visit a particular feeding-ground, when they can be more easily made to feed and captured. The articles decorated in this manner
MALIK IBN ANAS—MALTHUSIANISM

with magical intent include, in addition to the Semitic plants. They have been used as quiver for darts and arrows, the last being covered with patterns intended to secure success in hunting. Other articles similarly adorned are 'stampers' (i.e. bamboo struck on the ground during magical ceremonies), and 'mages', such as insect pests, drought, etc. Besides these they decorate bamboo rice-dibbers, poison receptacles, tobacco receptacles, blowpipes, arrows, nose-sticks, etc., mats and wall-hangs and hairpins, etc. (see Snouck, "Arabische Kunstgeschichte", Berlin, 1895, p. 129). The term "al-Musulman" (1884, 416); C. Brockelmann, Geschichte des arabischenLiteratur, Weimar und Berlin, 1918-1920, i. Other biographers, and also the Arab historians, have used the term "Malikite" for Malik ibn Anas, and Malik ibn Anas, the founder of the Malikite school, was born in the month of Rabii al-Awal (A.D. 78), a.d. Nov. 170). He was of pure Arab stock, being descended from Dhu Asha’ al-Jufri, who belonged to one of the tribes of Yaman. When still a youth, he had acquired a full knowledge of the Qur’an and the hadith (tradition), and other Muslim sciences, and so high was he held in reverence as a great authority in these matters.

During his long career Malik ibn Anas resided in his birthplace Medina as a mafirat and teacher of Muslim law. Like many men who have spent their lives in study, he has not left much for his biographers to record. His chief work was the collection of cases (known as the Qudsi), the basis of the whole Malikite system of Muslim law. This book is not a mere collection of traditions. It deals not only with the sayings of the Prophet but also with the opinions of several famous fakihis in Medina and with Malik’s personal views on various matters of canon law. It is often alleged that Malik rejected every kind of reasoning by means of argument and kept exclusively to the literal sense of the sacred texts. But the contents of the Murraddi prove the contrary. According to his later biographers, Malik repented of this in his last illness, and told them that, when his last illness and wept, he was asked: ‘What makes thee weep?’ He answered: ‘Who has more reason to weep than I?’ By Allah, I should wish I had been flogged and reflogged for every question of law on which I pronounced an opinion founded on my own fallible judgment!’

The text of the Murraddi is handed on by Malik’s disciples in different versions. The best known is the text of Yabiyah al-Musulmi, which was printed with the commentary of Muhammad al-Zarqani in 4 vols. at Cairo (1803). Another version is that of Muhammad al-Shafi’i, the famous disciple of Abi Hamid, who studied three years in Medina (printed at Lucknow, 1859).

It seems that the opinions of Malik ibn Anas were not always in agreement with the views of the other books, or with the views of the Malikite school, or with the views of the Qudsi. In A.D. 145 (A.D. 762), as some persons had accused him, he declared that he did not consider the oath of allegiance to the Abassid caliph’s binding; he was even flogged and treated in a most scandalous manner. After this cruel punishment, however, he rose still higher in public estimation in Medina, where he died on the 10th of the month Rabii al-Awal, A.H. 179 (A.D. 3rd June 798).

Malik ibn Anas enjoys the reputation throughout the whole Muslim world of being one of the greatest faqihis and traditionalists of Islam. At the present day his school is still dominant in the west of the Muslim territory, in the French and Italian possessions, as well as in Tunisia, Tripoli, and in many other parts of Africa.

W. JUYNBOLL

MALTHUSIANISM.—Some economic and social investigations seem to have been haunted by an evil fate. The subject with which they are concerned seizes popular attention for a time, and the results of the inquiry come to be represented in a form which is little more than a travesty of the original meaning and intentions. One of the most remarkable instances of this tendency is to be found in the reception accorded to the work of Thomas Robert Malthus (1766-1834) on Population. Popular interest in his work grew much more rapidly than the time or the capacity for assimilating it, and he was criticized by many who had not read him. He was acquitted of the sin of being an enemy of the human species, and of being guilty not merely of heterodoxy but also of atheism. It was said that ‘the insults the theory of Malthus level at God, and the injuries it meditates inflicting upon man, will be endured by neither’ (M. T. Sadler, Law of Population, i. 15). Further, the principles of population enunciated by Malthus have been expanded and developed in several different forms (notably by T. R. Malthus, 1802; W. McCulloch, 1803; W. Petty, 1805; and all these views are described roughly by the vague and comprehensive term ‘Malthusianism’, which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than ‘Smithianism’ in Germany.

It would be a mistake to consider that Malthus was the first economist who treated of population. The Mercantilists had explicitly advocated ‘population’ as an important condition of national wealth, and had even thrown down the tabus against the use of blowpipes, etc., and thus they prepared the way for the later writers. Yet all these views are described roughly by the vague and comprehensive term ‘Malthusianism’, which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than ‘Smithianism’ in Germany.
convention was destined to have important results. It took place between Malthus and his father. The latter, Daniel Malthus—a friend of Voltaire and the author of A Treatise on the Principle of Human, was favourably disposed towards Godwin's views, while the son had doubts, which he afterwards placed in writing. The treatise which resulted was his Essay on Population, published anonymously in 1798.

Malthus believed that a fatal objection to the thesis of Godwin and other writers who maintained the necessity and the gravity of the relations of population to the means of subsistence. Population, when unchecked, doubles itself every twenty-five years; the means of subsistence, under circumstances the most favourable to human industry, could not possibly be made to increase faster than in an arithmetical ratio; i.e., the progression for population, if unchecked, would be 1, 2, 4, 8, 16, 32, 64, 128, 256, while that of subsistence could not exceed 1, 2, 3, 4, 5, 6, 7, 8, 9. Population had not increased in a geometrical ratio, owing to the checks imposed upon it by misery and vice, the former being certain and the latter by the operation of whatever makes 'a constant effort towards an increase of population,' with the result that there is a constant tendency towards distress among the lower classes (Essay, 1798, p. 29). Against this position, he adduced the grim spectres of famine, war, pestilence, and evil living as the necessary limitations to the natural increase of mankind—either positively by reducing a redundant population, or negatively by the dread of those evils. The first edition of the Essay can be understood only by remembering the controversy process out of which it arose. In opposition to the optimism of Godwin and his sympathizers it overestimates the darkness of the situation. An attempt was made to correct this in the second edition (1803), which is practically a new book. The treatise of 1798 was in the main the product of his youth. Utopia, from the point of view of the support of a growing population; that of 1803 was a scientific examination of the principle of population, as far as possible in isolation from other phenomena. There was, however, a greater change than that of external form; the two progressions remain, but the exposition of the checks to increase of numbers is worded differently. Misery and vice become subordinate to what Malthus termed the 'rest submarine.' The optimists anticipate, and so prevents, a pressure on the means of subsistence; and, where it is observed, actual misery, as a result of population, need not arise. Moral restraint is, strictly speaking, 'moral' only in so far as it is exclusive of 'irregular gratifications'; its main characteristic is rather that of rational prudence, based on man's 'reasoning faculties which enable him to calculate distant consequences,' (Essay, 1803, pp. 9, 11), such as his capacity to support a large family without lowering a suitable standard of life. Hence moral restraint operates in the direction of postponing early marriages as well as irregular connexions. It means, in fact, as J. Bonar puts it, simply continence (Malthus and his Work, p. 53).

Much of the popularity of the principles of Malthus may have been due to his summing up the foundations of his theory in a formula which is capable of being apprehended easily and remembered, especially as the geometrical and arithmetical ratios were to be exhibited in a mathematical demonstration. But the formula suffers from a false simplicity; the first important objection is that Malthus founds his argument upon two premises, both of which he claims as co-ordinate, but it is clear that a supply of food is much the more urgent need. The colatitude must be fed if he is to live. It follows that the tendency towards increase of population is a conditional one, and hence the theory may be advanced at a given time is susceptible of alteration, irrespective of changes in the quantity of food. Malthus often speaks as if population must increase up to the limits of the means of subsistence, but in such a ratio, as the maximum possible increase in the production of food, was never formally and fully proved by Malthus; indeed, his sections on the state of population in America (Essay, 1798, p. 29) partially contradict his view of the range. Moreover, not only the production of food but its consumption must also be taken into account. Economics in consumption without loss of efficiency would enable a larger population to be maintained by the same supply. The whole statement of Malthus regarding agriculture in his earlier editions is embarrassed by his ignorance of the Principle of Diminishing Returns, a law which could not have been anticipated, or even implied. Torrens, James Mill, and McCulloch understood Diminishing Returns not so much as a theoretical tendency, but as a condition of the working of the extractive industries in practice. Accordingly, in spite of improved methods of production, they thought that the increase of population drove agriculturists to cultivate more and more inferior soils, so that a larger and larger proportion of the produce became required for providing the necessary of life. J. S. Mill stated this point of view concisely when he wrote: 'It is in vain to say, that all months which the increase of mankind calls into existence, bring with them hands. The new mouths require as much food as the old ones, and the hands do not produce as much' (Principles, bk. 1. ch. xii. § 2). Mill, like the rest of the Classical School, regarded Diminishing Returns as a 'law' which could not be suspended only temporarily by the disturbing influence of improvements. The present disposition of economists is to consider Diminishing Returns as a tendency too low characterized by the term of action. The difference of outlook removes some of the gloom which settled on the population question during the 'dismal' era of economics in the first half of the 19th century. The real influence of Malthus survives in a much modified form, on the one side in the responsibilities of parents in being able to provide for their offspring, on the other in a ceaseless effort to effect improvements in the productive arts, particularly in those connected with the provision of the world's food supply.

It is scarcely necessary to add that the doctrines and practices of Neo-Malthusianism, or the voluntary restriction of the birth-rate, form no part of Malthus's own teachings and would doubtless have been indignantly repudiated by him.
transliteration of the Gr. μαμωνᾶς, a form which, with ας, appears in TI, with Latin Vulgate, Old Latin, and Greek manuscripts. The correct Greek, however, is μαμωνᾶς, which is found in RV, with all Greek manuscripts, and most minimuscles, as well as in the Complutensian and the first two editions of M. But the influence of the Vulgate led to the appearance of μῶν in the later editions of Eramus and in AV (for further details as to spelling see E. Nestle, in ZDB).

The word mammon is one of the few English words found in the Hebrew Bible. It is a hellenized form of the Aram. ממון, which means 'money,' 'riches,' 'worldly goods.' Wycliff and Purvey translated the word by 'riches' ('richess'), but Tindal followed the Vulgate in transliterating the word, and so did all later English versions, except Geneva.

1. Derivation.—The Aramaic form ממון (stat. empf., מון) follows a well recognized form of normal inf. מון, but scholars are divided as to what is the verbal root.

(1) J. Draisius (quoted in J. Buxtorf, Lexicon Chaldaicum, Basel, 1640, s. v.) and Dalman (in PPE XIII, 158) derive the word from מון, i.e. ממון = מון, which would mean 'that on which man trusts,' or, as Dalman prefers, 'that which brings man into safety.' (2) Justrow (Talmud Dictionarius, p. 724) derives the word from a form, מון, 'to distribute,' to the root, and thus our word means 'that which is distributed.' (4) W. Gesenius (Thesaurus linguae Hebrew et Chaldea, Leipzig, 1829, ii, 532), as if ממון were the true form, derives it from מון, 'hide,' whence מון = ממון, 'that which one hides or treasures.' (Gen 44, Job 29, 5, Prov 6, 11). However much the learned may now differ as to the derivation, it seems certain to the present writer that the Syriac versions all derive the word from מון, and that they assumed a paronomasia to exist between our word ממון and מון (pass. part. of מון), which means 'faithful' or 'trustworthy,' thus: He that is trustworthy in little is trustworthy also in much; and he that is not trustworthy in little is not trustworthy in much. If ye have not been trustworthy (ממון) in the unrighteous mammon (ממון), who will entrust (معنى) to you the true? But, since the verb מון is a verb of disjunction, we must expect to find our word ממון in Syriac, may we not go further, and say that the paronomasia was probably intended by our Lord in the original Aramaic?

2. Usage.—The trade of the world, before the time of Alexander, had long been in the hands of Phoenicians and Arameans; and we have evidence that in both languages mammon was the word for 'money.' As to the former, it occurs on Phoenician inscriptions on tombstones; and Augustine, in two passages (de Serm. in Monte, II, iv. 47, and Quest. Evang. ii, 34), states that the Punic word for lucrum ('wealth') is mammona. Its Aramaic usage is also abundantly attested. Jerome (Ep. cxxii, 6) affirms:

'Non Hebraeorum sed Syrorum lingua, mammona dividit monetanum.'

Irenaeus (III, viii, 1) attests its use 'secondum Iudaicam loquentiam, qua et Semitice sanctitatem.'

The Aramaic Targums often contain the word: e.g., Fr 3, i.e., 'Honour the Lord with thy mammon'; Is 50, i.e., 'Ye that wish to learn, learn without price and without mammon'; Jz 5, i.e., 'They accepted no mammon of silver'; in Ex 1821, the ideal judges are those who hate the receiving of mammon.' In the Aramaic sections of the Palestine Talmud the same story is told twice (Nedarim, v. 3; Brakhot, vii. 2) of 300 poor Nazirites who came for purification. R. Simeon asked King James to give half the cost, but it turned out that the king paid all
the money (μαμων) and the Rabbis' half was his knowledge of Törah. Brekh. 616 says:

"May the name whose money (μαμων) is dearer to them own body."

There is also a classification in lawsuits between those which concern money (πληρωμ) and those which concern life, and which speaks of them as a pair. This is found often in the Talmud and also in Jesus, Targ. to Dt 11. The pre-Christian usage of our word even in Hebrew is shown from Sir 31, 'Blessed is he . . . that hath not gone after deceit.' The translators of LXX show themselves acquainted with the word, for in Ps 36 (ERV 37) they mistranscribe γαρ as γενομενον, 'Thou shalt dwell in the land and be fed on its wealth,' and in Proph. Abdath (l. 16) we have a saying of which the Lord says: 'Let the property (της) of thy friend be as precious to thee as thy own.'

The very phrase 'mammon of unrighteousness' is quite common in Jewish literature; in the pre-Christian work of Enoch the word is:

"Our soul is sated with unrighteous mammon, but this does not prevent our descending into the flame of the soul of Sheed." (ESR 37)

The phrase γενομενον γενομενον is a well recognized phrase in the Targums for 'money earned through deceit or fraud.' The crime of Samuel's sons was that they turned after mammon of fraud (1 S 8; cf. also Ps 52). In Deut. 32:19, they are called "money givers by fraud," and in Prov. 28:27, 30:3.

3. Exegesis. — (1) In Lk 16, 'Make to yourselves friends by means of the mammon of unrighteousness,' the difficulty is: to whom was Christ speaking? In the Greek Testament, 1 Cor 15:58 is employed: 'For the gospel, I say, is of no worth to you if it bring not salvation.' The other passages cited, 2 Cor 9:3-15, Rom 15:25, and Gal 2:10, are all of the early church, and are in the crowded (164). It was certainly more suitable for them for the Twelve, who had not much 'mammon' of any kind; and, if so, the phrase has no meaning homely in Jewish literature—'money ill gotten, money gained by fraud.' Thus the advice which Jesus gives to the Pharisees is that they should make restitution to God by deeds of benevolence. The Rabbis say, "Maimon (p. 253), 'Ye who have acquired money unrighteously and cannot refund it, use this wealth in making friends for yourselves,' as Zechariah, when converted, volunteered to give half his goods to the poor. 'The counsel is to use wealth in dolog kindness to the poor, . . . only care must be taken not to continue to get money by unrighteousness in order to have wherewith to do charitable deeds' (Bruce, loc. cit.).

The alternative view, that the words are said to the Twelve, and that μαμωνας γενομενον is the evil term stamped on all wealth, 'wretched' or 'low', 'beautifull great wealth, is seldom gained or employed without injustice,' is forcefully presented by Moffatt, in DCOG II. 106 f.

(2) In Lk 16:16 we have a contrast between τοις διάκονοις μαμωνας and τοις διάκονοις μαμωνας, which seems to turn on a second meaning of γενομενον. In the original Aramaic, γενομενον means (a) 'deceit,' 'fraud,' and (b) 'nothingness,' 'illusion,' 'vanity.' We believe that γενομενον, here as elsewhere in NT, means 'real,' 'permanent,' 'belonging to the spiritual world,' in contrast with the present life of illusion and vanity, where 'the things that are seen are ephemeral' (2 Co 4:4). We surmise, then, that γενομενον would, in the original Aramaic, appear in both v. 9 and v. 11, but in v. 9 γενομενον means 'deceit,' 'fraud,' while in v. 11 it means 'illusion,' 'vanity,' and thus presents a contrast to the true, the 'real,' 'spiritual' riches. Our Greek translation, of course, obliterates or ignores the distinction between the two meanings of γενομενον.

(3) In Lk 16:13, 'Ye cannot serve God and mammon,' the opposition is on 'serve' (κεναλώντες). No man can at the same time be the θέλητας of God and of worldly wealth. The ordinary pursuit of wealth is not condemned. It is the undivided concentration of mind—the surrender of body and soul to money-getting—that is censured, as being incompatible with whole-hearted devotion to God and to His service. Mammon is personified as the object of unkindly attention and service, as in Ro 16:14 Paul says, 'Counsel is given him of his own nature (συνεστίον παρ' αυτω και καλέω), and as in Col 3:2 he utters a warning against 'covetousness, inasmuch as it is idolatry,' i.e., wealth so easily erects itself upon and substitues its affections from God and makes men averse to giving cheerfully what they acquire. Here and in Lk 16 there is, no doubt, a personification of wealth, as also in Tertullian (deo. Movr. iv. 33). When Milton, therefore, speaks of Mammon as one of the fallen angels in hell, 'the least erected spirit that fell from heaven,' who even in heaven was

"admiring more
The riches of Heav'n's pavement, trod'd gold,
Thus sage, divine or holy, else enjoyed
In vision beauteous." (Par. Lost, i. 637 f.; cf. also ii. 223)

We have, perhaps, not so much legislation on the poet's imagination as an indication of his familiarity with apocryphal lore. The phrase 'mammon-worship' has been made familiar by Carlyle (Past and Present, bk. iii. 2, bk. iv. 4, 5, etc.), and is, no doubt, used in an emphasis upon the warning of Jesus, 'Ye cannot serve God and mammon.'

MAN.—See ANTHROPOLOGY, ETHNONOMY, EPHORATION, PSYCHOLOGY, SOCIOLOGY, etc.

MAN, ISLE OF.—See CELTS.

MANA.—Mona is a native term belonging to the Pacific region, but, for the purposes of the science of comparative religion, serves likewise as a category of world-wide application. The local sense will be found to stand in close relation to the scientific, despite the fact that the latter represents but the generalized content of various concepts prevailing in different ethnic areas and presumably of more or less independent origin.

1. Local meaning of mana.—'The word,' says R. H. Codrington (The Melanesians, p. 119), 'is common I believe to the whole Pacific, and people have tried very hard to describe what it is in different regions. I think how we know our people mean by it, and that meaning seems to me to cover all that I hear about it elsewhere.' For the two-fold reason that Codrington's account has in no respect been impugned by later observations, and that it is the classical source from which the scientific use of the term mana is derived, it will most naturally be followed here, though one must bear in mind that it deals primarily with the Melanesian usage, whereas there is reason to suppose that the actual word is an importation from New Holland and the Melanesians.

W. Taylor Smith calls the attention of the present writer to a passage in 'Pastio Sandoval Velarde,' in Adolfo Antoniani, New Zealand, 1813–69, p. 320, in which "mana" is used in the same way as mana, and in which it is stated that the people who use "mana" are the "Maoris" who live in the South Island, and that the word is "a kind of magic, and is used in this way: 'Mana' is a powerful person, or a god, and so the word may be translated "god." C. R. M. Snow, in his "New Zealand," says: 'Mana' is a word signifying power, dignity, and respect. It is also used in reference to the essence of a man or woman, and is often used in combination with names of persons or places, thus: 'Mana-a-Puhinui,' meaning the essence of Puhinui. The word is derived from a root "man" meaning a person, and is used in the phrase "mana," meaning a person's soul or spirit."

LAW, THE MEDITERRANEAN, AND THE PACIFIC. (See also MELANESIA.)
manifested, where it resides, and whence it comes; and (b) practical, involving the methods by which it is sought to turn the supposed fact of its existence to human advantage.

(a) Theoretical aspect. — **Mana** is defined by Codrington thus:—

> It is a power or influence, not physical, and in a way supernatural; but it shows itself in physical force, or in any kind of power or excellence which it possesses. This mana is not fixed in anything, and can be conveyed in almost anything; but spirits, whether disembodied souls or supernatural beings, have it, and can impart it to personal beings to originate it, though it may act through the medium of a stone, or a house, or a bone (p. 118).

Again, he describes it as 'a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which is of the greatest advantage to possess or control' (p. 118 n.).

In this account three points are specially to be noted: (1) that the power or excellence for which mana stands is 'in a way supernatural,' namely, in fact, 'what works to effect everything which is beyond the ordinary power of men, outside the common processes of nature' (p. 118); (2) that, even if it be in itself impersonal, resembling a contact, it is such a force as electricity, in that it can have a material object for its vehicle, 'it essentially belongs to personal beings to originate it'; (3) that it 'acts in all kinds of ways for good and evil.' Other words, 'it may be used to benefit or to afflict friends and enemies' (p. 200), and is thus indiscriminately at the service of religion or of the black art. So much for the nature attributed to mana which, be it noted, is noun, adjective, or verb, since it is equally a property, quality, or state. It may next be shown how such an attribution is a result of experience and sometimes even of experiment.

If a man has been successful in fighting, it has not been his natural strength of arm, quickness of eye, or readiness of resource that has won success; he has certainly got the mana of a successful warrior to empower him, conveyed in an anulet of a stone round his neck, or a tuft of leaves in his belt, or a tooth hung upon a finger, or the form of words with which he brings supernatural assistance to his side. If a man has pigs multiply, and his gardens are productive, it is not because he is industrious and looks after his property, but because of the stones full of mana or pigs and yards that possess them. On the other hand, a man naturally grows wise when planted, that is well known, but it will not be very usual unless mana comes into play; a canoe will not be swift unless mana be brought to bear upon it, a net will not catch many fish, or an arrow inflict a mortal wound' (p. 120).

Moreover, in this matter the native mind proceeds logically through by the method of hypothesis and verification.

> A man comes by chance upon a stone which takes his fancy; its shape is singular; it is something like something. It is certainly not a common stone, there must be mana in it. He asks with himself and he puts it to the proof; he lays it at the root of a tree, the fruit of which has a certain resemblance, or he buries it in the ground where he plants his garden; an abundant crop is the result, the garden shows that he is right, the stone is mana, has that power in it' (p. 119).

Hypothesis and verification even lurk behind the forms of prayer.

Thus in Florida, one of the Solomon Islands, a fisherman addresses Daula, a Tindalo, or ghost, connected with the frigate-bird, in these words: 'If thou art powerful, mana, O Daula, put a fish or two into this net and let them die there.' If he makes a good catch, he thereupon exclaims, 'Powerful, mana, is the Tindalo.' or 'Great is the mana.'

Again, the heir of a famous chief must live up to the reputation of his predecessor, or society decides that the mana has departed (p. 52).

Indeed, a man who has been successful in fighting, to use a phrase of the Polynesian, has mana, and a man of authority, a great man, one who may be called a chief (p. 119 n., cf. p. 115). In the words of the native, the ghost who is to be worshipped is the spirit of a man who in his lifetime had mana in him; the souls of common men are the common herd of living beings, nobodies alike in mana; but the supernatural power abiding in the powerful living man abides in his ghost after death, with increased vigour and more ease of movement' (p. 125).

As for the mana associated with inanimate things, the following example will show how it may come to be attributed.

> If a man came upon a large stone with a number of small ones beneath it, lying like a saw among her litter, he was sure that to offer no man help it would break him; and such a stone would be thought to have mana (pp. 151, 153).

Moreover, the mana (herein, as has been said, resembling a contagion, or such a force as electricity) may be transmitted by one thing to another. Thus, to make sunshine, certain leaves are held over a fire, and a song is sung to give mana to the fire, which gives the leaves, so that when the latter are hung upon a tree, the wind may blow about the maize derived from the fire, and sunshine may result (p. 201).

In other cases, the mana is seen to lend itself not only to transmission, but likewise to a sort of accumulation.

To make rain, leaves that are mana for this purpose are caused to ferment so that a steam charged with mana may rise up to make clouds and rain; at the same time a stone, or mana for rain is placed amongst thee to assist the process (p. 231).

It remains to notice the native theory of the ultimate source of mana. It has already been noted that, according to Codrington, mana is a spiritual force that belongs to personal beings to originate it' (p. 119 n.); namely, to a dead man's ghost, a spirit (which was incorporeal from the first), or a living man (p. 151). The notion of the living man to originate mana is, however, somewhat doubtful, inasmuch as, if a man has mana, it resides in his 'spiritual part,' which after death becomes a ghost, while, for the rest, it is held in his hand, or held by his ghost, or his mana, or not that a man has mana, not that he is mana, as can be said of a ghost or spirit (p. 191). In short, the native theorist would seem to have arrived at the view that mana, being something supernatural (to use Codrington's own term), must ultimately come from pre-eminently supernatural personalities such as ghosts or spirits. The existence of such a view, however, need not blind us to the fact that it is the man who does great things in his lifetime that is after death supposed to be a ghost with mana, a fighting man's ghost, for instance, being known specifically as a keramo, or ghost of killing, and hence much prized for its mana, or mana of mana (p. 135). Similarly, it is because the stone with little stones round it is like a saw among her litter that it is credited with mana; and the doctrine that it belongs to spirits (p. 153) is, clearly, but an explanatory after-thought. Thus neither animism (in Tylor's sense of 'the belief in spiritual beings') nor even animatism (the attribution of life and personality) would seem to be essentially involved in the native experience of the wonder-working thing, whatever be the last word of native theory on the subject.

It must be allowed, however, that, if mana does not necessarily imply personality in the case of the thing with mana, it is none the less perfectly capable of co-existing with it, as in the case of the living man with mana; and, being itself something indwelling, could be inanimate without a personality.

In this way mana and its derivatives have come in various Polynesian dialects to supply all that is needed in the way of a host of terms merely for 'heart' and 'belly,' but for the 'interior man,' and all therein comprised, namely, 'desire,' 'love,' 'wish,' and 'feelings' generally, as also 'thought' and 'belief,' and even in some sense 'conscience.
and ‘soul’ (see E. Tregear, Maori-Polynesian Comparative Dictionary, s.v. ‘Mana’). Even if, however, mana is not imported in an apologetic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of comparative science, mana should not be taken to cover all cases of magico-religious efficacy, whether the efficacy be profane or sacred, or derived, i.e., as proceeding immediately from the nature of the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question.

191. Thus, finally, the saying of Codrington quaintly declares that ‘all Melanesian religion consists in getting mana for oneself or getting it used for one’s benefit—all religion, that is, so far as religious practices go (p. 110 n.). As he shows by numerous examples, to obtain mana is the object to which all prayers and sacrifices are directed. Or, again, as can be gathered from Tregear’s Dictionary, mana may be used to express the performance of miracles, the exertion of a gift of healing, the interpretation of omens, an act of prophecy, in short, all the manifestations of a wonder-working beneficence which a religious man may aspire to see in the world. On the other hand, mana is a twined-edged sword which may just as readily be employed in the service of maleficence. Those who have the mana to produce wind or calm, sunshine or rain, and order, are accordingly beloved. Not to turn their will to turn it’ (Codrington, p. 200).

Healing medicine and poison are alike mana (ib. pp. 198, 358). As Tregear’s citation of phrases shows, accident and misfortune, curing and throttling, involve the exercise of mana no less than does any and every form of blessing. In short, all trafficking with the unseen and occult, whether illicit or illicit, involve mana; and, just as electrical energy may be exploited alike in the public service and with criminal intent, so mana lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is mana is likewise, in a complementary aspect, not to be lightly approached, or, as we find it convenient for comparative purposes to say, ‘tabu,’ though, in Melanesia at all events, the word tambu (=tabu, tapu) has a rather different sense, implying human sanction and prohibition, the sacredness involving a supernatural sanction being rendered rather by rongo, or, where it is held to be especially severe, by buto (ib. p. 215; cf. pp. 190, 34). Whatever has mana belongs to the beneficent, is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which it is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the profane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is mana. Meanwhile, conversely, such tabu may be looked upon as helping to keep the holy person or thing inviolate, or guarding the mana from degrading influences that will somehow spoil its efficacy.

2. Scientific meaning of mana.—It remains to determine what mana may appropriately mean when used as a class-name of world-wide application. Just as tabu has been turned into a general category standing for any prohibition resting on a magico-religious sanction, despite the fact that in Melanesia another shade of meaning apparently attaches to it, so mana, in approximately the same way, obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so used without reference to the particular association of mana with this or that part of the Pacific region. Thus, even if it be true, as Codrington’s somewhat guarded account leads one to suspect, that in Melanesia mana has been more or less successfully incor-

377

MANA

and ‘soul’ (see E. Tregear, Maori-Polynesian Comparative Dictionary, s.v. ‘Mana’). Even if, however, mana is not imported in an apologetic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of comparative science, mana should not be taken to cover all cases of magico-religious efficacy, whether the efficacy be profane or sacred, or derived, i.e., as proceeding immediately from the nature of the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question.

Thus, finally, the saying of Codrington quaintly declares that ‘all Melanesian religion consists in getting mana for oneself or getting it used for one’s benefit—all religion, that is, so far as religious practices go (p. 110 n.). As he shows by numerous examples, to obtain mana is the object to which all prayers and sacrifices are directed. Or, again, as can be gathered from Tregear’s Dictionary, mana may be used to express the performance of miracles, the exertion of a gift of healing, the interpretation of omens, an act of prophecy, in short, all the manifestations of a wonder-working beneficence which a religious man may aspire to see in the world. Those who have the mana to produce wind or calm, sunshine or rain, and order, are accordingly beloved. Not to turn their will to turn it’ (Codrington, p. 200).

Healing medicine and poison are alike mana (ib. pp. 198, 358). As Tregear’s citation of phrases shows, accident and misfortune, curing and throttling, involve the exercise of mana no less than does any and every form of blessing. In short, all trafficking with the unseen and occult, whether illicit or illicit, involve mana; and, just as electrical energy may be exploited alike in the public service and with criminal intent, so mana lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is mana is likewise, in a complementary aspect, not to be lightly approached, or, as we find it convenient for comparative purposes to say, ‘tabu,’ though, in Melanesia at all events, the word tambu (=tabu, tapu) has a rather different sense, implying human sanction and prohibition, the sacredness involving a supernatural sanction being rendered rather by rongo, or, where it is held to be especially severe, by buto (ib. p. 215; cf. pp. 190, 34). Whatever has mana belongs to the beneficent, is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which it is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the profane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is mana. Meanwhile, conversely, such tabu may be looked upon as helping to keep the holy person or thing inviolate, or guarding the mana from degrading influences that will somehow spoil its efficacy.

2. Scientific meaning of mana.—It remains to determine what mana may appropriately mean when used as a class-name of world-wide application. Just as tabu has been turned into a general category standing for any prohibition resting on a magico-religious sanction, despite the fact that in Melanesia another shade of meaning apparently attaches to it, so mana, in approximately the same way, obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so used without reference to the particular association of mana with this or that part of the Pacific region. Thus, even if it be true, as Codrington’s somewhat guarded account leads one to suspect, that in Melanesia mana has been more or less successfully incor-
(3) Manitu.—Here once more we have an Algerian word that is generally identical in meaning with orenda or wakan. It is primarily an impersonal substantive; for in the Algerian dialect a rigid distinction of gender is made between things with life and things without life: and, when manitu stands for a virtue or property, the form expressive of inanimate gender is used, though, ‘when the property becomes identified with the object observed and confused’ (W. Jones, A.J.P.L. xviii. (1905) 183 f.), the following account by an Indian of the Fox tribe of the beneficial effects of the sweat-lodge, becomes very much a non-personal nature of the force set in motion by a man for his personal betterment: he might almost as well be describing an electric bath.

‘Often one will cut oneself over the arms and legs ... it is done to release the power or the message for the medicine-man to put into the body. The manitu comes from its place of abode in the stone. It becomes aroused by the beat of the fire, ... ceeds out of the stone when the water is sprinkled upon it, ... and in the steam it enters the body, ... and imparts some of its nature to the body. That is why one feels so well after having been in the sweat-lodge’ (ib. p. 183.)

See, further, notes MANTU.

(4) Hasina.—This word is used in Madagascar to express the power of a virtue which makes a thing unusually good and effective, such as the efficacy of a remedy, the power of a prophecy to come true, the virtue residing in an amulet or in a spell, the sanctity of holy persons and things, and so on. Hasina belongs in a high degree to the king, seeing that he is born in a family which has it, and is strengthened by the ceremonies of people having it, such as sorcerers and his own relatives. Hence his hasina, being highly contagious, is apt to cause his subjects to fall ill and die, if they but touch him. He dare not even speak to them, save through an intermediary. Meanwhile it is his duty to guard and hoard his hasina, so that A. van Gennep is probably right in regarding such a tabu as that which prohibits the subject from entering the court of the palace with his hat on his head as a pady (= tabu) de conservation (Tabon et totémisme à Madagascar, p. 17). Indeed, the native theory of kingship turns entirely on this notion of hasina. Thus, at the king’s enthronement, the monarch-elect stands on a sacred stone charged with hasina and cries aloud to the people, ‘Have I, have I, have I the power?’, to which they reply, ‘The power is thine’ (ib. p. 82). Taxes paid to the king are called hasina, being derived from firstfruits and hence inherently sacred, in fact, a tithe. Even when the king is dead, his body transmits its hasina to the place of the cairn, a cairn for war, or, in the present case, a cairn for peace. It may even be, as van Gennep suggests, that the royal practice of strict endogamy, which was carried as far as sister-marriage, was due to the desire to keep the hasina in the family (ib. p. 162). Hasina thus is a monopoly of the exclusive property of the king. Nobles have it too, but in less degree. Even common men have some, and the very animals, trees, and stones have their share likewise. Hasina, in short, is relative. If I plant something in my field, I put into it some of my hasina. Another man will therefore respect it, unless he feels his hasina to be greater, in which case he can receive no harm (ib. p. 18). Meanwhile I shall do well to fortify myself by protecting my property with amulets of hasina, these often amounting to veritable boundary-stones (ib. p. 186). For the rest, whatever is sacred has hasina and for this reason is likewise pady, or tabu, so that, for instance, the word hasina, and therefore pady, must be received with rites of admission the object of which is détabouère, ‘to remove the tabu’ (ib. pp. 40, 40).

(5) Barakka.—This is the term used in Morocco to describe the holiness attributed to ‘saints’, male or female, as well as to places and natural objects, which are, however, thought of as deriving their holiness from the saint. The name sayid (i.e. sayyid), ‘lord’, is meanwhile bestowed impartially on person or place, implying a certain ‘confusion of categories’ (E. Westermarck, in Anthorp. Essays presented to Tylor, London, 1907, p. 305). To secure that the power shall be exercised in his favour, the Arab puts a conditional curse (ér) upon the saint by throwing a stone on the cairn marking his tomb, or by tying a rag near by. The most obvious effect is the blood becoming red, however, by no means necessarily noxious (as it is when it provides the sting of a curse); for it stands equally for the blessing, l-baraka del ‘id, ‘the benign virtue of the feast’, which flows from the sacrificial meat and is further distributed among the worshippers by a man clothed in the victim’s skin (Westermarck, MI i. 445). Or, to take another example, the baraka inherent in the Moorish bride ‘implies not only beneficial energy, but also a seed of evil or an element of danger’, so that people partake of her dried fruit to rid themselves of evil on account of her baraka, even while they regard it as an evil and likewise suppose her baraka to give efficacy to the ceremonies practised with a view to producing rain for the good of the crops (Westermarck, Marriage Ceremonies in Morocco, London, 1902). Baraka is, however, a virtue which may recover the potency resident in the pebbles being thus equally capable of killing or curing according to the intention of the powerful man who has the baraka and, as such, it may relieve his patient by drawing out the evil by means of a rope, and such a rope he obtains from Dhakkan, the rainbow, who is himself mannggyur (superlative of manngyur, superlatively potent) (ib. p. 162).

These examples, which might be multiplied indefinitely, will suffice to show that there is a widespread tendency on the part of the peoples of the lower culture to isolate in thought and invest with
a more or less independent being of its own the power whereby a holy person or thing proves his or its holiness by means of action supremely efficacious in the attitude of fear or evil. Modern anthropology lays great stress on this notion of the savage (whether it be conceived and expressed by him with full explicitness or not), because it appears to stand for something which lies at the very heart of existing belief in regard to the supernatural and unseen. Whether it is more or less central and fundamental than the notion of spirit is a question that need not be raised here. In any case it would be quite beside the mark to seek to assign exact relations of logical priority and posteriority to these two ideas, seeing that savage doctrine is tolerant of confusion, not to say downright contradiction, and uses the one or the other conception alternatively or in manifold conjunction as a particular situation may seem to suggest.

Here, then, it will be more profitable to indicate shortly what general purposes of theory are served by reference to the group of ideas for which mana may by convention be allowed to stand when used in its scientific as distinguished from its purely local sense. The first is the attention to the element which magic and religion have in common. Among savages my religion corresponds roughly to whatever system of rites is regarded by the Melanesians as preserving in the face of all the dangers, real or imaginary, that beset them. If you are a member of another tribe in perpetual strife with mine, I am not disinclined to attribute to you any religion worth speaking of, even if your rites bear the closest family resemblance to mine; but rather incline to pay you the compliment of supposing you to wield a most malignant magic, in proportion as I feel respect for your power of getting the better of me. It is a case of me and my gods against you and your devils. Gods or devils, however, they have power alike, and to the stronger power, whichever it be, the victory goes. Similarly, within the tribe a particular individual may have recourse to mystic rites to help a public cause or to help himself in a way of which the public approval, or contrariwise in order to wreck his private spite on his neighbour. In the former case he is behaving piously, in the latter he shows himself a wizard and deserves to die the death; but in either case indifferently a wonder-working power is attributed to him, and it is quite irrelevant whether that may be broadly described as the element of the miraculous, enables theory to treat the magico-religious as a unity in difference, the unity consisting in wonder-working power and the difference in the social or anti-social use to which it is put by the rival systems. In the second place, mana, taken together with tabo, provides a minimum definition of the magico-religious, such a delimitation coinciding accurately with the distinction which the savage both in theory and in practice draws between the world of the supernatural and the world of the workaday and ordinary. Whether it may be as well, and however diverse the characters it may otherwise wear, the magico-religious in all its manifestations is always hedged round with respect because of the potency inherent in it. Tabo and mana always imply each other, so that either can stand by itself for the whole two-sided notion. Thus tapu ( taboo) was a name general for the system of restrictions in which the magico-religious is involved, and conversely, wakan, a word of the mana type, is translated by McGee ‘mystery,’ because the notions of power, sacred, ancient, and animistic, animate, immortal, and to a certain extent the circle of its implications (Is RBBW, p. 152). Mana, however, taken by itself offers the more adequate characterization of the nature of the magico-religions, since it reveals the positive ground of the negative which is the characteristic attitude of fear or evil. It only remains to add that, having by means of such terms expressed the generic characters of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and much remains to be done in the way of fresh terms of narrower connotation the specific types in which this class abounds. Thirdly, mana is well suited to express that aspect of the magico-religious in which it supervenes as an irresistible force or influence. Thus van Gennep shows the notion of hasina, which is of the mana type, to be closely bound up with that of tabina, realization (Trabou et tolémisme, p. 17). The idea of spirit, on the other hand, does not lend itself so readily to the representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as ‘inspiration.’ Meanwhile the passing on of sacredness between one person and another, one thing and another, or a person and a thing in either direction, is a common enough case of mana (corresponding as it does to that play of association to which the uncritical mind is prone, more especially when rendered suggestible by emotional excitement. Thus when for self-culture and sunshine, the operator’s desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therein to warm them, then the hanging of the leaves upon a tree to impart their warmth to the wind; and the whole process is interpreted in terms of the transmissibility of mana, from the song to the fire, the fire to the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associational flow of the interest (cf. Codrington, Melanesians, p. 201). Lastly, mana is the term best suited to express magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If mana is, regarded in itself, an impersonal and quasi-mechanical force operating on its own account, even though personal beings may have set it in motion, this largely because a more or less automatic efficacy is imputed to ritual as such. Whereas the reason and conscious design which are immanent in the ritual, are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of mana and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects, which are thought of as so many foils in a system of partly co-operating and partly conflicting controls. And so it is also with the civilized man’s notion of luck, which is a genuine, though degraded, member of the mana group of concepts. Those who still hold to a belief in luck are precisely those who likewise believe in the possibility of controlling it.

Literature.—For the local use of the word mana the best classics are R. H. Codrington, The Melanesians, vol. i, pp. 378 seqq., Cl. also E. Tregear, Maori-Polynesian Comparative Dictionary, Wellington, 1891, e. x. ‘Mana’ (Tregear, s. n.), ‘tabou’ (Tregear, s. n. ‘tabou’). Conversely, wakan, a word of the mana type, is translated by McGee ‘mystery,’ because the notions of power, sacred, ancient, animistic, immortal, and to a certain extent the circle of its implications (Is RBBW, p. 152). Mana, however, taken by itself offers the more adequate characterization of the nature of the magico-religions, since it reveals the positive ground of the negative which is the characteristic attitude of fear or evil. It only remains to add that, having by means of such terms expressed the generic characters of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and much remains to be done in the way of fresh terms of narrower connotation the specific types in which this class abounds. Thirdly, mana is well suited to express that aspect of the magico-religious in which it supervenes as an irresistible force or influence. Thus van Gennep shows the notion of hasina, which is of the mana type, to be closely bound up with that of tabina, realization (Trabou et tolémisme, p. 17). The idea of spirit, on the other hand, does not lend itself so readily to the representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as ‘inspiration.’ Meanwhile the passing on of sacredness between one person and another, one thing and another, or a person and a thing in either direction, is a common enough case of mana (corresponding as it does to that play of association to which the uncritical mind is prone, more especially when rendered suggestible by emotional excitement. Thus when for self-culture and sunshine, the operator’s desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therein to warm them, then the hanging of the leaves upon a tree to impart their warmth to the wind; and the whole process is interpreted in terms of the transmissibility of mana, from the song to the fire, the fire to the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associational flow of the interest (cf. Codrington, Melanesians, p. 201). Lastly, mana is the term best suited to express magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If mana is, regarded in itself, an impersonal and quasi-mechanical force operating on its own account, even though personal beings may have set it in motion, this largely because a more or less automatic efficacy is imputed to ritual as such. Whereas the reason and conscious design which are immanent in the ritual, are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of mana and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects, which are thought of as so many foils in a system of partly co-operating and partly conflicting controls. And so it is also with the civilized man’s notion of luck, which is a genuine, though degraded, member of the mana group of concepts. Those who still hold to a belief in luck are precisely those who likewise believe in the possibility of controlling it.
MANDÆANS.—I. Introduction. — The Mandæans claim our interest not only as being a separate surviving branch of the Semitic stock, but also on account of their religious language, and their sacred literature. Besides the records of their religious teaching and their religious poetry, that literature includes fragmentary remains and revisions of ancient Gnostic speculations and myth. Adherents of the Mandæan faith, either as larger communities or as distinct family groups, were to be found some forty years ago— and may perhaps still be found in cities and smaller market-towns on the lower Euphrates, the lower Tigris, and the rivers which water the eastern Iraq al-ārabi and the adjacent Persian province. It is, indeed, necessary for them to live in the neighbourhood of rivers, since immersion in flowing water is an essential, and certainly the most characteristic, feature of their religious practice.

According to our records carry us, we find them subsisting in very humble conditions, earning their living as tradesmen— carpenters, smiths, locksmiths, goldsmiths—or as shopkeepers. Upon their priests rested the duty of preparing and directing the public religious ceremonies, which were few and by no means sumptuous, as well as that of performing certain rites on behalf of individuals and members of the community. At these functions it was their regular task to recite a number of extracts from the sacred books. In the Mandæan religion, as in others, such recitations take the place of the incantations that are no longer permitted, and in conjunction with the religious rites they serve to effect or to ensure the salvation of the soul.

From the time when the Mandæans began the serious collection of their religious texts— their mythological and legendary documents may also be regarded as revelations—the transcribing of their sacred books, and even a monetary contribution to the expense of such labour, ranked among them as a work which could purge from sin hence not merely priests, but also a considerable number of laymen, possessed copies. Some of those were obtained by Christian missionnaires from their converts, and others were bought, with the result that since the middle of the 17th cent. not a few Mandæan MSS have found their way into European libraries. The books are composed in a distinct Semitic idiom, and written in a special script.

2. Mandæan writings. — The most valuable, from the historical point of view, and—at least in the main—the most ancient portions of Mandæan literature are collected in the voluminous Sîdîr râbbâ ("Great Book") or Genâz ("The Thesaurus"), which is divided into a right and a left part. 2 This consists largely of theological, mythological, ethical, and historical treatises, which are interspersed with revelations, prayers, and hymns. All these components, so varied in their matter, may be called "tractates," though only by way of having a uniform term by which they may be enumerated and cited. From the introductory "blessings," which occur some forty times, it may also be inferred that the sixty-four pieces, with three collections of hymns, were gradually incorporated in the "Thesaurus," now singly, now in groups. Originally the tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the "King's book," which contains a survey of cosmic events as they appeared to a Mandæan who was composed prior to Muhammad's time to take place one hundred and fifty years after the foundation of the Arabian sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractates, xix. R, speaks of Mahamet the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important i. and ii. R, however, notices referring to Muhammad have been attached only at the end, the redactors of these tractates only thinking that they might expound the historical sketch, no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of more and those of lesser importance, the latter having their materials or their themes from the former. In some we find fragments interpolated from older works not now extant, while not a few are mere patchwork of remnants of what they originally contained. When all has been said, it cannot be doubted that these documents of the Genâz which speak authoritatively of Mandæan thought and sentiment were composed prior to Muhammad's time, and such later recension—often far from competent—as they have undergone was the work of Mandæan priests who were concerned to transmit in some form to future generations the greatest possible amount of their ancestral literature. The formal nucleus or focus of the entire collection is a manifesto of the Mandæan priesthood to the community (xxvii. R; cf. MS., supplement A).

Like the Genâz, the Sîdîr d'Yahdû ("Recitations of John"), or Drâtâ d'malîtâ ("Recitations of the Kings"), more rarely designated Drâtâ d'Yahû ("Recitations of John"), is also a collection of tractates, many of which have come down in an incomplete, or at least in a corrupt, textual form. A considerable number of them relate to the experiences and the teachings of John the Baptist. The book also contains narratives (e.g., one about the "fisher of souls"), instructions in conversational form, etc. The fiction is still good, but the legend of the baptizer of the Jordan, who is mentioned only once in the Genâz, where he is described as a truly wise and devout prophet, is here brought down to the sphere of popular taste, and expanded with entertaining stories. The older form of his name, Yîhânnâ, is superseded by the Arabic Yahû ("Recitations of John"). From these facts we infer that the contents of this collection are of considerably later origin than those of the greater "Thesaurus." The QâqÎlû is a volume containing the liturgies for the annual baptismal festival and the service in Bithroitic form as Thesaurus sine liber manibus, Leipzig, 1867. We shall cite from this ed., using the letters R and L for the right and left parts respectively of the adjoining figures will indicate the page and line. The right-hand pages are for the living, the left-hand for the dead. 1

1 In this art., the abbreviations M.R. and M.S. indicate respectively the present writer's Mandæische Religion and Mandæische Schriften, cited at the end of the Literature.

2 A transcription of a complete MS with a list of variants from three others, executed by H. Petermann, was published in Liturgical form as Thesaurus sine liber manibus, Leipzig, 1867. We shall cite from this ed., using the letters R and L for the right and left parts respectively of the adjoining figures will indicate the page and line. The right-hand pages are for the living, the left-hand for the dead. 1

1 ed. M. Littmann, Das Johanneum, Jena, 1891, 1: a second vol., with tr., is promised for 1915.
for the dead (massagath). Its poetical sections, which are intended to be recited as hymns or prayers, are worthy to stand beside the songs in the Gena, though such a feature is not so abundant. The liturgical directions attached to them are certainly of much later origin, being the work of writers who were not familiar with the pure form of the Mandaean language. The same statement holds good of the two sections of Massagath Ritual, which has not yet been printed, though there are MSS of it in Oxford.

To the liturgical rubrics of the two works just mentioned attaches the Dīdēn, now in the Vatican Library, 7-6 metres in length, and consists of a series of sketches representing the halting-places through which the soul of a deceased Mandaean must pass in its ascent (cf. § 28), and, at its destination, the scales and the throne of Abartār. Its numerous figures have been drawn in the shape of a hand, but parts of the text found between or at the side of the figures have been rendered illegible by stains and disfiguration of the paper. The Latin notes added by Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read the whole language. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes.2

Another Mandaean work, one main division of which bears the title Asfar moloudāt (‘Book of the zodiacal Constellations’), is found in the Royal Library of Berlin.

According to Nöldeke (loc. cit.), ‘it is a compilation, containing all sorts of astrological material of very diverse date, and translated in part from Arabic and Persian; portions of it are of Jewish origin.’

Mention should also be made of the recently discovered earthenware bowls with Mandaean inscriptions intended to avert a curse or an evil spell.2 They furnish melancholy evidence of the complete decay of Mandaean theology.

3. The Mandaean language. The idiom in which this literature has been composed is recognized by Nöldeke as of importance for the study of the Semitic languages; it is the form of Aramaic which developed in lower Babylonia, and its nearest congeners is the special dialect of the Talmud Babli (i.e. the Aramaic of Upper Babylonia). The script (see below, § 19) has the advantage of expressing the vowel-sounds by letters, and does not require diacritical signs. A correct interpretation of the texts is at least so far as they are accurately written and in good preservation—has been made possible by the grammar which Nöldeke has drawn up from them (Mandäische Grammatik).

4. In 1884, Ignatius a Jesu, who, as a missionary in Basra in the 17th cent., was in close contact with Mandaean for nearly thirty years, simply says that he had some knowledge of the language, while his successor, Angelus S. Josepho, thought himself to be able to read the Mandaean writings. The material extracted by the learned Maronite, Abraham Echellens, from three Mandaean books, and given to the public in a work printed in 1660 at Rome, that scholar had doubtless succeeded in the Mandaean versions and converts then resident in Rome (cf. M. R., p. 6). From the same period come three renderings of the supposed Mandaean baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandaean books, for it is in reality their introductory formula. Later essays in translation, the most notable of which were the arbitrarily conjectural version by M. Norberg and the more careful but still very erroneous studies of G. W. Lobsach, are considered in some detail in JS, pp. xiv-xix. In the latter half of the 19th cent., it also transpired that there was no such traditional interpretation as scholars had expected to find in the hands of the Mandaean priests (cf. MR, pp. 7-20). The specimens of translation offered by H. Petermann simply repeat the errors of Norberg, 1867, 210.

Even with Nöldeke’s Grammatik at our disposal, there are still serious obstacles to a complete translation of the Mandaean writings. These contain a large number of words which are not yet determined and of which the meaning seems to be that they are of the same sort as the words used in other dialects of the Mandānaean language. In some instances, again, it is obvious that words and phrases have acquired a theological or ritual sense which is not clearly determinable. All this, however, has to do with matters of detail; the course of thought and most of the constituent elements lie within the scope of literal reproduction. H. Pognon (opp. cit.) has taken the utmost care in establishing the renderings of the inscriptions, and has also, in connexion with them, translated numerous passages in the Gena and the Babul,3 though he, too, has made mistakes. The same may be said of JS.

5. Interest of the Mandaean texts. The largest and most interesting portion of the Mandaean writings is liturgical and mythological. The myths relate to the origin and nature of the world of the gods and that of men, and also to the religious history of mankind. They are not derived from conceptions of nature, nor did they originate in the popular mind, but were constructed in accordance with theological views. The scientific gains which this vein of liturgy and myth seems to promise—and it is the prospect of such gains that draws us to the study of the Mandaean texts—are in the main as follows: (a) enlightenment regarding the meaning of the Mandaean rites; (b) a tenable view of the origin and early history of the Mandaean religion; and (c) an advancement of our knowledge regarding the character of Oriental Gnosis and its religious bearings.

6. General contents of the Siddā rabba, or Gena. In seeking to solve the riddle presented by the Mandaean and their writings, we must begin with a critical examination of the oldest portions of their literature. We shall, therefore, first direct our attention to the matter found in the Gena. There we find a teeming world fabricated by religious and theological fantasy. Gods and demons, or beings of like nature, come before us with actions and mutations, and set forth, as the key to all other, except those relating to the creation of the world, the
founding of religions, and the destiny of the human soul. Not infrequently it seems as if one and the same being stood before us under different names, while in other texts the bearers of these names are found in company with one another; sometimes, again, a particular action is ascribed to beings of altogether diverse character, or, as the action of one and the same being, is characterized with much variation in different texts. It would be impossible here to set forth or unravel all this, and we shall seek only to give a concise summary of the most of distant frames of thought and imagination to which the vast variety of the materials may be reduced.

7. Ancient Gnostic elements in the Genzâ. — The tractsates that first claim our interest, as being probably the oldest, are those which exhibit polytheistic beliefs, or are at least ultimately based upon polytheistic views. Some of these open with speculations regarding the origin of all things, including the world of the gods, and to this group belong the sections in which emanational doctrines are set forth (cf. MR, p. 24 f.). Here 'the Great Fruit,' from which innumerable other fruits have sprung, and a personal divine being, the 'Great Man of Glory,' from whom, in like manner, other 'Great Mânas' have arisen, are spoken of as primal entities. Beside the Great Mân we frequently find 'drops' (ayar, akhûd, or 'the great ether of Life' (ayyâ râbâ d'ayyâî), who appears sometimes as a primitive being, sometimes as one of the first emanations; and the same holds true of the 'First Life,' also called 'the Great Life,' and of 'the Great Hidden First Nôxîftô' (i.e. 'drop,' perhaps thought of as a sperm-drop). In all the sections of this type we read also of 'the great river,' which is always represented as a river of white water, as 'the living water,' 'the glistening and lustrous water.' It encircles the realm of the ayar, the world inhabited by the higher beings, and in its descent it is joined by innumerable other Jordians which water the ayar-realm; and, again, it traverses that realm as 'the great artery of life.' So unorganized is the system, however, that as early as the middle period of the Genzâ we find the personified figures of Wisdom making request for revelations as to the gradation of the higher beings according to their period and dignity (MS, p. 25 ff.). Nor do the texts in question proceed merely with divergent conceptions of a single underlying view, or with various attempts to reconstruct an imperfectly conceived system; on the contrary, they contain originally divergent conceptions of the origin of things—conceptions either fabricated or gathered from foreign sources by the Mandaean scholars themselves at a period before the transmitted texts were written. Of the authors of the Genzâ it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important tractate vi. 1, which we may call the Mandaean Genesis. In this text 'the Life,' calls 'the Second Life' into existence by a 'request to itself.' Then this 'Second Life' creates for itself a celestial world, and among the spirits of this higher realm of second rank (the 'âdrâs of the Second Life) arises the idea of creating a third world, viz. our earth, with inhabitants who should know and worship only the Second Life, not the First. Then the Great Mân of Glory, in order to frustrate this design, calls into existence the Mândä d'âyâî, who was to see that the First Life was worshipped also upon the earth.

In the Mandaean dialect mandâ is a by-tern of mändû or mändûd, a noun from the root 'man' (cf. Nîdûs, Mand. d'âyâî, p. 75), and Mándû d'âyâî is equivalent to D'ayyâî ū tspûq yputs, 'the knowledge of life'—such a knowledge of life as gives one a portion in it. The term 'Mândû' is a rendering of mändû, /nvests-cus.

8. The polytheistic strain in Mandaean theology. — While the Mandaean writers esteem the theological speculations and divinities as matter of distant and ancient revelations, in their own religious thinking they retain only the belief in 'the Great Life'—or simply 'the Life'—whom they regard as the deity of the second rank. The spirit of pîrât for the most part is equivalent to 'fruit' in the ordinary sense, and the term ayar (ultimately derived from Gr. ἀγάρ) as denoting the air of the celestial world and the north wind associated with it. The word mändû (usually = 'vessel,' 'instrument') is still found in a group of hymns (L 38-74) in which the soul of the Mandaean asserts its heritage in the higher world, declaring, 'I am a mändû of the Great Life,' while occasionally an exalted celestial being is distinguished by the epithet 'pure mändû.' At first the deity referred to as 'the Life' is still regarded as a plurality, being designated 'the Fathers,' and is thus conceived as a council of gods—though one that is small and always unanimous. Very soon, however, 'the Life' comes to be spoken of in the singular. Other gods appear besides 'the Life'—not, indeed, as its subordinates, but inferior to it in power and prestige. These are not called 'gods'—among the Mandaean texts we know them all as angels or devils, as also are the countless angels who play a more ornamental part.

Far below the realm of ayar lies a world of darkness—'the black water' (meyyâ yûkhâ). We are nowhere told that the black water is merely a portion of the under world, or that it bounds or covers it, and yet the idea that the under world is in a liquid condition is quite irreconcilable with a large number of its features as presented in the narratives.

The creation of the earth which lies solid in the black water, and of the firmament expanded over it, is ascribed to no elaboration of the Nag Hammadi texts. Ptáthil (on whom cf. MS, p. 60 f., note). The characterization of this demigre shows a remarkable degree of variation. Ptáhîl merely resembles the higher beings, and has arisen out of the black water; he acts only by permission, or, indeed, upon the authority of 'the Life,' and with the means vouchsafed to him by the latter, but he oversteps his orders; or he has accepted the preferréd help of the evil spirits. Again, he is in fault solely because he has not boldly resisted such an evil spirit, or, once more, he himself has committed no transgression, and it is only after he has only performed his work that evil comes into the world.

The creation of man is wrought in part either by Ptáhil or by the evil spirits, but is left incomplete, the soul and the finer organs, or at least the former, being still lacking, and man live—labreasted into Adam by Mándâ d'âyâî, or else brought down from the treasure-house of 'the Life' and placed in Adam's body by one of the celestial beings. By this means, and also by the fact that the first man was at once enlightened regarding his origin and the true religion, the design of the subordinate spirits (those of the Second Life) to create a world in which inhabitants should belong to them and worship them alone was foiled.

The wicked spirits, however—of the 'âdrâs of the
Second Life nothing is said even in the 6th tractate—do not at once accept defeat. By magic they create all manner of! noxious things—poison and corruption by way of incantation, devouring fire and earthquake, etc., as well as evil passions—and mingle them with the good creation. According to vi. R, the first to be deluded by the wicked ones was the son of the first man (Adam = Adam); and Mandã d’hâyê, or his representatives (Hibîl, Sitîl, ‘Ènãsî), must once more appear to fortify and maintain mankind in the true faith. These spirits, with their wives, Arâm, son, and her children, viz. the spirits of the seven planets and of the twelve zodiacal signs. Prior to the creation of the earth her abode was the region overlying the black water, and from her and her sons all evil things have come into the world—demons, founders of false religions, teachers of heresy, and men of violence. The Rîthâ, who also bears the epithet of ‘world-mother’ or ‘mother of the world,’ bore these children to Ur, the Mandæan devil, who was himself her son. He is a most villainous creature, and had to be laid under restraint before the earth and the firmament were created, and, accordingly, the solidification of the land in the black water would otherwise have been impossible. According to vi. R, it was Mandã d’hâyê himself, according to vii. R. it was his son Hibîlî, who, as at Ur, loaded him with chains, and set warders over him—or, on another view, immured him in Ur’s own dark realm. Detailed accounts of how these measures were carried out—mainly by magic and trickery—are found in the tractates cited; and vii. R (one of the later portions of the Genza) relates further, with reminiscences of Bah. myths, how the ‘fathers’ of Ur, the lords of three deeper regions of the under world, were rendered harmless (complete tr. in MS, pp. 137-191).

9. Biblical matter in the tractates of the polytheistic earlier school.—The Rîthâ and her son Ur, dwelling upon the surface of a watery expanse that existed before the creation of the solid land, and in some way interested in that creation of which their names are not Mandæan, but of Heb. origin, can be none other than the female ‘whom he loved, according to the opening words of the Heb. Genesis, ‘brooded upon the face of the waters,’ and the light (79), which is said in the same passage to have been the first work of the creation. The Gnostic Mandæans, who according to the tractates believed the light which the light was born of the Rîthâ (of God), as were also, subsequently, the lights of the heavens. The word ‘gîy’, ‘call,’ as used for ‘call into being,’ can be traced to the Biblical Genesis, as well as the names of Adam and his wife Hawwâ, and, consequently, also that of their son Sitîl (i.e. ‘îsî, lengthened in Mand. to ‘îsîi) and the names of the other two gôni Hibîl and ‘Ènãsî. The exaltation of Abel (‘îsî, slain in his innocence, as Hibîl ‘îsî) seems to the present writer to be of later origin (cf. § 14). The Heb. narrative of the Fall, in which knowledge is described as a forbidden fruit, is one that the Gnostic author could not use at all, since he must have regarded it as directly in conflict with the view that the knowledge of good and evil, of truth and error, was revealed to the first man immediately after his last, and as a soul from the higher worlds, and that that revelation marked the founding of the true religion.

In connexion with the account of the origin of the Hebrews, and of their origin in the tractate, the Mandæan Genesis refers to the false religions of the whole world, and states that all of them, as well as the peoples who profess

them, were called into existence by the planetary spirits, and that, in particular, Judaism was created by Sîmûs (‘the sun’), ‘whom all people call Adônas.’ The writer does not, however, say that the Mandæan reform was an outgrowth of Jewish religion, but in the place of Mercury he inserts the Messian (Mîthâd), of whose followers he says that they ‘all accuse one another of lying,’ and of himself that he had disturbed the peace of the true religion. This reference to the mutually conflicting teachings of the Christian Church (R 120, 7 f.) comes doubtless from the hand of the Mandæan redactor.

10. Possible antecedences of a Gnosticism entirely independent of Christianity.—In the last relating to the cosmogony (and theology) there is nothing to remind us of Christianity except the fact that the rivers which contain the ‘living’ water are each called ‘Jordan.’ Among the Mandæans the word yarînâd is used as an appellative; but, as it is not a native Mandæan formation, this usage is, no doubt, to be explained by the peculiar respect accorded to the chief river of Palestine by the Gnostics, whose writings had been appropriated or used by the Mandæans. There are certain facts which lend support to the opinion that the high standing of the Mandæan doctrine is somewhat greater than the gospel narrative of John the Baptist and Jesus (cf. MS, p. 16 f., note; Brandt, Elchast, p. 164); and upon this point depends the answer to the question whether the Mandæan documents show vestiges of Gnosticism that was not affected by Christianity, and was perhaps pre-Christian.

11. Jesus Christ as Mandã d’hâyê.—Tractates bearing unmistakable signs of dependence upon a tradition of gospel history, and emanating, at the same time, from the polytheistic school, are found in ix. and xi. R. These two tractates stand out from the rest of the tractates in that they alone speak of the Mandã d’hâyê as having appeared in Jerusalem and Judah, or in company with Yâhânnâ the Baptist at the Jordan, with a view to selecting the believers in the true religion from amongst all peoples and families (R 115, 10), while the proclamation of the true doctrine, which, according to the view otherwise universal among the Mandæans, was revealed in the days of Adam, is in these tractates utterly ignored. The Mandæans gave their sanction to the narratives without suspecting that they related to the Lord of Christian believers, and also without adjusting their own theological views according to the appearance of the Mandã d’hâyê among the Jews, or amongst a human race long in existence, is never again mentioned—so far, at least, as the Genza is concerned—by later Mandæan writers.

12. The monothetic school, or doctrine, of the king of light.—With the polytheistic Gnosticism described in the foregoing paragraphs Mandæan writers of, we would surmise, the 4th or 5th cent. A.D. conjoined a strictly monothetic Gnosticism, which, from its leading themes, we shall call the doctrine of the king of light. i. and xxv. R furnish a complete and almost unavowed account of it. *1

*1 One is the lofty king of light in his kingdom—lord of all heavenly beings, source of all good, creator of all forms of life, of infinite greatness and goodness, highly extolled by the ‘kings’ of the angels who stood before him and incited him to create the distinctively Mandæan character are the features noted in 3. 11 of the tractates in the north) and 6. 17c ‘victims are not sacrificed before him,’ and the description given in 9. 8: ‘The Jordans of the world of light are white waters, fall, whiter than milk, cool and drinkable, and in the Zêda and the Gisana and the Gudot the taste of death;’ their garments and crowns are things of splendour and light. In a complete contradiction to all this is seen in the realm of darkness, with their black water and poisonous snakes. Likewise, like the Mandæan devil, has the head of an lion, the body of a serpent, and the wings of an eagle; he is called ‘incendiary’ by two Mandæan authors, and is said to carry three arrows of poison: ‘iron teeth in the exubilations of his mouth; the stone is burned in his mouth, the breath: when he bursts the mountains tremble; the phœnas quakes at the whisper of his lips,’ etc. All the demons he once projected an assault against the realm of light, but, coming to the border of his kingdom, he
found no gate, no way, no means of ascending to the celestial being. This is the most primitive concept of the king of light, by proclaiming that 'All the projects of the Daywâ (`demons') come to naught whenever sins are offered in his name.' (MS, p. 425.)

According to the theology which finds expression here, the king of light is also the creator of the universe, with all that they contain—stars, winds, fire, plants, animals, and human beings—were created by command of the king of light through the agency of an `âdûn named Gabriel, the Ambassador.

In the second mandate given to Gabriel the Mandean redactor has interpolated a passage referring to the subjugation of the world of darkness (R 12, 9-12), but nothing is said of this subjugation in the account of the actual creation. The creation of man is briefly recorded as follows (12, 9): And the man Adam and his wife Hâwêç were fashioned, and the soul fell into the body.

Then (13, 9) the `angels came: they made submission to Adam; they came and worshipped before him, and changed not his word. One was the evil one, by whom wickedness was formed, who departed from the word of his lord; and the lord fe Herned him with a fetter.'

13. The moral code.—With this theological exposition in i. R and also in the parallel ii. R it is associated a code of practice, which seems to be of identical origin, and which, at all events, has been transmitted (R 13-36; cf. MS, pp. 24-43) as a record of the doctrine of the king of light. Here, e.g., we read:

I say unto you, all who give heed to the name of God: In your standing and your sitting, in your going, coming, eating, drinking, sleeping, and as charged a dressing-gown and girdle, the name of the lofty king of light. That the record in question is derived from a non-Mandaean source appears from the use of the term alâhâ, 'God,' and also from its repeated mention of the `Satan,' and of `Satans.' The laws relating to food are of special significance; they forbid the faithful to partake of the flesh of animals that have died otherwise than by slaughter, or to taste of blood, and of meats and drinks that have been prepared by heterodox hands. This portion of knowledge (mandâ), R 13, 29), however, has been considerably modified in conformity with the Mandean faith, and distinctively Mandean commandments have been inserted in it—those enjoining white clothing with girdle, immersion in a river, the Mandean communion, the massequâ for the dead, and the washing of all foods, as well as those prohibiting lamentation for the dead and condemning fasting.

14. Judeo-Christian Gnosis in the doctrine of the king of light.—The monothestic concept of the king of light, as set forth, with marked Parri colouring, in the Genâz, must be originally Jewish or, at least, Judaeo-Christian. The present writer is of opinion that it reveals a Judeo-Christian Gnosis. From what was said above (§ 10), the mention of the `Jordans' of the world of light must not be regarded as decisive evidence; but in the moral code (11, 25, 29, 48, 9) we find the injunction:

"Arm yourselves with the weapon that is not of iron; let your weapon be Sagâridûn (šarâbîtân; variet sagârîtâ) and the direct utterance of the place of light."

In the Genâz the terms Nâzârêyâ and Mandâyâ are used synonymously; according to the Mandean, both terms apply, or, at least, should properly, apply, to themselves alone. We know, however, that down to the end of the 4th cent. the former designation was specially used by the Jews who believed in Jesus, and that it is applied in the Qur’ân (li. 59, 105, 107, 114, 129, 134. Lii. 69, v. 17, 21, 56, 73, 85, ix. 30, xxxii. 17) to the Christians generally. The injunction just quoted permits us to hazard the conjecture that the doctrine of the king of light was the source from which the Mandean, adopted the name Nâzârêyâ.

No other unmistakable features of a specifically Christian character occur in the tracts of the school under notice. In the Middle Sections of the two most notable documents (i. and t. R), the Messiah, the prophet of the Jews, is actually described as a leader among the wicked spirits who make the human race abandon the true religion. These sections, however, regard only the second elements of the original doctrine of the king of light. Such residual elements might with most likelihood be found in the figures of Hûlût, etc., like Mandâ d’haîyâ in the polytheistic Gnosis) instructs the first man in all the necessary salve, and Enôs-tû, who in the course of the world’s history comes forth to rehash that instruction (R 29; cf. MS, p. 48).

15. Enôs.—He is the cloud; MandâEnôs (i use, us) rests upon an identification or fusion (due, possibly, to the author of the Judeo-Christian doctrine of the king of light) of the OT Enôs (Gen 4, 32) with the Son of Man (bar ‘enôz) of Dn 7, 14, 17. Abel, Seth, and Enôch—or, in their Mandean form, Hûlû, Sitîl, and ‘enôs, three ‘âdûns—are associated with Adam as messengers of the true religion and as his auxiliaries. ‘Enôs, however, comes forth again, appearing in Jerusalem at the same time as Isa-îshâ (Jesus Messiah,) who poses as a wonder-worker, and whom he unmask as a deceiver; he performs miracles of healing (perhaps on the basis of Mt 11, 3) proclaims the true religion, causes three hundred and sixty (or three hundred and sixty-five) ‘disciples’ to go forth from Jerusalem, and ascends to the Life, by whom (again) he is called ‘Mandân’ (here since he destroy the city, and does so in the form of a white eagle—corresponding to the white falcon in Bundahish, xix. 23 (SBE, p. 1880) 71 f.; cf. MR, p. 155 f ). In all these acts ‘Enôs has for his dispensation a cloud, in which he dwells; and from its matter he fashion the body in which he appears upon the earth as a man. This cloud is in its origin doubtless the cloud of the gospel narratives (Mt, 17, Ac 19), and this, again, probably has its source in the clouds of heaven which seem the vehicle of the Son of Man in Danâd (7, 12; 2 Es 13, 21, Mt 26, etc.). In the closing periods of the Bundâhish, the Mandaeans began to dopst the cloud of ‘Enôs in conformity with the Para conception of the garden of Yâmin (see art. BLEST, ABDÔH OF THE (Persian)), and it then came to be conceived as a country floating above the earth—a realm called mhânûn endôh from the ‘righteous translated ones’ who inhabit it (R 335 f); the name recalls the Jewish traditions about the righteous spirits. Enoch, Eljah, etc., who were translated to heaven (cf. MS, p. 77, note).

16. The Christian Redeemer in the Genâz.—From all this we seem to be entitled to infer that the Mandean form became adapted to the figure of Mandâ d’haiyâ in the framework of a Gnosis working with polytheistic ideas, and appropriated it, and that they afterwards adopted the figure of ‘Enôs from the Judeo-Christian doctrine of the king of light, while, at a still later date, they met with the Messiah Jesus in writings of another origin. The tracts or books in which they found the name last mentioned were, as regards their contents, more closely related to the gospel narrative than were their other sources, and in them the Christian Saviour was intimately connected with the Holy Spirit. Hence, as the Mandean savants identified the Râhôwith the Iribh whom they had long known as an evil being, the mother of `Ur, they could not but regard Isa-îshâ likewise as belonging to the group of evil spirits. In the Genâz tracts which profess to relate the religious history of man—in other tracts the Messiah does not appear at all—He is usually surnamed the ‘liar’ or ‘impostor,’ on the ground, of course, that He sought to diminish the role of Mandân, Seth, and ‘Enôs. Where the writers of these sections still employ the scheme of the earlier system, they assert that He is the planet Mercury, and, similarly,
an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandaeans turned towards the north, where the erstwhile king of light sits upon the throne, while the common Jewish view (held also by Elkesai) is that the evil spirits and their chief Sammaël (from semäl, 'the left,' i.e. the northern one) have their abode in that very region of the heavens.

18. Conjectures regarding the origin of the Mandean religion.—The relations between the Mandean teachings and Manicheism (q.v.) cannot be fully discussed here. The parallels have been noted by the present writer in MS, pp. 223-228 (cf. Elchesian, p. 142 f.), and to that list should be added the correspondence between a passage in the Manichean narrative regarding the awakening of the first man to life (as quoted by Pognon, Inscr. wird., p. 190 f., from Theodore bar-Khoni's Book of School), and one in L 461. In the verifiable parallels the Mandean versions seem to be secondary, and we must infer that both sides are indebted to the same group of sources. A large proportion of the material common to both is explained by the mass of Paris ideas in the Judeo-Christian groundwork of the doctrine of the king of light, to have died on the cross, and in the theology of Mani on the other.

19. Doubtless, too, the Mandean redactors introduced into their tractates a number of fragments from Manichean documents unknown to us (cf. MS, p. 198 f.). The religious teachings of the Mandaeans are derived from Jewish and from foreign sources, including some of a Gnostic character. The ark of Noah (Nû) ran ashore—as the Targums also tell—on the mountains of Qardh (Gordya, i.e. Kurdistan); Abraham and Moses were prophets of Rûhâ; King Solomon, like King Jânisdî in Iranian legend, held the demons in subjection until he caused them to return to their prison by undertaking a performance of duties, or by adoring the angel Daniel, to whom was given power over fires, at the order of 'El-rabbâh and Rûhâ (MS, p. 120 f., 122)."!

The assumption that the Mandaeans were originally a Jewish or Judeo-Christian sect (Hilgenfeld, Weilhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Judaism was not obtained from oral tradition; on the contrary, they found the names in written documents, such as the Hebrew Scriptures. Thus they render the name of Moses as Mîšâ, Miriam as Mîryâ, Abraham as Abraham, Israel as Usrîl, Jacob as Yaqîfi; Sabbath appears as Sâyîdâ, mukktehâ, 'angels,' as mûkbtû, 'kings,' and Benjamin actually as bûn 'Amin,' 'the sons of Amin.' The inevitable inference is that the Mandaeans had been through-out complete strangers to the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandean literature there is no evidence to show that the Mandaeans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in their prayers. Like the Essenes (q.v.), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of monogamy, though with a succession of wives—and the procreation of children were considered upon them as a religious duty; they had nothing like the organized communal life characteristic of the Essenes, while their views regarding the planets are quite inconsistent with such a practice as that of according

1 The Genâd refers also to the Iron Mountain (L 17. 5: yâfîr d'parâid), which, though not noticed in the OT, is mentioned in the Targums in connection with the fire of the eastern frontiers of Palestine in Nu 33:11 (also in Josephus, BJ iv. viii. 2 [416, ed. Weiser]).
MANDAEANS

had they much appreciation for explanations of the
world-process by pre-suppositions which purported
to guarantee salvation to all who acted in
accordance with them, although this salvation
itself and its mythological elements, the ideas of
the gods and all their imaginative embroidery,
were quite of the kind to produce a powerful impression
upon them. In reality it was into the hands of a
class whose learning was confined to a little read-

and writing that "Gnostic" tracts fell, and
texts, written in a foreign language, and,
Gnostics, wrung upon them with the force of oracles,
revelations and, as it were, a subject . . .

20. The baptismic nature-religion.—The idea
that the rivers descended from the celestial world
by way of the mountains in the distant north and
that their waters impart fresh energies to the
pious who bathe in them—a naturalistic element
of belief retained by the Mandaeans amid all the
thoughts and fancies subsequently acquired—
was probably inherited from their ancestors.
In explanation of this belief we might advance
the conjecture that this Semitic people had not always
lived among the lower courses of the rivers, but at
an earlier period had dwelt in a locality much nearer
the snow covered mountains—in a district
from which they could see, upon their northern
horizon, huge mountains towering to the sky (cf.
M.B, pp. 96-72; M.S, pp. 213-217). We scarcely
need to explain how these facts would provide a
basis for the belief in question, and we can easily
understand, too, how a people, if driven from their
native region and compelled to endure a miserable
existence in their new abode, should seek, in con-
formity with the practice of their ancestors, i.e.,
by means of immersions, constantly repeated, to
absorb the virtues which the river brought from the
higher world to the low-lying plains. We do not
claim, of course, that this is more than a surmise,
yet we would draw attention to the fact that there
are linguistic phenomena which might be adduced
in its support. Thus the Syriac idiom used in
Kurdistan and on Lake Urmiya is found to agree
with the Mandean dialect in the formation of the
ininitive and in not a few features of the pronoun
— a fact which Nöldeke (q. xxvii) recognizes as
'the strongest proof'. If, however, we set the
theory aside as over-hazardous, we must be
content to suppose either that the very simple religious
ceremony of baptism had prevailed from primitive
times among the country people of Lower Baby-
lonia or that by some means or another it had
spread to that district from Syria (cf. Brandt,
Ebonasi, pp. 151, 154).

21. The adoption of Gnostic tracts.—The
Mandaeans, then—though not yet bearing that
name—practising their religious abonitions, and
sharing the general Semitic belief in demons, were
living in Southern Babylonia at a time when the
intermingling of religions had proceeded so far in
the districts in which the Aramaic and Persian
languages were spoken that it had at length
evolved those creations of theological fantasy com-
mmon among all Gnostics, whether, however, we
must here combine the Manichean teachings and,
great part, the substance of the Pahlavi books
(Bviandahin, etc.). The priests of this baptismic
tribe were not intellectually sufficiently advanced to
share in the reflective activity which strives to
interpret the objects of faith and the influences of
religion as cosmic entities and occurrences; nor
would these circumstances have prepared them to
receive the Gnostic script which bears a fairly close relation to the earliest form of Pahlavi,
especially the so-called Chaldean-Pahlavi, but its conformity with the Syriac script mentioned above shows to
the present writer much more striking.

22. The rise of Mandean theology.—It seems
beyond question that the earlier generations of Mandaeans who had previously been
stripping, by an early act of translation, we should estimate, a period of at least two
hundred years) treated all the texts in their posses-
sion as far as the contents comprised in some
measure with their own religious sentiments, as
records of revealed wisdom; in their backward
intellectual condition, moreover, they could not
fail to be impressed with matter so familiar.
In the work of transcribing, the Mandaeans
were intranscribing and renewing dilapidated texts,
themselves learned the art of literary com-
position. Thus, if they found that these strange
documents made no mention of, e.g., the 'Jordan,'
the bath of immersion, or anything else that they
could have wished to discover in them, they added
what was required, while fragments of defective
MSS they either inserted into others or put into
such order as was possible. Hence, we may infer
that they advanced to reduction, and from reduction
to independent composition. Such, then, was the
genesis of the Mandean literature; it consists
for the most part of pieces written in different
views. This,

23. The religious beliefs of the Mandean writers.
—Amid all this evidence that the Mandean
script bears a fairly close relation to the earliest form of Pahlavi,
Mandean writers, especially the so-called Chaldean-Pahlavi, but its conformity
is the true home.
surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion underwent a process of refinement in conformity with the development of their theology.

If we take into account the trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandaean religious belief, which can be traced without difficulty in most sections of the Gena\textsuperscript{d}. The main features of that belief are as follows. Far above, beyond the heavens, there is a world full of light and splendour, where dwell the Life (as the supreme deity) and other divine beings, or, where, according to another phase of doctrine, the 'exalted king of light,' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandaean community. Far beneath, again, is the world of darkness with its black waters. Part of it has been 'thickened,' brought into a solid state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains to the lowlands, and it was by the bathing in the 'living' water of the rivers, main- taining their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land and must, therefore, make an effort to lift themselves up to the powers of darkness now innured—the deities of other peoples and other creeds—and it is they and their creatures or servants who make life a torment for the Mandaens. Hence the believer waits with earnest longing for his salvation, i.e. his deliverance from this earthly existence. At the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards through the celestial spheres to the world of light and of the Great Life.

24. The Mandaean typology. The soul of the Mandatory after the hour of its deliverance, is sustained by the symbolism of the ritual elaborated by the priests. 'Confessors of the true faith are plants of the world of light or of Mand\textae\textsuperscript{d} hay\textae\textsuperscript{y} (R 89 f., 220, 15 f., etc.), and they are summoned to their death not only by the Mand\textae\textsuperscript{d} br\textae\textsuperscript{d} y\textae\textsuperscript{y} (P\textae\textsuperscript{d} r\textae\textsuperscript{d} n g\textae\textsuperscript{d} r\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n, \textae\textsuperscript{d} 17), 'Make the river sprout' or 'blossom' (\textae\textsuperscript{d} M\textae\textsuperscript{d} S, p. 99 f.; \textae\textsuperscript{d} M\textae\textsuperscript{d} S, p. 163, note). What is implied here is that the water is to flow from the world of light and confer life into those who bathe in it, so that they may be said to spring from the river like plants. They were also required, however, to mark their brow with the living water, and likewise drink of it (the draught is called 'gushing'), partake of a loaf (the loaf is termed \textae\textsuperscript{d} p\textae\textsuperscript{d} k\textae\textsuperscript{d} t\textae\textsuperscript{d}, 'opening,' 'unlocking,' etc.); and those who take part in these ceremonies have a share in the benigh fountains of the better world—in the great baptism in the heavenly Jordan, in the gushing of radiance, in that treasure of the Life which is to be opened. The liturgical recitations (\textae\textsuperscript{d} d\textae\textsuperscript{d}\textae\textsuperscript{d}\textae\textsuperscript{d}\textae\textsuperscript{d}) were meant to represent the beams (\textae\textsuperscript{d} d\textae\textsuperscript{d}\textae\textsuperscript{d}\textae\textsuperscript{d}\textae\textsuperscript{d}) of splendour which would flow from the house of the Life to meet the soul as it sped upwards from the earth (\textae\textsuperscript{d} M\textae\textsuperscript{d} S, p. 49), etc. The ultimate ground of trust, however, was always the ceremony of immersion; thus it is in R 18, 1 we read: 'Your token is the token of the living water, by which you ascend to the place of the Light.'

25. The Mandaean prayer—originally this itself was the sign—it was the practice, as early as the period of the Gena\textsuperscript{d}, to utter names, viz. those of the Great First Life (R 196, 8; or of the king of light, R 17 f.) and Mand\textae\textsuperscript{d} d'h\textae\textsuperscript{d} m\textae\textsuperscript{d} n (\textae\textsuperscript{d} M\textae\textsuperscript{d} R, p. 104 f.). To their own rite of immersion, whether performed, as was usually the case, by the individual himself, or, as on feast-days, with the cooperation of a priest, or administered to children, the Mandaens applied the term m\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n (presumably for m\textae\textsuperscript{d} t\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n; the odd pronunciation given by Siou\textae\textsuperscript{d}, \textae\textsuperscript{d} m\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n (French), could be approximately correct only for the plural form of the noun), the word which certainly comes from the Som. verb \textae\textsuperscript{d} t\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n (the sound of \textae\textsuperscript{d} t\textae\textsuperscript{d} n\textae\textsuperscript{d} n in Mand\textae\textsuperscript{d}), which the Mandaens was exclusively in connexion with the religious practice in question (cf. § 36). For Christian baptism, on the other hand, the writers of the Gena\textsuperscript{d} persistently employ the term used in the Syrian Church, ml\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n (\textae\textsuperscript{d} M\textae\textsuperscript{d} S, p. 152) and the A\textae\textsuperscript{d} d\textae\textsuperscript{d} n forms of \textae\textsuperscript{d} m\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n. They contaminate and vitify the Christian ceremony because it is performed not in 'living,' but in (or with) 'cut-off' water.

26. Ceremonial purity. In this period the idea of purity was recognized in the sense of a relation to the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it ('H\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n\textae\textsuperscript{d} n, pure Mand\textae\textsuperscript{d}; I. 118, 17, 'the Jordan of the Life, from which I have taken purity'). The laws already mentioned regarding food came to the Mandatory through the medium of the ethical code in the doctrine of the king of light, as did also the injunction that husbands and wives should 'wash themselves with the water of our baptism' after ordinary ablution (the ritual of ablution was afterwards for the Mandaens transformed into a sort of self-purification by means of special baths). It was only later that the commandment of abstinence was extended to many other occasions of life (Siou\textae\textsuperscript{d}, cited in \textae\textsuperscript{d} M\textae\textsuperscript{d} S, p. 195 f.).

27. Prayers. Among the Mandaean prayers was known as 'compassion,' or 'petition and praise.' According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judeo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (R 300) prayer in the night-time is actually forbidden. We read of a 'man' who (like the archangel Michael among the Jews) receives the prayers, and stores or preserves them in the treasure-house of the Life (R 223 f., 300). In the later redaction of a regulation in the ethical code the believer is commanded to ask a blessing upon flesh-food before eating (R 68; cf. \textae\textsuperscript{d} M\textae\textsuperscript{d} R, p. 94). The priests drew up short forms of prayer for these ordinances; but the protection accorded by such danger they regarded prayer in the proper sense as less effectual than a long series of recitations from the ancient books.

28. The massæ\textae\textsuperscript{d} n. The ceremony termed mas-
Mandæans

segat, 'mounting up,' 'ascend,' consists exclusively of such recitations, and is designed to help the souls of the departed if in their journey or flight to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandæans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured, and none have any pretensions of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being ma'rōd, or ma'tartōr, i.e. 'ward,' 'place of custody,' 'prison.' Some of the descriptions contain features taken from Parsi-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as Mithrale in Origin, c. Cela, vi. 22; cf. MS. p. xii), or the guardian spirits who come to meet the soul, and—in the latest Genzâd texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (MS. p. 105 f., and in the Various, Dēva, beasts of prey lie in wait for the soul). The souls of the deceased pass all the wards without molestation, because, according to the tracts of the Genzâd which describe the ascension (x. R and iv. L), they give the name 'hâdyây' or 'shāh'—takem from the waves of the water, i.e. because they profess the Mandæan faith and thus show that they belong to the world of light. In place of this name and summary incantation, the hymns of the Genzâd (about 120 pieces), all of which find their themes in the destiny of the soul, its imprisonment in the body, its release, and its journey home to the world of light, insist rather upon the necessity of good works; with these was probably associated a devotional spirit (cf., e.g., L 101. 3: 'I loved the Life, and Mandâ d'hâdyây dwelt in my heart'). It is but seldom, however, that we find in these hymns even a few words referring to the religious practice of the Mandæans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The massagêtâ for the dead is in reality a Mandæan imitation of a corresponding ceremony in the Parsi religion. According to the Parsi doctrine, the soul, after leaving the body, is received by its own good thoughts, words, and works—which assume the form of a beautiful maiden—and by them is led across the narrow Chinvat bridge, or guarded against other objects of fear. Now the hymns in the Genzâd are simply massagêtâ hymns, i.e., they were composed for the purpose of a ceremonial. They are the work of Mandæan writers, as can be deduced in view of the matter incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Parsi ceremony and the Parsi texts.

29. Mandæan poetry.—Although the majority of the Mandæan hymns can lay little claim to real poetic merit, they show at least that the Mandæans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them seems to be one of sincere and genuine emotion. As a specimen of the massagêtâ hymns we give here one of the most pleasing (L 80 f.); it should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in its earthly daily affairs generally—an entanglement that is dissolved at death.

How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.

By and by, when I arrived at the water-brooks, As I arrived at the water-brooks, the radiant beam (am ūm) came forth to meet me. He took me by my right hand and led me through the water-brooks. They (the water-brooks) brought splendor and clothed me with it; they brought their light and wrapped me round with it. Life reclined upon me, and life was my own life; it overflowed in life. Here follow a few sentences composed of ancient formulas; their construction and, in pars, their sense are difficult to make out.

30. The Mandæans under Sasanian rule.—The Mandæans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandæan hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half of the 3rd century, when a number of rampacous Jewish satraps, as related by Josephus (Ant. XVIII. ix. 1 § 310 ff., ed. Niese), provoked the whole population to an outbreak against themselves and their companions.

The Sasanians persecuted the Mandæans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peasant Mandæans. The latter, however, were sometimes ill-treated by Christian monks who went to them as missionaries.

In the Genzâd (xvi. R) we find an account of the Roman Catholic clergy and worship, and (i. and ii. R) we are told that the attempts to convert the Mandæans were not always carried out 'with sweetness'—with discourses and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 28, 16): 'When [the] Fravashis [the Persian] diurnal [religion] take reference to the gate and the demons of the planet Mars, [the nearer] (Nergal) who is called the Arab Abdâl.'

The whole earth is made subject to his throne; to his followers all things fall a prey; 'day after day they make war and shed blood, and live ever an enemy to the souls, and to the great family of the Life; and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life. . . . ' In their distress the devout Mandæans comforted themselves with the thought that the wicked Abîlah had fallen into one of the infernal prisons, where his followers take him to task, asking why they now suffer torments in the realm of darkness while 'the servants of the alien (i.e. Mandâ d'hâdyây), against whom we drew the sword, mount up to the world of light' (MS. p. 162 f.).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandæans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on in the Enfratrees and the Tigris, had for a time ostensibly adopted Islam, or that they concealed themselves among the adjoining marshes.
adulation to the Mandaeans of both sexes to urge them to fulfill their religious duties. The people are to come on Sundays to the temple (lit. ‘dwelling’; down to modern times it was nothing more than a small house with gabled roof), where, in becoming ordained, they are to stand prayerfully behind the Tarnýdý, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the Genad, and is a documentary witness to the rise of the ecclesiastical organization among the Mandaeans. In earlier texts the term ormidá (for ḫon̄a), like the corresponding word aḏmád in the NT, means simply ‘believers’; but by this time it was the name which the priests applied to themselves. The Institution of Sunday, as is shown by its designation as habaṭbá (ḥabāṭbā; cf. Peshîta of Mt 28), was adopted by the Mandaeans from Syro-Christian usage, though, of course, through the medium of documents of whose origin they were ignorant. The manifesto urges the due observance of the day (MR, pp. 85, 90). The religious ceremonies enjoined are those of old: immersion, performed by the individual himself or applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. The prayers in the morning were included, as was the case in the morning prayers in the Psalms; and in harmony with the fact that the ormidá, ‘priests,’ are still hardly distinguishable from the motfánd, ‘teachers,’ reverence for whom had been enjoined in the moral code of 132 (53).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonial with rites requiring the co-operation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conjoined them with the simple ceremonies of earlier times. Even towards the close of the period of the Genad as attested in the latest sections of that work (cf. MR, p. 104), we find, besides the rites of marking the forehead with water from the river, a sign made with oil; a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of ‘living’ water was duplicated, being taken once from the individual’s own hand and once from the priest’s bowl (gâmir). The priest has to bring in the water, and in addition to the ordinary communion-bread, a host of higher order, the ‘superior pektá,’ which was reserved for ourselves and the Sāhlimá (see below). They also introduced a meal, and in addition to the massaqú the dead one for the living. The latter was an eight days’ ceremony, and conferred upon the person concerned the title of stumánd tâkî, ‘blessed perfect one,’ as well as priestly rank; he was afterward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandean as time and opportunity permitted—every day, morning and evening (Le-Gonz, Voyage et observations, p. 301), or only on Sundays and feast days, and the days preceding them (Sioulli, La Religión des Souabés, p. 23)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerged the layman in the water; then, he made the sign upon the recipient’s forehead, and thrice, with his own hand, gave him water to drink (Qolastán, fol. 9. 32 ff.). Further, the first immersion of children now assumed the form of a baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. MR, pp. 221–224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandean worship the cross rests upon a misapprehension. Nor, according to Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few wands into the ground close together and crosswise, and that he renders homage to this symbol. The structure is termed ‘beams of splendour,’ and may thus be regarded as symbolizing the world of light. Reports dating from the 17th cent. agree in stating that it was the practice of the Mandaeans in Bagara to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed ‘la sacrifice de la poule’ on the 2nd of November 1665. Since, however, the Mandean religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Sioulli, the ‘superior pektá’ was made but once a year, and was in the form of baked wheaten cakes, each of which was sprinkled on one side with some quiver afflute, in drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in the temple, presumably with a view to ratifying its slaughter as a sacred act. (The act thus has no sense of a sacrifice, and it must be the simple record of the ritual act.) The fabric of the Mandean cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also a pupil) was ignád or skónád (cf. MS, p. 169), and to a priest, ormidá, while a high priest bore the Persian title of gâzmábâr, ‘treasurer.’ Each priest had his own dishes and table, and partook of food and drink apart from the congregation, after the usual liturgical consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalization of the Mandean cult was carried as far as in the Persian settlement. Besides the title of the high priest, the names of several articles of priestly attire (rásat) are Persian words—tâgâ, kânâmâth, pandâmâth. The priest’s seal-ring (Sioulli, ‘le chaumiavar’) bears the device, ‘Name of Yāwar siwā;’ had the inscription originated in Babylonia, it would have been ‘Name of Mandâ d’hayâyê.’ Again, while the Narratio of Ignatius (p. 23) shows distinctly that the Mandaeans of Bagara knew nothing of the practice of confessing to a priest, Sioulli’s informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sin, after a special prayer receives absolution for the same sin, i.e., he is assured of the remission of future penalty; but after the third time further transgression can be expiated only by certain good works. The imagery of the Genad to which appeal is made in support of this ordinance simply enjoins that the devil shall thrice ‘re-eject’ apostates or transgressors before casting them out of the same. Three times, thrice, thrice, the form of...
hardly have come into vogue among the Mandaeans except on Persian soil. When, accordingly, in many tractsates we find these names taking the place of the undoubtedly more ancient Mandā ḍanyūṣ, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called Sām, Yāwar, etc., it seems highly probable that most of the tractsates in the Genaz underwent their final reduction, i.e., attained their present form, in the Persian province.

37. Religious decadence; obsolence of the language.—By the time when the 'Abbaled khalifs had established peace and order throughout the Mandan provinces, the Mandan religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place—as in the writers of the Drattā ḍánalak and the Sādār d'Yahūdā—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and would again beheld its primal abode was no longer a well-spring of sacred lyric; the Mandean had, in fact, become familiarized with his faith, and the Mandasans were wholly occupied in making its stories and ancient hymns into order, to keep it intact, and to use it properly. It was in this period that the Mandaeans gathered their writings into collections, and brought their doctrines or regulations comprised in the Qolastā, the Marriage Formulary, and the Paris Divān. Moreover, living, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their ancestral languages and melodies, and made their way into these districts, became their vernacular, though Mandean still maintained its place in religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the masqueṭā, indeed, the recitations constituted the main element, and, according to the ritual, this ceremonial, designed to succeed the departed, lasted for seven days. Since, however, the teachings of the Genáz required all believers to engage in such recitations, the priests endeavoured, by the generous manner in which they distributed the fruit of their study, at the least, to make the laity able to read and, as far as possible, to understand the texts, although their own learning was doubtless almost wholly confined to a knowledge of the liturgy and a traditional understanding of the language and grammar, but not as far as the learning of the writer himself, who, had he been a literary man, might have written his work in the ancient tongue and the Mandean sued for it; as it is, the text is written in Arabic, and the learned writers of the proto-Mandaean time—perhaps more than once—circumstances arose in which they thought it better to be regarded as Christians. As, however, besides the name of 'Mandāy', they had also adopted that by which the Christians were known, viz. 'Naṣūrāy'—in the Genāz the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Śabians dwelling in the marshes, or if they hoped to evade a tax imposed specifically on the Sabians, they properly assume the Christian name without negotiating. According to Ignatius a Jesu (Narratio, i., a chapter written by himself), the Mandaean of Bāra believed that Muhammad had granted them a document with guarantees that his successors had not respected it. Ignatius also states that the Mandaeans were formerly united with the Chaldean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandean community had at one time joined hands with the Church—though only for a while—it will be quite correct.

The Arabic writer, Hanna Isfahrī (belonging, like the two above, to the Marzūka-Шāhī Subs.), who had not received a formal schooling, and who, after the instance of the true Śabians, i.e., those whom the Qur'ān has in view, were heretical Christians, 'living between the desert and the swamp.' This opinion may have arisen from a confusion of vague reports about the Mandaeans and the Mandaean, and it might possibly be taken as direct evidence that the early Christians, i.e., the Śabians and the Mandaeans, of Sarā'in, and that the Mandaean desires to be regarded as Christians. On the other hand, Harīdū might quite well think of all the Śabians, by reason of their baptismic practices, as belonging to the Christian body.

40. The Mandaeans as 'Christians of St. John.'—The Portuguese missions of duarte and those that have since then brought no new reports the existence of the Mandaeans was first made known in Europe asserted that they were descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1622), and
from that time, in treatises and textbook of Christians, especially St. Ignatius, it has been referred to and regarded (on the ground of Ac 18:10[39]) as Christ-
ian S. Ioannis, 'Christians of St. John.' It was not without some support from their own side that this designation grew in currency. A number of Mandaeans who had transferred their allegiance to the Roman Catholic Church visited Rome in the period between 1652 and 1669, and Abraiam Echeleemis, who cultivated a most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves Nasareans of Yahaya—which was in Arabic only, the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as krisifidiné (R 55. 14, 282, 12).

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandaeans, and at length, when the final additions and a number of titles to the writings of the Genzâ came to be formulated (R 57, 25, 188, 26, 229, 23, 210, 10), a section in which the Mandaeans turned to the figure of the Baptist with intense interest, and it is worthy of note that his old name Yoḥanân (which they pronounce Yahaḥa) was now expanded to Yahya-Yoḥanân, or was sometimes simply superseded by Yahya. Yahya is the Arabic form of the name—the form by which the Baptist is mentioned and highly ex-
tolled in the Qur’ân (III. 34, vi. 85, xix. 15-15). We may not, therefore, venture to suggest that the reason why the writers of this period bring John into such prominence and make him a hero of their people was that they had already begun to refer to him, in the presence of the Muslim authori-
ties, as the prophet of their religion? Henceforth they could claim, whenever and wherever they thought fit, to rank as Naṣrayâ d’Yahya—a name which, to all except themselves, could mean nothing else than ‘Christians of John.’

Finally, they are said actually to have introduced the name of Yahya-Yoḥanân into their baptismal formula, and to have done so, in fact, by speaking of himself as having been put under the auspices of St. John, by Mandâ d’hâyyâ, and by John (cf. MI., p. 225, on Siouli’s authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandaeans by Roman Catholic missionaries during the 17th cent., viz. that their baptism was only the baptism of John mentioned in Ac 18:10[19], and as a counter-
stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendancy in the Persian Gulf.—In the 16th cent. the Portu-
guese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian island and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Baṣra they reached an agreement by which, in return for annual gifts, he permitted them to have a trading-station in Baṣra, and promised to protect it. The Portuguese soldiery were verv so numbered by the Jesuits, who founded missions, and secured the government of such settlements as ‘Christian territories’ according to the regulations of the Ignatian Order. The Jesuits then came to Baṣra, where they obtained a house and made one of its rooms into a church, their hope being to win

for the Roman faith more particularly the schis-
matic (Nestorian) Aramaic Christian Church in the district. Their attention, however, would soon be attracted by the Mandaeans, for the number of the latter in Baṣra and its neighbourhood in the 17th cent. was estimated at 14,000—15,000, while in the city itself they are said to have formed the majority of the population (Le-Gouz). Decades may have elapsed, however, before the monks learned that the Sâbî was held John the Baptist in honour and beheldized by its children, and so it is to believe that this baptismic people were already semi-Christians, and needed only a little instruc-
tion in order to become good Catholics. The Discourse which Ignatius issued as a supplement to the Narratio provides the arguments to be employed in persuading the Mandean priests; but the latter were not to be won over by such simple means. Thereupon the missionaries, bent upon gaining their end, induced the pasha to order the Sâbî, under threat of fines or bodily penalties, to attend the Roman Catholic place of worship and observe Sunday according to the Christian practice of resting from servile work on that day. In this way the work of conversion was set on foot, sup-
ported, however, by doles of food and clothing to the children of the poorer Mandaeans.

About this time the communities suffered a considerable loss from another cause. In the early years of the 17th cent. the Portuguese found that their commercial monopoly on the Persian coast was challenged, and by way of strengthen-
ing their powers of defence they resorted to the employment of mercenaries. To the Portuguese cantonments the Mandaeans are said to have flocked in vast numbers from Baṣra, and, no doubt, from Persia also—people who, of course, had there barely managed to live. In their new capacity they were instructed in the Christian faith and received Christian baptism (Le-Gouz, della Valle).

The fortifIed inshore island of Hormuz, which commanded the entrance to the Persian Gulf, was invested by British merchantsmen and the military forces of the ‘Duke’ of Shiraz in 1621, and surrendered on the 1st of May of that year. The prestige of the Portuguese was at an end; their missionaries withdrew from Baṣra, and the Mandaeans once more enjoyed freedom in their religious services. Of this it is related by Gabriel, the Christian of Islam, while the rest reverted to their ancestral faith—‘et ne s’en conserva pas quatre Christéens’ (Le-Gouz).

42. In Baṣra in the time of Ignatius a Jesu.—

The place of the Portuguese Jesuits was taken by an Italian mission of Discalced Carmelites under the leadership of Ignatius a Jesu. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mand-
æans while they lived in Persia, and he devised the plan of persuading them to emigrate to Chris-
tian territories. From the Portuguese viceroy in the Indian Ocean he obtained a guarantee from the Mandaeans who so desired would receive grants of land in the colonies under the viceregal authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by many who were eventually rejected because they insisted upon being allowed to take their priests with them and to remain loyal to their faith; but, notwith-
sanding this, the number of Mandaeans, who emigrated, was relatively considerable. It is not, how-
soever, a great many who emigrated, and all that Ignatius himself says of it is that he had once sent to the
vicery of Goa a number of men who were to act as the spokesmen of their people, and also to look for suitable residences in Ceylon, and that at length other fifty Mandeeans, some of them with their wives and children, hastened on this mandate: it may be remarked that between 1633 and 1653 the Portuguese were gradually expelled from Ceylon by the Dutch.

43. Numerical strength of the Mandean communities in the 17th century. — Information regarding the numerical strength of the Mandeans and their diffusion in the contiguous provinces of Turkey and Persia is scanty, probably, in the first half of the 17th cent. — is provided by a map published in Paris by Melchisedech Thévenot in 1633. This map, which, unfortunately, bears no date, embraces the area throughout which the Mandean communities were scattered, and gives on its lower margin a list of the townships in which they were located and the number of families in each community. We find an aggregate of 3279 families living in 31 settlements. By far the largest figure, exactly 2000, is conjoined with Huwaiza, in Persia; 

next comes Tina with 500 families and Basra with 400, then one place with 50, two with 30, and so on. These names, while to four place-names a dotted line is attached, and to several others only a stroke. We shall thus hardly err in assuming a total of some 3400 men.

44. Reports of European travellers since 1650. — Ignatius a Jesu left Basra in 1650 or 1651, and the Christians no longer endeavoured to win the Mandeeans for the Church. It is true that the mission-house was not abandoned, and that a small number of families lived there; but, when Jean Thévenot lodged there in 1665, he found that it was attended only by a single Italian monk, and that the church stood open for prayer not only to Europeans, but to Nestorian and Armenian Christians. Shortly afterwards, when the station had more or less become involved into working order, its director, the Carmelite Archangeus of S. Theresia, was obliged to expend a considerable sum of money to procure Mandean MSS. for Robert Huntingdon, who lived in Aleppo from 1664 to 1686. The vendors were a couple of Mandean monks, one of whom had to be assured upon oath that his co-religionists should never hear of the transaction, while the other had to become a convert.

A long period then elapsed during which little or no information regarding the Mandeans reached Europe. Paragraphs devoted to them (and often referred to in encyclopedias) in J. Chardin, Voyages, etc. (Paris, 1756 ft.), and E. Kaempfcr, Amentatun, etc., fasc. v. (Lemgow, 1712), simply repeat accounts previously published. In 1765 Carsten Niebuhr visited Basra and found that only a few "Sabians" lived there; he had their alphabet transcribed for him by a smith. Naval Lieutenant Ormby, the friend of J. R. Wallstedt, stayed at Hiz for five days in 1833, and ascertained that the Mandean festivals took place in the month of Tashin, with sacrifice of a bull. In 1839, the Mandean Bani Zuq was in close communion with the Druze of the mountains of Baalbek.

45. The Mandeeans in the 19th century. — The looks of Petermann and Siouffi contain observations from which we may learn how the Mandeeans had fared in the long interval from the 17th cent., and it would seem that in this period, too, the vicissitudes of their ordinary life were due to suffering and want. About the year 1800 30 families in Shushter alone are said to have received a sum of money from France and surrounded by a certain number of people who had been converted to Christianity some years before, in order to help a boy who was sick. — The Fr. Murat, who visited the Mandeeans in 1847, says: "We found them in the midst of their tents, surrounded by a large number of Mandeeans professing the Catholic faith, and the little boy was cured by the priest called a "frère chrestien," and all the villagers were to be found at the mass."

The Mandeeans continued to be persecuted, and their numbers were diminished. In 1849, the visitor found only 25 families, but the authorities had been instructed to allow them to remain in the village. When, however, the Fr. Yalayé arrived at Shushter in 1850, he found only 12 families, and the village was attacked by the Persian government, who burnt the Mandeean houses and plundered the village.

MANETHO.—This historian of Egypt was born at Schemnysus, the Theb-Neteret of the hieroglyphic inscriptions, and lived during the reigns of Ptolemy Leg and Ptolemy Philadelphia. His name is probably the Gr. form of Amenophis, "Gift of Thoth"—equivalent to the Gr. "Ephrēforos." The following works have been attributed to him: some of them on doubtful authority: (1) Agiptiak, (2) Βιβλίον Σάθας, (3) Περί Βιβλίον, (4) Φοινίκισ τής τησώρος, (5) Περί τής Αρχόντης τής Φοινικίδος, (6) Πέρι Αρχόντης Τής Αρχόντης Φοινίκιδος, (7) Περί της Αρχόντης της Φοινικίδος. His reputation rests upon an alleged history of Egypt, of which he compiled at the request of Ptolemy Philadelphia. The first part of his work dealt with the mythological era in the history of Egypt, and the next eleven of the thirty-three divisions, or dynasties, of the second began with the XIlth dynasty, and ended with the XIXth; the third comprised dynasties XX.—XXX. The work was written in Greek, and has, unfortunately, perished, with the exception of the list of kings, which has been preserved in corrupt and incomplete forms by Julius Africanus, Eusebius, and George the Syncellus.

An examination of these king lists shows that in many particulars Julius Africanus and Eusebius do not agree in their rendering—i.e., in arrangement of the dynasties, in the lengths of the reigns, and in the number of the kings assigned to the various dynasties. According to Africanus, 561 kings reigned in about 5524 years, while, according to Eusebius, only about 361 kings reigned in 4480 or 4780 years. The version of Africanus closely agrees with the accurate chronology of the first, agreeing best with the monuments. It seems fairly certain that Africanus had access to the actual work of Manetho. The version of Eusebius was based on that of Africanus, and shows carelessness in the copying of both names and figures. It will thus be seen that the work of Manetho must be received with some caution, for his king lists have become very corrupt; and it is probable that the Christian writers who transmitted his system, being anxious to reconcile it with the accepted Biblical chronology, have curtailed his lists to some extent. Nevertheless Manetho's work remains the standard and most useful on Egyptian chronology, and upon it all attempts to restore that chronology must be based.

The chief original authorities with which his work is in detail, Abraham Ekechel's Physicus patris archa. Alexandrinus vindicat. ("De Originis nominis Pauz") Rome, 1600, pp. 330-336.; (2) The Tablet of Abydos, containing a list of 75 kings, dynasties I—XIX.; (4) The Tablet of Sais, and several others in papyrus by the same hand in the same order as (2); and (4) The Tablet of Karnak, containing a list of 61 kings—the cartouches are not arranged chronologically. The lists of Manetho are much more complete than any of these, and it is to him that we owe the accepted distribution into dynasties.

Opinions differ widely as to the value of his historical work. A period in which he was regarded as a mere fabricator, and his authority was considered practically unimpeachable. Thus Lenormant says:

"He is now the first of all authorities for the reconstruction of the ancient history of Egypt (Atf. hist. of the East, 1. 217.)

More modern authorities are sharply divided. Adverse opinion may be represented by Breasted's sweeping dictum: "A list, careless and uncritical compilation, which can be proven wrong from what has been supposed to be his book's nature; in most cases where such monarchs have survived, of the dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars." (Hist. of Egypt, p. 25.)

This is so sweeping as to suggest bias at once; and, when it is remembered that an exactly opposite judgment is pronounced by authorities of such standing as Maspero and Filinders Petrie, its oracular tone begins merely ridiculous. Maspero's verdict is as follows:

"The system of Manetho, in the state in which it has been handed down to us by his contemporaries, has been so marred by later writers as to render, service to science; if it is not the actual history of Egypt, it is a sufficiently faithful substitute to warrant our neglecting it when we wish to understand and reconstruct the sequence of events. His dynasties furnish the necessary framework for most of the history of Egypt, and the monuments have preserved us a record." (Lives of Civilization, p. 255.)

Still more emphatically favourable is Petrie's judgment:

"An authority of the highest order. . . . The internal evidence is also strong for the care given to his work and its precision. . . . Manetho has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. Every instance in which this has been supposed to be his book's nature; in most cases where such monarchs have survived, of the dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars." (Researches in Sinai, p. 171.)

Possibly the truth may lie somewhere between the two extreme opinions, and Manetho may be neither so careless as Breasted alleges nor so immaculate as Petrie affirms. In any case, even his detractors cannot afford to do without him; for every reconstruction of the history of Egypt is based, and will continue to be based, on the dynastic framework which he has provided.

What system of dating we are to derive from its dynastic sequence is a different question. Here also there is fundamental disagreement. As far back as 1550 B.C. there is practically no difference between the various schemes of dating, and Egyptian chronology may be looked upon as settled with only a few years' margin of error up to that point. Beyond that lies chaos. The Berlin school, represented by Meyer and Breasted, dates the beginning of the 1st dyn. at 3400 B.C., and that of the XIlth, fixed by astronomical data, at 2006 B.C. Wallis Budge, still clinging to Brugsch's system, gives 4400 B.C. for the 1st dyn. and 2400 B.C. for the XIlth. Petrie gives 5510 B.C. for the 1st dyn. and the same astronomical data as the Berlin school, 3459 B.C. for the XIlth. Here it is most unlikely that the truth lies between the two extremes, and Brugsch's via media seems to lead nowhere. The gigantic gap between Petrie's dates and those of the Berlin school is due to the fact that Petrie holds that the advocates of the shorter system have dropped a whole Sothie period of 1600 years out of their standard reckoning. If they are right, then when one sound, the truth must lie either with the shortest or with the longest system, and only further
research can clear up the problem. Meanwhile the

tendency has been somewhat in the direction of the

Bebelian view, which according to Petrie, 'delays all

the history and the collateral facts which sup-

port it' (Ancient Egypt, London, 1915, pt. i. p. 57);

and Manetho's credit remains in suspense.

In addition to his second-hand, two interesting traditions of Egyptian history. These

are preserved in the Apion, which contains a

character nearly akin to the primitive Manichaes, and had every opportunity of becoming well ac-

quainted with them. Of course it is a little bit very little of their testimony has come down to us.

Apataiates, in the first half of the 4th cent.,

the earliest Syriac author whose works have been pre-

served in a distinct codex. The quantity of which

alludes to Manichæism as a dangerous heresy.

1 The children of darkness, the doctrine of the wicked Mini,

who dwell in mansions like serpents, and who practised Chaldeism (i.e. astrology), the doctrine of Babel.12

More information may be gathered from the works of a younger contemporary of Apataiates, the well-

known Ephraïm of Nisibis, commonly called

Ephraim Synes. References to Manichæism are found in several of his writings, especially in a

series of letters, entitled Lettres a l'Egypte.13

The treatise against Manichæism composed by

Gabriel, bishop of Hormizdshâr, in the 6th cent.,

seems now to be lost.14 Later Syriac writers, such as

Theodore bar-Khiom15 and Barhebræus,6 do not

supply much that is of importance.

Among Oriental Christian authorities we must also

reckon the Armenian writer Ezmik of Kobâ, who lived in the 5th cent.,15 and Sa'd ibn al-Bitrîq,16

generally called Patriarch, who was Patriarch of

Alexandria from A.D. 923 to 939.16

(2) Zoroastrian.—The evidence contained in

Zoroastrian literature is, if anything, scantier

than that which may be collected from the works of

Oriental Christians; moreover, it is much more
difficult to interpret, owing partly to the unsatis-

factory condition of the text and partly to our

imperfect acquaintance with the language. But

the vehement condemnations of Manichæism which

are found in Zoroastrian books bear witness at least to

the dread with which the Persian priesthood

regarded the rival faith.6

(3) Western Sources.—Accounts by Greek and Latin

authors exist in far greater quantity, but they are,

from the nature of the case, much less trustworthy.

Manichæism was so essentially Oriental (i.e. non-

Hellenic) in its character that the Christians of the

West would probably have had considerable diffi-

culty in understanding it, even if they had been

wholly impartial. That this was out of the question

hardly needs to be stated. The strangeness of the system

was doubtless an attraction to some minds, but

those who are attracted by mere novelty are usu-

ally uncritical, while the attitude of uncon-

8 Euphorbis Annales, ed. E. Pecocke, Oxford, 1639-50, which

contain the original Arabic text with a Lat. tr. 

9 Perhaps the most important passage in this subject is that

which E. W. West has translated in his Philologus Text. iii. 243 f. 

10 See the edition of the Biskopis of the Syriac text: 2, 1900; 

11 Bruchstück manichäischen Schriftstücks im asiat. Museum.
promising hospitality, which was adopted by the great majority of Christian theologians, naturally proved less favourable to accurate scholasticism.

The foreign origin of Manichæism is duly emphasized by Eusebius in the brief notice which he devotes to this 'insane heresy,' Alexander of Lycopolis, that author of the short extant Life of Mani, was probably a contemporary of Eusebius. He deserves notice as being the only Western writer who treats the subject from a purely philosophical standpoint. He speaks of Christianity with a certain respect, it is doubtful whether he ever became a Christian. Of more importance is the testimony of a somewhat later controversialist. Titus, bishop of Bostra in Syria, who died about A.D. 370. In a geographical sense, Titus must be reckoned among Oriental Christians, but his Treatise against the Manichæans proves him to have been thoroughly Western in his education and habits of thought, deeply imbued with Greek philosophy, in particular with Stoicism, and full of contempt for 'barbarians.' He distinctly states that he derived his information from a Manichaean book, but he does not name it, and neither does he supply any definition as to its authorship. His words, however, seem to imply that the book was not composed by the founder of Manichæism himself, for in quoting it he attributes the errors and mistakes to it that were made against the doctrines of that mania; and again, these are the very words used by him or else by one of his followers. He afterwards mentions a Manichaean work entitled The Treasure, but whether this is identical with the book cited previously cannot be determined. In any case it is interesting to observe that, according to Titus, the Manichaean made every effort to conceal from outsiders the particulars of their founder, apparently in obedience to his express orders. Another fact, no less significant, is that Titus professes to have softened down the expressions which he found in his source: these are not the words used by him, but this is what he meant to say, translated into more decent language. In estimating the evidence supplied by Titus this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the Acta ARCHELAI, a work which professes to record a dispute between Manes and Archelaus, bishop of Carchar 10 in Mesopotamia.

Of the four books into which this work is divided only the first two and the beginning of the third have been preserved in the original. The first four are extant in Syr. tr., which must have been made very early, as it is contained in a Brit. Mus. MS written in A.D. 415. The Gr. text was first published by J. Rasmussen in 1725; the best edition is that of F. A. de Lagarde (Berlin, 1859), who also edited the Syr. version. It is to be noted that the Gr. text has a long insertion (printed as an Appendix by Lagarde, pp. 69-103) which is absent in the Syr. In 1849, 1850, Auguste Brünckmann endeavoured to prove that this piece is a fragment of a book against the Manichaees by Severus of Thonis, a friend of Athanasius.

11 See Euseb. Hist. 39. 21; Phot. Bibl. 38. 1136. The penning use of oura, etc., in allusion to the name Manes, is extremely common.

12 See e.g. a τον μανιαν ιερογλυφιον θρηνει (ib. l. x. 21).

13 Photius states that the source used by Titus was the one preserved in a copy of a manuscript: Πάλαι μοι κυρίως ουκ εδεικνύτον τον Αρχέλαιον, ἡ δὲ καθηκόντων αὐτοῦ ἀκριβία (P.G. 832, 388).

14 Syr. sinchou (ib. l. x. 9). This is probably the work called Φασιαδας by Epiphanius, and σὁ προς τὸν μανιαν κυριολέπιον, which is cited in the Greek, Formula of Arianism. Both al-Yaqubi and al-Birdini ascribe to Manes a work entitled Παρακολούθησις φήμης διδασκαλίας, Theodor. 191. 410. This is a Life-giving, but it is to be noted that the list of Manes's writings in the Friede (p. 339, line 8 ff.) does not include this title, although it mentions a work written under that name, being the "Life-giving of Manes," which is translated into Syriac, but which is not extant. See 9th ed. of Euseb. Hist. 39. 21. 13. 14.

15 Phot. Bibl. 38. 1136.

17 άλλα μάχη τού πάντα αὔτον καὶ τοῦ δοκεῖν καθαρωτότατον τό χρώμα εύρη μεγάλον Αρχέλαιον (ib. l. x. 21).

18 The name is doubtful. Possibly the author, or a later scribe, may have confused the two places Karcha and Raskbar; the latter form agrees with that given by Ephiphanios in his version of the story.

Here for the first time we meet with the remarkable theory that Manichæism originated in the 5th century with its reputed founder, but with a certain Stylilius, from whom the system was passed on to Manes. These Acts are extant in a Latin translation, made from a Greek text of which we possess some long fragments. 1 According to Jerome, 2 the book was originally composed by Archelaus himself in Syriac ('Syro sermo'), and afterwards translated into Greek. But it has been clearly proved that Archelaus is nowhere quoted, either by himself or others, and the whole motive is to a large extent, if not entirely, fictitious. Nevertheless, some modern writers have endeavoured to show that, though Jerome was mistaken in ascribing the Acts to Archelaus, he was right at least in believing them to have been composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by W. Nöldeke to be worthless. The author of the Acts, whoever he was, was evidently possessed of no accurate information about the country in which he placed the scene of his story. For example, he represents the river Strangas as the Western boundary of the Persian Empire—a notion which is derived from the Greek Romance of Alexander the Great (pseudo-Callisthenes), as Nöldeke points out. A writer who was capable of falling into such mistakes must have had any definite knowledge as to the early history of Manichæism. Nevertheless, it is not surprising that his statements were readily believed by Western Christians. With some variations, the story contained in the Acta Archelaei reappears in Epiphanius, 3 Socrates, Theodoret, and several later writers.

By far the most celebrated of the Western authorities on Manichæism is Augustine. At first sight it might seem that his testimony ought to outweigh all others that have been mentioned, for during nine years (from A.D. 375 to 383) he was a professed Manichaean. Among the works that he composed on the subject, after his conversion to Catholic Christianity, are the following: Contra Epistolam Manichæi quem vocant Fundamenti, Contra Faustum, Contra Fortunatam, Contra Adrianum, Contra Secundum, De Actis cum Felice Manicheo, De Genesi contra Manichaes, De Natura Boni, De Duabus Animabus, De Utilitate Creatoris, De Moribus Ecclesia Catholicae et de Manichaeis, etc. According to Augustine, Manichæism came to Manichaee is to be found in his other writings, particularly in the Confessions. But, on the whole, the amount of positive knowledge which can be gathered from Augustine is much less than might have been expected. In the great majority of cases he confines himself to vague generalities, and, when he descends to particulars, his statements seem mostly to rest on hearsay. It may be doubted whether even his Manichaean informants were at all accurately acquainted with the history and writings of their founder. Faustus, whom Augustine represents as one of the ablest and most influential among the Manichaees, was a native of N. Africa, and it is therefore unlikely that he could read the sacred books of his religion in the original Aramaic. Nor have we any reason to believe that the other Manichaees with whom Augustine came in contact were better instructed.

One of the latest, but not the least important, of the Western sources is the Greek Formula of Arianism, 4 which repentant heretics were required to pronounce during their being admitted into the Church. 5

Manichaeism

MANICHAEISM

manichaeism of the Byzantine Church. In its present
shape this document cannot be older than the 9th
century. It consists of a series of anathemas,
directed partly against doctrines and partly against
persons, put together without any definite plan.
Some of the doctrines are undoubtedly Manichean,
but some are from other sects, and it does not appear
to be a gross misrepresentation. Yet, in spite of
the unclear manner in which it is compiled, the
Formula of Absolution contains a certain
number of valuable evidences. In the first place,
the Manichean scholars to whom we owe these
descriptions wrote from a historical, rather than
from a controversial, point of view. Moreover,
some of them at least had access to very ancient
and trustworthy sources of information for
Babylonia, the political centre of the
Manichean Empire, was also the ecclesiastical
centre of the Manichean community, and accord-
ingly, in that country the text and the traditions
of the Manichean Scriptures were most likely to
survive. It is true that after the Manichean conquest
the Aramaic language gradually ceased to be spoken, but the knowledge of
Manichean, as preserved in the text of the
Formula of Absolution, is Catalogue,
the great storehouse of information respecting literary
works of various kinds; and (c) al-Biruni, who died
A.D. 1048, one of the most learned men that the
East ever produced, the author of a book on
Chemistry, in which he mentions the
principal chemical affinities, and the
most important chemical facts; (d) al-Shahristani,
who died A.D. 1155, the author of
a work on religious and philosophical sects. All
these authors wrote in Arabic, although the last
two were of Persian nationality.

The story of Mani in the Shah-namah of Ferdousi,
the well-known Persian epic poet, is almost entirely
legendary, and the same may be said of nearly
all the popular Manichean accounts, whether
written in Persian or in Arabic.

2. The founder of Manicheism.—With regard to
the history of the founder we are mainly dependent
on Manichean writers, for the
Western authorities either tell us nothing definite
or else repeat, more or less faithfully, the legend
contained in the Acta Archelai. The story there
related is briefly as follows:

According to the Acts of the Apostles there lived a man
named Scythian, who is described as coming from Scythia,
and also as being a Saracen by race ("ex genere Saracenorum.")

He settled in Egypt, where he became acquainted with the
"wisdom of the Ptolemies," and invented the religious system
which afterwards was known as Manicheism. Finally
he emigrated to Persia, and, when he had
opened himself to his sole disciple, a certain Tertullian. The
father bequeathed to him his knowledge, and, to propagate
his master's teaching. But he, like Scythian, gained only
one disciple, who was an old woman. After
Gundahar's death, he fled from the roof of a house, and the books he had
inherited from Scythian burnt, carrying the property of the man's
father. At the time of his death, bequeathed him to a young man named Cornicius,
who had been her slave. Cornicius thereupon changed his
name to Mani, and, in order to test the writings of the new
teacher, he added three discourses (of Aditha, and Hermas. About this time the son of the Persian king
fell ill, and Manes undertook to cure him; the prince, however,
died, whereupon Manes was thrown into prison. He succeeded
in escaping, but eventually fell into the hands of the king, by whom
he was tried, and his corpse was hung up at the city
gate. It is needless to say that this narrative, as it
stands, has nothing to do with historical
accounts. Some details, in particular the account of
the execution of Manes, are confirmed by more trustworthy authorities, but
not to the main point—the existence of Scythian and Tertullian
confirmation. The assertion that
Tertullian took the name of Buddha seems to be a
confused reminiscence of the fact that Mani
represented the Indian Buddha as one of a series of prophecies of Christ, and
far from tending to support the story as a whole, is rather an argument against it.

The accounts of the principal Manichean authorities may be shortly summarized thus: Mani, the son of Ptolemy, was born in Babylonia about A.D. 216. His father was originally a heathen, and frequented an "idol temple" near Ctesiphon, the residence of the king, and the other people were wont to do. But shortly before the birth of Mani he abandoned his former religion, and joined the sect of the Magi, alias Jews, those who practise abstentions. Mani at an early age became convinced that he had received divine revelations, and that he was chosen to preach a new faith.

1. As to this man, the authorities vary.
2. This name is also uncertain.
3. So the name is written in Arab. and the adj. derived from it is usually written (formed according to the ordinary rule in Arab.), but sometimes mezane, manandi, or maniti. In Syr. the name Mani seems to have been pronounced as in Arab., although the Syr. spelling does not enable us to decide positively whether the first vowel was long or short. In the case of rare proper names the vowel-points added by later Syrian scribes have, of course, no authority. In Zoroastrian writings the name appears with a final aspirate, as in modern moderni, and this aspirate accounts for the form Magi, or Mande, which Gr. and Lat. writers often use, not only as an adj., but also as the equivalent of the Syr. form. The meaning of the name Mande is unknown. But this very fact tends to show that it is a real name, not an honorific title like Christ or Buddha.

4. This is the form given in the Fihrist. The vowels are uncertain, but the consonants agree with those of Harware, who is expressly mentioned as the father of Manis in the Gr. Formula of Absolution. It is well known that the Gr. and Syr. orthography differ, and no sign for έ or ά or Π is used. According to the Fihrist, the Fihrist also bore the name of Mani (= Ptolemy), while al-Yaqubi calls him Hazam. The last name, which is
5. The statement of al-Biruni that Mani was born in the year 297 of the era of Alexander (i.e. the Seleucid era) agrees very nearly with what we are told in the Acta Archelai to the age of Mani when he came forward as a public teacher.

5. G. T. Seidl, in DCS, s.v. "Mani," states that Mani's father 'founded' this sect—an assertion for which there is no authority.

6. These details are given in the Fihrist, evidently from a Manichean source. What was the precise form of heathenism which Mani substituted for the prophetic system? What terms were used in the Fihrist point to some local cult rather than to Zoroastrianism. The religion of the Magi seems to have been a mystery religion, with very many elements. It was not identical with that of the Mandaeans in later times, though it bore some resemblance to the Fihrist, and a similar statement appears in the well-known historical work of Al-Marwazi, which dates about a century later than the Fihrist, and states that the name is there written somewhat differently (see Mad'lli, Les Précisions, or, éd. G. Barbier de Meynard and Travers
Before he was twenty-five years old he had privately gained a few disciples, but he began his public propaganda on the day when Shapir (Sapor 1.), the son of Ardashir, was crowned king, i.e. March 29, 228. He was enabled to succeed in securing the patronage of the king's brother Peroz, and through him obtained access to the court. While in the court of his sovereign, 1 however, he is said to have visited Central Asia, India, and China, but it does not appear that he ever penetrated into the Roman Empire. In addition to the monographs and commentaries in Arabic, and at least one book in Persian, probably the work known as the Shaiptr (Sapor), we have three other works ascribed to this king Shapir. "We learn from Ebram Syrus that Mânî illustrated his writings with graphs or figures, 4 and his tales as a physician he composed in ancient centuries in the East. He is also said to have invented the peculiar alphabet which the Manichâ- eans still use to-day in what they call their 'written language.' As the recently discovered fragments prove, Mânî was put to death by king Bahram (or, according to the older pronunciation, Warshârân), 5 who reigned from about a.d. 274 to 278. 6 Whether he was slain alive, as al-Yaqsib and some other authorities state, is doubtful. His corpse, or, according to others, his skin stuffed with straw, was hung up by order of the king on the gate of Gondâ-Shupir, a important city which lay a little to the east of the ancient Susa. In after times that gate was always known as 'the Manichaean Gate.' The execution of Mânî was evidently due not so much to the personal caprice of the king as to the enmity of the Manichaean sect. At the same time the Persian government made a strenuous, but wholly fruitless, attempt to exterminate the adherents of the new religion.

3. The Manichaeism system,—Manichaeism, like other forms of Gnosticism, professes to be at the same time a religion and a philosophy, inasmuch as it not only sets up an ideal of holiness, but also undertakes to explain the constitution of the world. It is to be understood as wholly a philosophical system, in the ordinary European sense of the word. It attempts to arrive at philosophical truth by means of a method which, to us, appears wholly unphilosophical. Thus the Manichaeans confidently appealed to human reason and were always ready to defend their conclusions by argument, they did not pretend that those conclusions had been reached by any kind of scientific induction on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mânî himself says, in a passage which al-Birâni quotes from the Diatessaron: 

Wisdom and deeds 1 have always from time to time been brought to mankind by the messengers of God. 2 In one age they have been brought by the messenger called Buddha to India, in another by Zaradust [Zoroaster] to Persia, in another by Jesus to the West. Therefore this revelation has come down to us in this last age, through us, Mânî, the messenger of the God of truth to Babylonia. 

Such was their aim put forward by Mânî. We have now to consider the substance of his teaching.

The Manichaeism system is based upon the idea of the essential and eternal contrast between good and evil. This dualism was the basis of Gnosticism, and it is not correct to say, as Western writers have frequently done, that Mânî identified good with spirit, and evil with matter (69). Whether he ever attained to the conception of matter may be doubted; 4 at all events, it is clear that he represented evil, or darkness, as something capable of thought and volition, 7 in other words, that it was of the imaginative, or poetical, not of the philosophical kind. The following is an abstract of the account given in the Frîsthr

Originally the light was supposed to be bordered on one another, but were mingled, the light being limitless above and the darkness limitless below. The light is identical with God, who is called King of the Light; but the realm of light includes also an atmosphere and an earth which are co-extensive with the Godhead. Moreover, there are various other beings called gods, who are subordinate to the King of the PARADISE OF LIGHT. Out of the darkness arose Satan, the Primal Devil, who "did not exist from all eternity, although the elements of which he is composed are eternal." At first he did not have in his own domain, and then he took the form of light. 6 When he saw the flashes of light, he conceived a hatred for them, and reigned with his native element. He made a second attack, and the King of the PARADISE OF LIGHT, in order to repel him, produced a being called the Primal Man, who went forth armed with a fiery sabre—the breeze, the wind, the light, the water, and the fire. Satan, on the other hand, arranged himself in the smoke, the consuming flames, the darkness, the scorching blast, and the cloud. After a long struggle Satan prevailed over the Primal Man. The heavenly powers then identified and rescued the elements of darkness which formed his panoply and mingled with the elements of darkness. Out of this combination the powers fashioned the actual world which we inhabit. Not only all animal and vegetable organisms, but even objects which we call inorganic are regarded as being identical with the universe. The visible universe is, in fact, a vast and vasty place of the invisible; for the purpose of enabling the elements of light to effect their escape. When the light was first sent into the earth beside itself of darkness, it ascends in the form of a pillar, called the 'pillar of glory,' first to the moon, 5 thence to the sun, and thence to the higher regions. The light of day will be secured for ever against the assaults of the darkness.

The most singular part of the Manichaeism system is that which relates to the origin and history of mankind. Unfortunately, the statements of the Frîsthr on this subject are fragmentary and full of obscurities, which the other sources do not enable us to explain in an altogether satisfactory manner.

He is believed to have lived in his own domain, and then he took the form of light. 6 When he saw the flashes of light, he conceived a hatred for them, and reigned with his native element. He made a second attack, and the King of the PARADISE OF LIGHT, in order to repel him, produced a being called the Primal Man, who went forth armed with a fiery sabre—the breeze, the wind, the light, the water, and the fire. Satan, on the other hand, arranged himself in the smoke, the consuming flames, the darkness, the scorching blast, and the cloud. After a long struggle Satan prevailed over the Primal Man. The heavenly powers then identified and rescued the elements of darkness which formed his panoply and mingled with the elements of darkness. Out of this combination the powers fashioned the actual world which we inhabit. Not only all animal and vegetable organisms, but even objects which we call inorganic are regarded as being identical with the universe. The visible universe is, in fact, a vast and vasty place of the invisible; for the purpose of enabling the elements of light to effect their escape. When the light was first sent into the earth beside itself of darkness, it ascends in the form of a pillar, called the 'pillar of glory,' first to the moon, 5 thence to the sun, and thence to the higher regions. The light of day will be secured for ever against the assaults of the darkness.

The nature of the gods is not clearly defined; they are regarded as the offspring of the Supreme God.

It is introduced into the history of the Buddha with the parallel passage in Titus of Bostra, bk. i. l. 17. For 'the Primal Devil' Titus substituted 'the devil of man.'

Thus, for instance, the rain is explained as due to the perspiration of the gods (Titus of Bostra, bk. i. l. 17). The moon, as it is described is a bucket which alternately fills and empties itself (ibid.).

It is to be observed that Adam, Eve, and the Primal Devil (al-Dinawari) is wholly distinct from 'the Primal Man' (al-Dinawari).
As we learn from the passage of the Skhāpārangā quoted above, Māni held that a series of divine revelations had been promulgated in the world by Buddha, Zarathustra, Jesus, and finally Māni himself. He had divided the Mānichēan books, claimed to be the "Paraclete (al-Farāqli) announced by Christ," and this we learn from other sources also, both Christian and Mānichēan. The Muhammadans and others use the Greek word, it may be assumed that it was used by the Manichēans themselves, but we are not to conclude that Māni knew Greek, still less that he had been in the Orient. The term Paraclete was in common use among Aramaic-speaking Christians, from whom Māni doubtless borrowed it. Precisely what meaning he attached to it is a question not easily answerable.

From the statements in the Fīrīṣt that Jesus pronounced Jesus to be a devil (ibid. 1.4). The Fīrīṣt informs us also (p. 336, line 10 ff.) that one of Māni's works, The Book of Secrets, contained a chapter on the son of the widow, that is, to say, according to Māni, the crucified Messiah, whom the Jews crucified. How the strange phrase the son of the widow is to be explained, and how this passage is to be reconciled with that in which Jesus is said to have been called a devil, we have no means of determining.

But, whatever the Manichēans may have believed as to the origin of the historical Jesus, the nature of His body, etc., it would certainly appear that they denied the fact of His crucifixion. Hence, according to Augustine, they were in the habit of contrasting the unreal sufferings of Christ with the real sufferings of Māni, which they regarded as another of his tricks, as an interpolation, as a ceremony known as the Bāṣa. That the Muhammadan writers say very little on this Christological question may be due to the fact that here their own views of the universe as a whole. Since the visible world has as its goal the separation of the light from the darkness, practical religion must consist mainly in the furthering of this process. The divine element in man must be freed from all material goals and this is the reason of his heavenly source. With regard to this part of the Manichēan system much misconception has prevailed in the West, from the time of Augustine to the present day. The divine element in man is not to be identified absolutely with the soul, though the Manichēans sometimes used language which admitted of such an interpretation. Yet, if we examine a passage, we become clear that, when they spoke of the soul as divine, they meant only that it contained something divine; and even this was not asserted with respect to the soul itself, but only in so far as it was the part of the re-creation, due chiefly to Augustine's treatise De Duabus Animabus, is that man was represented as having two souls, one good and the other evil. In reality the passages which are cited as proofs of this theory affirm only the existence of two opposite tendencies in man. And, just as the soul is not wholly good, so the body is not wholly evil; for, according to the Fīrīṣt (p. 335, line 16 ff.), the Manichēans held in an allegorical sense that the righteous man the powers contained in his body, namely, the water, the fire, and the breeze, have to be extracted by the sun, the moon, and the shining stars, and that the rest of his body which is altogether darkness is cast into hell.

But, although it was the duty of all Manichēans to take part in the liberation of the light from the darkness, the degree of their cooperation varied according to their several capacities. First of all, a broad distinction was made between the ordinary Manichēans, who were known as "the Hearers" (al-Manīkān, the "Combitants," as the term is sometimes applied to them) and the teachers or ascetics, whom Western writers call "the Elect" (al-Balad, Electi) and Muhammadans al-Šidqīquān. The Elect again were subdivided.

1. It is well known that, according to the Qur'an (iv. 156), Christ was never crucified; but, when His enemies sought to slay Him, He was removed from the earth and a likeness was made to appear to them. This theory, it will be observed, does not imply any denial of the reality of Christ's body. That Muhammad borrowed the conception from the Manichēans is very improbable, but at all events there is a striking analogy.

2. See the very instructive discussion by Baur, p. 102 ff.

3. This expression means in Arab, "the veracious," but, as Kessler has pointed out (Māni, p. 318, note 4), it is here to be understood in the sense of its etymological equivalent in Syr.
into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Mānī himself. But the position of the Elect differed essentially from that of the Christian clergy. They were not occupied as such until the shape was assumed by the system, since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting. Thus the main characteristic of the Elect was not that they had the exclusive right, or power, to perform certain acts, but rather that they possessed a fuller knowledge of religion and abstained from certain things which were lawful to the rest of the community.

This duty of abstention was called by the Manicheans 'the three seals,' which Augustine more definitely characterizes as signaementum oris, signaementum oculorum, and signaementum sinu. The first seal imposed restrictions with respect to food and speech, the second with respect to outward acts, the third with respect to thoughts and desires. Thus the Manichean asceticism implied a no thought on the part of an individual that sinned, as well as abstaining from sin—a view which is essentially an influence of some sects of the Christian Church—was quite foreign to the religion of Mānī. The prohibitions which have been issued are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are essentially Satanic, and therefore require the abstention of the pious from them. In matters of detail the Manichean code naturally appears arbitrary to us; it is evident that in drawing the line between what is 'Satanic' and what is not Mānī was guided more by his fancy and by various casual associations than by any abstract logical principle. Thus, for instance, all Manicheans were forbidden to kill animals, but it would seem that the Hearers were permitted to eat flesh. The Elect abstained from both flesh and wine; they were also forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry but were restricted in worldly avocations, whereas the Elect might neither marry nor acquire property, 'except food for one day and clothing for one year.' It is remarkable that among the things most strictly prohibited by a Monothelite and mystic as in nearly all Oriental religions, fasting played an important part. Sunday was observed as a fast-day by ordinary Manicheans, Monday by the Elect; viz. Zaddīq, 'the righteous,' which we may assume to have been the form employed by the Manicheans themselves (see C. W. Mitchel, op. cit., 30). A Manichean who is called a Zaddīq. (137 R.) 'Those Idle women of the party of Mānī, those whom they call Zaddīqītāth.' Neither Kesseler nor any previous writer seems to have noticed that from the same Syriac word is derived sandīq, or sandīk, 'butter,' a term which was applied especially to the disciples of Mānī by the Persians of the Sassanian period, and afterwards by Muhammadans. Various other interpretations of this word have been proposed, but none that is in the least plausible. The substratum of it is probably the word for dīq, a phonetic change for which there are many analogies. That a term which was originally used as a title of honour should afterwards be reduced to an epithet of the commonest natural; e.g. the Germ. Ketzer, from cauhtpe. The Persian term for a dunghill' and the Sanskrit word prakāra are the derivatives. Mānī and Zaddīqī.

According to Augustine (c. Fortunatum, 1.), the Elect were supposed to celebrate a kind of Eucharist in their secret meetings. But, as Augustine himself admits that he knew nothing definite on the subject, we can determine much importance to his testimony.

4. The relation of Manichæism to other religions.—W e have considered the proposition that that of Mānī's teaching. It will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manichæism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manichæanism naturally gave rise to the theory that Manichæism is a combination with Christian Zoroastrism or Buddhism. For 'paganism' we should not doubt read 'jēsūt,' 'Hē, as Nöldeke and others have supposed.

That is, apparently, called into existence—the Arab. verb de'ēs means here the giving a new rendering of the Arab. ūfira, on the use of which see H. Pogson, Inscriptions mandaica, p. 116, note 4.

Here follows a passage which is excellently natural; e.g. the Germ. Ketzer, from cauhtpe. The Persian term for a dunghill and the Sanskrit word prakāra are the derivatives. Mānī and Zaddīqī.

Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency to explain everything in the ancient world as due to Babylonian influence has led to the belief that Manicheism and all other forms of Gnosticism are simple modifications of the old Babylonian religion.

But to those who impartially examine the sources none of these hypotheses will appear satisfactory. Whatever elements Mānī may have borrowed from older Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manichæism stood to Christianity was undoubtedly closer, but to call Manichæism a Christian heresy would be misleading. The characteristics which Manicheism and other Gnostic systems share with primitive Christianity are not necessarily derived from any Christian source; they are, for the most part, products of a general movement which, as mankind outgrew the older religions, spread over the civilized world and assumed various forms, according to the special circumstances of each case. The general movement in question has been described by H. Oldenberg as a shifting of the centre of gravity, in religious matters, from without to within.

The ancient conception of religion, as a sort of offensive and defensive alliance between man and God, a unitarian agreement whereby the worshipper secured for himself prosperity, success, and victory over his enemies, gradually faded away, or sometimes was violently shattered, and in its place there arose a new kind of belief, which held out the hope, not of earthly enjoyment, triumph, and dominion, but rather of rest, peace, and redemption (Buddhā, Berlin, 1897, p. 3).

In the time of Mānī the old heathenism was by no means extinct in Babylonia, though Zoroastrianism had become the religion of the State. Moreover, large Jewish colonies had long been established in the country. Of the early history of the Christian Church in those regions next to nothing is known, but there can be no doubt that before the beginning of the 3rd cent. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians of Babylonia were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type. In particular, the sect founded by the Syrian Christian Bar-dāsān (Bardesanes), who died in A.D. 222, seems to have had great influence. Ephraem Syrus goes so far as to call Bar-dāsān "the teacher of Mānī." It may not be improper to think that Mānī was a Bardesanist, but merely that he had adopted certain Bardesanist doctrines. In any case it is essential to realize that Manichæism arose in a country where several religions were competing with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Mughchisla, the community to which Mānī's father attached himself.

The hostility of Mānī to popular paganism is sufficiently shown by his strict prohibition of idolatry. That he clearly distinguished between orthodox paganism and Zoroastrianism appears from his inclusion of Zoroaster among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than false; but how much he actually believed that the Zoroastrianism did not become the State religion till after the overthrow of the Parthian dynasty (about A.D. 226) is uncertain. Mānī appears to have been closely identified with the Christian church in Persia, and to have contributed to the spread of its doctrines.

1. Astrological myths and speculations played a considerable part in some other Gnostic systems, notably in that of Bar-dasān.

2. F. C. Burkitt's Early Eastern Christianity (London, 1904) relates chiefly to the Christianity of Edessa and its immediate neighbourhood, but contains much that he says probably applies also to Babylonia.

The question of Mānī's dualism was due mainly to Zoroastrian influence would be an warranted assumption; for, though both systems are rightly described as dualistic, they nevertheless differ profoundly. The aim of the Zoroastrian is to banish evil from the world; the aim of the Manichean is to extract from the world that which is good. In this respect Mānī has more in common with Buddhism than with Zoroastrianism; but from the fact that Mānī represented Buddha as the communicator of a divine revelation we must infer that Mānī's acquaintance with Buddhism was of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can attach no great importance to his adoption of certain ancient Babylonian myths—such as relate to the nature and movements of the heavenly bodies. In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude towards Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved; hence in Christian writings directed against Manichæism the name of Moses is given a prominent place. It is probable that Mānī's aversion to Judaism was largely due to his horror of a practice which Judaism notoriously has in common with popular paganism, namely, the sacrificing of animals.

Towards Christianity he was much more favourably disposed. Whence he derived his information on the subject is indeed uncertain, for, though it seems probable that the greater part of the NT had been translated into Syriac some time before Mānī was born, we cannot safely assume that he had access to it. Hence his peculiar teaching as to the personal history and miracles of Christ is the result of allusion has been made above, may he due in some measure not to perversion of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the most essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Mānī. But he had one great advantage over the Christians, namely, that he provided a much more secure dogmatic basis for asceticism than any previous teacher. The Christian ascetics, in condemning natural feelings and appetites, were constantly hampered by their theory of God as the ruler of the universe in general and of man in particular; the distinction which they were obliged to make between human nature as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichean dogma that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Mānī displayed a boldness and originality of conception which entitle him to be regarded as a genius of the first rank. To represent his system as a more patchwork of older beliefs is therefore a total perversion of the facts.

5. History of the Manichean community.—At the time of their founder's death the Manicheans were already a numerous and highly organized
sect, scattered over a great part of the Persian Empire and drawn from the ranks of various other religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrian priesthood opposed the new faith. Muhammad's immediate successors, as head of the community, was a certain Sisa (Gr. Συσσα). For many centuries Babylonia continued to be the headquarters of the Manichean organization, in spite of repeated persecution by the Christian governments. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manichæans were treated even worse than the Christians. For this no political pretext could be alleged, since the Manichæans were politically inoffensive, whereas the Christians not infrequently brought persecution upon themselves by an ostentatious display of their philo-Byzantine sentiments. The principal result of these attempts to suppress Manicheism in Babylonia and Persia was that large numbers of Manichæans took refuge in Central Asia, where they established a successful propaganda among the Turkish tribes.

The precise date at which Manicheism began to spread in the Roman Empire is not certain, but it was undoubtedly well known there early in the 3rd century A.D. In any event it is difficult to account for its prevalence in N. Africa, two or three generations later, Augustine furnishes ample evidence. The Christian emperors, as we might have expected, showed themselves no less intolerant towards Manichæan than the kings of Persia. In the persecution of the Manichæans Pope Leo I. played a specially prominent part. As to the later history of the Manichæans in Europe very little can be discovered with certainty, on account of the vagueness with which the term 'Manichean' is used by Catholic writers. Thus the charge of Manicheism was brought against the Bogomils in the Byzantine Empire and the Albigenses (q.v.) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokians has been described as a modified form of Manicheism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mani in the East enjoyed a period of relative safety. Strictly speaking, they had no legal claim to toleration, for the Qur'ân, which expressly recognizes Jews, Christians, and Sabians 2 as capable of deserving the favour of God (ii. 58, v. 73), does not mention Manichæans. Nevertheless, it would appear that in the early days of the Muhammadan Empire no penalties were inflicted upon the Manichæans. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may for a while have served to protect them from molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manichæism. In many cases these reports were certainly false; thus, for instance, the Khalîfa al-Walîd II. (A.D. 743-744), whom Muhammadan historians depict as a monster of iniquity, is accused of having said that Mani was the only prophet whom God ever sent into the world. 1 If al-Walîd really uttered these words, they would prove not that he was a Manichean, but that he knew next to nothing of Manicheism. It is, however, impossible to deny that secret conversions to Manicheism actually took place among the Muhammadan clergy. A passage from Islam is notoriously a capital offence according to Muhammadan law (see art. Apostasy [Muhammadan]). Hence we cannot wonder that in the latter half of the 8th cent., when under the 'Abbâsîd dynasty the spirit of religious intolerance became dominant in the Muhammadan world, a systematic attack should have been made to extirpate Manicheism. 2 The organizer of this persecution was the Khalîfa al-Mahdî (A.D. 775-795), who instituted for the purpose a State Inquisitor, with the title of 'Inspector of the Zanâdik.' 3 The term zanâdik (plural sindik) 4 was used primarily to denote the Manichæans, though Muhammadan writers often employ it vaguely in the sense of 'heretics' or 'atheists.' 5 That al-Mahdî did not make a very clear distinction between Manicheism and other heresies may be inferred from a passage in which he is represented as elaborately justifying his policy of persecution; 6 the accusations here brought against the Manichæans include, e.g., the practice of carrying the 40 new-borns (as alleged al-akhdawî wa-l-bandâ), which was characteristic of the Zoroastrians (see art. Marriage [Iranian]), but seems to have been altogether foreign to Manicheism.

The religious policy of al-Mahdî was generally followed by his successors. The number of persons put to death on the charge of Manicheism certainly amounted to many thousands, while Christians and Jews, though subject to various disabilities, were usually tolerated. But, in spite of all, the religion of Mani long survived even in the heart of the Muhammadan Empire. Some two centuries after al-Mahdî, the author of the Fihrist tells us (p. 337, line 26 ff.) that he had been acquainted with about 800 Manichæans in Bagdad alone. But the region in which they were most numerous was Central Asia. In the territories of the Turkish tribe Taghazghaz the majority of the population professed Manicheism; a Muhammadan traveller who visited that country describes it as flourishing and civilized. 7 When, in the reign of the 'Abbâsîds, the Muhammadan emperor of Samarqand condemned to death a large number of Manichæans, they were saved, it is said, by the intervention of their co-religionists, the princes of the Taghazghaz. 8 This is the only known case in which Manicheism became the religion of a political community. We do not know how long this state of things continued, or when Manicheism finally died out; but we may conjecture that it was swept away, like many other beliefs and institutions, by the great Mongol invasion of the 13th century.

The Manichean community in the course

1 See ibid. 2 See the very interesting paper by I. Goldscher, 'Abîl-i Kûndis and das Zoroastrismus des Zoroastrismus des Chalîf-iv, in Trans. of the Ninth Intern. Congress of Orientalists, London, 1883, ii. 104 ff. Goldscher is of opinion that the Muhammadan propaganda under the early 'Abbâsîds was somehow connected with the anti-Arabian movement of the Persian nationalists (the so-called Shiva'is). Whether there is any truth in this view may be doubted, for Manicheism had nothing to do with nationality. At the same time it is not surprising that it would often have confounded these wholly distinct tendencies.

2 See 3, note 5.

3 From the statement in Ibn Qutbah, Kitâb al-Jâfîrî (ed. F. Wulffen, Götingen, 1830, p. 290), it is very unsafe to conclude, with Leipziger, 'der Nachfolger des Chalîf en al-Mahdî in Trans. of the Ninth Intern. Congress of Orientalists, London, 1883, ii. 107, that there were Manichæans at Mecc in the time of Muhammad.

4 Al-Tahiri, iii. 588.

6 Fihrist, p. 337; Fligel, Mants, p. 100.
of its long history was not altogether free from internal dissensions might have been safely assumed. But the positive information which we possess on this subject is very scanty. We learn from the Fiburil (p. 354, Line 4 ff.) that at a date which is not specified, but in any case some time before the end of the 7th cent., a party among the Manipurans severed their connexion with the central authority established in Babylonia and set up an independent organization; whether this schism was due to dogmatic differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th cent., when a branch-sect was formed and became known as the Miglašiya, after the name of their leader Miqlaš. The majority of the Manipurans, who remained faithful to the head of the community, a certain Mihr, were thenceforth called the Mihriya. The points in dispute between these parties seem to have been matters of discipline rather than of religious belief.

In later times,—in modern times, the first serious attempt to investigate the subject was made by the French Protestant theologian I. de Beaucare in his colonial work, Historie critique et des mœurs des Meithei in Amsterdum, 1734-1739; in dealing with the sources he shows considerable acumen, and his liberality conceals many irrelevant digressions. An admirable summary and examination of the sources as far as it was then possible, will be found in the treatment of F. C. Baur, Das manichaïsche Religionsystem nach den Quellen neu untersucht, und entwiekelt, Tübingen 1867. The best general account is F. Spiegel, Erdtheilische Alterthumskunde, Leipzig, 1871-78, II. 195-225. K. Mihrlya-Kessler—Manichaïsche Vorherrschaft über die manichaïsche Religion, i, Berlin, 1889, art. 'Mani, Manichäer,' in DHRE 8 and FRED—supply much valuable information, but the compilers use with extreme caution; the author's speculations are often fantastic and his linguistic knowledge is very restricted. A. H. Venn, Die Nachrichten der Kopenhagenerschule, 1861, 39owi (revied by F. O. Conbykere in EBR 10), is largely based upon Kessler. The same may be said of the work of A. Rochat, Doctrine, Genève, 1891. Very important contributions to the study of the subject are contained in a series of monographs by F. Camont and A. Kugener, entitled Recherches sur le Manichâisme, Brusells, 1898-1912.

A. A. Byvan.

MANIPURIS.—Officially the Manipuris are Vaisnavite Hindus. They cremate the dead; they receive the menstro from a recognized Hindu gour in many but not in all cases, they recognize Hindu festivals (but observe them a day later); they revere the cow; they are scrupulous in the matter of food, but, on the other hand, they do not practise child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brahman, and only an ordained Brahman or deified ancestor applies to their social order. Knowledge of the Vaisnavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1705), is of social and political value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonies of everyday life. It is, so far as externals are concerned, the religion of the Meithei. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Raja or rye, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religious development in India to study at close quarters the process by which in Hinduism animism is tempered by metaphysics, and magic transformed by philosophy.

The official records of Manipur, Ningtahau, and Ningtahaul, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meitheis and the Lois. The Meitheis consist of seven clans, each divided into numerous families, the principal clan being that known as the Ningthauja, or Royal, clan. The name Meithei now borne by all the clans is thought to have been the name of the Ningthauja clan before its hegemony was completely established. The Lois, or the conquered people, are not admitted into the Meithei confederacy, but are of similar stock to the Meitheis, and the Meitheis worship the gods of their former masters as long as they live themselves. The Meithei confederacy is an endogamous group in theory, although in practice the issue of mixed marriages is admitted. The principal order of divine beings is the simang lai. There were originally, as recent research has shown, nine simang lai, or forest gods, with whom were associated seven lairemas, or goddesses. There are now 364 such deities. The gods married with mortals, and their issue were promoted to divine rank. The deities have different names in different places, and there are cases where Rajas have been deified after death. The creator deity is identified both with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are members of a special group, whose functions are not yet fully investigated, and who are therefore known either as maikeingka, watchers over or guardians of direction, or lamli, gods of definite areas. Here there is obviously a combination of local, clan, and other deities, and some definite areas were occupied by local groups each possessing a group deity. Then among the simang lai is the rain-god, and last is the god of the household (Sena-mehi), who is occasioned to be described as the son of ocean (Vaisnavism); in Rolden (revied by F. O. Conbykere in EBR 10), is largely based upon Kessler. The same may be said of the work of A. Rochat, Doctrine, Genève, 1891. Very important contributions to the study of the subject are contained in a series of monographs by F. Camont and A. Kugener, entitled Recherches sur le Manichâisme, Brusells, 1898-1912.

A. A. Byvan.
pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus preserving intact the rite in its purity. The hindrances which were imposed on the rite in order to restore the solidarity of social life and to produce in the worshippers a sense of religious exaltation. The social divisions, resting on age and other lines of social cleavage, function separately on these important occasions. The society was formed into cells of one, or two, or more families, and the varied cases as to render the active participation of professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a Loi, a male member of the male Hindu section of the community, for the Hindu believer for and by whom and on whose behalf the rite is performed. The Hindu may salve his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the Pîr Alîs of Bengal, who fell from orthodoxy by mishance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was undoubtedly practised, probably not at very distant date.

The priests of the ancient order are designated mabos and mabba, and are recruited by the admittance of the betters of the profession at one of the high religious festivals. Inasmuch as sickness and disease are attributed to spiritual beings, the mabba is also the doctor of the community. He is the priest, the magician, and the practical knowledge of the mabos is far from despicable. The wide-spread belief in possession as a token and source of abnormal power and religious authority is beyond a doubt at the root of much that is important in Hindu doctrine. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like bhâkets and fojits, are regarded as jîvanmukta (g.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the regularity, adequacy, and seasonability of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of the chabhitas, the person who gives his name to the year. Various means of divination are employed for the purpose of securing for this office a person who shall bring the good luck that is dependent on the person.

Beliefs in evil spirits, who accompany animals and fish, and are ever hurtful to mankind, in beautiful sirens who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree-spirits to cure or to cause sickness, and in the maleficient activity of the ghosts of those who die by violence or of women who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

T. C. Hodson.

MANITU.—Manitu, a word originally applied by the Eastern Algonquins to a spirit, is properly and technically an evil spirit, existing in any spirit or genius in the shamanistic devil-cult of the Indians, and also any genius loci without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great Spirit became current among the Indians, and this was expressed by the word kit or keht prefixed to manitu; thus Keht-manitu, or Kitani (Kitanit), to the Great Spirit, which was considered a mode of existence; hence Kitanitovit, ‘the existence (known as) the Great Anito,’ the paraphrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is also seen in the fact that, in any language of this people, the phrase was used in John Eliot’s Bible (Cambridge, Mass., 1663) and employed by the missionaries in the Mosanid,” Keht-anit, and Keht-manitu, being merely variants of this artificial compound. As such the conception was introduced in opposition to a spirit variously called Hobomoko, the Evil Spirit, or Malsum, ‘the Wolf.’ Another form of the latter appears to have been evolved in antithesis to a contracted form of Keitaminton, namely, Tan’tam, as opposed to Squamun, the Devil (‘angry god’). Manitu is, therefore, the general word for any sort of a demonium, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the fusion (really a combination) of a sign and symbol of Christian conception. The Indians believed that a spirit might be a good or good-natured power, and that it might be an immeasurable power, and they also believed that a certain ancestral spirit had always been favourably disposed towards his children, but it was far from the thought of the Algonquins that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found, they reflect the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, that they might be under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as in any case Great Spirits. They believed rather that the ‘medicine-man’ could control all spirits. Similarly, when the ‘epie’ or Dhulokap describes the Passamaquoddiess as the son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of goodness opposed to a sort of Ahri-man, it must be remembered that the Passamaquodies have long been under higher religious guidance than that of their medicine-men. Even the ‘revised faith in a Supreme Spirit’ ascribed to them is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that reveres him as leader and helper. In general it may be said that worship is not paid to any evil spirit as such, but also that worship is not paid to any good spirit as such.

The Manitu is often confused with the wakan of western tribes. But the latter is often less a spirit than a power, like the mana (g.v.) of the Poly- nations, which lies inherent in certain objects as well as in certain men. Its possession gives power, not to the Indian’s thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two there is the conception of the ordinary object which at bottom is one with wakan, but is conceived as sometimes a spirit and sometimes a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them con
notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag, which is not really a medicine-bag at all, but a collection of objects of fetichistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is in this latter form which may inhabit in matter or may make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, producive earth, and animals all have it; though some in larger amount than others. Finally, men have it in certain cases.

But there is no sharp distinction between this power and that found in spirits proper, where it becomes individualized. It is this very power that is the 'medicine' of the conjurer and nature-subsiduing priest. Whether it be called manitu, oki (oki), wakan, or even ku (in Maya form), it is always the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. Manitu is generally personal, wakan is generally impersonal, but the alternate use of the two terms is frequently found by Brinton (Myths of the New World, p. 45) as 'supernatural in its etymological sense,' in that it means in the forms current among the Iroquois and Dakotas, namely, oki and wakan respectively, sometimes in the same sense, and sometimes in the 'super' in the sense of supernatural. But it is more probable that the word means super in the sense of superior. These Iroquois and Dakotas forms are etymologically allied, and a possible connection with Sioux oghye may be admitted; but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned ku of the Maya culture. Tan'tum Missibizi is another form of the same word, the quaker gods being, however, not the higher but the lesser spirits. This word, like Tan'tum and Squatnum above, is an adaptation from approximately corresponding Indian sounds (Quaker is gu-toki, 'small spirits') and contains the oki of the Iroquois and Algonquins, but it is not probable that it is one with the southern wuca, ku, etc. The Algonquin oki means a spirit of any sort—e.g., the spirit of a body of water, or the spirit of winter—and expresses also the idea of a distinctly demonic power ruling the winds, but not in a devilish manner; for, especially among the Algonquins, the spirit of the winds regulates the winds for the benefit of the good Indian. It also implies a ghost, and, in this respect differs from the conception of anit (manitu), though in other respects it is difficult to perceive any distinction between the anit (manitu) and the oki; perhaps, as appears from the geographical distribution of the two words, the anit was confined to the East, while the oki penetrated from the West to the Eastern tribes.

The manitu of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being a supreme spirit. Like many of the Indian gods, he was a very superior animal, Michabo meaning 'great hare' (originally manibocho). This manitu was revered from the Northern line of the States to the Mississippi, and from the West as far as the Missouri. He was represented as the originator of all the system of conjuring and exorcizing which makes the real science of the medicine-man; he ruled the not only the great animal, but was as often tricked and deceived as he in turn tricked and deceived; he was for the most part a horridous bauble, whose exploits amused the Indians, as those of Dior Rabbit amuse the Negroes. On the other hand, he was respected and the hare the expression which means that he is the ancestor of the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, and, when autumn comes, to smoke his last pipe and vanish. But before turning to his arctic home, it is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, seems (as) the 'great hare' and made out of the East, has led to the ingenious conjecture that Michabo has come from a confusion of webo, 'hare,' with wabi, 'light' (Brinton, Myths of the New World, p. 165). There is the greatest confusion in the form of the name now known as Michabo, which appears as Missibi and Messon as well as Nanibozho and Manibozho, apparently because the name was sometimes rendered miow ("great") and sometimes manitu ('spirit'), with webo, 'hare.' That is, Michabo was thought of as the 'spirit-hare' or as the 'great hare,' and this 'hare,' according to Brinton, is a later Indian mistake for 'light.' Although the words are alike, and wabi means 'white' (wopa means the eastern light), yet nothing is more apt to lead one astray than reliance upon such etymological chances.

We are, then, at last, on the threshold of the harem. He says that 'beyond a doubt this is the compound in the names Michabo and Manibozho which therefore means the Great Light, the Spirit of Light, the Dawn' (ib. p. 166). Much as Brinton has done for something, it is the dawn-myth influence of his day and probably laid more stress upon etymology than upon ethnology. The truth is that the 'great hare' is the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demonic animal of kindly disposition and endowed with a great magician's knowledge and cunning, which, however, he was able to control in the Indian difficulties. He was not a god, still less a god of goodness, but, as has been said of similar Indian spirits, a spirit of good nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the year 1616, Michabo and the four winds were the only gods that the Algonquins had at that time. Further, it must be remembered that Michabo was the Devil or Bad Spirit (New Jersey Indians) as a devil, while at others he is represented as the 'ancestor'—a term which has often led to the false conclusion that believers in an ancestor-spirit must necessarily believe in a creator-god. Other tribes also have ancestral or at least specially revered animals, such as the bear, deer, and wolf of the Mohigans. None of the Western or Southern American Indians had the conception of a Creator-God, but many of them derived their stock from certain animals. To this class of animal-gods Michabo, the greatest manitu of the East, appears to belong. The history of the brothers is told in various forms in various tribes, and has been interpreted as additional evidence that, when there is a good and a bad brother, we have a fundamental dualism, which, however, is unsubstantiated by the Virginia and the West as far as the Mississippi. He was represented as the originator of all the system of conjuring and exorcizing which makes the real science of the medicine-man; he ruled the not only the great animal, but was as often tricked and deceived as he in turn tricked and deceived; he was for the most part a horridous bauble, whose exploits amused the Indians, as those of Dior Rabbit amuse the Negroes. On the other hand, he was respected and the hare the expression which means that he is the ancestor of
The Iroquois. He destroyed the frog, which had made a fire by fiddling on his foot and he learned the wisdom of the tortoise, which supports the world, namely, how to make fire. The Iroquion gave this knowledge to man. Yet here is the brother is not represented as an animal; it is a spirit weapon of white, black, and red, or light and darkness, a culture-myth which the Algonquins kept in animal-form, while the Iroquions preserved or invented it without basing the myth upon anything resembling real animal characteristics (cf. art. DUALISM [American]). It is this myth that caused the belief in American Indian duality to receive wide acceptance, as it was thus originally interpreted by Brebeuf in 1626.

As the word manitou has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forms of spirit-power more or less unknown to the Algonquins. Thus it has come to denote the personal guardian-spirit of certain Western tribes which has occasionally arisen out of the personal guardianship of an individual. The mythical ancestor of a village at a certain period in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal-spirit, which is then adopted by his clan; and, when the clan becomes part of a larger tribal organization, it still remains as the guardian of the clan, though with a marked tendency to become simply a totem-crest. The totemism guardian-manitou thus becomes a mere symbol. Sometimes such crests become merely the property of certain families. The ancestors who received the totem-manitou received with it the powers or privileges still retained by the protégés of the spirits, who continue to appear to the young men of the totem, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the North-West. This is the 'individual totem' acquired by every youth at puberty, when, which the organization of the clan is in a decayed state, is no longer identical with that of the ancestor and is no longer inherited. The youth at this period wanders from his father's lodge and in a secluded spot fasts and cries to the spirits, inviting any one of them to become his spiritual patron (cf. art. COMMUNION with the Spirits). When, in his dream, he sees the animal, he is to fall asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mysterious protector during life. He then returns home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery-bag ('medicine-bag'). It is possible that the individual manitou, though in some cases a later development than the clan-totem, is in other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-manitou. Even among the Eastern Algonquins the acquisition of a special manitou-spirit in animal form by the youth who fasts is not unknown.

LITERATURE.—G. Catlin, The North American Indians, London, 1841; Bram, 1846; A. H. Keane, Man, Past and Present, Cambridge, 1899; Relation de la nouvelle France pour l'an 1657 (and subsequent years); H. Webster, Primitive Secret Societies, New York, 1895. The earliest source of information on this subject is the early missionary, Brant and Webster (esp. cit.) give full biographies. The Annual Reports of the Bureau of American Ethnology are of course for modern materials.

E. WASHBURNE HOPKINS.

MANJUSRI.—Like the majority of Buddhist gods, Manjusri is represented under various aspects: as a Great Vehicle or Mahāyāna (q.v.), properly so called, he is a bodhisattva, an entirely Buddhist personage in definition if not in origin (his origin is obscure; cf. Avalokiteśvara); (2) in the 'T'antam Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Manjusri becomes one of the names, and often the principal 'exponent,' of the Supreme Being; (3) the cult of Manjusri, originating in India, took root in China in 465 A.D. and is probably spread from China into Japan, where Manjusri is the mythical giver of civilization.

1. As bodhisattva.—The most ancient of his numerous names is 'light and deep silence' (Bhadrachārya), his wish to lighten and brighten the way of the Buddha. His epithet is kumarī, or kumarabhāṣa, 'young man,' or 'royal prince'; this title, whatever its origin, means technically a bodhisattva; at the stage when, having received concomitant (abhicakra) as a prince, he is associated with the power of a Buddha and becomes his right arm (see Bodhisattva, vol. ii. p. 748). He is named in the first rank of bodhisattvas, before Avalokiteśvara, at the beginning of the Lotus of the True Law (translated into Chinese A.D. 147-160), where he is represented (ch. xi.) as a great converter. The 'scholastic' sātres and devotional works give him as a type of bodhisattvas, relates his vow to his guardian-spirit (the abhiṣeka) to the conduct for the conduct of the Great Vehicle, and celebrate his power. Legend associates him with the revelation of the books to the people; his epithet and name (the Pārijat, god of the Word, he is the patron of the Great Vehicle, of the 'second dispensation,' and becomes the god of wisdom, a personage of high importance. According to Fa-Hian (see J. Legge, Fa-Hien, A Record of My Journey to the Buddhist Countries, London, 1886, p. 46), the followers of the Mahāyāna worshipped the Pārijat, Manjusri, and Avalokiteśvara. We have many images of Manjusri; the most ancient, with his characteristic mark the Pārijat carried upon a lotus. 2. As Tantān god.—It is in the Tantānic section of the Tibetan scriptures (Kangyur, Kanjur as well as Tanjur) that Manjusri takes his extraordinary development. Half a dozen Tantāra (Kanjur) bear his name; among them is The List of the true Names of Manjusri Jñāna-sattva. The last term, Essence-of-knowledge (3), is opposed to the name bodhi-sattva, and is more dignified. We find it again in one of the numerous magic rituals devoted

1 On this expression see H. Kern, in SBE xxi. [1884] 1; cf. Siddhampraparāgika, ed. H. Kern and B. Nanpje, Petropag, 1892, p. 53: 'The manjusri, a live twelve cosmic ages, not counting the time he is kumarā.'

2 Various legends are told of his former human lives, but they are not so developed as the legends relating to Avalokiteśvara. See (1) E. Chavannes, 'Le Sātra de la parol occidentale de l'inscription de Kin-yong Koon,' in Mémoires Académie, Leyden, 1896, p. 75 (this Sātra is a bhārata, sacred to Vairochana, the 'brilliant,' the Buddha whom Manjusri is sometimes subordinated); (2) the Mahāyāna-sūtra-prajñāpāramitā (translated into Chinese A.D. 360), where Manjusri tells how he took his bodhi-sattva vow; 'I do not wish to become a bodddha quickly, because I wish to remain to the last in this world to save its beings'; 'In all my existences I wish to follow the example of Alikeyopa and be a monk' (Stākṣasthānagāthā, Petropag, 1892, p. 12); (3) the Manjusrīśrīprajñāparamitā (translated in SBE xxi), a book patronized by the Mahāyānists, giving the story of the conversion of a light woman by Manjusri in the guise of a handsome young man; the only real sin of the bodhisattva is the sin of lack of charity (śīcāra-sāṃskāra, p. 140). All these works are scholastic, as is the Rādjāyājñāpanidhāna, an account by Manjusri of the compilation of the Mahāyāna Nīyamatattva, translated into Chinese by Manjusri, the virtue of his name, which protects against all female birth, and his glorification as the hero (bīra) are to be noted. Manjusri is one of the savours and patrons invoked in the 'Stanzas of Good Practice' (Bhadraśrayavarghīthā), one of the classical texts of the Tantānic sect (cf. The Tantānic Principles, London, 1910, p. 256). In the Tantānic sect Manjusri is 'exponent, the voyage of the five vehicles (Śikṣāsāmanuṣaya, pp. 297, 307; Dādhipatīyakaraka, 147-186), cf. the prayers of the five vehicles, Paris, 1907, p. 84, p. 58.

4 Namamgog Howells, J. P. Mineyje, Petropag, 1887.

5 This term has been invented on the model of bodhisattva for the purpose of implying something more sublime, and yet more mysterious, than the word bodhisattva. This bearing up of terms is characteristic.
MARA

by the Tantrj to Mañjūśrī: ‘spell (śādhanā) of the Adibuddha, the Essence-of-Knowledge Mañjūśrī,’1 which begins as follows:

‘Homage to the Buddha of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.’

śādhanās (spells) are magical operations by means of which the worshipper brings the deity into his presence in order to identify himself with the deity—which is not difficult to accomplish, since every man is essentially nothing but deity, though particularized and stained. These operations include diagrams (māṇḍalas),3 geometrical figures formed of squares and circles, more or less ornamented, and inscribed within each other, upon which is ranged an endless succession of deities4 represented by magic syllables.5 Mañjūśrī often occupies the centre of these māṇḍalas.

Tāntrean gods have two aspects, a ‘right hand’ aspect and a ‘left hand’ (or erotic) aspect. Under the former Mañjūśrī is called Lord of speech of the ontological Universe (Dharmadhātu-vāgīśvara); under the latter he is ‘Diamond-Love,’ ‘Thunderbolt-Love’ (Vajrānāga).6 His right-hand aspect is further described as follows:

‘Qu'on s'identifie à Dharmadhātu-Vāgīśvara, qui a le corps tout blanc, quatre faces, huit bras; les cinq Bouddhas (qui représentent les cinq grands échoirs de la science, de la connaissance à laquelle Mañjūśrī est le synthèse) ornent sa couronne de joyaux . . . les deux mains (dées) protègent le front du dieu, parmi les trois autres droite tiennent la guerre, la hache, la hache; les trois autres de gauche, le livre de la Prajñā.’7

Thus, whether one goes on to say, the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahma. Grīnvedel remarks that Mañjūśrī and Brahma share the favours of a common śakti (divine energy, feminine aspect, of a god), Sarasvati.8

It is noteworthy also that the Nāmaśaṃcāgaṇi (viii. 19) gives Brahma among the names of Mañjūśrī. As soon as the Buddhists and bodhisattvas became gods, they inevitably became gods after Hindu fashion: Avalokita has more likeness to Siva, and Mañjūśrī to Brahma. Mañjūśrī always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China.—E. Huber was the first to observe that one of the canons of one of the Buddhist schools of the Little Vehicle, or Hīnayaña (P.), contained a version foreign to India—a, e.g., the legend of a town of Khotan—and he wondered, therefore, whether this canon had not been consideredly augmented and modified in Turkestān itself.10 But he and later Khunawati suggested that, after 11 a Chinese translation of the Old Testament, brought into Central Asia by Bodhidharma, accords in some respects with the account of the Tāntras.11

The story of Mañjūśrī, who, according to the Chinese pilgrims,12 now dwells in China, who is represented in the miniatures of the Nepāla MSS as a god worshipped in China, and who, according to the Nepāla tradition, came from China to Nepal, is interesting from this point of view.13

MAN OF SIN.—See Antichrist, Eschatology.

MANTRAS.—See Charms and Amulets (in dian), Magic (Iranian).

MANU.—See Law (Hindu).

MAORIS.—See Polygenesis.

MĀRA.—It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacerdotal and esoteric; they are the expression of a pantheistic and pessimistic philosophy; but they, nevertheless, appeal to devotion and worship. Brahma-brāhmaṇ is the most eminent among them. Kāli, ‘Time,’ creator and destroyer, Kāma, ‘Desire,’ a cosmical entity, and many others may be embodied in the figures of the popular pantheon. Our Brahmānic information on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic sources.

This is the case with Māra, who is not unknown in the Aharavada, that aristocratic compendium of demonology and demoniac figures in Buddhism, and the Upaniṣads show the elaboration of the ideas which constitute his frame in Buddhism.

The Aharavada joins together Yama, the old Aryan king of the dead, Mṛtyu, Death, Agga Māra, the evil slayer or hateful murderer, Nirṛthu, the destroyer, and Sarasvata, the prototype of Siva (VI. xcii. 1). Elsewhere (xii. xvii. 19) it mentions ‘the deities called Misfortunes, or Ill, or Evil’ (pāpyamaṇa kāma devatāḥ) and has developed the invocations (xvi. xxvi. i–2, cxiii. 2, xvii. i. 29) to Misfortunes (pāpyam). Māra, or Mṛtyu, is Death personified, the god who kills, and he has already acquired his Buddhist qualification pāpyam, ‘the evil one’ (Pali, pāpim). With this dark figure may be identified Yama or Sarasvata, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the thinkers of the age of the Brāhmaṇas and of the Upaniṣads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subsonic universe; whoever obtains a passage beyond the sun reaches the realm of immortality. For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the Kathaka Upaniṣad is of importance for the history of Death: a young Brāhmaṇ descends to Hades, and, unfeignedly, all promises of transient pleasures, wrung from Yama, the god of death, the secret of which lies beyond death and the means of liberation from death, this only means being the knowledge of Brahman which confers immortality.

H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the supreme boon, but Māra is benevolent and himself reveals the liberating truth to Nachiketas with only the habitual jealous reluctance of a god, Māra is the evil one, the tempter.1

In the Buddhist scriptures all these premises are fully developed. Māra actually assumes the rôle of the sovereign of the world, both of men and of gods; god of death, he is also the god of the living, who are only won by a food of death; he is the god of re-birth. Māra is Kāma, ‘Desire,’ since desire is the raison d'être of birth and death; and, because

MARBONISN

Buddha is the deliverer from death and birth. Mara is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciplines. The dogmatic position of Mara is clear in all our texts. From the very start, he is the universal fetter, the sensual life both here and in the other world.

In scholasticism three Maras—Dasaputra Mara, the mother Mara, and Kālakāriṇī Mara—are distinguished. In ancient times these Maras were confused. Mara is not an allegory in the Pali stories of temptation; he is a demon; he is spoken of as Namuchi, a Vedic demon killed by Indra.

It follows that mythological features are not wanting, even in the oldest tales of the Pali canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by Mara's daughters; but these daughters are Desire, Unrest, Pleasure (Taghā, Arati, and Rati). It has been said that these stories—the intervention of Mara in order to frustrate Buddha's ascetic efforts—are only poetical descriptions of the crises of conscience of Sakyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or modernists, but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death, Mara. It is probable that Mara may have been inspired by the Babylonian god of death, but it is by no means certain that he was

1 See C. A. F. Rhys Davids, Buddhist Psychology, London, 1914, p. 21; Satipatthāna, i. 223, ii. 124.

2 See art. TEMPTATION (Buddhist) for the comparison between the Buddhist stories of temptation and the Gospel.

Original sources, both Buddhist and Christian, have been studied by Senart and Windisch.

L. DE LA VAILLY POUSSE.

MARBONISN—1. The founder.—According to the earliest and most reliable accounts, Marcion was a shipmaster (manulcerus, or naviria) of Pontus, and may have been a native of Sinope. The story 1 of which relates how the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about the corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of doctrine has become entirely Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near A.D. 140—after the death of Hyginus, 2 according to Hippolytus (see Epiph. Htr. xiii.). Whether or not a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (De Proser. 30), he presented the sum of 200,000 sesterces. But before long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that the God proclaimed by the law and the prophets was not the father of our Lord Jesus Christ. For the former was known, but the latter was unknown; while the one was righteous, but the other benevolent (Iren. Htr. i. xxvii. 1). It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the pale. This took place about the year 140. After that date, the Marcionite propaganda must have been active, since Justin Martyr tells us in his First Apology (c. 150) that Marcion 3 by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than he has done greater works (xxvi.).

Tertullian, who was writing his adversus Marcionem in 207 or 208, places the activity of Marcion in the reign of Antoninus Pius ("sub Pio Impio"). Irenæus (loc. cit.) says that Cerdo came to Rome in the episcopate of Hyginus (c. 137-141), and that his successor Marcion flourished under Anicetus (154-160). In view of the different statements, we may conclude that Marcion became active as a teacher some years before 150, and that his activity ended before or about the time of the death of Anicetus. For Marcion's own death no date can be definitely assigned.

2. The doctrine.—The teaching of Marcion may be reviewed under five heads: (a) theology proper, or the doctrine of God, (b) Christology, (c) criticism

1 This account, which was unknown to Tertullian, may be traced through Sidonius to Hypatius. The Armenian version is thus given by Emil (5th cent.): *This Marcion was a native of Pontus, the son of a bishop. And having corrupted a virgin, he went into exile on account of his father's having expelled him from the Church. And going to Rome at that time to seek absolute and sincere penance and not obtaining it, he was irritated against the Faith* (Against the Sects, bk. iv.).

abode, no heaven of his own, in the official cosmology of the Sarnāvalins (see art. COSMOLOGY AND COSMOLOGICAL [Buddhist]).
and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(a) Theology.—In theology Marcion's main assertion was that the just God of the law and of the OT generally was other than and inferior to the God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving-kindness. The idea of a dual godhead seems to have come from Christian doctrine; the introduction of this false notion may be connected with the (otherwise doubtful) statement of Clement of Alexandria (Strom. VII. xvi. 107) that Marcion, 'being contemporary with Basilides and Valentimianus, was employed as an elder with younger men.' At all events, Marcion's theology differed from the Gnostic in excluding any doctrine of sons, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures. His teaching was not in any sense pegan. His last work named the Antitheses contained the proofs of his theology, which were attained by placing utterances by and concerning God in the OT side by side with opposed statements by Jesus and Paul about God in the NT.

He further differed from the Gnostics by abstaining from any attempt at a complete speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two θεοί were and remained fundamentally opposed, and the long division of the mental superiorities of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number (plurality) was inconsistent with the essence of the godhead; on the other, the interposition of the good God—'the Stranger'—in a world which had been created by and belonged to another was an obvious stumbling-block.

(b) Christology.—The mode of self-revelation employed by the good God was, according to Marcion, that 'in the 15th year of the reign of Tiberius He (i.e. Jesus Christ) came down to the Galilean city of Capernaum'—to which Tertullian adds the explanation, 'of course meaning from the heaven of the Creator, to which He had previously descended from His own' (adv. Marc. iv. 7). The relation of OT to this grace of the NT does not seem to have been otherwise defined than by the idea of sonship. Of the human experience and suffering of Christ, Marcion took a wholly Doceic view. Rejecting the Gospel accounts of a human being, he represented the real appearance of Christ in the year 29 as an entirely new phenomenon, without any root in the past history either of the people or of the human race. And, while he regarded the life of Christ on earth and His crucifixion as the means of salvation for men, he nevertheless believed that our Lord suffered only in appearance. On the other hand, he did accept the historical facts narrated in those portions of the Third Gospel (see below) which he believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on the descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to another Messiah who was to appear later as the messenger of the just God of the OT. But his exegesis of the NT wove on this Messianic does not differ. In his view the Creator (i.e. the Just God or God of the law) was the ruler of the whole material universe.

(c) Criticism and exegesis of the Scriptures.—In his dealing with the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or even verse in the Jewish Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical exegesis, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel seemed on the one hand to rest on an inferior model in his theology, he adopted this, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To another him Paul was an apostle of the man of the flesh, and he believed that the Third Gospel—which he did not call Luke's—had been written under Paul's supervision and expressed Paul's view of the life of Christ. This view is regarded as harmonizing with the ancient tradition which had grown up among the Twelve, and he therefore rejected their works in toto. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian's adv. Marcionem.

(d) The application of religion to practical life.—It is easy to see that, however arbitrary and subjective was Marcion's attitude in relation to the Christian tradition and its literature, his main interest in the matter was not speculative or theoretical, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life allowed. Thus the celibate alone were admitted to baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation thereafter was in the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) The ritual of worship.—The aim of Marcion was to found not a school, but a church. Accordingly, in points of ritual he for the most part followed the usage of the orthodox Church, but espoused some peculiarities in Church worship as baptized persons, and forbade the use of wine in the eucharistic service. Some

1 There is no definite evidence as to whether Marcion knew the Fourth Gospel.
Marcus Aurelius Antoninus

409

of the peculiarities of usage in the Eastern branch of the Church may be gathered from the statements of Eznik (bk. iv.):

'He allows not one baptism only, but three after (successive) transgressions, and in place of catechumens who have died he urges their heirs to be baptized to Sanctification, that women be admitted saying that the consecrated is under a second or a third baptism, or (does he venture) to admit women to be priests,' etc.

It is evident from this that the church of the disciples of Apelles seems to have been of the highest character. For Apelles, in his followers, seem to have elevated him (at least virtually) to the rank of bishop, and the constitution of the sect was probably episcopal, though on this point we have not much information.

3. Later developments. — Among the followers of Marcion some, like Pothius and Basilicus, followed their master in recognizing two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles — the Good, the Just, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the God of the OT and the NT God, he seems to have regarded the former as 'an opposing spirit' who owed his existence to the supreme God. The material world, in the view of Apelles, was created by Marcion's father as an opposing spirit,' and so Apelles also taught an ascetic view of life. On the other hand, he rejected Marcion's Docetism, and held that Christ really felt anguish and sorrow, although he did not suffer as a man. He did not possess a truly human nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

The doctrines of Marcion were for a time widely spread, not only in Asia Minor and Pamphylia, but also in the East — Arabia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under Diocletian, the Marcionites seem to have enjoyed a short period of toleration early in the 4th cent., to judge from an inscription of A.D. 318-319 discovered a few miles south of Damascus, which records the existence of a village community of Marcionites. But their worship was soon prohibited by Constantine. In the West they seem early to have succumbed to the more powerful propagandists of Manichaeism (g.v.), but in the East they remained active, and their influence exerted a stronger and more enduring influence. We infer from the attention given to them in the controversial works of Ephraim, and from the careful account of their doctrines which Eznik, an Armenian, wrote about the middle of the 5th cent., that they counted for much in Eastern Christendom. So late as the 10th cent., they are mentioned in Arabic by the 'Pharis.'

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eznik's Armenian account:

Marcion wrongly introduces a strange element (in strange's) in opposition to the God of the Law, positing with him also Hyle by way of essence, and three heavens. In the one (they say) dwells the Stranger, and in the second the God of the Law, and in the third his armies; and in the earth Hyle, and they call her the Power of the Earth. And he so orders the world and the creatures, as the law says. But he adds that in union with Hyle he made all that he made, and it is as though the aforesaid Christ had a wife. And after making the world, he went up together with his armies into heaven; and Hyle and her sons remained in the earth, and they are the inhabitants of the earth, and the God of the Law in heaven.

And in the God of the Law, saying that the world is beautiful, thought to make it a man. And going down to Hyle in the earth, he said, 'Give me of thy clay, and from myself I give spirit, and so make me a likeness.' On Hyle giving him of her earth, he moulded it and breathed into it, and it became a living soul, and it became a living soul and therefore was called Adam because he was made from clay. And moulding him and his wife, and putting them in the garden (as the law says), and ... —

Marcus Aurelius Antoninus. —

1. Early influences. — By birth and training, alike on his father, the philosopher-king of the Roman aristocracy, Aulus Verus, belonged to the official aristocracy of Rome. From boyhood he was inured to the

how he could deal with Hyle and appropriate to himself. Taking him as he said, "Adam, I am God, and there is no other, and beside me thou shalt have no other god. But if thou takest any other God besides me, knowest thou that the die is cast." And when he said this to him and mentioned the name of death, Adam, struck with fear, began by degrees to separate himself from Hyle.

And Hyle, coming to give him commands according to custom, saw that Adam was not following her, but was purified being aloof and not coming near her. Then Hyle, annoyed in her mind, knew that the Lord of Creatures had done harm to her. "From the source of the fountain its water is befouled. How is this? Before Adam is increased with offspring, he has stolen him by the name of Lord from me; and he has not kept with me the covenant, I will make many gods, and will fill with them the whole world, that he may enquire who is God and not find out."

And she made (they say) many idols and named them gods and filled the world with them. And the name of God, that of the Lord of Creatures, was lost among the names of the many gods, and was spread among all the peoples in the world. And Marcion, seeing that his father was like this to his God, was grieved for these fallen into the fire and tortured. He sent his son to go and save them, and to take the likenesses of a servant and associate them with the name of God, that of the Lord of Creatures. "Heal," he said, "their lepers, and raise their dead to life, and open the eyes of their blind, and make them great cures without price; until the Lord of Creatures see thee, and he jealously and cruelly thee. And when thou dost heal, they shall make an image of thee, and shall put a name to thee; for Hades is not wont to admit life within it. And therefore thou art gone on the cross, the dead, like the dead, and Hades may open not its mouth to admit thee, and thou mayest enter into the midst of it and empty it. And when he had found him (they say) he was sitting down into Hades and emptied it. And taking the souls in the midst of it, he led them into the region of the souls of the Lord of Creatures, being enraging, in aore to his garment and the veil of his temple, and darkened his son and clothed his world in blackness, and cast into grievous mourning.

Then Jesus, going down a second time in the form of his godhead to the Lord of Creatures, said to his Father about him, his death. And the Lord of the World, seeing the godhead of Jesus, knew that there was no other God beside himself, and said to him, "I have a suit with thee, and let none be judge between us but thine own law which thou dost write." And when they induced the law, Jesus said to him, "I did not write thou in thy law that which killeth shall die; and which shouldest the blood of a righteous man, they shall shed his blood?" And he said, "I was taught." And Jesus said to him, "Now give thyself into my hands, that I may kill thee and shed thy blood, and thou didst kill me and shed my blood, for I am indeed juuter than thou, and have wrought many benefits in thy creation." And he was about to reconcile the benefits which he had wrought in his creation.

And when the Lord of Creatures saw that he had conquered him, and knew not how to say because of his own laws he was not a man, and was condemned, and was finding no answer because he deserved death in return for the murder of his Father, he was driven to数量 to them. And they hand on the teaching to one another orally. The Stranger (they say) has bought us with a price from the Lord of Creatures; he has made us one with what the purchase has been made, that not all of them know.'

Literature. — A full list of authorities is supplied by A. Harnack, Gesch. der altchristl. Lit. (Heidelberg: 1905-1906, 1, 191-200); and a shorter list by G. Krüger, in PH Rav. xlix. 2001. The main ancient sources are Irenaeus, Tertullian (esp. in De haeresibus contra Marcionem), Tertullian of Alexandria, Origen,pseudo-Tertullian (Carm. nat. Marcionis), Adamantius, Ephraim, Ephraem, and Eznik. An exhaustive account of Marcion's dealings with the NT will be found in T. Zahn, Geschichte des NT (Amsterdam: Harnack, vol. 3, 1-285).
round of absorbing and ceremonial etiquettes which had marked the reign of Hadrian, made up the official life of the capital. Through his uncle Antoninus, whom Hadrian appointed Quatuor vir for the administration of Italy, he was brought from Rome into touch with official life, and the Emperor himself, and the playful 'Verissimins' accorded to him by Hadrian re-appears even in the formal address of the Christian apologist.

Another influence, which he himself attributes to his education, was the fascination deep into the fibre of his being. In the antique life of Rome, religio, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient piety and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and guilds, of Sullan priests, of Arval Brothers, of Vesta Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor, whether in the incalculable forms of mystery worship. To this religious complex Marcus was acclimatized from youth. At eight years old he was enrolled among the Salli, the most primitive of all the priestly colleges at Rome, and at all times his heart.

At sixteen, as Prefectus feriarum Latinarum, he solemnized the fête upon the Alban Mount; and besides the formal dignities of Pont. Max., AV vir Secr. Pae., and VII vir Eyr., he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which besought blessing for him and L. Verus in their conflict with the Marcumani. At the outset of his great campaigns he purified the people with the solemn ritual of the ludi terentiani; at Athens he was himself Initiated in the Eleusinian mysteries, and on the Danube he approved the casting of images into the stream at the bidding of the Eastern Magi. His Stoic monothelism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life. His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played ball, and engaged in the mischievous excitements of the circus and the amphitheatre; at Lavinium, hunting, walking, and shared the language of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows rare docility of type. Boyish experiments in philosophy ended in complete conversion on the perusal of Aristotle, the influence of Rusticus, and the charm of Epictetus.

His life falls into three sections: A.D. 121–138, boyhood, ending with his adoption in 128; 138–161, apprenticeship to rule, as Caesar and lieutenant to his adoptive father, Antoninus; 161–180, Imperial rule, shared nominally in 161–162 with L. Verus, and from 167 with his son, Commodus.

Till 167, when the Danubian campaigns begin, the years are filled with unremitting administrative activities. The Edictum perpetuum of Salvius Julianus furnished the basis of the Pandects of Justinian; laws and Papae are immemorial themera, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the patria potestas, the slave-owner, the slave, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at University and lyceum; and these institutions were liberalized for communities. Commerce, industries, and communications were literally fostered by pro-

vision of roads, aqueducts, bridges, and inns, while in the regions of earth, fire, famine, or inundation, State aid was ungrudgingly extended. The collection and distribution of taxes were vigilantly supervised, and vast extension given to public works, both for local and municipal government. Wealth lavished its resources upon the provision of temples, baths, gardens, colonnades, and other embellishments of city life, while among all classes of the community guilds, colleges, and confraternities under strict surveillance, multiplied to an almost incredible extent.

In his dealings with the Christians, Marcus followed the practice of his predecessors. First by Nero, then by the Flavian Emperors, especially Domitian, Christianity had been treated as a form of sacrilege (dissece, abhorre) and treason, that lay outside the province or protection of law and entailed the penalty of death. Like rebellion or brigandage, it fell under the summary jurisdiction of the Emperor or his representative. Trajan, setting his hand against professional or anonymous delation, and Hadrian, still further in discouragement of malicious information or assault, did much to arrest active persecution; but Christianity continued to be a capital offence, and the forms of tort, with all the terrors of the law applied, were prescribed by the Emperor himself.

Enforcement of the penalty rested with the Emperor's delegate, and was rarely exercised. But outbreaks of personal hostility, of local prejudice, or of racial or religious jealousies might at any moment bring it into play. The progress of Imperial consolidation, and the rapid social developments of Christianity, both tended to enhance the seeming dislocation of Christians to Imperial unity. In Pliny the note of condescension and compassion softens contempt for the perversé superstition, which seemed to invite and almost compel persecution; in Marcus the accent of irritation becomes prominent; to him Christian defiance seemed like the melodramatic pose which induced Procons Pergrinus, in the story of Lucian, to cast himself on the pyre as the finale of the Olympian festival. On the main merits of the case he shared, no doubt, the judgment of his contemporaries, the leading Hellenists of the time, and among them his own intimate associates. Yet the perusal of Celsus and the précis of Celcius do not stand alone; Fronto still credits the Christians with nameless crimes and immoralities; Aelius Aristides satirizes their mean and mischievous self-seeking; Galen questions Christianity as the type of impenetrate bigotry. The Emperor's political philosophy led him the same way. The Graeco-Roman unity of Empire was the World-Cosmos finding realization in the communities of men; the highest and best hopes of the world we were centres in that consummation of the civic bond about the person of the Emperor; and the self-willed isolation of the Christian was essential atheism, in its estrangement from the divine impulse immanent in man.

But, as a statesman, Marcus holds to the prescriptions of Imperial policy. The rescript, cited by Eusebius as the principal of which he is the author, is a formal statement of the Emperor's attitude to Christianity of any kind to any period, to that of Antoninus. Melito himself discards the persecuting edicts to which he refers, and bears witness to the clemency and philosophy of the Emperor in checking tumultuary acts of violence against the Christians. The decree, or rather rescript, uttered against 'denorrizing superstitions' may have been partly aimed at Christians; but the terms were general, and it was retained in force and reiterated under the Christian Emperors. Possibly under its terms Christians were sent to the mines of Sardinia, but the Edictum perpetuum of Salvius Julianus furnished the basis of the Pandects of Justinian; laws and Papae are immemorial themera, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the patria potestas, the slave-owner, the slave, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at University and lyceum; and these institutions were liberalized for communities. Commerce, industries, and communications were literally fostered by pro-

2 In Eus. HE iv. 15, 54.
in point of fact the penal provisions—deportation or those of higher rank, and death for humbler offenders—were mandatory, the penalties to which all avowed Christians stood liable. In their social organization the Christians remained as free as other sects. In Rome itself Church membership and jurisdiction, episcopal authority, and literary activity advanced apace. Apologists, such as Justin, Melito, Athenagoras, one after another addressed their pleas to the Emperor in person. Heinz, on the contrary, was unimpressed and interpretative of their antagonists. Christians served in the Imperial households and, as the story of the Thundering Legion proves, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Antoninus, prefect of the city, on the charge of 'atheism and sacrilege'; each in succession adhered to the Christian confession, and, on refusing to abjure or to offer sacrifice, was ordered to execution. Marcus was at the time resident in Rome, and, no doubt, endorsed the sentence passed by the Stoic prefect, his close friend and ex-preceptor. Still more famous is the persecution recorded in that masterpiece of Christian martyrrology, the letter of the Christians of Lyons and Vienne to the sister churches in Asia and Phrygia.1 The outbreak, rooted in racial, even more than religious, antipathies, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was restored, and the martyrs, rescued from the fury of the mob, were remanded to prison, their sentence was referred to the Emperor Himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote down his reflection on Christian perversity and bravado.2 In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdom was judicially inflicted, though for the most part Christians were saved from outbreaks of popular fanaticism or dislike. Of systematized persecution there was none, and to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus's latter years were clouded with calamities, public and personal. In 166 Italy was desolated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity; then the yet more terrific inroads of barbarians, streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazyges, and other trans-Danubian hordes, sustained and carried to a triumphant conclusion only by the dogged and inspired leadership of Marcus himself.

3. The 'Thoughts.'—From these ordeals the Thoughts emerge. They are not the exposition of a system, but a criticism of life; reflections confided in the hours of loneliness and interstices of strain; a retrospect and record of experience; a manual of duty and endurance. In them a soul communing with itself, examines models of human conduct, and records conclusions, emits the sigh of weariness or the ejaculation of disgust, but perpetually renew resolve, unfalteringly clinging to the noblest hypothesis with which it is made; the almost random reminiscence, composition gave relief from strain, and became a substitute for company, and a pleasure for its own sake; and for Marcus Stoicism profoundly interpreted the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of Roman Stoicism than the homilies of Seneca or the Memorabilia of Epictetus.

(1) Logic.—In his theory of knowledge and sensation he adheres closely to the terms of Epicurus. The panpsychia are in part sense-impressions proper, derived from things, in part impressions of aims, qualities, or attributes, moral or aesthetic, belonging to things, and conveyed to the reason.

It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prerogative. In the one passage in which he formally discusses the doctrine of assimt (συσκόρισθεν, v. 10) he drops the Stoic claim to final certitude—τα πράγματα οίκολογία. But there remains a tenacity of moral assurance, which suffices for conduct of life. Reason as part of the divine immanence attains a coherence, a consistency, and strength which give the indefeasable assurance of truth.

(2) Theory of being.—In Stoic monism matter, form, and forces are an inseparable unity. The life-power, self-determined from within, is embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of τόσον, that is, of 'tension within the life-producing force,' present in ever-varying grades in all forms of existence, material or spiritual. In the successive grades inorganic, vegetable, animal, and human life each variation represents a different degree or kind of tension in the informing πνεύμα, or life-power.

Cohesion, life, and reason are resultant phases of embodied spirit, varying in the same way as inorganic substances are seen to vary under processes of rarefaction or condensation. 'Είσι, 'hold,' or 'cohesion,' is the characteristic property of being in its inorganic forms, φύσις, 'growth-power,' of vegetable life (vi. 14), ψυχή of 'soul' realized in the animal phase (ix. 9, x. 33), while the higher grade of 'reason'—λόγος, co-extensive, it will be noted, with the Stoic knowledge of the whole, has not arrived at the stage attained by man. The higher tension always includes the properties of the lower, so that the higher order shares the attributes of the lower, but with its own διάφορον superadded. Thus man shares with the inferior orders έίσι, φύσις, and ψυχή, but 'reason' is all his own.

Each type finds its guarantee of individuality and perpetuity in the seminal or generative principle, the συμβράκτων λόγος, which defines and reproduces the type. This survives immutably, until its final re-absorption into the 'seminal principle' of the universe, the primal reservoir of life (iv. 14, viii. 24). Thus of the universe at large, which is whole, and is likewise immanent in the cosmos individualized συμβιοσιολ λόγος, which determine, conserve, and reproduce life in all the several orders of being through their 'productive capacities of realization, change, and phenomenal succession' (iv. 14, ix. 1).

(3) Soul.—Man, the microcosm, within his individual range, is the counterpart of the macrocosm, in which he dwells in the hours of loneliness and endurance. In them a soul communing with itself, examines models of human conduct, and records conclusions, emits the sigh of weariness or the
from which it originated. As, in the individual, soul actualizes itself in physical energy, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (δύναμις), inclination (φιλοστοιχία), aversion (αφίλοστοιχία), will (τελουρέναι), or perception (φανερόν), judgment (φανερώματα, καθάρισμα, προφανές), mind (νοῦς), or reason (διάνοια), so, too, the world-soul operates in energies no less diverse in operation, now as the mortal forces that fashion all inorganic or organic life, e.g., heat, moisture, breath, the flow, traction, expansion, or the like, now as the moral forces which we know as fate, destiny, necessity, the ‘laws’ of nature or of God, and now, as again, as those purportive or causative powers which, as design, providence, Zeus, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test, by which the construes all the accepted formulas of the school, and resolves their ambiguities.

(4) Cosmic unity.—Cosmic unity stands at the centre of his thought, the pole to which his moral compass continuously turns. In a phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose vital activities centred in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and welter of atoms, is impatiently dismissed. It would imply permanent confusion, moral and intellectual. The universe is unity, heights as interminable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, ‘one order made of all things, one God through all, one being, one law, one reason common to all things intelligent and live’ (vii. 9), as is shown by the ramifying bond of ubiquitons design ('απαντισίας ἐκολογος, iv. 45) and that unfulfilling rapport between the constituent parts (συντόνεια τῶν μεταφ, vi. 26, x. 9) which results from perfect interpenetration (κοινωνία εἰνάδω, and makes the whole inseparably one.

Design is everywhere apparent, in small— things in the universe, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire concatenation of the web. Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of reason immanent within the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unity of Logos, which the Stoic school derived from Heracles, ‘the reason and the ordinance of the city and commonwealth most high’ (II. 16), the all-permeating, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or ‘the nature of the whole’ (vii. 9, x. 6, 7). But the preference is for terms which associate it with these attributes: ‘in human consciousness on which the whole conception is based. Marcus speaks not only of the world-mind and thought (νοῦς, διάνοια), world-soul and moral sense (ψυχή, ἄγεια), but also of world-impulse and world-sensation. The living power, a common gravitation revealing itself in man as truth, beauty, and love, combines, constrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

‘Earth is in love with rain, and holy other loves—Yes, the world-order is in love with fashioning what is to be. To the wonder I look and the contemporary beauty of the cosmos, the blessed God of the universe, in whose name the whole—beauty and of value are part of the great scheme, but everywhere ‘things lower are for the sake of things higher’ (v. 16, 30, vii. 55, xi. 10, 18, etc.), and all is for the better which is in the Universe Beholds itself and knows itself divine’ (Shelley, ‘Ode to Apollo, vi. 11’).

But the splendid harmony invests common things and processes with an appeal and beauty of their own; they contribute to the advantage of the universe; the rational, not the discord, is of good the great accord. Not only the heavenly bodies in their orbits, sun and stars, rain and air, the living bees and nesting birds, the lustre of the emerald, and the bending of the corn, but even things unprepossessing in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild boar’s mouth—appeal to him who is in unison with nature, and touch hidden springs of answering creation and desire.

(7) Evil.—The oneness of the cosmos is utilized to explain the mystery of evil. Seeming evil is good misunderstood or disguised. The course of nature is all good. ‘It contains no evil, does no hurt, and befits no harm on anything.’ Analyse the facts, suppress the hasty, ill-formed inference, and the evil ceases to exist, or changes its complexion (vi. 30, vii. 20). It is the discord that prepares and shapes the harmony; the coarse jest (as Chrysippus said) that gives the comedy its point (vi. 9). ‘Nothing is hurtful to the part which helps the whole’ (x. 6).

(8) Providence.—God the mind of the universe is social, ‘civic’ (συλλογικός) in all its aims. Fate, destiny, necessity (μοχρίδος, τὸ περιμένον, τὸ ειρήμενον, ἅμαγγελον), overrule all things for good; man’s free will is accord with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) The round of being.—Everywhere there is the recurrent transformation of elements, a process whose continuous round is nature’s joy (ix. 35, iv. 36), the life of individuals, of nations, and of the universe at large. The ‘passage up and down’ repeats itself in history, upon the small scale and the great; always ‘the same dramas, the self-same scenes re-produced; the court of Hadrian, the court of Antoninus, the court of Philip, Alexander, Ceroes; the same stock rôles, only changed with changes’ (x. 27; cf. vi. 40). This is the depressing side of the Emperor’s philosophy, the resignation from which he would not deign to extricate himself by self-deception.

(10) Man a part of cosmos.—Man is by nature an inherented part, a living organic member—μῆλος, not μῆλος merely—of the whole. He draws from its organic life as vitally as the branch draws sap from the parent tree. His ‘nature’ is the nature of the universe, its self-realization and beauty. The basis of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following
of law and reason, by active citizenship in the world-commonwealth.

(11) *Virtue.*—Moral obligation is fulfillment of function, active acknowledgment of reciprocal relations, in the measure that one is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' The soul—a particle of *Zeus* (v. 27), the good genius or the God within (iii. 16, 76 of the law-giver (iv. 1, 12), the pilot reason (vii. 64), the fellow-citizen, the priest and minister of God—is the power within which makes for righteousness. The indwelling presence of the Holy Spirit in the Christian believer. Prayer is not merely communion with the inner self, but a true intercourse with God; the self-communings which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) *Littleness of man.*—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sum, a moment between two infinities. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (ii. 7, iii. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and is itself. It is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason in fellowship with nature and God. If over that is forbidden or barred, God sounds a signal for retreat. Unmurmuring and undispleased, we quit the rank. The exodus is quick and easy—a 'bare boddikin' is enough. The play is ended (xii. 36); ring the curtain down. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 3)—alternatives which are passionately considered—the dissolution of the material elements ends the present resultants; they take their place in other compounds, while the 'sensational, or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) *Ethics.*—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, and obligations proper to his own experience. But the Imperial position assumed general treatment and elevations of view, and the fixed sincerity of the writer atones for lack of form, or method, or variety. The commonplaces or the paradoxes of Stoicism—the insistent virtues of military training which, as the wise—are not discussed at large. The more developed casuistry of later Stoicism, with its scheme of conditional duties (οφικα, οί σβοιτοστια), its recognition of preferential moral choice (in ποιησις et &νεροναλογια), the admission of relative moral values (και δεσια), its belief in 'proliencey (φρονεσια), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phrasology. The philosopher is on the throne, and passion is outlawed. Duties of inferiors, sins of the flesh, all vulgar viciss of the tyrant or the profligate, even the licences and the luxuries of city life, are not in view. The whole attitude is one of strained, insistent obligation, wrought out in patience Inexhaustible; men are the recipients, himself the dispenser, of benefits; in realization of the social tie, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues courage seldom receives mention; truth is not protest or resolve, but that singleness of *Virtue.*—Moral obligation is fulfillment of function, active acknowledgment of reciprocal relations, in the measure that one is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' MARKET.—I. Definition.—The term ‘market’ may be defined as a periodic gathering of persons at an appointed place for the purpose of trading by way of exchange or purchase and sale, subject to the special regulations which law or custom may impose. The term ‘fair’ is frequently used in conjunction with the term ‘market,’ and has been defined as ‘the meeting of a market recurring at more distant intervals.’ In either case, the essential element is the same—recurrence, namely, at a fixed time and at a fixed place.

In any case the lapse of time between the running of two fairs was the same as the lapse of time between the running of two markets.

3 See ibid., p. 35.

6 See authorities in F. J. Hamilton-Griffen, The Silent Sleep, Edinburgh, 1803, p. 64. See also § 4 below.

2. Geographical distribution of the market.—The institution of the market is not universal; in many parts of the world it is either altogether unknown or known only in its most rudimentary forms. In many of the more important geographical conditions and certain racial characteristics are more favourable than others to its establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are in general considerably more permanent, perhaps because the necessity for an exchange of articles of diet hardly arises among populations whose economic status is the same, and whose daily needs are supplied by the bounty of nature, seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into touch—where, e.g., a tribe of fishermen have a tribe of agriculturists for neighbours.

According to J. G. F. Biebel, there are no market-places in China, while we have the market of Java, Sumatra, and Borneo; we are reminded by a high authority that, in many of the islands inhabited by Malay peoples, the institution does not exist, or if it did exist it was held three or four times a year, a thing that is more than twice as frequent as the small markets of the Mediterranean.

The market thrives best where, in addition to the geographical conditions, the natural bent of the population is in favour of trade. In the latter case, as in the case of the Negro and Bantu races.

In Asia we find only few and scattered indications of the existence of the market, and to the hunting tribes of S. America it is practically unknown; while among many of the peoples of the South Seas and of the Far East, it has become a common pursuit, as in the case of the Negro and Bantu races.
market spread from Massilia, from the north of the Italian peninsula, and from the cities on the shores of the Euxine to the curia of the countries of the Rhine. 4 The future of Ubida, Ubii, Boussana, and Demi Najasi 5 were visited by the Prophet, and there is no doubt that Mecca was known to them. 6 Not indeed; the resting-places of caravans are little markets, where the Bedouin may buy his amulets and trade in peace. They were also known to Thucydis, 7 Pliny, 8 and the natural position of the town at Tentyra, a city of the Delta, was devoted to commerce as well as to worship.

The antiquity of the market in China is vouched for by the Book of Rites, which contains elaborate regulations for its conduct. 9 The 'market' is the most picturesque and characteristic of Annam's spectacles; and the great feature of life in the Shan country is the bazaar, which is held on every fifth day in all the chief villages of the States. 10 The Ichids of Assam hold a market every four days. 11 Lasch 12 observes of India that in early times, fairs and markets were to be found at the holy places frequented by pilgrims; and that the Rigveda and the Upanishads refer to markets and fairs.

We know that markets were held on the boundaries of certain Greek States under the protection of slaves. 13 and that an active commerce found its home in the markets of Olympia and Delphi; and Homer and Herodotus tell us of the market of foreign seducers, and of the specialty of those of Phoenician viola. 14 In later times the institution of the natural of the Indus, Madrid, 1853, xxvi, 97, xxxii, 3; J. Roman and Zamora, Republicanas de Indias, in Colleosion de libros raros de la Biblioteca Nacional, Madrid, 1900, Vera Paris (J. Roman and Zamora, loc. cit.). Nicara (L. from the silent trade seems to Lasch to be wholly unnecessary. His second objection rests on the nature of the goods brought to market, which are, he argues, the most perishable. They are supplied and produced constantly and they are in constant demand. Accordingly, market must follow market at a short interval, the times being fixed to suit the traders. The existence of such arrangements presupposes an exchange of views between those interested; and such an exchange involves a complete breach with the peculiarities of the silent trade. The best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its beginnings. We shall find that it is attended by men only, and that, in some instances, it exhibits features which are common to the present market.

S. Passage, e.g., describes a market on the Berme to which a river tribe resorted for the purpose of exchanging fish and goods for the salt and glass brought to settle it. The former left a man in each canoe to hold it in readiness in case of need, and the latter went about snatching weapons, etc., in front of his merchandise. On another occasion the boat people, the jungle, and the river men took to their canoes. Snails were buried, and arrows began to fly; and, in the end, after a few men had been killed on either side, they concluded a compact and lived in peace. Another example is supplied by Ellis's account of the trade between the Kikuyu, on the bank of the Nairobi river, and the Hapsi tribe. The inhabitants of the different districts into which the island was parcelled out, although frequently at war with each other, never exchanged goods or weapons, and occasionally even their women, without actual battle.

From bank to bank the traders shouted to each other and arranged the preliminaries of their bargains. From thence the articles were swallowed down in a large canoe, the whole thing being done in the middle of the stream. Here they were examined by the king's official, who demanded the presence of the king's 'collectors,' who stood on each side of the canoe, and were the general arbiters in the event of any dispute arising. The king was compensated with a heap of good corn during the fair; and they, of course, received a suitable recompense in the market. Again, we are told that at Somi-Somi, in the Fijian group, the market is held on the 2nd day, in the square, where each deposits in a large heap what goods and wares he may have. Any one may then go and select for what he wishes, and carry it away to his own home; the king then has the privilege of selling to the highest bidder, and selecting what he considers to be an equivalent.

This is all conducted without noise or confusion. If any disagreement occurs the chief is there to settle it; but this is said rarely to happen. It is reputed of the Eekins of Point Barrow that, in their intercourse with those of Desolation Point, they 'seem to be very wary, as if they constantly keep in mind that they are the weaker party and in the country of strangers. They describe themselves as having 'built a possible place of barbarism on a small island to which they can return if they are受害 from it. They also make signs of friendship. They say that great distrust was formerly more frequent, when their vessels were taken and which goods were snatched and concealed when a bargain was made; but in later years more women go, and they have dancing and amusements, though none of them are enough to impress the others.'

A very curious instance, in which women were the traders, and in which the method employed recalls that example of the silent trade mentioned by K. and J. Landor, is recorded by Torquemada in his account of the Mexican markets. He tells us that the Indian women made exchanges without a word being spoken. One held out the article of which she wished to dispose, another, who herself had something to barter. The latter took what was offered in her hand, and indicated by signs that it was worth very little in comparison with the value of her own article, and that something must be given in addition before she could consent to the exchange. If the additional required was made, the bargain was complete; if not, each retained her own property.

In these instances we have the mutual distrust, and, in some of them, traces of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, even if it be business confined to the exchange of provisions, entirely in the hands of men. So soon, however, as women can visit it in security, they assume the entire conduct of its traffic in perishable articles, and the men only attend as guards of its peace, or confine themselves to dealing in the objects of their special concern, such as cattle and slaves.

Two further points may be made in reference to Lasch's arguments. In the first place, there are many instances in which perishable articles, such as fresh fish and fresh meat, are exchanged by the methods of the silent trade. In the second place, many cases in which the places where the silent trade is to be found in operation are matters of common knowledge.

4. Situation of the market.—The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.

Thus, a river separated those who resorted to the market on the Wupe, the lake so tormented by being placed upon a flat rock in mid-stream. In many instances the market is held within a borderland, as in the Baluba country, in Somaliland, and in British New Guinea. We have already mentioned the border markets of Greece and Rome; and we are told by modern writers that the Bantus formed a vast zone of markets. In Uambara and in some districts in British New Guinea, the market is held in different districts; and the Batau markets in the virgin forest and those of Angola are generally equidistant from the nearest villages. This is the purpose of exchanging the specialties of their respective districts. These commodities are brought down to a large canoe, which stands in the middle of the stream. Here they are examined by the king's official, who demanded the presence of the king's 'collectors,' who stood on each side of the canoe, and were the general arbiters in the event of any dispute arising. The king was compensated with a heap of good corn during the fair; and they, of course, received a suitable recompense in the market.

In both cases the all-top is a favourite situation. Among the Gaurs of the Western Coast of the large country markets are usually held on the top of a small hill, near some big banyan; in the Gazzelles, on platforms, at the end of a journey from the coast; and, among the Lappas, sometimes in open fields, and sometimes on the ice. The Lappas, at

5. Another method employed by traders for this purpose was that of exchanging hostages (Voyage du chevalier Chardin en Perse et autres vues de l'orient, ed. L. M. Lomans, Paris, 1811, 146 f.). One of these was the hostage of the wife, which goods were snatched and concealed when a bargain was made; but in later years more women go, and they have dancing and amusements, though none of them are enough to impress the others.
7. As to the connexion of the market, the border-line, and the supernatural, see below, § 8.
11. See above, § 2.
20. Eugen, p. 95.
Markets are situated in uninhabited places, while in Zanzibar the two great markets are held on a wide plain, near some small villages adjacent. At Malindi, which consists of two villages, the market lies between them, and a somewhat similar account is given of it at Kilifi. At the port of Bora, the market is generally held at some distance from the town, and a little beyond the town walls. In some countries it is held near a principal town, as in Madagascar, or in an open space near a village, as in German New Guinea, or at a point on the town-wall and a river, as at the chief town of the Western District of New Guinea. In some districts, the market is held on an island, as in the Kwadore Islands, or on the seashore, as in New Caledonia and among the ancient Northmen. There are also markets held on islands near some great sea, such as the Victoria Yankee, and as at Guadalcanal, on a plain between mountains.

Many of these situations point to a time when the fear of attack was prevalent; and Schurtz suggests that the arrangement in the Mahezi country by which the weekly markets were held outside the walls, so that strangers might not enter the town, while the daily markets attended by the indigents held within it, is a survival of the old state of things. Where an established order exists, however, the market is generally held within the walls. Thus, at Kofun and Zaria the market-place is within the walls. It is generally held on a place situate on a hill or land stretching across a marsh, which narrowly intercepts the city. The markets at Heng-Chu are held in great squares within the city of the same name. At the market of a town which had its beginnings in a temporary market, in Java the markets are held under large trees on spots dedicated to the purpose. In the market of Horns the market is generally held at some distance from the town, and a little beyond the town walls. In some countries it is held near a principal town, as in Madagascar, or in an open space near a village, as in German New Guinea, or at a point on the town-wall and a river, as at the chief town of the Western District of New Guinea. In some districts, the market is held on an island, as in the Kwadore Islands, or on the seashore, as in New Caledonia and among the ancient Northmen. There are also markets held on islands near some great sea, such as the Victoria Yankee, and as at Guadalcanal, on a plain between mountains.

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages. This practice prevails throughout western Yun-nan, and is found in Java and Aboakota, at Ighyhe and Onitshah, at Kong, and at Bolo, in the Mekko district of British New Guinea, and in many other places. At Ikorodu, on the lower Ogun, the market between the townsfolk and the bushfolk takes place every eighth day, and in the many of the country markets are generally held on an eight days' interval. In regard to the markets on the caravan routes between Mahata and Leopoldville, a distinction must be kept in view between those held daily by the neighbouring villages for the caravan passers-by and the weekly markets. The Fioi week is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called "black day." The market is held every day. On the Lunga-lah the markets are held on the first day of the week. In the northern districts, the market is held on a day different from the one on which the market is held in the southern part of the country. This is the case in the northern districts of the country. This is the case in the northern districts of the country.
Market is held every fourth day, other markets being frequented in the interval. At Ambas Bay the market takes place every third day. There are daily markets at Loango, at Kanó, and at Mogelo. The chief town has now eight days in their week; but formerly they had four only. On each day there is a market in or near Benin city. Three markets are held at Kassa-Kanó; and two at a week at Timbuktu at Kanymar, and at Danjanilmara. Weekly markets are held in Morocco, 11 at Tapa- lahun in the Sherbro, 12 in Lega-land, 13 among the Oromó, 14 among the Kabylés, 15 and at Passumah in the southern part of Sumatra. In the Kuantan district of Central Sumatra each market has its own special day of the week allotted to it. 17 In Siilindong there is a daily market, but the place at which it is held varies from day to day. In this and in many other cases, the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market.—In Kékawa, Maséna, Kanó, and Danjanilmara the market is held in the hottest hours of the day. According to Clapperton, 21 the market at Kanó is crowded from sunrise to sunset. The Yo (Bornu) market begins about midnight and ends about 10 a.m., and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m. 22 In some places in the neighbourhood of Harar the markets begin about noon, and at Gire in Adamamayah they are in full activity by that hour. 23 At Sarla the busiest hour of the market is from 2.30 p.m. to 5.30 p.m. In Tshambé the market is held in the late afternoon, 24 and at Coësures the market is held at Aden two hours after sunset, 25 and at Bida and Ilorin 26 and in some parts of Malacca in the night. On the upper Ubangi it is held from 8 to 10 in the last instance. On the Inland Congo it is deserted after noon. 27 In the Padang district of Sumatra it

is little frequented in the early morning, but by 10 o’clock it is full. 28 Markets in the early morning are less frequent, for the obvious reason that they interrupt the day’s work of those who resort to them more as with the market, the markets close of the day, and also because those at a distance cannot attend them. 29

7. Frequenters of the market; market-women. —H. J. Jeaffreson, 23 in his book on the wild and savage, notes that both men and women make long journeys to sell their goods, the men always travelling furthest.

Among the Bondel, if the market be near the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone. 30 At Wydyak on the Gold Coast, 31 and among the Balak of Sumatra, traffic in slaves was confined to the men. Among the Balak the men bring goats and poultry to what in market, 32 and in the Mandinggo markets they trade in clothes. 43 At Wo Kau there are sell fish, and and butter, and men sell oxen, sheep, and slaves. 3 At the Harar markets the frequenters are grouped by sexes, i.e., according to the articles which they sell, 33

In many instances the business of the market is entirely in the hands of women.

Thus, in the districts near Kilimajaro, 34 the women do all the trading, have regular markets, and will, on no account, allow a man to enter the market-place. 35 At Koolin, the principal town of Nuga, nine women out of the 12 who receive the daily market are women; 36 and the Foulahs or Falies leave the market in their hands. 37 Here the market is divided into thirty-four quarters. 38 It is of interest to observe in this connection that, in the Congo area, when a thief is caught, his punishment—that of being stoned to death—is inflicted by the women. 39 In Nicaragua no name above puberty might enter the market-place of his own village to buy meat, until he had reached this distance. But men and women from other friendly or allied villages go to market. 40 The women selling at the market of Brussels in Bornoo are generally old slaves. 41 In the principal markets the women form a caste by themselves; they attend all the larger markets in person, and send their servants to the smaller ones.

8. Religion and the market; the market peace. —The market peace is sacred; and the market peace may be due to one cause or to a concurrence of causes. 42

several causes. It may be due to the nature of the relation between traders which the act of exchange creates, to the sacredness of the place where the trading takes place, to the consecration of the market at the time of its foundation, or to the magic or the power for the protection of a god, or is associated with a religious festival.

Later, held at different points on the Niger, are progressing regard as sacred ground, whatever was there may be in the kind; and, although this neutrality is not inexpressibly void of meaning; yet, it remains as a matter of curiosity to the Shilluk to enquire the Khartum traders to their camp by a direct route. The market-place is divided into sections, and then hallowed for their arms and ivory; at the close of a lackus market the chief allowed his bodyguard to plunder the market-women; and M’Lavrobe speaks of a massacre of many hundreds market-women by Arab traders.  

4 But, he observes, they have great tenacity and hopefulness. An old established custom has great charms for them; and the market will again be attended, if no fresh outrage is committed.

5 Violence kills the market. To "revive" a "dead" market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market is established. Establishment of a market was the occasion for the sacrifice of a slave (Courtauld, "K., 1876."

When the king went to the frontier to settle boundary questions, and a trade arose, the peace was a host's peace. If it is said that, at Stanley Pool, some religious peace extended beyond the territory where the great festivals were celebrated, it is alluded to the presence of many of those who frequented them, even in their passages through a hostile district (Havelin, p. 7b; see above, § 4.)
stones, he came to be regarded as the god of boundaries. In many cases the border-land consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders. People passed in all directions, and Germans used to raise poles at their public meetings, which were consecrated to the god of the public assembly. These poles were, in all probability, erected upon a stake, and it has been suggested that this 'truncus super lapidem', replaced in later days by a stone column, is the prototype of which Imrin-iston, Rolandston, perrons, and many of the market-croiss of Scotland are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justices, was in many cases at all events, a boundary-stone.

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary peace became a permanent peace.

In China an official notified the beginning and end of the market, and this custom still exists among the Chinese. In British New Guinea a drum is beaten at the opening and closing of the market, and the drum beat marks the time of the passing of the goods between the people of the Kil and the Spanish garrison when they were besieging ceased on the ringing of a bell.29

Many instances might be cited of trading during a time of war, and by a resumption of hostilities as soon as the trading was over.30

2 Gold-Aldrich, The Migration of Symbols, Westminster, 1894, p. 116. This god was probably Thulguus, the Germanic equivalent of the Latin equivalent, but it is also possible, however, that Thulguus, the god (cf. Toutencq,) vol. vi. p. 345. According to Caesar (De bel. Gall. vii. 17), the Gauls worshipped a deity whom they identified with Mercury.
3 D'Aliville, p. 117.
4 D'Aliville Les Perrons de la Wallonie et les Marché-Croix de l'Espagne, (Brussels, 1914, pp. 27, 42, The Migration of Symbols, p. 105.) indicates his agreement with the view of M. Momont (Generalité littéraire du Piédestre de Saône, 3rd May, 1911). He observes that, before the diffusion of Christianity, the pole, to which we have referred, was at once the symbol of the god of assemblage (Thugius, the equivalent of Zeus Agoraios) and of the autonomy of those assemblies. It is not improbable that, for the purpose of ornament, a representation of the god in the likeness of an armed man was attached to the pole; but at that period, and that, when the meaning of these representations came to be forgotten, the popular imagination gave them the same of the Paladius most popular at the time, and thenceforward became Zeus Agoraios. When the Church established itself among the barbarous peoples, these public places served as the religious points of collective life. Sometimes they bore the emblem of Christianity; sometimes they were altered or transformed so as to serve the duties of a new or additional; and sometimes they were replaced by the crosses planted by the Church in sign of possession.

The resemblance which many of the market-crosses of Scotland bear to the perron has been pointed out by W. O. Black (Glasgow Cross, with a Supposition as to the Origin of Scottish Market-Crosses, Glasgow and Edinburgh, 1915), and his suggestion as to their origin has been approved by D'Aliville in the latter of his two works cited above. At p. 39 of this work D'Aliville figures certain of the Scottish crosses, and it is certain to observe how close is the similarity of some of them with the image of Hermes figured by him on p. 184 of The Migration of Symbols.

q. The law of the market and its enforcement.

We have already seen1 that acts of violence perpetrated upon the frequenter of a market may and probably will 'kill' it—for a time, at all events. The recognition of this fact appears to produce two results: first, the acts of the market authorities that are committed within the market are punished with exceptional severity, as imperilling its peace. In the second place, since offences committed outside of the market are not regarded as a danger to its peace, those who have committed them are in consequence not subjected to punishment so long as they are within it.

On the lower Congo every breach of the regulations of the market renders the culprit liable to death. He is either buried to his neck in a hole, in the centre of the market place, and his stick and a heavy stone are placed on it, until he is buried to his head with sticks, and his body is subsequently lashed to a pole, which is erected alongside a native path.2

Beautt tells us that in some of the Congo markets 'a man who brought a gun with him would be promptly buried alive, and the murderer of a man in a market was not punished in any way, not even the payment of a fine, but his head was placed on a large stone, or he was beaten to death with sticks, and his body is subsequently lashed to a pole, which is erected alongside a native path.'

Some instances might be cited of trading during a time of war, and by a resumption of hostilities as soon as the trading was over.3

of the common law which attracted not only the merchant but those in search of pleasure.\(^1\)  

10. Administration and execution of the law of the territory of the market. It has been observed that, where the market lies within the territory of a tribe, its law is administered and executed in part by those who resort to it and in part by officials appointed by the tribe of the district. Where, however, it lies on the territory of a king, chief, or feudal lord,\(^2\) it is his officers that act as police, and, in some instances, as judges.

In the Kabyle markets, e.g., an official—the chief of the market—acts as the leading family of the tribe which owns it—sees to the preservation of the peace, escorts those who fear attacks on the road, summaries the quarrel-some, and fines those who create disturbance.\(^3\) It is concerned only in those offences which occur public and civil and commercial disputes are referred to a marabout of the tribe.\(^4\) At the same time, it is the strangers in the market that execute its law by settling the disputes of buyers and sellers; and, if the market, there is no supreme authority to whom the enforcement of the law is entrusted. Its execution is in the hands of the market chiefs. An assembly of those belonging to the district is sole judge in disputes; but the disputants need not abide by its decision. If they ignore it, they may leave the market.\(^5\) But where the market lies within the territory of a king, he or his officer sees to the maintenance of order.\(^6\)

This, at a fair on the Lulakha, within the country of the Kalou,\(^7\) the chief kept watch in his greatest glory and grandeur, for he knew that no dispute might disturb his peace. His companions were all well-known by the broad axe which they carried and the dust of the oxen. Among the Laghania a chief appointed by the king performs similar duties;\(^11\) and these are directed against those who breaks the law by his king's collector,\(^12\) and among the Gallas by the local headman.\(^13\) At Maitugari—-the largest market of Borno—there is a market king in the chief seat of the tribe; and the men and women choose a market queen for their protection, through whose hands they enter into their business.\(^14\)

This last instance shows that, while, in some cases, the duties of the officers of the market are confined to the preservation of the peace,\(^15\) they are, in many others, of a much more varied character.

Among the Tuaregs the market king collects the dues and attends to matters of police.\(^16\) At Wairuku the king's collectors are the general arbiters of disputes;\(^17\) and those of the city of the Gallas, on the western Abyssinian plateau, the market is held under the superintendence of the local headman, who decides all questions arising out of broken contracts.\(^18\) At Whydah the chief constable of the market attends to its cleanliness,\(^19\) and a high officer named Consonghis sees that the strings of beads which serve as money are composed of the proper number. Those which are deficient he corrects.\(^20\) The king's officers are for his posts and his lands. Among the Gallas the duties of direction of the market are exercised by an inspector who acts under the conduct of foreign traders and the supervision of the exchequer.\(^21\) In the Congo markets there is, in most cases, a chief of the market, perhaps an important personage in all matters, but he is more a litigant so heavily that all are choir of invoking his assistance.\(^22\) At Kand the judge of the market all day to try disputes arising in the course of trade; and in the Loungh market an official is charged with seeing that no deceits are practiced in the trade between natives and Europeans.\(^23\)

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The whole trade to the market of Jakoba, however, is daily subjected to examination; and in Morocco an officer is appointed to inspect the provisions offered for sale.\(^24\) He must constantly attend the market, that no goods may be overcharged; and, in view of the quantity or scarcity of the goods exposed, he must also fix the prices.\(^25\) At the market the price of each of the goods increases by the amount which the market fixes the price; and among the Bangash the price is fixed by the chiefs with reference to a standard.\(^26\) At Maroc the market authority has a public officer to fix a maximum price to all trading.

In some of the markets in Haiti the chiefs regulate the market prices and among the Siamese they were fixed by the superintendents of the market.\(^27\) In China the officer placed over the market was charged only with the maintenance of order, but with the supervision of the goods and measures, and with the administration of justice in more important cases.\(^28\) The Greeks appear to have executed similar functions in regard to the preservation of the peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally.\(^29\) The Roman senate preserved order by means of his officers, and imposed fines upon the peace-breakers. He allotted their positions to the traders, and saw to the accuracy of weights and measures.

But it is the duty of these officers to fix the prices and to regulate the goods offered for sale, while the market was to study to exclude those who served only to create trouble and to assist in the market in such a manner as to be troublesome.\(^30\) Among the Hausa, while dues are levied, entrance into the town is granted to the merchants and to the canoe men. At Estelo men can enter the market and trade without charge, but every woman must pay ten cowries to the government.\(^31\)

When the trade took place in the temple of the sun, the priest collected dues on behalf of the divinity.\(^32\) At a fair on the Lulakha, in Kasmouna's country, each district whose representatives were assembled sent a sum of money to the king who decided disputes, and money which was required, and on that account it was impossible to sell merchandise in that district.

MARKET

visious for the king, and levies a contribution for himself. Among the Huganda a chief appointed by the king collects a tax upon every article which is sold in his territories, and levies the people a tax on every article of food exposed for sale. In the Lango market the chief of police sees to the payment of the duties; and at Kajjansi, the town of which is sixty miles from Kampala, the tolls at the month, the rent forming a part of the governor’s revenue. In Choson the market-dues, which are collected by special officers, are levied in the following manner; 1 in those of the Middle Ages what determined the trader’s position was not only the character of his goods, but also their quality; and, in some cases, the latter was the sole determinant. 3

13. Modes of bargaining in the market.—One of the most characteristic practices of the primitive trader is haggling, or negotiating the terms of a third person. Dall 4 tells us that the Aulets never trade with one another directly; and we have suggested that some light is thrown upon the origin of this method by the inscription of the exercise of the silent trade reported by Lander. 5 It is said that, among the natives of Australia, children are made ngua-ngiange in order that they may act as the agents of their respective tribes in the business of haggling, and many cases may be cited in which the man who takes a stranger under his protection not only acts as his host, but assists him in buying and selling, and is generally responsible for his conduct. 6 At Beers each stranger must choose a protector (abäm). He dare not trade without him, and must pay him one cent on the value of every article which he brings into the market. The abäm is his broker; he protects him against the exactions of the traders, and prevents disputes from arising, and in case they may have become involved. 8 A similar account is given of the part played by the protector at Dioulasou. 9 It was an article of law that an abäm should be present at the transaction; inasmuch as changes hands, the seller pays a commission to a third party, who is supposed to have facilitated the purchase. 10 In the markets of many Africans a curious practice prevails by which traders, when bargaining in the presence of others from whom they wish to conceal their business, drive and conclude their bargains by touching the points of each other’s fingers, without any word being spoken. It has been found in use at Mecca, 11 at Calicut, 12 among the Somalis, 13 at Jidda, 14 at Pega, 15 in Malacca, 16 in Mongolia, 17 and elsewhere. 18 Torquemada 19 notes a curious practice which prevailed among the Indian women in the markets of ancient Mexico. They exchanged their wares without a word being spoken. The one party held out the article of which she wished to dispose; and the other, taking it in her hand, made signs that it was not a fair equivalent for what she had given in exchange. If the first party refused to add anything, she ran the risk of losing her customer; if she added what was demanded, the bargain was concluded.

14. Methods of securing attendance at the market; its place in public and social life.—In some of the Congo countries it is penal for a woman to go to her farm on a market day. 20 To the desire to induce the stranger to come to market Heeren 21 ascertains certain Lydian and Babylonian regulations. 22 Cortes, 23 Lasch, 24 Schuver, 25 Barth, 26 and many others, who have written on this subject, refer to the prevention of monopolies.

In the markets of ancient Mexico each class of merchandise had its allotted place, the more common kinds being stored in the niches or niches of the walls. In those of the Middle Ages what determined the trader’s position was not only the character of his goods, but also their quality; and, in some cases, the latter was the sole determinant.

1 Lang, p. 235. Similarly, at the market of Bobo Dieloulou, a man carrying a grigs-gris staff, accompanied by a drummer and a crowd of urchins, sets down his stall before each merchant ceremoniously, and, unopposed, helps himself, by means of a small calabash holding about a litre, from the merchant’s stock (Binger, l. c., 371).

MARRIAGE (Introductory and Primitive) 423

The institution of marriage may be regarded as
1 E. Westermarck, The History of Human Marriage, London, 1894, pp. 79-75; Yale, Book of Sea Marco Polo, l, 144, 190, 210, 212; ibid. 54, 56, 63, 73; A. H. Poas, Geschichte der ägyptischen Jurisprudenz, Oldenburg and Leipzig, 1869, t. 28; E. Wiltisky, Forschungen des Rechts, Berlin, 1882, p. 451; K. Weinhold, Almuthlichen Leben, do, 1898, p. 447; B. Birkh.und, Die Aromota in ihrer Belehtung für Religion, Sitzen, Gebräuche, Handels und Geographie des Althell, Leipzig, 1895, pp. 61; W.lescher, System der Volkswirtschaft, Stuttgart, 1890, iii. 58. In the charter of Brunswick in Dauphiné, b. 1558, it is stated that the special privileges and acts causes in dictis conciliulins (sic) existentes quiet et immunes a crimina adulterii (sic) resulted in 1432. 2 Marot. fo. 374, 380; Hagen, Eine Heim nach dem Tode. See in Zentralblatt, p. 172. The gameing booths which are found in the most populous part of Europe seem to be the only centres of trade (Snoeck Burggreeno, p. 27o). 3 Marot. fo. 384, 383. According to Buchhardt, p. 449 it was the custom among the Assyrs, Arabs, before the Wahabbi conquest, to bring their marriagable daughters to market, and it was only through the medium of the market that marriage could be consummated. 4 P. W. Joyce, A Social History of Ancient Ireland, London, 1894, pp. 612-13. According to Rodwell, p. 149, it was the custom among the Assyrs, Arabs, before the Wahabbi conquest, to bring their marriagable daughters to market, and it was only through the medium of the market that marriage could be consummated. 5 Joyce, loc. cit. 6 Th. ii. 441. 7 O'Corry, ii. 259, 260. 8 Th. l. pp. 62, 63, cccxxiv, ii. 192. is there that the public announcements of the sovereign is made. 3 In the Kabul market foasts and feasts and all matters that affect the community are proclaimed. It is the place of news, group, and friendly intercourse, of planning, and of plots. 4 The Papuan markets last all day, and are enlivened with feasting and feasting; and similarly some of the Eskiibe markets. These who resort to the Congo markets go not only to buy and sell, but to meet friends, to drink makonfan and enjoy a gossip with them, to settle thorny questions, to help neighbors, to arrange disputes between clans and villages, to decide the law and peace, to bargain about the purchase of a wife, to describe slaves lost or stolen, and to give publicity to transactions such as the release of hostages or prisoners of war, or the payment of the price of blood. It is there that the man who is robbed gives information about his robber, and that the creditor, if he cannot get payment, claims the inherency of the debtor. It is there, too, that oaths are administered and criminally executed. Under the trees in its vicinity the drinkers of palm-wine, the politician, and the news-wogener hold rendezvous. 1 LITRATURE.—The authorities are cited in the course of the article; but special references must be made to three works, to which the writer of the article owes a special debt: Lamartine, Das Marktwesen auf den primitiven Kulturungsstadien, Zeitschrift für Sozialwissenschaft, lx. (1890) 619 ff., 770 ff. F. Huvell, Einzel historische u. der recht der marriage und des fiares, Paris, 1897; H. Schutzi, Das afrikanische Gewerbe, Leipzig, 1890. P. J. Hamilton-Grierson. MARRIAGE (Introductory and Primitive).—Marriage has two main functions: it is the means adopted by human society for regulating the relations between the sexes; and it furnishes the mechanism by which means of the relation of a child to the community is determined. Owing to the preponderant importance which has been attached to the former function, and the more stringent and rigid social functions of marriage have been largely overshadowed by its moral aspect, and it has not been sufficiently recognized that the function of marriage as the regulator of social relations may be of the most definite kind where the institution is of a very lax and indefinite order when regarded from the moral standpoint of civilized man. The institution of marriage may be regarded as

1. Regulation of marriage.—In all forms of

the central feature of all forms of human society with which we are acquainted. It stands in an especially close relation to the family—using this term for the group consisting of parents and children. This social group rests absolutely on the institution of marriage. Where marriage is monogamous, the group formed by the family will consist of the parents and their children; where marriage is polygamous, it will consist of a man, his wives, and their children; while in polyandry, the family will consist of a woman, her husbands, and her children by those husbands or assigned to those husbands by social convention.

The institution of marriage also underlies the extended family, this term meaning the social group consisting of all persons related to one another either by consanguinity or by those social conventions which so often take its place (see art. Kin, KNISHIP). It is the marriages of the members of the extended family that immediately determine the limits and functions of this mode of social grouping.

The relation of the clan and other similar social groups to marriage is less simple. While marriage is the foundation of the family, it is possible that the clan-organization has grown out of a state of society in which individual marriage did not exist; but, whether this has been so or not, the clan-organization as it now exists is intimately related to marriage, this institution being the means by which descent, inheritance of property, succession to rank, and other social differentiations are regulated.
human society there are definite rules regulating whom the members of the community may and may not marry. These rules are of many different kinds, but they all fall under one or other of two main forms; regulation by genealogical relationship; and regulation by some form of social mechanism, consisting of clans or similar social groups. The rules may also be distinguished according to whether the marriage is endogamous or exogamous.

Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the ‘table of prohibited kindred and affinites.’ Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kindred, the two modes of regulation coexisting, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with rules of prohibition, there are often definite rules which allow marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as endogamy and exogamy.

2. Exogamy and endogamy. — Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed one to another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is the custom which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term ‘exogamy’ is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term ‘clan’ is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which may marry only with the members of their own group. If there must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being endogamous, while the clan within the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the gotra (q.v.) or other corresponding sub-group the exogamous unit (see art. Caste). The social system of the Bushmen is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who arenewValueed from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages may occur. Often in Europe there are cases in which marriage within the village or other social group is so habitual and departure

from this custom meets with such social reproba-

tion that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the division of the village follows an occupation, and this association of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, with a result only unusual.

Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the ‘table of prohibited kindred and affinites.’ Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kindred, the two modes of regulation coexisting, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with rules of prohibition, there are often definite rules which allow marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as endogamy and exogamy.

2. Exogamy and endogamy. — Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed one to another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is the custom which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term ‘exogamy’ is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term ‘clan’ is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which may marry only with the members of their own group. If there must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being endogamous, while the clan within the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the gotra (q.v.) or other corresponding sub-group the exogamous unit (see art. Caste). The social system of the Bushmen is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who arenewValueed from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages may occur. Often in Europe there are cases in which marriage within the village or other social group is so habitual and departure

from this custom meets with such social reproba-

tion that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the division of the village follows an occupation, and this association of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, with a result only unusual.
regulated exclusively by a genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while other marriages may not be strictly prohibited, though looked upon with more or less disfavour by the community. The chief explanation of this difference of attitude occurring in the case of first cousins. We do not know, however, of any such people among whom marriages with certain relatives are obligatory, and have not found their presence on the nomenclature of relationship.

The regulation of marriage solely by relationship is not limited to peoples whose system of relationship is based on the family, but occurs also among many peoples who form a more elaborate system of relationship. It is found in many parts of Africa and America; it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among all these peoples, however, the results of this type of regulation differ widely from those found in the cases in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among such peoples we have not to do with the prohibited marriage being limited only to brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rule forbids marriage with a person with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibition to certain classes of genealogical relationship, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different classes. The peoples among the children of two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, these relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system to limit endogamy. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are prohibited, and sometimes the exogamous group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related. Many gradations occur between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-mechanism, but we know no people who have been carefully investigated and have been found to be wholly devoid of the mode of regulation by kinship.

6. Marriage with relatives. — Among many peoples, and especially among those who use the clan prohibited, outside the circle of the regulations of marriage by kinship is not confined to prohibitions, but there are often definite regulations which make marriage with certain relatives the orthodox union, and marriage with such relatives occur but are not especially frequent the influence which they have had upon the nomenclature of relationship shows that they must once have been habitual. The influence upon systems of relationship is so definite that it is possible to infer from their nature the existence of forms of marriage in the past which are no longer in vogue, thus affording evidence which makes it possible to trace the past history of marriage. (a) Parent and child. — We know of no people who allow marriage between mother and son. In many places, especially in Africa, a man may marry one of his father's wives, but in these cases his own mother is definitely excluded. Marriage between father and daughter is said to occur occasionally, though it is probable that in such cases the marriage is not that of a man with his own daughter, but with one whom he calls daughter in the classificatory sense. The marriage of a man with his brother's daughter would be a union of this kind, and such marriages certainly take place in some parts of Melanesia and in Australia. (b) Brother and sister. — The case in which we have the most definite evidence for this form of marriage is that of royal families. Examples of the marriage of brother and sister are known from history in the cases of Egypt and Peru, and occurred also among the Incas of Peru. In recent times the marriage of brother and sister is, or has been, the custom in Sinn, Burma, Ceylon, Uganda, and among the Veddas and Dusun of Malaya. In the case of brother and sister is, or has been, the custom in Sinn, Burma, Ceylon, Uganda, and among the Veddas and Dusun of Malaya. In the case of the highest kind of chief was one whose father and mother were own brother and sister, who were themselves the offspring of a similar union. In this case certainly, and probably in the other cases, this form of marriage is definitely forbidden to those of other than royal or chiefly rank, and the practice is due to the belief in the virtue of royal blood and the desire to keep this blood as pure as possible.

Marriage between brother and sister has occasionally been recorded as the general custom of a people. There are well-established cases where marriage is allowed between half-brother and half-sister, usually where they are the children of different mothers, more rarely by one mother and different fathers. No other cases are well authenticated, and some records of the marriage of brother and sister with such as the case of the Veddas, are now known to be mistaken. In general, not only is this form of marriage prohibited, but its prohibition forms the central and most definite feature of the moral code; and this applies to the marriage not only of first cousins, but of those relatives in the widest classificatory sense.

It has been supposed by Morgan and others that the marriage of brother and sister was once general among mankind, and that it formed a stage in the history of the institution of marriage, but this opinion is chiefly based on misinterpretation of the evidence. Thus, avoidance between brother and sister (see Kin, Kinship, III. 2) has been held to show the former presence of sexual relations between these relatives. This is probably correct; but in Melanesia, from which region some of our best examples of this form of avoidance come, the custom is almost certainly a relatively recent practice due to external influence. In all cases where marriage or sexual relations are allowed between brother and sister, they are probably of late occurrence, due either to relaxation of morality, or to the working of special ideas, such as that of the virtue inherent in royal blood.

(c) Cousins. — It is necessary to distinguish here between the marriage of cousins in general and the marriage of those cousins, usually known as cross-cousins, who are descended from persons of different sex. The marriage of females in which such marriages occur is sometimes allowed and sometimes prohibited, this prohibition being a necessary consequence of the
MARRIAGE (Introductory and Primitive)

classing of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Mshumambians, usually with the daughter of the father's brother, and this custom has almost disappeared. It is also customary among some parts of the Kung, who marry their daughter's son. In some parts of Australia, marriage is allowed between cousins, especially between the brother and sister, and this custom has been widely practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) Grandparents and grandchildren.—In Pentecost Island in the New Hebrides it is, or has been, the custom to marry the daughter's daughter of the father; and this marriage with one who, through the classificatory system, has the same status as the parent, has practised itself so deeply on the nomenclature of relationship that it must once have been the habitual custom of the people. This form of marriage has also been recorded among the Dieri of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambrym, adjacent to Pentecost Island. It is not uncommon for a man to marry the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. The occurrence of this form of marriage seems to be due to the complexity of the terminology of relationship in Fiji and in Bougainville Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with the wife of the father's father, but with the actual grandmother. We do not at present know of marriage between grandparents and grandchildren outside of Australasia, but these are part of the African systems of relationship which suggest its occurrence at present or in the past.

7. Polygamy.—The forms of marriage so far described may be classified by the social status of the partners to the union. The varieties now to be considered arise out of the number of the persons who enter into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. Polygyny.—Though this form of marriage exists, or has existed, in every part of the world, it is very rare, i.e., practiced by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife are in vogue, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddy Island in the Solomons, where a second wife is allowed to men who have taken ten heads in warfare.
Polygynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one household, or each may have her own establishment. Sometimes one wife is superior to the rest, and her children differ in rank from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage (see below, § 11). Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the practice is so frequent and has so impressed itself upon the social organization that it has influenced the nomenclature of relationship, and special terms are used to distinguish from one another the children by the different wives of a polygynous marriage. Other regions where polygyny is well established are Australia and parts of Melanesia, where the polygyny forms part of an organized system of monopoly of the young women by the old men of the community.

It is sometimes the custom in polygyny that the wives shall be sisters, a man who marries a woman having to be the right one of her sisters also as they reach marriageable age.

9. Polyandry.—This custom is far less frequent than polygyny. At the present time its chief home is in the Himalayan regions, and it also occurs in a definite form in the Marquesas Islands and among the Babina and Baziha, Bantu peoples of Africa. In ancient times it has been recorded among the Arabs, Britons, Ficts, and Guanches, but our information about those and many of the recently-recorded cases is not sufficient to show whether the condition was one of true polyandry or a variety of sexual communism. Even in India there is a distinct tendency for polyandry to be associated with polygyny, thus producing one form of communal marriage. Two varieties of polyandry are generally recognized, in one of which the husbands are brothers, while in the other they are not necessarily related to one another. Following McLennan, these two forms are often called Tibetan and Nair (Nayar) respectively, but are better distinguished as fraternal and non-fraternal.

Both among the Todas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the boy brothers grow up as a distinct group, and as his brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayars, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as eichist rather than husbands, yet it is difficult to decide, since the purely matrilineal institutions of the people make the fact of fatherhood of little social importance.

A variety of polyandry which may be distinguished is one which occurs among several peoples of India, in which a young boy marries a wife who consorts with the boy's father or maternal uncle. Several or some of the offspring are counted as the children of the boy-husband, and, when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said to be that the boy shall have a son to take him out of hell. A similar practice has been recorded elsewhere, as among the Ostanks and Ossoces. In Melanesia a man and his sister's son may share a wife or wives in common, but this was almost certainly part of the general possession of property, and it is probable that this is also the true nature of some or all of the other cases of this variety of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the status of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to the different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among this people there is no need for any special ascription of the children to the different husbands when these are brothers, owing to their common habitation and of their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by means of a ceremony at the seventh month of the pregnancy, which forms this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and especially in Tibet, polyandry is associated with female infanticide, and it has been supposed that the polyandry is a result of the scarcity of women so produced. It may also be supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. Communal or group-marriage.—The question whether this form of marriage exists has been the subject of a long and controversial discussion by schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts the fact, and, as it is the oldest type of marriage, which conforms to the definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polyandry with polygyny. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term 'marriage.' If this word is employed for relations between the sexes, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are met by our very imperfect knowledge of the exact nature of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and eichist.

The recorded case which seems most to deserve the name of group-marriage is that of the Ngara-bana (Urhulunna) of Central Australia. It is stated that, among this people, no man has exclusive rights over any woman, and that we have
not to do with a confusion between wife and concubine; appears from comparison with an ad-joining people, the Dieri. The Dieri have a definite term for individual marriage, viz. tippa-
malku; this exists side by side with the pirra-
ure relationship, which is a group marriage, a term in which a group of men and a group of women have the right to sexual relations with one another. The Ngarabans have consort types pirungaru, who evidently correspond with the pirra-
ure of the Dieri, and the relations between the Ngarabans men and women who call one another nuja would, therefore, seem to correspond with the tippa-malku union of the Dieri, except that they are group-re-
lated unions, while the tippa-malku union occurs between individuals. The tippa-malku marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the tippa-
malku union is regarded as true marriage, it is difficult to withhold this name from the union between nuja which seems to correspond with it among the Ngarabans. In order to reach a positive decision on the matter, however, we should like to be more fully informed about the exact social relations which exist between individuals and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between the group of men formed by the husband's brothers and the group of women formed by the wife's sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may also be of considerable size. This case, now at any rate, re-
lated to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with natal marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Selig-
mann, who among the Massim of New Guinea, in which all the members of a brotherhood who enter into marriage have marital rights over the wives of the eriasum.

11. Concubinage and citizenship. -Reference has already been made to the difficulty of distinguishing these conditions from marriage. The conventional use of the word 'concubine' would be to denote a woman with whom sexual relations are permitted, although the union does not in-
volve fatherhood if there should be offspring. Similarly, the term eiselbeo would be most con-
veniently used of the male partner in a similar union. If the terms were used in this sense, the pirra-
ure and pirungaru of the Dieri and Ngar-
abans would be concubines or eiselbeos. The dis-
tinction would be especially applicable in such a case as that of the Todas, whose mokkhtha-
veid would be distinguished as eiselbei from the husband's brother, thus being the important difference between the two that the mokkhthavei partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The man within the group of father to his partner's children except in those rare cases in which, being of the same endogamous group as an expectant mother whose husband is dead or missing, he is called upon to perform the ceremony which gives fatherhood.

The difficulty in using the term 'concubine' in the sense thus proposed is that in some of the cases, such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of fatherhood, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE [Introductory]).

12. Marital relations. -In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized society. But if the institution of marriage is a social institution of the most definite kind may vary greatly in its attitude towards the sexual relations of married persons. All gra-
dations can be found between peoples who regard any sexual relations other than those between husband and wife as a heinous offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the clue to the nature of these restrictions resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have transgressed, will nevertheless freely allow others access to their wives if their consent is asked, or will often impose upon extra-marital relations with other men form part of the satura-
malia or other occasions when relaxation of the ordinary moral rules is allowed.

The difference from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of ova for money or other kind of compensation is more rare, and is often only a feature of the relaxation of morality which follows contact with external influence.

13. Sexual relations before marriage. -In general, pre-nuptial freedom is allowed to men, but great divergencies are found in the views held about female chastity before marriage. Among many peoples the pre-
marital chastity of the wife is so highly valued that it may lead to such a practice as in the test leading to annulment of the marriage or depriving the relatives of the woman of the bride-money or other benefits which they would otherwise obtain.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded as a regular prelimi-
nary to marriage, and those who have been successful in this career may be especially sought as brides. In other cases sexual relations before marriage may take place more or less freely, though they are not openly condemned. Among many peoples sexual relations are allowed so long as they do not result in offspring, and often, as in many parts of Sarawak, the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

In addition to the forms of marriage dependent upon the society of husband and wife and the numbers of partners who enter into union, other varieties can be distinguished according to the place of residence of the married persons, and the age at which marriage union takes place and the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

14. Patrilocal and matrilocal marriage. -These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children
will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian sociology, by means of the epithets "bride-wealth" and "scrota," but the above terms, first proposed by N. W. Thomas, are now coming into general use. Intermediate cases between the patrilocal and matrilocal forms occur in which the marriage takes place in the wife's home for the reason that the case is closely related to that mode of obtaining a wife in which a man has, for a period of months or years, to serve the parents of the woman he hopes to obtain as a wife (cf. § 19). Sometimes, as in the island of Tikopia, the wife's home to the wife's home is of short duration that it is probably only a survival in ceremony of a former condition of matrilocal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sudan, in which the wife turns to the home of her parents in order to give birth to her children.

15. Infant marriage.—It is necessary to distinguish between infant marriage and infant betrothal, though the line between the two is often indefinite. Children are often promised as husbands or wives even before they are born, but it is only when ceremonies are performed or transactions carried through which are of the same nature as those accompanying the marriage of adults that we ought to speak of infant marriage.

Even in this limited sense, infant marriage is a very widely distributed practice. It is especially prominent in India, where its combination with the prohibition of re-marriage of widows makes it a very important feature of social life. Infant marriage occurs as an established practice in Australia and Melanesia, but here, as in other parts of the world, it is a phase of betrothal rather than of marriage. Sometimes a girl married in infancy goes at once to live with her husband's people; in other cases she continues to live with her own parents until she is of age for the marriage to be consummated.

Infant marriage has probably had two chief causes. It is a means of promoting the chastity of the young, adopted by peoples who attach importance to chastity before marriage, and this is especially the case when the girl goes to live with her husband's parents, who are thus able to watch over her son's wife. It may also be the result of any social condition that it is difficult to obtain a wife, such as scarcity of women due to infantile or natural causes, or monopoly of women by one section of the community. A lowering of the age of marriage for these reasons only accentuates the difficulty in obtaining a wife, and the lowering of age thus tends to be progressive, producing, in course of time, the marriages in extreme infancy which are found among some peoples (cf. art. CHILD MARRIAGE [in India]).

16. Arrangement of marriage.—In the very rare cases in which the choice of a consort is absolutely free the arrangement of marriage is a simple matter, and the same is true of the condition which seems to occupy the other end of the scale, in which the marriage of a person is pre-determined by the social rules of the community, as in those cases in which a man has to marry a certain relative. Even, however, in cases in which the choice is largely free, it is often the custom to make use of an intermediary, or the transactions connected with the marriage are arranged by the relatives or friends of the partners in the proposed union.

An important difference in the nature of the process of courtship turns upon whether the initiative comes from man or woman. Among many peoples proposals of marriage should come from the women.

The part played by other persons in the arrangement of marriage largely turns upon the extent to which religious or social regulations are placed in pecuniary transactions which so often accompany marriage; but in many communities the consent of certain relatives is necessary, quite apart from these. Among those peoples whose social system is based on the family it is the consent of the parents that is chiefly needed. Among other peoples the place of the parents in this respect may be taken by some other relative, such as the mother's brother or the father's sister. In some parts of Melanesia the consent of the father's sister is essential. She usually chooses a wife for her nephew, and has the power of vetoing his marriage if he should choose for himself.

17. Marriage by purchase.—In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payments are made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatives of the bride, these being usually known as a dowry. In other cases again there are complicated transactions in which payments pass between the two parties, but often these are chiefly of a ceremonial nature, either existing alone or, more frequently, accompanying the transfer of the bride-price.

Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large the common ownership of the property or right of residence by the family is a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion for them.

Among peoples who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

The most frequent type of marriage by purchase takes the form of the bride-price; but in India, and in some parts of Europe, the dowry or payment to the husband is the more usual custom.

18. Marriage by exchange.—The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practise it is that it does away with the necessity of paying a large sum to the family of the bride; but there are some reasons to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. Marriage by service. — In this kind of marriage, which has become well known through its occurrence in the OT, is probably not very common, and, as already mentioned (§ 74), passes insensibly into the matrilocal form of marriage.

20. Marriage by elopement. — Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of
restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has been the custom for them to survive at their in- 
tracultural settings by a tenacious and dogmatic 
In Australia and some parts of Melanesia where 
elopement is frequent it may be the secondary 
consequence of the monopoly of women by the old 
men, or the larger custom of elopement from 
the obstacles to marriage due to the bride-
price.

21. Marriage by capture.—This form of marriage 
bears out the social interest in which the term of 
the idea of McLennan that, at one period of the his-
tory of human society, it was the normal mode of 
obtaining a wife. The capture of wives is known 
to occur, and the marriage ceremonial of many 
parts of the world includes either a definite con-
lict for the possession of the bride or features 
which may be interpreted as survivals of this pro-
cess. It is very doubtful, however, whether any 
people habitually obtain wives from without their 
trie, though the Khonds of India are said to do 
so, and it is probable that the conflicts of wedding 
ceremonial are derived from other social processes, 
such as the simple form of marriage which gave 
certain persons a vested interest in the 
women of their own community. The vogue of 
the cross-cousin marriage in southern India makes it 
probable that a conflict which takes place 
between the husband and his wife's cousin in some 
parts of Malabar is a survival of that form of 
motherhood which the custom had a proscriptive 
right of divorce in each part.

It is probable that many of the other customs 
which have been regarded as survivals of the cap-
ture of women from hostile tribes are rather the 
result of the native desires to which the custom 
that women should become the wives of 
certain members of their own community.

22. Trial marriage.—Unions to which this term has 
been applied have been recorded among many 
peoples, but many, if not most, of these cases 
should be regarded as trials before marriage rather 
than as examples of marriage in the sense in 
which the term is used in this article. Temporary 
unions, especially those which are contracted with little or no ceremonial, and these 
cases shade off insensibly into trials before mar-
rriage on the one hand and into consanguineous 
of the other. In this way it is possible to 
cal a trial marriage only if there is a definite 
contract or ceremony entered upon when the 
condition that the union shall be annulled if it is 
unprofitable or if the parties to it wish to separate 
after a certain period.

23. Social functions of relatives by marriage.— 
Marriage brings the partners to it into definite 
social relations with large groups of persons in 
whom they had previously no special interest. 
Among some peoples, and especially among those 
who use the classificatory system of relationship, 
these social relations may take very definite and 
well-established form. Prominent among those 
is the custom of avoidance (see Kin, Kinship, III. 9) between a married person and his or her parents-
in-law. The restrictions on conduct are usually 
most pronounced in the case of a man and his 
wife's mother, and the avoidance in this case may 
be so strict that the two are not allowed to see 
one another or to be in the same house or even in the 
same village. A more frequent form of avoidance 
is that a man may not speak to his mother-
in-law or may not speak to her familiarly, and 
still more frequent is the custom that he may not 
use her personal name, but must address her by 
the appropriate term of relationship. A similar 
mode of conduct often accompanies the relation-
ship of a man to his wife's father, but usually the 
avoidance is less strict, and the avoidance between 
a woman and her husband's parents is also, in 
general, less rigid than that between her husband 
and her parents. Care certainly, and probably everywhere, these customs of avoidance 
are definitely associated with the idea of the likeli-
hood of sexual relations between those who avoid 
one another; and the absence of customs of avoidance is 
also shows that this is not the only explanation.

Similar customs of avoidance also occur between 
brothers- and sisters-in-law, using these terms in 
the classificatory sense; but they are usually less 
strict, and often limited to prohibition of the use 
of the personal name or of familiar conversation. 
Often these customs are combined with certain 
probabilities on the part of these relatives towards one 
other—dues which may be summed up as those 
of mutual helpfulness. This is especially the ease 
with the relationship of brother-in-law. Sometimes 
the duty of helping one another goes so far 
that a man may use any of the property of his 
brother-in-law. Sometimes the men must defend 
one another in case of danger, while the presence 
of the relationship in cases, which lead to a 
fight. Still another duty sometimes assigned 
to these relatives is that one must dig the grave 
or take the leading part in the funeral ceremonies 
of the other.

This combination of customs of avoidance with 
the obligation of mutual helpfulness may possibly 
be explained as having grown out of the relations 
which arise in the marriages in cases of elopement between hostile peoples, or they may be the result 
of the marriages which form part of the process 
of fusion of two peoples.

24. Marriages ceremonial.—The rites accom-
porny marriage vary greatly in duration and 
complexity among different peoples. Sometimes 
they are so fragmentary that they can hardly be 
said to exist, while in other cases the ceremonial 
may consist of rites of the most diverse and 
elaborate kinds, prolonged over weeks or months. 
In the lower forms of culture the ceremonial of 
marrage is, in general, scanty, especially where 
it is the custom for marriages to be contracted with little or no 
ery. And in these cases shade off insensibly into trials before marriage, 
which they are may be the result of the marriages which form part of the process of 
fusion of two peoples.

Another group of ceremonies which may have 
a motive chiefly economic is the conflicts and 
other features which are probably indications of 
interference with vested interests affected by the 
marriage.

A large group of ceremonies consists of acts 
symbolic of features of marriage. Such are the 
the joining of hands and the tying together of gar-
mets. Allied to these are the acts which seem
to show the superior status of one or other partner to the union. Thus the superiority of the bridegroom may be symbolized by presenting him with a whip or by his boxing the bride's ears, and possibly lying the toil in India and the use of the wedding ring of our own ceremony is only to impress the mind with the meaning. Elsewhere, as in Morocco, the bride may perform various acts, such as riding a pack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rite in which bride and bridegroom eat together or march round a fire. Other rites, such as that of pouring rice on wheat on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that rites of this kind at marriage form part of a general custom of performing ceremonies at any transition from one ceremonial to another— the 'rites de passage' of A. van Genne. Another motive may be the idea of the danger accompanying sexual intercourse to which so great an effect has been given by certain religious ideas.

Among features dependent on ideas of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage. In Hindustan, and in frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. The many rites of purification, the assumption of new garments, and such disguises as dress and colour, in the opposite sex may also be of this order. It is probable that some rites of marriage are designed to impart to others the spiritual sanctity which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head. The most perfect people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to actuate the ritual, its performance tends to pass more and more into the hands of persons especially set aside for the performance of this and other religious functions.

25. Marriage to inanimate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this kind of marriage is the entrance of a dancing-girl upon her career, the motive being apparently that, though the future occupation of the girl will render a husband superfluous, she shall, nevertheless, be married.

Another motive for this custom of marriage is the belief in the unlikelihood of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an inanimate object in order that his succeeding union with a woman shall be his third marriage. It is probable, also, that marriage to a tree may, in some cases, especially where this forms a part of the wedding ceremony, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an ancestor represented by, or whose representative is present in, the tree.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of a dead bachelor is a similar custom among other primitives. The Aryan practice seems to have been connected with the practice of killing the wife on the death of her husband, and has been had as its motive the desire to provide the man with a wife in the life after death. We do not know the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which the marriage is allowed, but is not subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, wives are killed as part of the ceremonial of their husbands, and there is no reason to suppose that there is any connexion between this practice and the prohibition of re-marriage, particularly as the latter practice is often found in the neighbourhood of places where the custom survives. For the law of the husband is or has been practised. Two places where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported by the fact that widows undergo a period of seclusion after death, with features suggesting that the seclusion is intended to represent a ceremonial death. It would seem that the prohibition of re-marriage is adopted when the more extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband; but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is applied to the case in which the dead husband has no children, the motive of the marriage being to raise up seed for the dead brother. The term is now used for any case in which a man marries the widow of his brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no children of his own or his younger brother's wife. It is not easy to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the levirate is a survival of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected with the maintenance of the relationship between elder and younger brother of which at present we have no knowledge.

Though the OT motive does not wholly account for the custom of the levirate, it shows itself in
other forms among many peoples. In many parts of Africa a child born to a widow even many years after the death of her husband is held to be the child of that husband, and the Dinkas of the Anglo-Egyptian Sudan have a custom according to which a widow without male offspring who is beyond the age of child-birth will purchase a girl and pay a man to beget children by this girl for her by his husband. Indeed, there is a necessity for male offspring, especially to perform religious rites, a man without sons may call on his brother or some other man to beget children by his wife.

29. Re-marriage of widowers.—We know of no people who prohibit the re-marriage of widowers, and the chief point of interest in this subject is the difference of attitude towards marrying with the deceased wife's sister. It has already been mentioned that in polygynous unions it is often the custom to marry sisters, and among people who follow this custom and many others the wife's sister is the natural spouse of a widower. Other peoples prohibit this form of union. Among many of these peoples the wife's sister is regarded as a sister, a conventional relationship often shown in terminology, and the prohibition of marriage is definitely associated with this idea. It is an expression of the general repudiation of marriage between persons who stand in the relationship of brother and sister, even when this relationship has come about through marriage, and when the use of the term is only metaphorical.

30. History of marriage. —Widely different views on this topic are at present current. On the one side are those who regard monogamy as the original state from which the other forms of marriage have developed; on the other are those who believe that monogamy has come into existence by a gradual process of evolution from an original condition of complete promiscuity through an intermediate stage of group-marriage. Lewis Morgan, who has been the chief advocate of an original state of promiscuity, based his opinion on evidence which we now know to be fallacious, and at present not only do we have no knowledge of any promiscuous people, but there is also no valid evidence that a condition of general promiscuity ever existed in the past.

The problem of group-marriage stands on a different footing. Whether the communal unions of different parts of the world be regarded as marriage or not, the fact is that such unions exist and there is much reason to believe that they have been more general in the past than they are at the present time. The nature of the classificatory system of classification is naturally explained by its origin in communal conditions. Even if this view be accepted, however, it does not commit us to the position that this condition was once universal among mankind. It is possible that only some of the main varieties of mankind have been communal. Still less does it follow that sexual communism was the primitive condition of mankind. No people now in existence can be regarded as primitive, or even as a surrogates representative of primitive conditions. Even if it be accepted that sexual communism was once widely distributed or even universal, it would remain possible, if not probable, that it is not a primitive condition, but one which only represents a stage in the evolution of human society. If, as there is much reason to believe, mankind originally lived in small groups, perhaps consisting of only one or two of the same sex, or, according to original state would have been monogamy, and, if so, the wide prevalence of communal forms of marriage must be ascribed to some factors which came into action as the social group increased in size. Even if the classification be based on the assumption that communal forms of marriage can be founded in communal conditions, it has features, such as the clear recognition of generations, which are most naturally explained by its growth out of a still earlier condition in which the unions between the sexes were monogamous, or were restricted to such small groups of persons as to approximate to that condition.

MARRIAGE (Celtic).—1. Gaul.—Polygamy does not seem to have been customary in Gaul. In the only investigations (Cesara, de Bell. Gall. vi. 19) the plural uxor(es) is certainly due to the plural urbi. At the time of Gaul's last struggle against the Romans every Gaul bemoaned that the Roman conqueror would enter his house again not to see his children, relatives, or wife (uxorem, vii. 60) until he had ridden twice through the enemy's lines. We know that, as in other places, the wife (uxor) brought a dowry, but the husband usually shared an equal amount taken from his own property.

On the death of either husband or wife, the survivor received both portions, along with the revenues accumulated after marriage (vi. 19). Marriage was often employed as a means of securing political alliances; thus Orgetorix gave his daughter to Dumnonix; and the latter had his mother wedded to a noble of the Bituriges, and married his sister and other female relatives into other cities (i. 3, 9, 18). The wife's position, then, was very much superior to that of a slave. Plutarch relates that if a wife was found guilty of adultery the women reconciled the opposing parties after a terrible civil war, and ever afterwards the Celts continued to admit their wives to their council when deliberating on peace and war, and made the disputes with their allies be ruled by their wives' judgment. An agreement was made, later, between Hannibal and the Celts that, if the Celts had any grievance against the Carthaginians, the Carthaginian general would judge, and, if the Carthaginians had any complaints against the Celts, the case would be judged by the wives of the Celts (de Mili. Virp. 6; cf. Polyben, vii. 50). The numerous stories handed down to us from the ancients about the women of the Celts—Chlomara (Polyb. xxii. 21), Cauma (Plut. de Mili. Virp. 20), Eponins (Thuc. Hist. iv. 67), Gypsias (Athen. xiii. 38; Justin, xili. 5)—speak of the passive being that the wife has remained among most barbarous peoples. Caesar, who often gives her the title of materfamilias, relates nevertheless that, when a woman of high birth wished to die, his relations assembled, and, if there was any suspicion in connexion with his death, they cross-examined his wife like a slave; if any delinquency was proved, they put her to death by fire and all kinds of torture. If there was nothing more in this than the exercise of the power
of life and death which the barbarous Franks had over his wife as well as his children (vi. 19).

Among the ancient Britons the position of woman was quite different. The women were the common possession of ten or twelve husbands, especially of brothers, or of fathers and their sons; but from these unions belonged to the man who had married the woman first (Cæsar, de Bell. Gall. v. 14). Women were common property also in Caledonia (Dio Cass. xvi. 6). In Ireland, it is stated, it was quite a natural thing for men to have intercourse with other women, with their mothers, or with their sisters (Strabo, iv. v. 4; cf. Jerome, in Just. ii. 7), but we find a much severer class in addition to his lawful wife (ctiunntir, ‘first wife’). Kinship ties were not always an obstacle to marriage: Lugaid, king of Ireland, married his mother; and a king of Leinster had his two sisters as wives.

The rights of the woman after marriage depended largely on her personal status in the community. In cases of separation for serious offence or by mutual consent, the wife received either the part of her dowry which was left her; or she brought it on her marriage-day; in dividing the property, all that she had acquired by work and manufactured articles was taken into account, and the very smallest details were controlled by law.

4. Medieval Wales and Brittany.—The laws of Wales show in their archaic parts a similar social state. The woman brought with her a dowry (eguoddef) equal to half of what her brother would have (gwaddol), and articles for her own use (argyr-frend); she received from her husband a present proportionate to her position and payable on the morning after the consummation of the marriage (cenvyll). The conditions of separation depended on how long the union had lasted. If it had continued for a period of seven years but all three, the belongings were divided equally between the couple; but, if the wife left her husband before this time, and without good reason, she had no right to anything beyond her cenvyll. Polygamy was forbidden, and the postiere seems to have been less widespread than in Ireland.

The Britons who emigrated from Great Britain to Armorica in the 9th cent. called the dowry given by the husband to the wife enpriscut, ‘face price.’ It was common property in land. Cf. also art. CHIL-DEEN (Celtic), ETHICS AND MORALITY (Celtic), POSTERAGE, II. 5-7.

VOL. VIII.—28

G. DOTTIN.

MARRIAGE (Christian).—1. The Christian ideal.—The NT does not profess to set forth any new law or theory of marriage. Our Lord’s answer to the Pharisees who questioned Him on the subject of divorce (Matt. 19:1-8, Mark 10:1-12) is the perfect ideal of marriage is sufficiently declared in the passage in Genesis which professes to record the original institution of the holy estate of matrimony (1 Cor. 7:3). The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teaching of the NT, and that part of this part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord’s deliverances on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all the same in essence. Divorce is in itself unjust and inconsistent with the original divine institution of marriage. In the Epistles we have a number of a few exhortations in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognized, and the duty of wisely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as ‘one flesh’ is duly emphasized.

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognized duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Graeco-Roman and the Jewish world in their time monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognize that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage.

Extra-matrimonial connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children, it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts could quote as distinctly forbidding the concubine, viz. 1 Co 7:1 'Let each man have his own wife, and let each woman have her own husband.'

Yet, although the NT does not profess to put forth any new theories on the subject, there can be little doubt that the religion of the gospel has done inestimable service, not only in restoring and preserving preci-
MARRIAGE (Christian)

((Christian))

ous principles which were being forgotten in an age of luxury and grievous moral laxity, but also in changing profoundly men's ideas of the marriage relation and of its duties and responsibilities. This result is the direct outcome of the teaching of the NT.

1. The spirit and teaching of the NT tend to put the mutual love of husband and wife in the foremost place. Marriage has been described as a provision, the provision of the race and the proper bringing up of children. The NT recognizes the importance of the Christian household and the rightful education of Christian children, but does not describe this as the main object of marriage. Again, marriage has been regarded as a provision for the satisfaction of a natural desire and a restraint upon unbridled indulgence. St. Paul acknowledges that marriage serves this purpose, but does not give it any great prominence (1 Co 7:9). According to the book of Genesis, marriage was instituted, in the first instance, to satisfy the need of man's social nature. Because it was 'not good that the man should be alone,' because companionship with his fellows was necessary for the perfect development of his nature, marriage was instituted to provide him with the closest interrelation for companionship. Thus the words, 'The twain shall become one flesh,' imply much more than a merely carnal relationship—a thought which is instinctively developed by St. Paul in 1 Cor 6:16.

2. It is not too much to say that our whole conception of the marriage relation has been changed, and changed for the better, by the high and honourable position accorded to woman in the NT, and the general improvement in the social status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. A system in which 'there can be no male and female' (Gal 3:28) so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3:7), must of necessity tend to elevate, and, if it may be so expressed, to equalize, the marriage relation.

When St. Paul compares the marriage-bond to that of the Jewish marriage, he is, no doubt, making use of a very familiar idea frequently expressed by the OT prophets, and applying it to the Christian community. It is easy to see that the substitution of Christ—our brother—for the awful Jehovah of the OT makes all the difference in the world, the essential difference, in fact, between the old world conception and that of the Christian Church. The ancient Romans had a high ideal of the sanctity of marriage—a ideal which, as the very bitterness of the satirists proves, was not wholly lost in the terrible immoralities of the times when Christianity made its appearance. Nevertheless, among Jews and Romans alike, as also, to a considerable extent, among the Greeks, the relation of the wife to the husband was, to all intents and purposes, that of a slave to a master, and the duties of obedience and reverence on the wife's part are put forth in the NT are too strong to be in harmony with our ideas to-day, and that we have rather possessed for the point of view of the NT. If so, this very advantage is the natural and necessary outcome of the gospel just as truly as the abolition of slavery—another social institution which is nowhere directly condemned in the NT. It may be argued on rational grounds that the natural characterisation of the sexes must involve a certain superiority and controlling power on the man's side in the nuptial relation; but such questions cannot be decided by the mere appeal to isolated texts of the Bible.

3. The union of the sexes has been purified, and the happiness of the married relation secured, by the absolute prohibition of every kind of extra-matrimonial connexion. Such connexions were regarded with the highest contempt, and, and, in consequence, the temporary connexion with the éroïs, or courtesan, came to be much more highly valued than the legitimate marriage, to the manifest injury of the home life and the status of the lawful wife. By this time, it may be said, such connexions, though not so lightly regarded as among the Greeks, were, on the whole, regarded with contemptuous indifference. Although the case was different, so far as the Jewish law was concerned, we cannot doubt that the Jews would be much influenced by the prevailing tone of thought in the Gentile world and would indulge in something of the very lax principles of morality current in their day. All such connexions are emphatically condemned in the NT, and it is expressly taught that the physical connexion of husband and wife is the obligation of the marriage-bond (see 1 Co 6:9).

4. The gospel emphatically condemned divorce as essentially sinful. In ancient Rome divorce was regarded as a common and therefore undesirable. For five hundred and twenty years it was boasted that divorce was unknown in Rome (Val. Max. ii. 1), and the very bitterness with which the satirists denounced the laxity of the times in this respect only shows that the old idea has not yet been wholly lost. Nevertheless, it is only too evident that, in the time of luxury and advanced civilization in which the gospel was first preached, divorce was to be looked upon with the utmost indecency as a commonplace fact in ordinary social life.

The Jews had no doubt as to the lawfulness of divorce (cf. art. 'Divorce,' in JEIV. [1903], 624—629), and it is probable that Mt 19:9 most truly represents the form of their question to our Lord. They desired to have His opinion, not on the question of the lawfulness of divorce, but as to the causes for which divorce might be legitimately instituted. Our Lord's answer declares the essential sinfulness of divorce as inconsistent with the original institution of marriage.

5. The teaching of St. Paul about marriage as the symbol and analogue of the mystical union of Christ with His Church (Eph 5:22-32) has had a profound effect on Christian thought, elevating and purifying the conception of marriage. Marriage for the Christian is something more than the ordinary social institution; it is, above everything else, 'a holy estate.' Man and wife are no longer twain, but one flesh. This, as has already been pointed out, implies more than a merely physical union. How much more? It may be said that it implies a perfect union of love and affection, and a perfect community of aims and interests, as also of worldly possessions, and a perfect mutual understanding. This positivist explanation may perhaps seem sufficient to the modern mind; but it is easy to see that the conception of the union between Christ and the Church might, to Hellenic readers, very naturally suggest something more, something in the nature of a metaphysical basis for the union of aims, affections, and interests. This basis may be an intellectual or, possibly, psycho-physical bond, uniting the two spirits so as to form a kind of single personality. It is quite conceivable—we may even say that it is probable—that some such idea was in the
mind of the Apostle. The idea may not seem altogether absurd to a modern metaphysician; but, if it should seem inconceivable, we are not bound to defend the infallibility of St. Paul’s metaphysics, and may be quite satisfied with the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in marriage is, essentially, that sacramental idea which constitutes the marriage bond as defined in the Middle Ages, which is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.1

2. Marriage rites and ceremonies. —The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as these rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief resume of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at least, have been attended by religious rites and ceremonies. The solemnization of marriage by a religious ceremony is, therefore, no new thing peculiar to the Christian Church. In fact, there is not a single feature in the marriage-service of the Christian communities that cannot be traced back to the sponsalia, or to the nuptial ceremonies, of the Roman Empire. On the other hand, the forms of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter so important a step as the contract of marriage without the advice and approval of the whole congregation. This is implied in the words of Ignatius:

πρόσθε δε τε τας χάριν και τας γονιμοτήτας μετα γνώσει τον εύφορον την κυρίαν της συνέλευσθα, ἵνα μή ἐστιν μικρον και μή εἰπήσην υμῖν ἵνα μην ἀποποθῇς ὕμνους ἤ ὡς ἄνθρωπος εἰς τὸν θρόνον τουτοῦ τοῦ Θεοῦ (Ep. ad Polycarp. v.)

It is inconceivable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomed marriage-rites should not have been celebrated as a solemn religious function. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 3rd cent. onwards, shows that what we should regard as civil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly discontented by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition of Christian communion, it was felt that the right and proper course was for all Christian people marrying honourably to seek the benediction of the Church.

From the 5th cent. onwards there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 802 Charlemagne prohibited marriage without benediction (Greg. vi. 363) and that so late as A.D. 900 Leo the Philosopher issued a similar edit (Novel. 80), that purely civil marriages, without benediction up to the end of the 8th or 9th cent., is not borne out by anything that we know of those ages.

Nevertheless, marriage without benediction, though thus condemned by the civil law, was, if otherwise unobjectionable, regarded as valid in the Church up to the time of the Council of Trent. That Council (A.D. 1553, sess. xxiv.) decreed that henceforth no marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, expressly conveys the principle that the ceremony is not of the essence of the sacrament, the matter of which remains, as before, the consent of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds in substance: that the civil law is good only in so far as the decrees of the Council of Trent have been published.

In the Eastern Churches the Confession of Peter Moglias of Klefl (A.D. 1616), in which the priestly benediction, the accustomed formularies, and the invocation of the Holy Spirit, are declared to be essentials of marriage, is regarded as authoritative.

The marriage-ceremonies in use all over the Christian world for hundreds of years past contain elements derived from two sources, viz. the sponsalia, the ancient ceremony of betrothal, and the nuptias, or marriage-ceremony proper. The solemn troth-pilight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the arka, pledge of the dowry—were the principal features of the betrothal ceremony. The veiling of the bride, the crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal procession to her future home, were the accustomed nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctive Christian addition to the ancient ceremonies, yet even this may have had only a special sanctification of the ancient congratulation of the family: it is even possible that in the Christian service there was some attempt to recall the ancient confarreatio, which had by Christian times become practically obsolete, but which, with its accompaniment of sacrifice and solemn benediction, was the only form recognized by Roman law for the celebration of an absolutely indissoluble marriage. The reference to the demand for ten witnesses in St. Ambrose2 would naturally suggest the confarreatio. Old customs are often preserved in an imperfect fashion even when they have become obsolete (see MARRIAGE [Historic]).

1 The following passages may be referred to as bearing out the view here presented: Clem. Alex. Ped. iii. 11, Strom. lv. 50; Tert. ad Ulp. ii. 9, de Pedigra, 4 (this passage is worth quoting in full: "ipsos enim, nuptiales ordinatum, id est non primum ecclesiasticum, sed ex antiquo, socieitate, nuptialis ordinatum. Includamus potestatem matrimonii, criminalis clandestini, quae de uxore potest assumpsit?"); Ambrose, Ep. xii. 7, condemning mixed marriages with heathen; St. Augustine, that but could not wholly prevail in the earlier centuries; Sylvest, bishop of Poitiers, Ep. ex. 1; Basil, Ep. xvii., canon ill, etc.
2 Salm. xi. 2, which expresses a feeling common to the East and West. St. Ambrose, Ep. viii. 8, contra lib. iii, etc.
There is no express evidence that the velling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the nuptials proper. In Tertullian’s time, however, it was a betrothal ceremony amongst Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day (Tert. de Virg. sex. 11.).

A passage in Tertullian would seem to imply that the giving of a ring with a harnessed heathen custom, was not practised by Christians in his day (de Idolol. xvi.). This may have been the case with some of the stricter or more old-fashioned Christians, but the universal custom of the Church from the 4th century onwards was to seem to show that the giving of the ring had always been generally practised.

The opening of the bide and bridgewoman was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his day. In the Eastern Church it prevails to the present day, and is regarded as the most important part of the marriage-ceremony, marriage in the East being often described as the “crowning.”

That sponsastra and actual nuptials were still regarded as distinct events, an interval of time might elapse, up to the middle of the 9th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 855 [PL cxix. 398]), in which he spoke of the marriage customs of the Western Church. It is, however, the etymology most probable that from much earlier times the two ceremonies had been generally combined in practice. Formal sponsastra were not required by Roman law, and as a partial result of this, it would be natural that the giving of the ring, the troth-plight, and other espousal ceremonies would take place at the actual marriage. The Anglican custom of celebrating “nowwards ward” of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between espousals and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as a somewhat grudging concession to human weakness, finds no place in the teaching of the NT. Notwithstanding the strict inculcation of the general principle of self-denial, there is nothing to suggest that Christianity condemns or repudiates any union, however higher or holier than the estate of marriage. There is just one passage, in the Apocalypse of John (14), which, however interpreted, seems to imply a preference for the virgin state; otherwise the NT gives no support to the doctrine. If St. Paul prefers the unmarried state, it is on purely utilitarian grounds, because of the greater freedom from worldly cares enjoyed by the unmarried. If we may accept the Pastoral Epistles as his, or as expressing his mind, the Apostle thought it most desirable that younger widows should contract a second marriage; marriage to what we may call ascetic ideas were widely prevalent, not only among the Essenes (q.v.) in Judaism, but in certain circles in the heathen world, it is very likely that such ideas came to some extent prevalent in the Church from the very first. The utmost prevalence of vice and immorality, the consequent demand for a resolute fight against those ‘fleshly lusts which war against the soul,’ and a sense of the strength of spiritual influences, breathing, would necessarily create a feeling of repulsion against all forms of indulgence, even the most innocent, in those newly aroused to a desire for a new and higher life. It is not surprising, therefore, that from the middle of the 3rd cent. the ascetic view should have taken a firm hold on the Christian Church and should have speedily become the predominant and, in fact, universally accepted view. The rise of monasticism and the admiration aroused by the devotion of the monks, and the monastic spirit that has always been so strong, has doubtless been one of the causes that have drawn the waters of the 4th cent., the intensified worldliness of the now fashionable Church would naturally foster the growth of the ascetic ideal. The command, ‘Love not the world’ (1 John 2:15), was also, from the middle of the 4th cent., taken more generally to mean that the world was no longer a professedly heathen world, but a community of nominal Christians. The doctrine of the earlier Gautes, Basilidians, Saturninians, Encratites, etc., and of the Manicheans, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extravagant labors of virginity in the writings of St. Jerome, and even the more moderate uterances of St. Augustine, the disparagement of the married state sometimes approaches very closely to the views of those heretics. Throughout the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disparagement of the married state, and, at last, the rise, of the state of celibacy.

The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Monastists, was one result of the ascetic spirit. This we should now regard as a mere harmless eccentricity of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the elevation of the unmarried state above the married.

It is significant that it was in the course of the 3rd cent. that the question of the propriety of clerical marriage seems first to have become an acute one. Either and even, or virgins or virgins might marry, not necessarily tied to any special order or class. It is true that certain regulations existed with regard to the marriage of the clergy, but they were less severe than in the case of the laity. Even the bishops might, for instance, become married, if they so desired (Tert. Vel. 12). The doctrine that the closest possible relation to the Church and its teaching was the highest good, and this could be attained by a life of prayer, study, and, above all, of poverty, had clearly influenced the Church from the first. In the 4th cent., however, the movement toward the ascetic ideal was in full tide, and the idea that the clergy should not marry was strongly urged. The Council of Elvas (Iliebri; A.D. 306) laid down this rule under penalty of deposition. The Council of Chalcedon (A.D. 431) made an exception for the clergy who were called to orders. In the West, the Church tolerated the custom, while in the East it was insisted on as a rule. The Church of the East long regarded it as a sin to marry, except to a virgin (Theodoret 1.14.33; Marcellinus of Ancyra 1.11.6). The Council of Ancyr (A.D. 494) laid down the principle that the clergy, in order to avoid the scandal, should not marry at all. The 1st Council of Carthage (A.D. 397) expressly forbade the marriage of a bishop.

The marriage of a bishop was in full force at this time, and the Council of Ancyr (A.D. 494) laid down the principle that the clergy, in order to avoid the scandal, should not marry at all. The 1st Council of Carthage (A.D. 397) expressly forbade the marriage of a bishop.

4 In some of his homilies—e.g. Hebrews, sermon. 4, Ev. Sophocles, sermon. 1—Chrysostom strongly asserts the equal blessedness of the married state with the single.” The opposition of the bishops to marriage was a warm advocate of the same view, but the general consensus of Christian opinion was on the other side.
of Nicon (A.D. 325) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Papinianus, who pleaded earnestly in favour of the perfect sanctity of married life. From the close of the 4th cent. the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. Pope Siricius (A.D. 355) in his Epistle to Donatus (6th cent.) asks the question whether even H. H. Milman 1 as the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church, "absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Boniface I., St. Gregory the Great, St. Anselm, and St. Dunstan, despite papal edicts and decrees of councils, the marriage of the clergy continued to exist in every part of Europe. It was regarded in general with indifference, sometimes with approval, by the laity, and was zealously condemned as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1020-85), the 'clerical concubinage' maintained its existence here and there, though it was probably never after Hildebrand's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy. By the 6th cent. (Theodosius Code; A.D. 438-450) the marriage of clerics after ordination was forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted; the wife of a bishop or abbot elected in a province was a duchess's jura, to be disposed of; or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not merely permissible but compulsory for the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected community claiming a right to exercise moral supervision and discipline over individuals. Church law and ecclesiastical jurisdiction are, therefore, intimately connected with primitive Christianity, but trace their origin to the earliest time, and even to the days of the Apostles. It was inevitable that in the Apostolic Age such questions connected with marriage should arise as would be considered suitable for the judgment of the community. In 1 Co. 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage contract for the approval of the bishop has already been quoted.

Nor is it at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage is a holy estate which the Church may claim to regulate in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two jurisdictions, and that, consequently, difficulties in practice may often result.

1 Hist. of Latin Christianity, London, 1873, i. 97; see also A. P. Pius X., "Excerpta Ex Sponsi, etc., of the Eastern Church", c.p. 1901, lect. 5. and v.; H. G. Romanius, Leit. und Judemanen der Gere-Russan Church, do. 1888; Photius, Nomenon, Paris, 1811.

But, while in theory it is very simple to say that the Christian must at all events give the 'leges Christi' the first place in his obedience, in practice he may often find himself confronted with the question whether certain practices of the Church must really be regarded as a divine ordinance. So long as the Church was a small and unimportant body in the heathen world, it did not much matter what its discipline or its members came into conflict with generally received opinions or not, and, as a general rule, in the earlier centuries Christians were content to abide by the rulings of their ecclesiastical authorities, though even then we have reason to believe that Church censures were sometimes defied or evaded when Christians wished to avail themselves of some legal right in opposition to the rule of the community. The case of mixed marriages with Jews or pagans, which often took place despite the ecclesiastical prohibitions, is an example in point. In the Middle Ages the matter was settled by allowing marriage, for Christians at all events, to become entirely an affair of the Church. Much laxity of observance might prevail, and the law-abiding men of the realm (e.g., Trullo; A.D. 680) were enough restrained by the wholesome restraints of the law; the princes of the Frankish, Teutonic, and other new nations might decline to abandon their ancient right to have a plurality of wives; but, none the less, it was fully recognized that the Church's opinion in such matters ought to be respected as supreme. It is in the modern period, since the Reformation, that the question of the two jurisdictions and the proper relations of the one to the other has come into prominence and has given occasion to many practical difficulties arising from the conflict of two different ideals. The Reformers vindicated the claims of the State and of the civil magistrate as against the extravagant claims of the mediæval Church, holding that the laws of the Christian State must be regarded as Christian laws and must be obeyed, and that no law-abiding citizen should be subjected to ecclesiastical censure or other spiritual inconvenience for neglecting some ecclesiastical ordinance, so long as he did nothing illegal or dishonourable. It was, of course, understood that no law contrary to primitively established Christianity, or to the general conscience of the Christian, could be obeyed. The Roman Catholic party, on the other hand, while in general admitting the duty of obedience to the law of the State, held that it was the province of the Church to define what should or should not be considered lawful in the matter of marriage. Both parties would agree that the object of all marriage laws should be to safeguard purity and morality, and would probably admit that the Church had no right to impose anything in opposition to the law of the State, unless it were in some sort necessary for that object; but the Reformers would by no means concede to their opponents the right to invade Church censure or other spiritual powers by legislation which it pleased, whether in conformity with the laws of the State or not. The two questions which in modern times have given occasion to most difficulty have been the question of divorce and the question of the conditions of valid marriage.

(a) Divorce.—Divorce, in the strict and proper acceptance of the term, means the complete rupture of the marriage-bond, the persons divorced being left free to marry again. Canonists and theologians, however, frequently apply the term to what is more properly called 'separation' or, when sanctioned by legal process, 'judicial separa
MARRIAGE

(Christian)

denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance except by abstaining altogether from further partner, such sinner could be necessarily refused the Church's benediction in the case of re-marriage. The latter principle has been invariably and universally accepted.

Although this principle respects the marriage relation more closely than any other offence, yet it may fairly be said that there are other things which may make married life so intolerable, and so far from being ideal, that, if divorce or separation be allowed at all, the grounds for such separation ought not in reason to be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more than a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no restoration of affection, that, where the tie of affection and attachment has been severed, the real vinculum has been ruptured, and that, therefore, such offences may rightly be put in the same category as conjugal infidelity in the strict sense of the word. 3

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be added, that the criticisms of the Synoptic Gospels have thrown a new light upon the matter and, to a certain extent, strengthened the case of those who consider divorce absolutely. A large and increasing number of competent critics are of opinion that the qualification, except for the cause of fornication, which has been added by the editors to Mt 5:32, is nowhere to be found in our Lord's teaching (e.g. A. B. Bruce, H. Weiss, H. B. Wendl, P. W. Schmidt, B. W. Bacon, G. C. Monograph), that He forbids divorce simply and absolutely. The four passages are reduced to two. The passage Mk 10:12, probably derived from the source Q, may be regarded as the original and genuine form which has been edited by the first Evangelist in Mt 5:32. It is quite evident that Mt 19:9 and Mk 10:12 are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. C. Allen, ICC, 'St. Matthew,' Edinburgh, 1912, ad loc.).

If the modern critical view is generally accepted, it will, no doubt, be admitted that the case of those who absolutely condemn divorce will be somewhat strengthened. It is not likely that the Christian Church will ever come to the state of opinion on the whole will be very much affected. The acceptance of the critical view will simply bring into greater prominence the fact that questions of this kind have never been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, ἐν σάλῳ πάντοτε καὶ ἰδίᾳ τις ἐν σάλῳ, may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those 1 Augustine frequently expressed the idea of the wider interpretation of 'fornication,' ἡ νεκρικὴν σεξουαλίαν, et saecularis infidelis, et criminalis, subdulgitum avaricii formitionem esse' (de Serm. Don. in x. v. 49). See also several passages to the same effect in the de Conjugatione Montan. In contrast to the Augustinian positions, we may, as a more likely case, hold that the legitimacy of this exegesis (I. 19). Passages from Hermas and Origen are quoted on which the view is expressed with which the value of that great utterance cannot well be denied. Our Lord as a teacher was a prophet rather than a legislator. Hence it is maintained that the passages in Matthew and Mark cannot be taken as a fuller expression of the Lord's mind. In the brief passages in the other Gospels, that we have His express sanction for divorce in case of adultery, with consequent permission to marry again in the case of the guilty partner. It is not, of course, 1 ἐν σάλῳ πάντοτε καὶ ἰδίᾳ τις ἐν σάλῳ (197); ἐν δέι τις ἐν σάλῳ (199).
who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7, where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There, however, is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he has the special case of conjugal infidelity before his mind. The prohibition is rather the other way, and it would seem as if he were merely thinking of the case of separation for what we should describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation "a mensa et thoro" (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other. Even though he were not actually considering the case of conjugal infidelity, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the Shepherd of Hermas.

The Jewish husband who divorced his wife was forbidden by the Mosaic law to break his contract; but it is characteristic of the gospel to give prominence to the possibility of repentance; and so St. Paul, writing to the Christian husband who has caused his unhallowed wife to remain unmarried (διὰ τὴν ἀφοσίαν) so that the sinner might have an opportunity for repentance with consequent restoration of the marriage, says (v. 11):

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union should continue, well and good; if not (v. 12), a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. Ro 7:2-4 for the use of the terms 'freedom' and 'bondage'). This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Innocent III, Decretales Gregorii, iv. 19, 'De Divortiis,' ch. 7).

The canon law of the Roman Catholic Church undids the idea of vincula matrimonii, if both parties at the time of marriage had been baptized Christians. In the Eastern Churches, on the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, designs by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e. after the middle of the 3rd cent.—the Fathers were strong in their denunciations of re-marriage, even in the case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. However, as far as the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more to the influence of the lay opinion than the Church of the West, where the power of the ecclesiastical authorities was more unfettered.

In the matter in hand this difference is very well illustrated in the 5th cent. by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though, he could not approve of it, and of Lactantius, as compared with the Western teachers of the same period. Yet even up to the 12th cent., when the present canon law of the Roman Church was formulated, it is evident, from a careful study of the various decrees of synods and councils, that it was not possible in practice to enforce strictly the principle of the absolute impossibility of remarriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the following Councils: Elvira (Illiberis, c. 365), Vannes (465), Agde (506), Orleans (533), Compiegne (756), and Bourges (1031); to these we may add the testimony of the Potential of Theodore of Canterbury, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation from the time of Constantine to Justinian had not influenced the ecclesiastical view, as we may see in the words of Theodosius the Second and Valentinian a wife might divorce her husband for adultery, (2) adultery, (8) homicide, (12) poisoning, (15) thefting from a church, (9) robbery, (9) cattlestealing, (10) attempts on her life, (11) introducing immoral women into the house, and (13) common assault. A husband might divorce his wife for any of the above causes, and also for (13) dining with men not relatives without her husband's permission, (4) going from home at night without permission or reasonable cause, and (15) frequenting of a church or theatre without permission; to which Justinian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid medieval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical authorities to supreme jurisdiction, made evident by the spirit of asceticism. The Protestant and Reforming divines held that divorce with the permission of re-marriage was justified in the case of adultery and, generally speaking, of cruelty or prolonged desertion. In the 16th and 17th centuries the same view was generally expressed by Anglican teachers, even by those who, like J. Cusin and H. Hammond, were generally considered as belonging to the High school in theology.

The Reformers rejected the sacramental theory of marriage, and held that the words 'the twain shall become one flesh' signified no more than a very comprehensive union based on common interest and mutual affections. The doctrine that marriage could be dissolved only by death, since husband and wife could no more cease to be husband and wife than brothers and sister to be brother and sister, seemed to them to be the natural outcome of the sacramental doctrine. This is not, indeed, wholly true; for it is quite possible to hold the sacramental view, or something very like the sacramental view, and yet to believe that grievous sin may rupture the mystic bond as really and completely as death itself. Still it is evident that rejection of the sacramental theory makes it easier to reject the strict doctrine of indissolubility.

In the next place, the Reformers maintained
MARRIAGE (Christian)

that, since separation 'a mena et thoro' was permitted, it was more conducive to morality and more in accordance with the teaching of 1 Co 7, that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin should be multiplied. Further, they pointed out that the strict enforcement of the canon law forbidding divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void ab initio, implying the continuation of the old idea of 'honourable' unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his *Doctrine and Discipline of Divorce* (1648). Probably no Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the liberty to women—in this matter. He is, indeed, wont to say that 'even if a woman be so wicked that no other man may not put asunder,' but he will by no means allow that a mere marriage contract or ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily continue a life of mutual consent and mutual submission; that marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton's two contrary principles Diluted and applied to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding age.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it has been permitted to those who are not members of the Roman Catholic Church. France is an exception. The *Code Napoleon* (1804–10) restricted the unlimited licence which had been permitted in the earlier years of the Restoration; the grounds for divorce were somewhat simplified, including 'mutual consent.' With the restoration of the monarchy (1816), the older law was again adopted and divorce was forbidden. It was not until 1884 that the provisions of the *Code Napoleon* were revived, with certain modifications, serious injuries or cruelty being admitted as sufficient cause, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the report of the Commission appointed by Edward VI. (Reformation lupum ecclesiasticum) had resulted in legislation, it is probable that the opinions of Cranmer, Bucer, and Peter Martyr in favour of divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of any alteration of the old law passed away. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation of the bed and board, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be considered as absolutely unbiased. The Marquis, however, was advised to have his second marriage legalized by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled the English practice under the *Act of 1587*. The canons of 1604 (can. 107) confirmed the authority of the ecclesiastical court to grant judicial separation, but only on condition that a definite pledge was given by the parties not to contract another marriage; and proper notice of the marriage was so arranged that, if the privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the *Divorce Act 1694*, no law had been made which dealt with marriage under the *Act of Parliament in England and 146 in Scotland*. The Act of 1807 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil act. In Scotland and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England adultery or other serious offence on the husband's part must be proved in addition. It is therefore possible for a man to be as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone; and thirdly, the commissioners were in favour of extending the grounds on which divorce might be granted so as to cover cases of wilful desertion for at least three years, cruelty, inexcusable liberty after five years' confinement, and consistent refusal to proceed with the death sentence; but a strict minority protested against this proposal, and claimed that divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1888, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

1. (2) Inasmuch as our Lord's words expressly forbid divorce except in the case of fornication or adultery, the Church cannot recognise divorce in any other case, in case, or give any sanction to the marriage of any person who has been divorced contrary to this law during the life of the other party.

2. (4) That in no case, during the lifetime of the innocent party in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage.

3. (5) That, recognizing the fact that there has always been a difference of opinion in the Church on the subject of divorce, our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be induced to refuse the sacraments and other privileges of the Church to those who under civil sanction are thus married. These resolutions were reaffirmed by the Conference of 1908, with an addition to the effect that when an innocent person has by means of a court of law divorced a spouse for adultery, and desires to enter into another contract of marriage, it is desirable that such a contract should receive the blessing of the Church, provided,

The increased wealth and luxury, and the growth of a spirit of self-indulgence so characteristic of the present age, together with the widely spread
intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience of old-fashioned restraints and a certain loosening of old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christianity has fostered makes the bond more inviolable than it ever was. The counsel of Paul should not to us be an ideal. Those who realize how much the stability and sanctity of home life depend on the unbroken firmness of the marriage-tie, and who recognize that the frequency of divorce must have a degrading effect upon individual character as well as on society in general, naturally regard with some anxiety the tendency in the present day to make divorce easier and more common. It is undoubtedly necessary for the Christian Church to make resolute protest against this tendency. It is, however, certain that the effects of nineteen centuries of Christian influence can never be wholly shaken off. We shall never again be able to regard divorce with the same easy indifferance with which it was commonly regarded in the 1st cent. of our era. Christian influence will make itself felt on behalf of the Christian Church in the modern world in the way of conciliar decrees and authoritative edicts, but by the weight of Christian public opinion guided by the principles of the NT. The question of the Equality of rank or condition between the contracting parties, though required by Roman law, has never been regarded as essential in the Christian Church, however desirable in itself.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, being regarded as perfectly honourable and moral. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would by no means uncommon—the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us seem to show that this was the case, and that such connexions were regarded by the Church as essentially marriages.

'Si quis habens uxorrem Sodis concubinam haecet, non communicaeat. Cathem qui non habet uxorrem non possit pro uxorrem concubinam habet, a communione non repellatur tantiuis ut uxorrem est. Tantum autem ut non loco uxorrem sit conjux desit concubinam.' (Istcre, ap. Gratian, D.i. 4, quoted by Saaulis Alexander, Hist. Eccl., Leura, 1774, l. 29.)

(2) The question of mixed marriages between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian ought to continue such a union so long as the unbelieving partner is willing that it should be so. The children born of such a marriage were holy subjects, i.e. Christian baptism. If the unbeliever decided to dissolve the union, 'the brother or the sister is not under bondage in such cases'—which must mean that the Christian would be at liberty to contract another marriage. Paul's use of terms 'bondage' and 'freedom,' in 1 Cor 7th the Apostle declares that a Christian is at liberty to contract marriage 'only in the Lord.' The general principles laid down in this capaper are to be regarded as the primary authority on this matter, though there has been much controversy as to the practical application, and even as to the exact meaning, of his teaching. Do the words 'only in the Lord' mean that any marriage contracted between one already a Christian and an unbeliever is unlawful? Does 'in the Lord' mean only with a fellow-Christian, and, if so, must the words of St. Paul be taken as a positive command or merely as holding out the counsel of Paul not to regard it as the ideal. Augustine expresses himself with some doubt and hesitation, but his opinion on the whole may be taken as expressing the general view of the Church in the preceding centuries. Mixed marriages with unbelievers were discouraged, and even declared, though with some hesitation, to be unlawful for Christians; yet such marriages could not be wholly prevented, nor was any penalty attached to them in the first three centuries, so far as appears. The Council of Elvira affords the earliest example of a specific penalty (five years' penance) being attached to such unions. From the beginning of the 6th cent. the decrees of councils are more numerous and more distinct, while the penalties are in general much more severe.

The civil law supported the ecclesiastical judgments, the Theodosian Code (438) decreeing a capital offence. In the Middle Ages the question of the exact interpretation of the Apostles's permission to convert to separate from unbelievers was the subject of controversy. The question being whether the separation should be the deliberate act of the unbeliever, or whether any circumstances making it impossible for the believer to remain 'wise contemnent' (Creator) might not justify the separation. The question was decided, on the whole, in the broader sense, by Innocent III. (de Divortia, 1198.)

In early times marriage with heathens and heathenwomen was generally brought under the same condemnation as marriage with Jews or pagans. It is now, however, generally recognized both in the Eastern and in Roman Catholic communions that all marriages duly celebrated between baptized persons are valid and indissoluble, though in the case where one of the parties is a heathen or heathensh the other may be subjected to censure. The decrees of the Council of Trent have been published, however, this ruling does not free those contracting mixed marriages from considerable inconvenience, inasmuch as 'due celebration' is defined to be celebration in the presence of a priest and of his laic helpers, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise celebrated is declared to be null and void. The publication of these decrees, for all practical purposes, in these countries by Pope Pius X. in the well known 'Ne temere' decree (1907) has given rise to much controversy. Roman Catholic divines defend the decrees on the ground that the Church has a right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of marriages blessed by her shall be brought up in the faith. Their opponents urge that it is inevitable that mixed marriages will sometimes occur in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to cast a slur on respectable persons who have, sincerely, from following such conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon conscience, while to demand a pledge for the future education in a church not regarded as the primary authority on this matter, though
natural rights of parents, and that such interference is unjustifiable. 1

(3) Kindred and affinity. — It was a common complaint with the Reformers, and those who sympathized with them, that the multiplication of grounds of prohibition of marriage, the custom of papal dispensations in doubtful cases or cases of illegitimacy, and the faculty with which decrees of nullity of marriage were obtained, created much uncertainty in the matter of marriage-relations and had been the source of grave scandals. This is forcibly expressed in the statute of Henry VIII. for the regulation of marriages (1535–34):

*Many persons, after long continuance together in matrimony without any allegation of either of the parties or any other at their marriage why the same marriage should not be good, had been divorced contrary to God's law on the pretext of precontract or some cause of other prohibition that God's law permitted.* Marriages have been brought into such uncertainty thereby that no marriage could be so purely knit or bounden but it should lie in either of the parties' power to prove a precontract, a kindred and alliance, or a carnal knowledge to defeat the same.

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz. blood-relationship or consanguinity, affinity or connexion by marriage, and spiritual affinity, the last of the connection between godparent and godchild, or between two persons who are godparents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of invalidity of marriage are many and different, though at the same time the custom of dispensation commonly practised in the West since the 5th cent. is unknown in the Eastern Church. In the East two cousins are not allowed to marry two sisters, and, in general, marriage between the members of two families debar the members of either from marriage with members of the other within the prohibited degree. A different method of describing relationships prevails in the two branches of the Church. In the East uncle and nephew are related in the third degree, first cousins in the fourth, and so on; marriage is forbidden within the seventh degree of kindred or affinity, natural or spiritual. In the West first cousins are related in the second degree, second cousins in the fourth, and so on, marriage being forbidden—since the Lateran Council (1215)—within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the second degree within the prohibited degree according to the Western reckoning. No trace of these somewhat burdensome restrictions is to be found before the 5th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (= Lv 18) and with the ordinary Roman law, which were, to all intents and purposes, to the same effect—marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of these codes.

The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the much-vaunted question of marriage with a deceased wife's sister. Such marriages have been long regarded by civil law in America in the British colonies, and in several European countries. In England they were not unknown prior to 1835, though condemned by the canon law of the Church of England. Such marriages were held by the civil courts to be perfectly valid and unimpeachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1836 declared all such marriages within the prohibited degrees absolutely null. After marriage was null, and in face of very strong opposition, an Act legalizing marriage with a deceased wife's sister in the United Kingdom was passed in 1908. A saving clause permitted the百花 to refuse to celebrate such marriages, but in the case of Bannister v. Thompson, in which proceedings were taken against a clergyman for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married though within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1804 to hold that such marriages are 'incestuous and unlawful and altogether null and void' (can. 99). The logical course might seem to be to revise the table of affinities, since this is an influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in the West, but, if or less ingenious have been made to prove that they are. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Levitical Law. The greater number of cases of affinity than of consanguinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's sister that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 1829) shows that the prohibitions are regarded as matters of universal moral legislation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes us regard with loathing and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment ought to prevent a degree according to the Levitical Law of Holiness (Lv 18) from being voided as morally injurious and degrading. Those who hold the sacramental view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, it is said, to tamper with so long established a custom or, indeed, with any well-established custom in connexion with a subject so delicate as the marriage relation. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider the arguments which have been brought forward on the other side.

It is very doubtful, it is urged, whether the Levitical law relating to a different state of civilization and society intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it be accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister, but, on the contrary, it is implied that such marriage is perfectly lawful (v. 19). The Jews have never regarded such
unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic canon (date probably late in the 3rd cent.) forbids such marriages to the clergy shows that they were not generally regarded at that time as unlawful per se.

No injury has resulted, it is held, either to married life or to the general tone of social morality from the permission of such marriages in America and in England. It is evident from experience that such marriages are in very many cases desired, and in large centres of population among the poorer classes it is absolutely necessary as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as respectus parentele. The marriage of a man with his step-daughter or with his nephew's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern ideas, this relationship would also prevail between a son and his mother's brother, now become the head of the house. That marriage with a deceased husband's brother was not regarded with moral repulsion, in itself, is shown by the Dispensations of the Church in the case of a man dying without children. There is no reason, therefore, for thinking that any other principle than that of the respectus parentele governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident total absence of any sense of repulsion against such unions among the majority of modern civilized people, recently engrants dispensations for the former, notwithstanding her high sacramental blessing.

Some Anglicans, while not prepared to condemn marriage with a deceased husband’s sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely allows such persons to re-marry. It was formerly held wrong or immoral, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objectionable, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical, and is at the same time unjust to Christian people. The majority of Christians have come to regard the nuptial beneficium as a right. If not absolutely essential, marriage is the right and of every Christian. If members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to hallow their union.

5. Conclusion. Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists have generally directed attention to the sternest aspect of the matter, dwelling exclusively on restraints and prohibitions, and scanning with watchful suspicion every form of natural indulgence.

Nevertheless, the Scriptural ideal of marriage has maintained its hold on the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unbridled licence and excessive indulgence; it brings with it duties and responsibilities which must tax our powers and energies to the utmost and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other connexion, we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sakes, but as a means to truer and more abiding blessedness.

Holy matrimony has been divinely instituted for man's good and happiness. In a very happy married life man is to find his trust and most lasting happiness, and to reach the fullest perfection of which his nature is capable.

Among the ancient Egyptians, Near Eastern and Graeco-Roman writers, and in the Anglo-Saxon period of England, we find the marriage law fully administered. And even down to very recent times in Europe, marriage holds a very high position, and the law is often considered to be one of the main pillars on which society rests.

MARRIAGE (Egyptian).—Amid the abundance of documents from ancient Egypt there is a singularly little to enlighten us on this subject. No representation of the ceremonial or festivities of marriage has been recognized among tomb or temple scenes; the scenes of the divine marriage of Ammon with the queen mother at Luxor and Deir el-Bahri can hardly be quoted for illustrating the human rite.

Written contracts of marriage are the oldest of their kind in the world (c. 600 B.C.), and first became common in the Ptolemaic period; and, notwithstanding the multitude of records preserved in tombs and on steles, it is difficult to ascertain what degrees of consanguinity and how many wives were permitted or usual.

To secure hereditary rights in a community with matrrialand tendencies and where women held property, polygamy was often convenient. This would especially be the case with the Pharaohs, who claimed the distinction of divine descent, and to them would be permitted acts which could hardly be allowed to their sub-

MARRIAGE (Greek). — I. General. — The Greeks, as a rule, seem to have entered upon marriage without regard to religious or prudential motives rather than on sentimental grounds. The generation of children 1 was, in fact, the recognized main end of marriage, with which went also the desire to obtain a capable housekeeper. 2 Not again motive lies at the root of that long conversation of Socrates and Ischomaches on household management, which as reported by Xenophon, is our most illuminating evidence on Greek marriage life in the 5th and 4th centuries B.C. (see esp. Euc. vii. 19 f.).

The purely physical significance of marriage in relation to the State itself found, doubtless, its strongest and most logical recognition in Sparta, where in the Epit political. 3

Monogamy was the Hellenic rule, as among the Egyptians (Herod. ii. 92). Exemptions to the contrary, however, are not lacking; e.g., in Sparta King Anaxandrides kept a double establishment (Herod. v. 40). 4 It is doubtless true enough that no definite law of Athens nor reference to any law asserting the principle can be adduced, and, on the other hand, there is no evidence of bigamy occurring in Ath

MARRIAGE (Greek).—A. Erman, Aegypten und ägypt. Leben, Tübin-
gen, 1885, p. 687; W. M. Müller, Liebesgeschichte der alten Aegypten, Leipzig, 1889, Introduction.

There were, it seems, no other prohibited degrees of affinity, except between individuals in the direct line of descent or ascent (cf. Piat. Laws, 383); there is, however, some indication that law and public opinion were not in accord in this matter (Aristoph. Frogs, 1011).

It follows from the above that even considerable disparity of age cannot have been generally regarded as an obstacle to marriage. The common Athenian woman, who was, like the wife, formally betrothed (φυγραφεῖσθαι) by her énuoia, her children being therefore legitimate, but who nevertheless was not a wife, fail to the ground, as being simply the assertion of illegitimate bias.

Here also should be mentioned Müller's theory—that after the failure of the Sicilian expedition, probably in 411 B.C., changes were introduced into the Athenian marriage law, with a view to increasing the number of citizens. His theory is that another form of marriage came into existence by the side of the regular marriage. Marriage in the proper sense could be concluded only between a Greek man and a Greek woman, but the new legislation permitted a man to take, in addition to his Athenian wife, a foreigner as a concubine, or as a secondary wife. If the latter was a Greek, she would, if the man had, in fact, no prior valid title. This Nekyssia, or secondary wife, might be either an Athenian or a foreign woman; her children would be legitimate without reference to the father's φυγραφέα. If the father left no children by his real wife, these secondaries would inherit the rights of inheritance, but this was claimed only by the φυγραφεῖσθαι, a prescribed fraction of his estate, if he left legitimate issue by the real wife. This institution was abolished on the restoration of the old law.

2. Permissible marriages.—It was illegal for an Athenian citizen to marry a foreigner, the alien wife or husband being liable to be sold into slavery (see P. L. 18, 19); the latter was expatriated, if not a citizen, from the first time of Pericles, 451 B.C. (cf. Plat. Per. 37), and in 408 B.C. Such marriage, however, was legal if Athenian citizenship had been bestowed on the husband, or if he had been admitted to a community to which the Athenian assembly had granted rights of intermarriage (φυγραφεῖσθαι); but, in spite of the law and its penalties, Athenians not infrequently did contract such marriages and smuggle their issue into their φυγραφεῖσθαι. Legally, the issue of such marriages were illegitimate (οὐδέδολοι), the issue of ἀφενήν. 

Forbidden degrees were few, the practical working of the law of affinity and adoption (παραγωγή), being to encourage marriage between near relatives, and even to enforce it. Marriage of cousins was common (cf. Dem. xiii. 74); union of uncle and niece (cf. Dem. 55), and even of aunt and nephew (case of Demostenes, father of the orator, betrothing on his death-bed his prospective widow to his nephew [Dem. xxvii. 6]). A man might marry his half-sister by the same father, but seemingly not by the same mother. 

Recht hat die Polygynia gewiss nicht anderswohin verboten, aber wahrscheinlich auch nicht gernest erlaubt. Das Gesetz erhielt nicht Bestimmung, und damit war der Willen der Bürger freier Raum gegeben. The law of Charondas of Thriss, inflicting loss of political rights on a man who gave his children away, is a stepmother (Dem. xii. 12, 14), clearly implies universal adoption (cf. Dem. 21). 

3 Pollux, iii. 21, γυναῖκας μὲν ἐν τοῖς γυναικαῖς ἀδελφὰς καὶ γοναῖς

4 At Sparta King Alexandrides had his niece to wife (Herod. v. 29). 

5. Cf. Dem. vii. 204; ἀφενήν γὰρ ἐπὶ ταῦτα ὁμοειδέως ἔργῳ σώματι ἐκ μεταφορῆς, Paus. v. 11, 7; cf. ἄνθρωπον ἀρχαίας ἑλληνιδίδας ἐκ τῆς ἀρχαιότητος ἐκ τῆς μεταφορῆς, ἀρχαίας μέντα ὑπὸ θεν, Puth. Thes. 2: 12, 8, 9; Paus. iv. 14, 9. 

6 Αὐτὸς ἓργον, ἐγγονός, ἐγγονοὶ, cf. χρόνιον μὲν ἐκ μεταφορῆς, ἐγένετο. Marriage of full brothers and sisters was, however, not outside the range of Greek ideas;
historical considerations. Primarily and originally, the ceremony of ἡγγασθαι was a literal putting of the woman by her κόρας into the hands of the suitor for price paid, the interval between the striking of the bargain and exercise of conjugal rights (γάμος) being purely ceremonial. So it was only when the newly-purchased bride. This home-leading, being that part of the entire transaction which was of a striking and necessarily public character, came to possess even greater importance, that the act of marriage came to assume its work done of the ceremony, and of the personal and social relations associated with the marriage ceremony.

5. Weddings. — The Greek γάμος was essentially a religious ceremony (πληροφ), covering the deportation of the bride from her parents’ house into that of her husband. The month Νοέμβριον (Jan.–Feb.) was generally selected, and Greek custom seems to have been prescribed in general the winter month of καλέμιον as pror for the bestowal of the bride. The speculations of the philosophers were in accord (cf. Arist. Pol. iv. (vii.) 14 = 1335a: τὸν ἐπὶ τὴν ἀνάλυσιν ὑπολείπεται ἡ νυμφή, ἡ γάμος, ὡς τῷ ἐπὶ τὸν νεότερον ἤλθεν τοὺς νύμφην γάμον ἐπιτύπωσεν). The most important pre-nuptial ceremony was that of the ἄνεμοι (νυμφαία) at Athens the ceremony was that of the νυμφαία, to the name being suitively used for the purpose—which was also the custom to set up on the tomb of those dying before marriage. The order of the details of the nuptial ceremonies is not certain, and doubtless varied according to the locality. A feast was given in the house of the father of the bride, thus securing publicity of the marriage, and attention to the married party. It was usually held in the house of the bride's parents (Demp. xx. 21; Is. viii. 18). Associated with this was the unveiling of the bride (the ἀνάκλασία).

1. Cf. Pollux, iii. 88 et τὸς γάμος ἐκείνος κ.κ. καὶ τὸν γάμον τῆς γυναῖκος γένος—εἰς τὸν γάμον τῆς γυναῖκος (cf. Arist. Pol. iv. (vii.) 14 = 1335a: τὸν ἐπὶ τὴν ἀνάλυσιν ὑπολείπεται ἡ νυμφή, ἡ γάμος, ὡς τῷ ἐπὶ τὸν νεότερον ἤλθεν τοὺς νύμφην γάμον ἐπιτύπωσεν). The most important pre-nuptial ceremony was that of the ἄνεμοι (νυμφαία) at Athens the ceremony was that of the νυμφαία, to the name being suitively used for the purpose—which was also the custom to set up on the tomb of those dying before marriage.
The procession accompanying the bride φοίνικας to her new home took place in the evening, by torchlight, the Hymnaios song being meanwhile sung to the piping of flutes (see the description of the scene on the Shield of Achilles in H. xvii. 401). It was a custom, very widespread, to make amends to the bride or her mother with a suit of clothes, giving her shoes of rare materials, and other sweetmeats (καρακίφυμα). 1

Spurious is the primitive capture of the bride by the escort of the bridge in the case of the bride from Athens, in the latter part of the 6th century, when the marriage of a young girl was often conducted as in the preceding centuries, but the bride was given over to the escort of the bride's father. 2

It is a common practice of the primitive capture of the bride by the escort of the bride from the mother's arms with simulated violence (Ptol. Lyc. 16; Dion. Hal. ii. 65; Strabo v. 165), 'Die Griechische Brautgefangnis oder die Anlagen des spartanischen Lehens' in R. o. xlii., 1201; E. Kroll, Der Brautgefangnis der Sparta, Berlin, 1894.

6. Bride-price. — In primitive times, remarks Aristotle, men bought their wives (Od. ii. 8 = 1280); cf. Plato, Lysis, 541 D). The Epic contains some instances of the bride-price (the dowry), normally calculated in oxen, paid by the suitor to the bride's father. It must sometimes have happened, even in very early times, and under a general system of marriage by purchase, that a father must give something to boot to obtain his daughter in order to secure the desired son-in-law. The economic factor, the relation between population and food-supply, may have contributed largely to the establishment of a certain scale of prices for the marriage of the bride in the bride-price. In historical times, at any rate, the bride-price has been wholly replaced by the dowry given to and with the girl by her parents.

The practice is supported by the evidence of the epigraphic tablets of Andromache. It is said that Hector took her from her father's house for the sake of her dowry (470); 3 of this claim lybidass is it said that he fell 3 from her rich of whom he had known no joy, and much had he given for her (H. xii. 287); he saw no return for his expenditure of 150,000 drachms, in order to appease Achilles, Agamemnon offers to let him have all her dowry (II. lix. 640). The argument, however, is open to question: In the Odyssey the two systems are both bound; e.g., in Od. ii. 5, vessels are c' sidered necessary to the marriage, the bride is 'given for the bride-price' (cf. Od. xvi. 77, 391, xiv. 529); but in Od. i. 277 f. — Od. i. 106 f. — Od. i. 284 f. — Od. i. 277 f. — Od. i. 284 f. — Od. i. 277 f. — Od. i. 284 f. — Od. i. 277 f. — Od. i. 284 f. it is a woman's right to claim a dowry from a man's father, as a dowry given to the woman is meant, just as by Pindar and Euripides dowries are used as equivalent to wages. 4

7. The dowry. — In historical times, in Athens, the marriage settlement or dowry (προδιος, φοίνικας) was made, and was sometimes distinguished from compensacion; for the freedom of divorce allowed by Athenian law to the husband made the position of a portlyness wife very precarious (cf. Is. lib. 28; τὸ πάντα τοῦ κοπροκατάσχεσθαι ἐκ τοῦ φόντον της τοιαύτης ἁπάντημος κακιών. That is: the husband can deprive his wife of all her dowry if she commits adultery. In the Odyssey the two systems are both bound; e.g., in Od. ii. 5, vessels are considered necessary to the marriage, the bride is 'given for the bride-price' (cf. Od. xvi. 77, 391, xiv. 529); but in Od. i. 277 f. — Od. i. 106 f. — Od. i. 284 f. — Od. i. 277 f. — Od. i. 284 f. — Od. i. 277 f. — Od. i. 284 f. it is a woman's right to claim a dowry from a man's father, as a dowry given to the woman is meant, just as by Pindar and Euripides dowries are used as equivalent to wages. 4

2. The marriage was followed by some ceremony or act for which the technical and fixed phrase was γαμηθήσεσθαι της γυναικείας των διαφορετικών εὐαγγελίων (cf. Is. lib. 70, 18; Dem. 47). This has been variously interpreted by both ancients and moderns as an introduction or registration of the wife among the members of the husband's φαύρος, or as a banquet, sacrifice, or donation. (See Wysse, loc. cit., p. 262.)

3. Cf. H. xvi. 176, 120; Od. xii. 282. It is clear from Od. xvi. 282 that the gifts were given to the bride in the case of the dowry. Hence is explained the term used in H. xvii. 352, παρθένου διάδοτος, 'realizing a high price in oxen' (see G. Murray, Rise of the Greek Epich, Oxford, 1911, p. 185 f.). In Od. xii. 282 there is talk of getting the price of a 'bad bargain' refunded. In H. xvii. 176, 352 it is said (κόρας θανάτων διαδότος, doves, does, doves, doves, doves, doves) that was serves in war in lieu of bride-price.

4. Head in his note on this passage prefers to see in it an example of a dowry list, the gifts here given to the suitor to the bride herself, and may be increased by gifts from her parents, the word μαρίαν being the technical term for such additional gifts (cf. H. xvi. 351). The example quoted from Od. vi. 139 as an illustration of this intermediate stage ('loading the bride' with gifts, a phrase which is still current in the sale of women to others with offers, &c., to the parents of the girl. The dowry.

2. Lactant. 19, 45. 83. The word (cf. Thuc. i. 176, 352) is not explained by the authors. A 'match-makers', 'marriage-brokers', or (Lanc, Less, and Myers, tr., London, 1883) 'exactors of gifts of wool'. It means 'one who gives the dowry'.
MARRIAGE (Greek, passed into the hands of the eldest son as soon as he came of age.

Under the Gortynian Code, if the wife died before her husband, having failed to recover her dowry, with the half of its fruits and half of the work of it (on the husband's hands), she left with children, he had the management and use of his dead wife's property until he died or remarried, in which cases it went to his issue.

8. Dissolution of marriage.—Dissolution of marriage in Athens was easily effected. The husband's power of repudiation was unfettered by any legal check or restriction, and it was in the hands of the husband to repudiate the woman, with her dowry, to back to her father's house. A prudent man would, as usual, summon witnesses, but need not do so. (Lys. xiv. 22.) When the wife sought divorce, she must lodge with the Archon τῆς ἀποικίας γυναίκας (Plut. Alc. 8; Andoc. iv. 14; ἀποικίας, ηθοποιήσας πρὸς τὸν ἀρχιτάτον κατὰ τὴν γυναίκας; but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, conc Damnation of the offence being visited upon the άρτημα (Dem. pro Thuk. 75). On the other hand, there is no certain that adultery of the husband gave the wife no legal right of divorce,2 and it is probable that it was not generally regarded as sufficient ground of separation.3 It is evident that the possession, or even the property, of a husband to protection to the wife against a husband's caprice, and in many households must have made her virtually without of the situation.

Two special features are of interest in this connection. It was competent for husband and wife to agree to a mutual dissolution of marriage in order that another more congenial union might be made. Thus, if there is the issue, the children benefit, except when the widow (mother) exercises her option of going back with her dowry to her father's house. Thus the dowry follows the wife, or goes to her children.

The Code of Gortyn shows that there, as at Athens, the wife's dowry was not merged in the family estate, and it was forbidden to the husband to sell or mortgage her property; for in case of dissolution of marriage the wife returned to her own family, taking with her dowry, together with half the increase thereon, and half the fruits of her own labour, as well as five oxen if the husband was to blame for the separation. On the other hand, the interests of the husband's family were protected by the provision that he might not marry another woman until three years after his wife's death, if there be a son a maker a larger gift to his mother—the intention being the same in both cases, namely, to prevent abruption of the household property by the wife, to which such gifts belonged to her absolutely. If her husband predeceased her, she might, if there were children, take her own property out of his estate into that of her second husband; the existence of issue was only so far material that, if there were children, she was limited to taking her dowry and such donation as her husband might have made within the legal limit aforesaid, and in the presence of a competent witness. If there were no children, she might take, in addition to her dowry, half the fruits of her own labour, and half the produce in the house— the balance going to his dead husband's heirs-at-law. If she did not wish to remarry, her property remained in her own hands, but if she died and then was divided among her children; she enjoyed, therefore, a more independent position than the Athenian widow, whose property, in similar circum-

1 CIL. XIV. 280: Heteroτος της Κοινωνίας φυλης ζωης (liter. from ibyros).
2 Dem. Ret. 52: κατα τον ναυν ην ειλειαν ηλατον γαρ την θεσσαλικης τινα πορφυρας και σιουν εις ειλειας εστι δικαιατα της τον γυναικην τον εκ τον θεον, αν εστιν τον ναυν της ουκ εστιν στατατον κατα τον ναυν εκ τον θεον;—The case of the Antiochus was proved for Athens in the 4th cent. B.C., by inference from the Ephesian. in the 2nd century. (Dittenberger, Syll., p. 53.)

XIV. 283: Heteroτος εις τον καισαριον χωριον εκ τον σιουν εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντις ου χωριον εις ειλειας, εντ}
9. Widows.—The Athenian regulations concerning widows were as follows: if there were any children, born or adopted, the widow must return with her dowry to her father’s house; she must, as a rule, if of suitable age, marry again in accordance with the laws of the deceased husband or those of her hēgōs (Ls. viii. 57). If there were children, she might remain in her husband’s house, where she passed under the authority of her children, if they were still minors, and under that of her oldest son when he came of age—her dowry becoming the property of her children, subject to her right to support (Dem. xlii. 27, xlv. 20). She might, however, return with her dowry to her father’s house, and be given again in marriage (Dem. x. 6 f.). The same option was open to her if, on her husband’s death, she declared herself pregnant (Dem. xlii. 75), in which case it was the Areopagis’s duty to protect her interests (Arist. Ath. Pol. 56. 7). It is clear that here again the existence of the dowry secured on mortgage put the final decision completely into the hands of the widow and her hēgōs.

10. Marriage law in the papyri.—In Egypt, under the Ptolemys, Hellenic legal ideas and principles came in contact with those of another, in some respects more highly developed, type; latterly modified by influence of legal conception and practices of the Romans. In the Papyri we have, therefore, to distinguish between the enochial marriage, in which the parties are Egyptians, and the Hellenic marriage, the regulations concerning which are partly derived from the older Greek law and partly developed under the influence of native models.

The technical term for marriage in the Papyri is phoros or evanagevos. Division of marriage (and probably therefore entry upon marriage) is no longer a purely private act, but requires an licence, a h̄ap̄e (by which is meant, in the older law (cf. T. 26. xlvii. 19: ἀπροκαταλήπτησις ὧν ἐποιεῖ). In the case of Christian marriage (after the middle of the 3rd cent.) the licence became more formalized, though it was not compulsory. The law of marriage was very difficult to apply in practice, because the Greek language is not well understood. The marriage contract itself was by no means clear as yet.

The exact marriage-contract exhibits, when taken together, the following elements. (1) Statement of the giving or receiving of the woman in marriage; e.g., Mitheus-Wilckes, Grundzüge, ii. 317, 329: ἔγγαμος ὠς ἡ ἐνδομοτικὴ ἐναρξία γεννησθείσης παρὰ τοῦ ἐνδομοτικοῦ, as in the older Greek law (cf. T. ix. 57: ἐνδοφαίρεσις). (2) Acknowledgment of receipt of the dowry brought by the woman. (3) Mutual marital obligations; the husband had to support the wife, to treat her property with care, to provide for her maintenance in sickness (εἰς ὑπομονήν ὑπόκειται), and engaged not to repudiate her unless she was guilty of adultery or of ἀποφύγεσις (ἀποφύγεσις), and to look after their joint interests in the household (ἐν τῷ ἀκομάντῳ τοῦ ἐν τῷ ἐντόκτῳ). (4) The consent of the mutual obligations; the husband guilty of breach of his promises must repay forthwith (ἀποκαταστάσει) the dowry with addition of half its amount (ὑπὲρ ὑπομονῆς ὑπόθεσιν); the wife so guilty lost her dowry entirely. Apparently the ordinary courts settled disputes so arising. (5) Divorce on the man’s side (ἀκοπασία), was tantamount to breach of his promise ἐκθέσεως, and rendered him liable to the aforesaid penalty; separation on the woman’s part (ἀλλοτρία) was not regarded as breach of promise, but provision was made for reparation of the dowry within a stated time. That is to say, the husband had entirely lost that unsecured power of repossession, under condition of simply repaying the dowry, which belonged to him under the older Hellenic law. On the other hand, here also the overwhelming importance which it had in Hellas. Here also it was a matter of money, wealth, and expressed in

"The relation of the wife in this position of society was one of security and dignity. She was, indeed, under the complete control of her husband, though we do not know to what extent of personal restraint his power extended. But she was the mistress (patris) of the household, as her husband was the master (patris). In the marriage-hymn of the Rigveda (X. 86. 26), the wife is the ‘holiest marriage between heaven and earth’ (सर्वभूतानां सुपर्वमित्रेण), and exercise of authority over her father-in-law, and her husband’s brothers and unmarried sisters. The case contemplated seems to be one in which the eldest son of a family marries at a time when his father, through decrepitude, has ceased to exercise full control over the family, and when, therefore, the wife of the eldest son becomes the mistress of the joint family. This is inconsistent with the respect elsewhere mentioned as due to a daughter-in-law to her father-in-law, which doubtless applies to the case in which the father is still able to control his sons. Exercise of rightful authority of the head of the household, therefore, is a participator in the sacred rites performed by her husband; but in this regard a certain determination of her position can be traced in the Vedic period, doubtless as the result of the influence of the priestly class and the rule that women could not be priests. This regulation seems to have been due to the view that women were impure as compared with men, which seems to have been at the root of the practice, which appears first in the Satapatha Brāhmaṇa (1. ix. 2. 12), requiring a woman to eat after her husband, just"
MARRIAGE (Hindu)

as in Bengal at the present day a wife normally feeds on the remnants of her husband's meal.

Naturally enough, there were different views as to the character of women. A wife completes a husband and is half of his soul, we are told (Bṛhadāraṇyaka Upaniṣad, I. iv. 11, Sotapattika Brāhmaṇa, v. ii. 1. 10), and her good qualities are frequently mentioned. On the other hand, the Maṅgalya Śatikā (I. x. 11, III. vi. 5) describes women and their activity as connected with misfortune, and classifies her with dice and drink as one of the three chief evils. Elsewhere (Tarātirīya Śatikā, v. v. 8. 2) a good woman is ranked below even a bad man, and the Kṛṣṭākha Śatikā (xxx. 1) alludes sarcastically to her ability to obtain things from her husband by cajolery at night.

The most important function of a wife was doubtless that of bringing into the world a son in order to perform the necessary funeral rites to his father and to continue the race. Adoption, indeed, was known as early as the Rigveda, but it was not popular (cf. art. ADOPTION [Hindu]), and lack of a son (sūdravartā) was regarded as the greatest of evils.

On the other hand, the birth of a daughter was regarded as a misfortune; the Aitareya Brāhmaṇa (vii. 15) contrasts a daughter as ni-mery (kṛpya) with a son as nīnī (niṣī). But, at the view once widely held, that the Vedic Indians practised infanticide in the case of girls, has been disproved by G. von Böhttingk.

We had no part; men alone went to the assembly. But, while the position of the wife in the sacrificial ritual was narrowed by the priests, there is evidence that women took part in the speculative activity as well as in the practical manifestations of the rite. In the 6th cent. B.C. in the Upaniṣads, we learn there not only of several women teachers, who may or may not have been married, but also of one of the two wives of the great sage Yājñavalkya, who shared his husband's intellectual activities.

In the Gṛhyasūtras and Dharmasūtras, which mark the end of the Vedic period proper, and which may be held to represent the views of the period from the 4th cent. B.C. onwards, in the epics (c. 200 B.C.—A.D. 200), in the Arthasastra, and in the Kāmaśūtra we find in full force the tendencies which reveal themselves in the earlier classical literature, and which were observed in their development at the present day.

Different types of marriage are now recognized and classified, being assigned to the different classes of the population. Married men of all ages are still allowed; thus the warrior class is permitted to marry by capture or to form love matches, while the Kāmaśūtra permits love matches generally.

Against these special cases must be set the general rule, which first appears as a counsel of perfection in the Māṇḍūkya (I. vii. 8) and Gobhila Gṛhyasūtras (III. iv. 6), but which by the time of the later Śūtrī—i.e., not later probably than the beginning of the Christian era—has won full acceptance, viz., that it was sinful on the part of a father to allow his daughter to attain puberty without being married, and the girl herself fell to the condition of a Sūdrā (slavery). This hom involved degradation on the part of a husband. The date of marriage is placed earlier and earlier as the authority is later in date. Thus the Śūtrī of Manus (I. 194) fixes the age of the girl at marriage at 12 and 12 or 24 respectively; the later work of Bṛhaspati (ZDMG xlvii. [1892] 416 f.) and the didactic portion of the Mahābhārata (XIII. xiv. 19) give the age in these cases as 10 and 7 respectively, while the later work fixes 4 to 6 and 10 as the lower and 8 as the upper limit. There is abundant evidence that these dates were not merely theoretical: the old marriage-ceremonial, which included as its essential part the taking of the bride to her new home, whence the name of marriage (viśāho) was derived, was divided into two parts: the actual ceremony took place shortly after the betrothal (viḥādina), but the taking of the bride to her husband's home was delayed until after puberty. The unmarried daughter (kumārī) was living at home, and was taken by her father (svāsini or svāsvini), whose connexion with her parents was still recognized to the extent that, contrary to the rule that no mourning was observed for a married daughter, a brief period of mourning was prescribed in the event of her death before her departure from her old home. The early prevalence of the custom is also vouched for by the Greek authorities, and was noted by al-Bīrūnī in the 11th cent. A.D. At the present time, despite the efforts of reformers, it is still the prevailing practice among all Hindus who stand under the influence of the Brāhmans to marry their daughters before puberty, and the practice has spread even among Mahānymānas.

The better side of such marriages is put before us in the Harita Śūtrī (iii. 3). The wife is to be treated with reverence and to be regarded as his eternal home. She is to prepare his food, set out what is left over by her husband and sons, wash the utensils, strew cow-dung on the floor, make the domestic offerings, embrace her husband's feet before and after her meal, and, in the hot season fan him, support his head when he is weary, and so forth. On the other hand, to her falls the place of honour in the household, and she is undeniably the mistress of her daughter and other women living under her husband's roof. The description in the Śūtrī is confirmed by the literature and by the practice of the present day.

On the other hand, it must be noted that the intellectual achievements of women in India since the rule of early marriage became effective have not been in accord with the normal development which might have been expected from the state of society depicted in the Upaniṣads, and the heroes of the epic and the classical poetry are chosen, as a rule, from those women who, for some reason or other, have not fallen under the operation of the ordinary practices. The evidence in the proverbial literature of the dōmitras which were attributed to women in general and wives in particular.

2. Forms of marriage.—In the Vedic period the normal form of marriage appears to have been one in which much was left to the choice of the two persons concerned. It is, at any rate, not proved that the father could control the marriage of either son or daughter of mature age, though doubtless parents often arranged marriages for their children. Of the practice of giving a bride-price there is clear evidence from the later Śatikās, but there is also clear evidence of the practice of a father and, in his absence, a brother giving a dowry to enable a daughter or sister to obtain a husband; or a daughter might be given to a priest in return for his assistance at a Sāman sacrifice. In the practice of marriage by capture by the Rigveda, where we hear (i. xxi. 19, xxvii. 20, x. xxxix. 7, lxxv. 12) of the carrying off by Viṣṇu of the daughter of the Parāsmita, we have a case of the wanted will of the maiden but against her father's desire. The normal marriage was duly celebrated at the house of the father of the bride, and its ceremonial, which is fully described in the Gṛhyasūtras, is marked by many features given to be observed in the marriage-rite of other Indo-European and non-Indo-European peoples. Of these practices the most

MARRIAGE (Hindu)

important and wide-spread were the solemn hand-
ning over of the maiden by her father (kanyādāna),
the joining of the right hands of the bride and
bridegroom (pañjabhāgana), the recitation of Vedic
formulae, including a speech by the bridegroom to
the bride asserting their unity, the offering of liba-
tiery in the fire, the seven steps taken together
by the wedded pair, and, finally, the taking away
of the bride to her new home by the bridegroom.
These observances, the several mutations customary,
described the kernel of the normal marriage
ceremonial throughout the Middle Ages, and much
of the ritual is still observed at the present day.\footnote{1}

In the Smṛti literature eight forms of marriage
are recognized and described, but with many
differences in detail. In the case of Brāhmaṇas
Manu (iii. 24) recognizes as approved four forms:
the brāhma, daiva, ārya, and prajāpatya. The
characteristics of these forms are that in the first
the father spontaneously offers his daughter to a
suitable husband, in the second he gives her to a
priest engaged in performing a rite for him, in the
third the suitor gives a pair of oxen, and in the
fourth the initiative in proposing the marriage
comes from the bridegroom. The first and fourth
forms, therefore, practically represent marriages
by mutual consent and agreement, while the second
and third have traces of marriage by purchase,
though the texts are careful to explain that the
pair of oxen was not intended as a price (śūkla),
but was to be given to the daughter by her father
as a mark of honour. It is perfectly clear, however,
that the original sense of the custom was a
purchase, and this fact is borne out by references
in the older Gṛhyasthānas of Pāraskara (t. viii. 18)
and Śākhāgīru (t. viii. 16) to the practice of giving
the father-in-law a hundred oxen with a
wagon, and by the recognition in the Gṛhya-
sthānas of the Kāthaka and the Manava schools
(t. vii. 11) of a marriage by which the bride-price
was paid in money to the father.

Marriage by purchase was recognized among the
warrior class; in the Mahābhārata (t. xxii. 9f), we
are told that Pāṇḍu paid the Madra king in gold,
jewels, horses, elephants, ornaments etc., for
the hand of his sister, and that the purchase of women
was the family practice of the king. Still more
was the custom prevalent among the lower classes
of society, and the type of marriage in which
allowed the Vaiśyas and the Śudrās the asura
marriage, which was an open, out-and-out sale,
though he condemns the practice in toto. But
facts have prevailed over the objections of the Brāhmaṇas
in the sale of children, and even at the present
day marriage by purchase is common enough in
Bombay, Madras, and the Panjab, and is the
normal form in Assam. In Bengal it is restricted
to the lower classes of the population, but there
the practice of the purchase of bridegrooms prevails
instead, the practice of child-marriage having
placed a high price on eligible husbands.

In addition to the asura form, the warrior class
was allowed the riśkaṇa, the gandharva, and the
pāñśāda forms, though the last is condemned by
Manu along with the asura as altogether improper.
The former type of marriage was marriage by
capture in its simplest form, and its performance
is related of many of the heroes of the epic, though
the rape of women of high rank is elsewhere
regarded as not in keeping with the spirit of the
epic, we hear little of this remarkable privilege
of the warrior class, and this practice has left no
survivals in modern India, though it is found among
some primitive hill tribes, where it is of
independent origin. In the defective
\footnote{1 See M. Winternitz, Das altindoische Hochzeitstein, Vienna,
1892; A. Weber and E. Haas, Indische Studien, v. 177-411.}
nature of the ritual given in the Gṛhyaśastras
have been interpreted in this somewhat hasty
interpretation is neither necessary nor probable. The
gandharva rite, which some authorities recognize
as applicable to all classes, and which the Kāmas-
śāstra eulogizes as the best form of all, is described
as a mutual invitation of the fire by
the wedded pair, on the ground that the observance
of these formalities would compel the parents of
the bride to recognize the validity of the marriage.
The pāñśāda, which is variously described, was
marriage with a girl when drunk or insane, and
is not recognized as a legitimate form by some
authorities, like Apaśānta and Vaiśīṣṭa.

For the Vaiṣyas and Śudrās the forms of marriage
recognized were the gandharva and the asura with,
according to some authorities, the pāñśāda. In
modern times the forms of marriage recognized are,
even for Vaiṣyas and Śudrās, either the asura or
the brāhma, under which term is understood a
form of marriage containing the essentials of the
first four forms of the Smṛtis.

The Smṛtis do not recognize a form of marriage
which plays a great part in the later forms of
jyotisthāna, or self-choice, a ceremony at which a princess
chooses for herself a suitor at a grand assembly held
for the purpose. The act of choice might be pre-
ceded by a trial of strength on the part of the
suits, the victor being rewarded with the hand
of the maiden, and, even when this formality was
omitted, it is probable enough that the choice was
only nominally free, and that the princess was
guided by the will of her father or brother. The
only svayāmvara which the Smṛtis mention is the right of a daughter in any class, if her father does
not find her a husband, to seek one for herself;
in this case the daughter ceases to have any right
to any ornaments received from her own family,
while the husband need not pay any bride-price,
and is permitted to sell her away.

Only the first four forms of marriage are at
all religions in character; the marriage hymn of
the Rigveda (x. 85), which serves to provide
verses for the normal form of marriage, deals
with marriage in general and the ceremonies
of all weddings of Soma, the moon, with Sūryā, the daughter of the sun. This
legend is certainly recondite in character, and it is
legitimate to deduce from this fact, and from the
fact that the Smṛtis do not deal with the forms of
marriage, that the religious ceremonial was not
the essential or primitive part even of the higher
forms of marriage.

3. Restrictions on marriage.—It is uncertain
how far the modern rule of marriage, which permits
alliance between members of the same
caste only, was in vogue in the early Vedic period,
when the distinction of castes (jāti) was only in
process of evolution from the system of classes
(varṇa). It is clear from the Brāhmaṇas that
purity of descent was an important qualification
for Brāhmaṇship, but cases are recorded (e.g.,
Aitareya Brāhmaṇa, ii. 19) which show that the
son of a Brāhmaṇ and a Śudrā wife might yet be a
Brāhmaṇ, and that Brāhmaṇs could marry the
daughters of members of the warrior class.
With
this agrees the evidence of the Gṛhyaśastras and
Dharmaśastras, which recognize with a good deal
of agreement the right of each class to marry
women of the classes below them in the established
order, Brāhmaṇ, Kṣatriya, Vaiśya, and Sudra,
and that this agreement does not differ seriously
only on the validity of marriages
with the Śudrā women. Arrian, probably on the
authority of Megasthenes, records (Indica, xii. 8)
that marriages were not allowed between cousins, probably a reference to the castes which were certainly in existence by 300 B.C. The Buddhist texts yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Manu still recognizes mixed marriages subject to the rule of hypergamy, but the later Sautriti tend to rule them out as objectionable. The modern rule is strict against mixed marriages, excluding the possibility of marriage to the modern castes; but the date when this practice finally prevailed is unknown, as even late texts repeat the permission for such marriages sanctioned by the older authorities, and the Kulin Brāhmans of Bengal still observe themselves of this now peculiarly very valuable privilege.

Simultaneously with the growth of the prohibition of marriage within the caste were developed restrictions on marriage within the family. In one hymn in the Rigveda (x. 10) the marriage of brother and sister is expressly treated as improper, and the son is no reason to suppose that this was an innovation, as suggested by Weber. No other restriction is alluded to, and the Sutapatha Brāhmaṇa expressly refers (t. viii. 3. 6) to marriage as being the rule by the third or fourth generation, the former being the rule, according to the commentator, among the Kānas, the latter among the Sārvāṇas, while the Dāśāstivas, or people of the same speech as the Brāhmans, were deemed to be the son of the father's sister or daughter of the mother's brother, but not, apparently, with the son of the father's brother or the daughter of the mother's sister. The Brāhmaṇas and the Dharmasutras in effect agree in prescribing that marriage with the son of the gotra (q.v. as his father, or a supinātī of his mother, and these terms extended at least to all relatives within five degrees on the mother's side and seven on the father's side. Later texts add to the restrictions by extending the prohibitions in the case of the mother, and by forbidding unions with the daughter of a spiritual teacher or pupil. At the same time, concessions are made to local customs, and the practice of marriage of cousins in S. India is recognized by Bāhuḍāyana (c. 400), who permits marrying outside the gotra, a term of wide extension and indefinite sense, but covering all those of the same family name, is recorded by al-Biruni, and is the general rule at the present day throughout India, and is only repeated, as against the higher castes.

The chief exceptions are found in S. India, where some tribes practise the opposite rule of endogamy. In Rājputana, among the Rājkuta who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture; but there is no sufficient evidence for the view that the development of the custom generally was connected with marriage by capture.

Of much less importance are the restrictions arising from the idea of the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a penance, and not a fasting duty. This rule is, however, very old, being found in the Vajra-
ceda (Mātrānayāni Sūktāvat, iv. 1), and recognized throughout the later literature. In the south branches of the Brāhmaṇas adopt the practice of a widow marrying the eldest brother with a branch of a tree in order to avoid the evil result of a breach of this rule by a younger brother.

The bride should be a virgin, and the importance of this rule lies in the fact that it renders the re-marriage of widows difficult. In the Rigveda (vi. xlix. 5) there is some indication that a woman might re-marry if her husband had disappeared and could not be found or heard of, and in the Atharva-veda (ix. v. 27 f.) mention is made of a spell to secure that a woman could not be united in the next world with her second, not her first, husband. The reference here may be to re-marriage in the case of an absent husband or one who had lost caste. The doctrine of Manu is that a woman should never be re-married, and that the marriage formulae are intended only for maidens, but he admits one exception in the case of a woman whose husband died before the completion of the marriage. Other authorities permit re-marriage in the case where a husband has disappeared, is dead, has entered a monastic order, is impotent, or has been expelled from his caste; but the authorities differ widely as to the length and condition of absence which entitle a woman to re-marriage. The son of a widow who has re-married (pavamanave) is ranked by Manu and other authorities only among the ninth class, and the daughter of the same marriage is still more degraded and forbidden marriage by Hindu law. But the dislike of re-marriage was one which developed gradually; the actual repulsion of such a son first occurs in Bṛhaspati (xxv. 11), and the forbidden comforts of the marriage of a widow occurs only in the Agniparyasts and later works. The objections to such marriages in modern India are very strong among those castes which lay most stress on exogamy-marriage, and, despite the enactments of the Hindu and British laws, and efforts of social reformers, they are still disapproved by the higher castes.

In the case of a man, while impotence was recognized and marriage forbidden, he might contract a new marriage, the marriage was not in itself null, and even mental derangement was not regarded as justifying re-marriage on the part of the wife.

4. Polygamy.—The practice of polygamy among the Vedic Indus is abundantly proved by direct references in the Rigveda and other texts, though in the modern monogamy has become the rule. In the case of a Vedic king four wives are expressly mentioned—the mohiśi, the first wedded, the paryvṛtā, or divorced (apparently one who bore no son), the evadā, or favourite, and the palāgnī, who is explained as the daughter of one of the court officials. The mohiśi seems to have been the wife proper, though the others were evidently not mere concubines. In the Arthasastra, the Sautriti, and the epic the rule is laid down that a man may have wives from his own caste and each of those below his, either including or excluding the Sūdra, and in such cases the wife of the same caste was the wife par excellence (alakṣamapati), with whom the husband performed his religious duties. The heroes and Brāhmans of the epic are frequently represented as having several wives, but one of them always ranks first and, generally, in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to caste and, within the caste, to date of marriage might influence the selection of the new husband, who could debase a wife from her position as chief wife; in that case he was required to make her a present equivalent to that made to the new wife whom he was marrying. The modern rule permits the six direct progeny of both the husband and wife as he wishes without any need for justification or consent on the part of his existing wives.

4 See Jolly, Zieht und Sitte, p. 83.
In addition to wives proper, the Śatīs recognize the existence of concubines (ādāsī, bhūṣjuṣās), who were distinguished from wives by not being married. In due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was considered polyandry; similarly, for the present day the keeping of concubines by wealthy Hindus is a recognized usage.

The Śatīs show some preference throughout for monogamy, and in due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was considered polyandry; similarly, for the present day the keeping of concubines by wealthy Hindus is a recognized usage.

5. Polyandry.—While polygamy is recognized in the Vedic period, though chiefly among kings and important Bṛahmans, there is no clear trace of polyandry, all the passages adduced from the Rigveda (xxv. 37. 8, 12) and Ṛgvedā (XIV. i. 44, 52, 61, li. 14, 17) admitting of more probable explanations. On the other hand, the heroes of the epic, the five Pāndavas, are represented as marrying Draupadī and having her as their chief wife, their other wives being largely explained and defended in the epic. This form of polyandry is recognized by Bṛhaspati (xxv. 20) as practised in the south, and by Ṛgvedā (ii. xvii. 2) as an antiquated use. At the present day polyandry is still found among Bṛahmans, Rajputs, and Śūdras alike in Kumaon, where children are shared by the brothers as by the Pāndavas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Todas the wife of the eldest brother has to serve often as the wife of the younger brothers also, and the practice is common in the case of the Hindu tribes. The custom also prevails in the south among the Nairs of the Kanara country and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetan and Dravidian tribes, and there is no indication that the practice was ever widely spread among them.

6. Divorce.—The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the Dravidian and Tibeto-Burman usages, marriages among Hindus were seldom broken by divorce. In the Śatīs literature, however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (tyāgota), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a serious crime, which must be explained by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and in certain cases be punished with death. Out, according to other authorities, it could be explained by severe penances. Any serious offence against a husband might, according to Yājñavalkya (i. 72), be a ground of divorce, and Nārada (xii. 52, 53) gives as offences justifying such treatment attempts to murder, wasting property, or the procuring of abortion. In modern Hindu law divorce depends on local custom and, where allowed, is permitted only for adultery, but divorces

are very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearances, long-continued absence, impotency, or lack of caste of the husband.

7. Position of widows.—In the funeral rites of the Rigveda the wife of the dead man is represented (X. xvii. 7) as lying beside him on the pyre and as being summoned to leave the dead in order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmistakable suggests that the custom to this effect, and the Aṣṭāvargya (XVIII. iii. 1) refers to this as an old practice. It is not however approved by the Bṛahmans of the Vedic age, for it is not mentioned in the sūtras, and appears first in the late Vaiśākha Gṛhyasūtras (vii. 2) and in interpolated passages of the Vaiṣṇavī Sūtras (xxv. 14, xx. 39). The later Śatīs approve it, but not without occasional dissent. In the epic it plays little part; though one of Pāndu's wives insisted on being burned with her husband (Mahābhāratā, i. exxv. 31); but in the later romances and historical works it is often mentioned, and the custom is found to be celebrated a satī. Forbidden in British India in 1829, it was observed in 1839 in the Panjāb at the death of Ranjit Singh, and in 1877 at that of the Maharājā of Nepal. The primitive character of the practice is shown by the fact that other attendants perished with the queen or queen when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from home, she might be burned alone (anumārāga), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy doubtless reinforced considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the Śatīs and modern usages, despite the efforts of reformers, condemn to a life of fasting, devotions to her dead husband, pilgrimages, and abstinence from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to maintain her so long as she remained faithful to her late husband. The later texts also recognize her right to remarry without permission of her husband, but only on condition that she remained unmarried—a disability which is not altered by Act XV. of 1866. The harshness of the rule is better realized when it is remembered that the practice of child-marriages enormously increases the number of widows.

In the Rigveda it seems to have been the practice the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already. This, the natural interpretation of the funeral hymn (X. xviii. 8; cf. also xi. 2), is borne out by the fact that the modern usage in the Panjāb, which has preserved much of ancient practice, is for a man to marry his brother's widow, with the result that many men have two wives. In the sūtras, however, this practice is not prohibited, and is even given to the brother of the dead or, if there is no brother, a near kinsman to beget a son with the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, was managed by his mother or by his real father, to
MARRIAGE

whose estate also he might in certain cases succeed by. An extension of the principle the texts allow as a sacrifice to the point another man during his life to beget a son for him, and in the case the right to act in these cases is frequently recognized as specially appropriate for Brahmanas. But the general tendency of the later Smṛta is otherwise, and shows a movement to increasing restrictions or absolutely forbidden, and in modern times the practice of appointment (nīgaṇa) has been replaced by the more primitive formalism of the texts. Here, for the first time, all the wives have an equal right of succession.

Distinct from the property obtained by inheritance was the stridhana of the wife, which is mentioned by Gautama, but is considered in detail in the Arthāśāstra (ii. 59) and by Viṣṇu (xvii. 18). It included any presents from parents, sons, brothers, or kinsmen, the marriage gifts, the bride-price when given by her father to her, and the fine paid by her husband in the case where she was degraded from her position as chief wife in favour of another. This property fell on her death to her daughters, if she had any; if not, apparently to her own. Later, as the law of marriage passed from the husband to the husband's lawful wife, and the stridhana thus passed to the wife, who was also entitled to receive from her sons any property promised by their father and paid to her, while gifts to wives were encouraged, if not exceeding 2000 paras. In some cases the unmarried daughter was preferred to the married in heirship to her mother. In the later Kātyāyana Smṛti (xx. 80 ff.) are found elaborated rules as to the power of a woman over her stridhana. She was at liberty to dispose in any way of presents from living relatives, even if consisting of immovables; her husband could not use them without her consent. If a husband also entitled to receive from her sons any property promised by their father and paid to her, while gifts to wives were encouraged, if not exceeding 2000 paras. In some cases the unmarried daughter was preferred to the married in heirship to her mother. In the later Kātyāyana Smṛti (xv. 1 ff.) she was given the power of disposal only when her husband's consent was obtained.

Marriage and property.—The widow of the dead man, according to the Nirukta (iii. 4) and Baudhāyana (ii. 34), was denied the power of becoming an heir. Gautama (xxvii. 21 ff.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of nīgaṇa for providing the son in whose absence alone could the mother be heir. In Viṣṇu (xvii. 44) and Viṣṇavālyaka (ii. 535) first found the expression of the widow as the next heir in the absence of a son. Gautama (ii. 291) places the Bhāratavarṣa Upaniṣad (vi. 11) calls a spell to expiate adultery with the wife of a Brahman, and that the Bhārata-Veda Gṛhyasūtra (ii. 29) advises a husband how to proceed in case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently allude to cases of infidelity, and the Arthāśāstra and the Smṛtis recognize as one kind of the gudhātāpanna, or secretly born, an illegitimate son who can, nevertheless, succeed to the property of his mother's lawful husband. Kātyāyana (ii. 34) and Āpastamba (ii. 37) preserve a saying of a sage to the mythical king Jānaka, referring to a time when the virtuous married women was lightly estimated, and the Mahābhārata refers (c. xxxvii. 4) to a time when wives were used in common, a practice terminated by Svētaketu. The lack of chastity of the women of the East is recorded by Bṛhaspati (ii. 50). Too much stress need not, however, be laid on this reference to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times may be made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

Marriage and property.—The widow of the dead man, according to the Nirukta (ii. 44—46), was denied the power of becoming an heir. Gautama (xxvii. 21 ff.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of nīgaṇa for providing the son in whose absence alone could the mother be heir. In Viṣṇu (xvii. 44) and Viṣṇavālyaka (ii. 535) first found the expression of the widow as the next heir in the absence of a son. The lack of chastity of the women of the East is recorded by Bṛhaspati (ii. 50). Too much stress need not, however, be laid on this reference to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times may be made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

In addition to many notices scattered throughout the literature, the Hindu marriage of the end of the Vedic period and in the classical period is dealt with in the Brāhmaṇa-sūtras and in the Smṛtis with their commentaries, and in comprehensive treatises based on the Smṛtis. Of the śruti texts, those of Āpastamba, Gāndhāra, and Baudhāyana have been translated by G. Bihler (SBE ii. 5 [1897] and xlv. [1902]). The Śrīvī of Manu has also been translated by Bihler (6, xx. [1886]), and those of Viṣṇu, Narada, and Bṛhaspati by J. Jolly (ii, viii [1900] and xxiii. [1899]). Viṣṇavālyaka has been translated by A. B. Reck, Berlin, 1904. Of these Manu is the oldest, Viṣṇavālyaka may be dated in the 4th cent. A.D., Narada about A.D. 600, and Bṛhaspati about 800. Somewhat earlier than Bṛhaspati is Kātyāyana. Of the later texts the Mābhārata of Viṣṇuśesāstra (c. A.D. 1199) is the most important, as having become authoritative throughout India, as well as in Bengal. Of modern works, for the Vedic period the most important are A. A. B. Schmidt, Indische Studien, Band 1, Leipzig, 1849-54, v. and x.; and H. Zimmer, Alteisches Leben, Berlin, 1879; and A. A. Macdonell and A. B. Keith, Vedic India, London, 1907. For the epics a valuable translation is that of G. W. F.裏哲, on which account of the epic art. In JAGS xiii. [1899], and much material is also given by D. S. Schmidt, Rechtszwecke und Eigentum, Leipzig, 1892. The rules of the law-books and the modern law are dealt with in R. West and G. Bihler, Digest of Hindu Law, London, 1884, and in J. N. Beare, Hindu Law, London, 1883, and a summary of the whole subject with full citations and references is given by J. Jolly, in Recht und Sitten, Straßburg, 1896 (GÖAP ii. 5).

A. BERRIEDALE KEITH.
MARRIAGE (Iranian).—1. Zoroastrian.—According to the sacred texts of Zoroastrianism, marriage is divinely favoured (Vendidad, iv. 47; cf. the Zoroastrians in Asadi, Pre.). The second happiest place in the world is that in which a righteous man sets up his household (Vend. iii. 2). In the Gathas the pair who wed are urged to strive to live a life of righteousness and to help one another in good works (XV. 14).

Since marriage is regarded as almost a religious duty, Zoroastrians hold it a meritorious act to help their co-religionists to enter the wedded state, and such an act may even determine atoms to stone for sin (Vend. iv. 44, xiv. 10). It is by no means unusual, therefore, for Parsis to enjoin by will or by a trust that a certain amount of their wealth be expended in aiding poor brides to marry, and certain institutions, as the Parsi Panchayats of Bombay, provide special funds for this purpose.

The Parsi community in India has passed through so many vicissitudes that it is difficult to determine which of the various marriage customs of the Parsis were originally Zoroastrian, although it appears that marriage is practically certain that the strictly religious portion comes under this category. At the very least, most of the marriage ceremonies, as listed in the Avesta, are to be found in the Parsi ritual as a whole.

According to the Avesta, both manhood and womanhood were attained at the age of 15 (Ya. ix. 5; Y. viii. 13 f., xiv. 17; Vend. xiv. 15; Burnadkhiin, iii. 19). Since in the Avesta we find maidens praying for suitable husbands (Ya. ix. 23; Y. v. 87), it would appear that childhood marriage was not practised. The ritual recited at the marriage ceremony, bidding the pair to express their consent after truthfulness consideration, points in the same direction. The present Parsi Marriage Act enforces the age of 21 for males and 18 for females; if the contracting pair are below that age, the marriage certificate must be signed by their parents.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first (Hormuzd) or twentieth (Bahrám) day of the Parsi month. At times, especially in Mofussil (provincial) towns, the parties consult Hindu astrologers, who name certain days as auspicious days for the betrothal, marriage, etc. The match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choices with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the Pand-namak-tâ-Astropândâ (XII.) and attested in the Sat-namâz (tr. A. G. and E. Warner, London, 1906 ff., i. 177 ff., ii. 125, 86-88) by the marriages of the three sons of Farûd with the daughters of the king of Yemen, of Rustam with Talmínah, and of Farûd with Sudden. Until recently professional match-makers were not unknown, and they still exercise a certain amount of influence.

On the day of betrothal 2 the women of the groom's family visit the house of the bride and present silver coins to her, and the groom receives a similar present from the women of the bride's family. The older term for this ceremony, now obsolete, was ndl nmzad shudan, 1 to marry (from Pers. nmzad shudan), since after the betrothal the bride receives in religious recitals of prayers for her the name of the groom, even though, by some isbâ, marriage does not take place. An unexpected bride is said to have bought 'with an nmzad' (vâd karâd înm). Betrothal is regarded as a solemn part of the marriage ceremony, the idrugav-nota, or 'pledge of the magnitude of a man' (Vend. iv. 5, 4, 5, 15), being considered by the Zoroastrians as a part of the marriage. At the present time the priests do not take an active part in the betrothal, except in Mofussil towns, where two priests—one for each family—formally ask the parents that the bride and groom respectively be given in marriage to each other. The priests took part in the nemzad (betrothal) at Sarat in the middle of the 15th cent. (Anquetil du Perron, Zend-Avesta, Paris, 1771, ii. 447), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other.

The betrothal is followed by the Divô, when a lamp (oliv) is lit early in the morning, and the women of the two families interchange visits and gifts. This day is regarded as more important than the betrothal proper, because on it the dresses and utensils of the bride and groom are divided among the bride's family. The Divô is followed by the Ashôr, when the dowry given by the bride's father is presented to the groom's family. 3 Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are inauspicious.

In some families the astrologer's services are engaged before the marriage. When matches are arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

In the morning or afternoon of the marriage day the bride and groom take a bath—a custom which is mentioned in the Sâh-namâz (ed. T. Macan, Calcutta, 1829, p. 1579), where Bahram Gar takes his Indian wife to the fire temple for this purpose. The religious portion of the wedding is usually performed shortly after sunset, perhaps to symbolize that, just as day and night unite and blend, so the wedded pair should be united in woe and woe.

The marriage is generally celebrated with much pomp, as was the case in ancient Iran, as recorded in the Dinkart (ed. P. B. Sanjana, Bombay, 1874 ff., ii. 57). The groom, wearing a white ceremonial robe and holding a shawl in his hand, is received among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (kunka). In colour this is held by some to represent in India an earlier custom of the sacrifice of animal life, and in shape to symbolize the brilliant, fructifying sun, whereas the ground kunka of the bride is supposed to be a symbol of the moon, which absorbs the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men seat themselves in the compound, and the women in the house. At the door, the side posts of which—like those of the groom's house—have been the average sum which a groom of moderate means was expected to give for his bride, with Pahlavi, Pusan, and Sarx. texts and tr., see Shapurji Ravazi Hodivala, Zoroastrianism and His Contemporaries in the Rigveda, Bombay, 1913, pp. 77-80.

1 Geiger, Ostiran, Kultur, p. 241, sees in this passage an allusion to the case of a bride who was ndl npaš šudan, to marry (from Pers. nmzad šudan), since after the

2 A considerable time might elapse between betrothal and marriage (Vend. xv. 87; cf. Geiger, p. 241).

3 In early times it was apparently more customary for the groom to give presents. The sun of 2000 silver dirhams and 2 gold dirhams bestowed in the house of the bride have been the average sum which a groom of moderate means was expected to give for his bride. See also the bride with Pahlavi, Pusan, and Sarx. texts and tr., see Shapurji Ravazi Hodivala, Zoroastrianism and His Contemporaries in the Rigveda, Bombay, 1913, pp. 77-80.
MARRIAGE

the Next-of-kin cross necessary little the 150 times A progeny said thus belonging making Nishapur odd which chkdedd least a passed raw English formerly is held thus survive adoption also to other, to a pair, who a in united the chairs officiating a pair, which tied the attendant the grains the The the 'fertility), now and the grains are followed the recital of the rite of the perquisite a of the husband's wedding the bride's rice, is the mark of mark of the grains of rice, is of the head.

An egg, a coo-mus, and a little tray of water are passed three times round the groom's head and cast away, and in the course of the evening the women of the bride's family make the groom dip his hand in a water-jar, in which he leaves a coin on the threshold. This is also the custom for the feet of the bride and groom to be washed after the marriage ceremony, but the adoption of English foot-gear has caused this to survive only in washing the tip of the boots.

After the groom has been thus welcomed at the door, he is made to cross the threshold without touching it, and with his right foot first, these precautions being observed also by the bride when she first enters her husband's house. Having entered the house, the groom awaits the bride, who sits on his left, the chairs being placed in the centre of the apartment. One stands beside the chairs and rice is thrown over the pair, and lighted candles, while beside the bride is a small vessel of ghi and molasses (typifying gentleness and sweetness); a servant stands before the pair, and, holding one hand anact a little frankincense in the other. Beside each of the contracting parties stands a witness, usually the nearest kin, and generally married persons.

The following requisites are necessary for a regular marriage: (1) the marriage must be solemnized before an assembly of at least five persons who have been summoned for this special occasion; other than nuclear cognate parties are asked by the officiating priest whether they consent to be united in wedlock; (2) the hands of bride and groom are joined (bhathvar, 'hand-fastening') and a symbolic knot also plays a prominent part in the ceremony; (3) the actual marriage ceremony is followed by a benediction accompanied by sprinkling with rice, etc.

Before being seated side by side, the bride and groom sit opposite each other, separated by a piece of cloth as a curtain. The senior officiating priest now joins the right hands of the pair, and, with the recital of the Yathā aha swīryō, a piece of cake is passed round the chairs of both so as to form a circle, the ends of the cloth being tied together. With a repetition of the Yathā aha swīryō the khathevar is then performed by fastening the right hands with twists of raw yarn, which is passed round the hands seven times, then seven times round the bridal pair, and, finally, an equal number of times round the knot in the encircling cloth. The fee for this ceremony is the perquisite of the family priests, even much of the rite may be performed by other priests. The attendant next puts frankincense on the fire, and the curtain between the pair is dropped, while the bride and groom throw rice over each other a few grains of rice which they have held in their left hands. The one who first throws the rice is said to 'win,' and during the recital of the benedictions the priest then throws rice over the pair. They are now seated side by side.

The more strictly religious portion of the ceremony follows. Two priests stand before the pair, the elder of whom blesses them, praying that Ahura Mazda may grant them 'progeny of sons and grandsons, abundant means, strong friendship, bodily strength, long life, and an existence of 150 years.' He then asks the witness who stands beside the groom whether, on behalf of the bride's family, he consents to the marriage 'in accordance with the rites and rules of the Mazdayasians, promising to pay her [the bride] 2000 dirhams of pure white silver and 12 dinars of real gold of Nishapur coinage.' A similar question is asked of the witness for the bride's family, and then of the contracting parties, the questions being repeated thrice. Next follows the recital, by both the officiating priests, of the Pāzand-nāme or Aitwād (tr. F. Spigel, Avesta überetzt, Leipzig, 1852-63, iii. 232-254, and, in great part, by the present writer, in Dosabhai Frampji Karaka, Hist. of the Parsis, I. 182 E.). The adoration is followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the yazatas (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Iran, that they may live long, and have many children, etc. A portion of this address is repeated in Sanskrit—probably a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hearers.

The Aitwād is followed by another group of benedictions in Pāzand, this group being called the Fan dovati (ed. E. K. Antlä, Pāzand Texte, Bombay, 1892, p. 160 i. The adoration is followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the yazatas (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Iran, that they may live long, and have many children, etc. A portion of this address is repeated in Sanskrit—probably a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hearers.

The marriage ritual is repeated at midnight. From Anquetil du Perron (l. p. 319, ii. 555, n. 5) this appears to be a reminiscence of the earlier Persian custom when the Kirmān, the marriage ceremony was performed at midnight. This custom is not, however, universal. A number of minor usages, not regarded in any way as part of the Aitwād are observed, especially by women, in the Mufussil towns. The first of these, which, like the others of this class, is now observed more as a joke, is chhedā chedī, in which the nearest friends or relatives tie the skirt of the jāmā, or flowing dress, of the groom to that of the sārī of the bride; thus united, the pair go to the bridegroom's house. This is followed by foot-washing (cf. above), after which comes the dahi ḫermā, the bride and groom taking turns in partaking of food consisting of ḥapi (curd) and rice from the same dish, each giving the other to eat. Another custom, now almost obsolete, is making the bride and groom play eki bēkī ('odd or even'). Each takes several rupees in the right hand and asks the other whether the number is odd (eki) or even (bēkī); if the opposite party guesses the number rightly, he or she is said to win. The underlying principle is probably similar to that of the rivalry of bride and groom to be the first to cast rice on the other, as already noted.

Marriage songs are sung frequently through the nuptial ceremony, and the whole concludes with a banquet, at which courses of fish (a symbol of good omen) and sweets are essential, but meat is forbidden, either out of deference to Hindu scruples or from motives of economy.

JIVANJI JAMSHEDJI MODI

2. Next-of-kin marriage.—A problem of peculiar delicacy in connexion with Iranian marriage is the question of the next-of-kin (Pahlavi avasthā, usually translated 'next-of-kin marriage.') The modern Parsis maintain that this is a marriage

The etymology of the word is apparently avasthā, 'belonging to, dependent on,' the occurrence of av in and urvād, ‘marriage’ (C. Bartholomäus, Altiran. Worterb., Strassburg, 1852-55; tr. 352). For a less probable explanation based on native tradition (Dinband, iii. 82, tr. West, SBE xvii. 600), see Darmesteter, Zend Avesta, i. 126 n.
two centuries later, the reformer of Magianism, Bah Afrid, forbad his followers to marry their mothers, sisters, daughters, or nieces (al-Biruni, *Chronology of Ancient Nations*, tr. E. Bachmann, London, 1875, p. 194; al-Shahristani, *Religionsgeschichte und Philosophenschulen*, tr. T. Haarbrücker, Halle, 1850–51, i. 254; cf. also above, p. 401). Yet there was a tradition, reported by Mas'udi (*Fawârides d'or*, tr. and ed. M. de Meynard and F. P. Chatelain, Paris, 1861–77, ii. 145), that Faridun (the Thracian-son of the Avesta) begot a daughter by his granddaughter, another by his great-grand-daughter, and another by his stock (cf. also Just, *Iran. Namensbuch*, Marburg, 1895, p. 192).

In the Pahlavi texts allusions to zvôkôdâs are common. Observance of it is one of the surest signs of piety in the coming days of evil, i.e. the Arab conquest (*Bahaun Yt.* ii. 57, 61); it expiates mortal sin and forms the one insurmountable barrier to the attacks of Aeshm, the incarnation of Fury (*Sgâyast il-Shyáht*, viii. 18, xviii. 31); it is especially ominous to demons, whose power it impairs (Dinkart, i. 82); it is the second of the seven good works of religion, and its neglect the fourth sin of the thirty three sins, and it is reckoned as one of the thirty-three ways of gaining heaven (Dink-â Mângiy-î-Xrât, iv. 4, xxxvi. 7, xxxvii. 12). It is even said to have been prescribed by Zarathushtra himself (Dinkart, iii. 105; cf. Selections of Zôf-Sporam, xxiii. 13), and to arrange it is a work of merit (Dâstân-i-Dink, Ixxvii. 19). In a word, from it is to arise 'complete progress in the world... even unto the very purpose of the renovation of the universe' (ib. Ixxvii. 6ff.).

These Pahlavi texts, however, cast no light on the precise connotation of the term. Yet there are references in this literature which are the reverse of ambiguous. The Pahlavi synopsis of the 18th farzâr of the lost Avesta *Yaratânmanaw Nask* clearly refers to the zvôkôdâs of brother and sister (Dinkart, ix. xii. 27); and that of the 21st farzâr of the lost Bakr Nask to the wedlock of father and daughter (ib. lxvii. 7, 9). The most explicit statement is found in the account of a controversy between a Zoroastrian theologian and a Jewish objector, recorded in Dinkart, iii. 82 (tr. West, pp. 399–410):

'The consummation of the mutual assistance of men is Khêtherkôdâs, an exchange of persons, of folk, and, among near kinsfolk, that with those next-of-kin; and the mutual connection of the three kinds of nearest kin— which are father and daughter, son and mother, brother and sister—is the most complete that I have considered.'

These three forms are illustrated, respectively, by the union between Ahura Mazda and his daughter Spenta Armita (cf. on Yxv. 4, 4; above; and on its probable origin as a cosmogonic myth of the *igôd râmôs* of Heaven and Earth, cf. L. H. Gray, *AEW* vii. [1904] 367), from which sprang the primordial being Gayôyart; by the return of some of the dying Gayôyart to Spenta Armita (cf. also Bundahšôn, xv. 1; Dâstân-i-Dînk, lxv. 6; al-Biruni, p. 107), resulting in the birth of the first human pair, Man and Mayâzûd; and by their prolic union (cf. also Dinkart, vii. i. 10, Dâstân-i-Dînk, xxxviii. 82, Ixv., Ixvii. 4ff.)

In the 8th chapter of a Pahlavi Ridâyast, probably

1 The statement that Arti-Virîd had seven sisters, and all these seven sisters were as wise as Virîd (Arti-Virîf Nâmak, ii. 1–3, 7–10; eclectically earlier than the 60th cent. a.d.) may be compared, but it is not current in the Pahlavi version. For another possible, though uncertain, reference to the zvôkôdâs of Ahura Mazda and Spenta Armita, see Dinkart, i. xxxvi. 7. There is an unmistakable allusion to it in Dinkart, iii. xxxvi. Darmesteter, *Zend-Avesta*, i. 541, n. 12, misunderstands the Pahlavi concept (cf. above, n. 4, as containing a possible reference to zvôkôdâs; for the correct rendering see Milic, p. 3761.

2 The statement that Arti-Virîd had seven sisters, and all these seven sisters were as wise as Virîd (Arti-Virîf Nâmak, ii. 1–3, 7–10; eclectically earlier than the 60th cent. a.d.) may be compared, but it is not current in the Pahlavi version. For another possible, though uncertain, reference to the zvôkôdâs of Ahura Mazda and Spenta Armita, see Dinkart, i. xxxvi. 7. There is an unmistakable allusion to it in Dinkart, iii. xxxvi. Darmesteter, *Zend-Avesta*, i. 541, n. 12, misunderstands the Pahlavi concept (cf. above, n. 4, as containing a possible reference to zvôkôdâs; for the correct rendering see Milic, p. 3761.

3 The statement that Arti-Virîd had seven sisters, and all these seven sisters were as wise as Virîd (Arti-Virîf Nâmak, ii. 1–3, 7–10; eclectically earlier than the 60th cent. a.d.) may be compared, but it is not current in the Pahlavi version. For another possible, though uncertain, reference to the zvôkôdâs of Ahura Mazda and Spenta Armita, see Dinkart, i. xxxvi. 7. There is an unmistakable allusion to it in Dinkart, iii. xxxvi. Darmesteter, *Zend-Avesta*, i. 541, n. 12, misunderstands the Pahlavi concept (cf. above, n. 4, as containing a possible reference to zvôkôdâs; for the correct rendering see Milic, p. 3761.)

4 All West, p. 397; later (SBE xxxvi. [1893] 362) he retranslates the passage so that zvôkôdâs is not necessarily implied.

5 Another stock source is given, e.g. in Dinkart, vi. 9 (1904), 837; E. Westermarck, *Hist. of Human Marriage*, London, 1894, pp. 290–296. Cf. also "Egyptian" section above.
written between the Arab conquest of Persia and the 16th cent., found preceding the Dādistan-i-Dīnk in many MSS, there is a lengthy polemic in favour of MARRIAGE as distinguished from the legendary period of Zoroastrianism, except the Sasanian royal instance mentioned above, and the marriage of Mihram-gushanap. We must also note that incest was abhorrent to the Indian branch of the Indo-Iranian family (for the strong exogamy of India see J. Jolly, Recht und Sitte [=GAP ii. 5], Strassburg, 1896, p. 62 f.). Among the other Indo-European peoples it is permitted marriage between cousins, nephews and nieces, and half-brothers and half-sisters on the paternal side (see ‘Greek’ section, above, § 2); the ancient Frisians and Lithuanians are said to have allowed marriage with any kinswoman except one’s own mother (O. Schrader, Reallex. der indogerm. Altertumskunde, Strassburg, 1901, p. 906 f.) and equal licence is ascribed to the ancient Irish (cf. ‘Celtic’ section, above).

There remain, then, two hypotheses on the origin of incestuous zwatvadatha. (a) It may be derived from a non-Indo-European people. This is the theory maintained by Moulton (pp. 294–295), who holds that the custom was Magian, and so neither Indo-European nor Semitic (cf. 16, chs. vii., viii., and art. MAGI—not Iranian at all. (b) Without denying or even criticizing Moulton’s argument, even probable, it may be suggested that the practice was genuinely Persian. In view of the extremely primitive character of the Baltslavonic peoples, who have, without reason, been claimed as Magian, it is obvious that the native Persian was the original type of Indo-European civilization (S. Feist, Kultur... der Indogerm. Berlin, 1913, p. 478; O. Schrader, Sprachvergleichung und Urgeschichte, Jena, 1907, p. 291; and art. ARVOST RELIGION, passim), the occurrence among them—as among the almost equally primitive ancient Irish—of what is practically identical with incestuous zwatvadatha is certainly significant. On this hypothesis Zarathushtra’s reformation did away with zwatvadatha, as with so much else of the older Iranian which his loftier teaching rejected; but, when the modern Persian religion returned, it restored zwatvadatha, together with many other things that had been discarded. In the present state of our knowledge the writer does not attempt to decide between these hypotheses; he merely presents his own for what it is worth.

Whatever the origin of incestuous zwatvadatha—which is perhaps nothing but endogamy carried to its extreme—so much is clear: pure Zoroastrianism never knew it; it was practised by non-Zoroastrian Persians; it was advocated at least during the Sasanian and early Arab periods by a Magianized priesthood; it appears to have then been a theological ideal, promulgated by the religious and political situation of the period, rather than an actual practice; it was constantly resisted (even as an ideal) by a large—and, doubtless, ever increasing—body of the faithful; it has disappeared. It had a certain justification during the days of Arab persecution, and Parsi should recognize this. It has been one of the chief taunts of the type flung against every religion by the ignorant or malevolent outsider, and no Parsi can be reproached for his sensitiveness on the subject. Yet it was at worst
MARRIAGE (Japanese and Korean) 459

merely a temporary exccurse, never a real tenet; and it was repudiated, no doubt, as intensely by Zarathushtra as by his modern followers.

3. Old Persian.—Concerning the specifically Old Persian marriage record there is only meagre information. Strabo tells us (p. 733) that marriages were performed at the beginning of the vernal equinox, and that before the bridegroom went to the nuptial couch he ate an apple or cancel marrow, but nothing else. In the day. We also learn from Arrian (Anab. vii. 4) that a seat of honour (θρόνος) was provided for the groom, and that his prospective bride came after the cups had gone round (μετά τῶν ποτῶν), being welcomed by her husband with the giving of the right hand and a kiss. Naturally a banquet formed part of the wedding (Est 3:1; Jos. Ant. xi. vi. 2).

To the Scythians (p.e.), at least some of whom were Iranians, the Greeks ascribed the practice of each man having free access to the wives of his fellow-travellers, although Herodotus (i. 216, lvi. 104) restricts this to the Massagetae and Agathryni. The latter were possibly Iranian (cf. H. Minna, Scythians and Greeks, Cambridge, 1913, p. 102; cf. W. Tomaschek, in Fainy-Wissowa, i. 764 f.). The former are considered Iranian— their name is certainly Persian in origin (cf. Gesch. von Eran, Göttingen and Leipzig, 1896—1905, li. 771, 240, Erzähler, Berlin, 1901, p. 156), though this is doubted by Minna (p. 111), who, preferring the belief of such a marriage or local collection of tribes without an ethnic unity. In any event, as he says (p. 93), this form of marriage (for other Indo-European instances of which see H. Hirt, Indogerman. Schriften, 1891-97, p. 708; Schenker, Rasse und Religion, p. 634) is properly non-Aryan.

See, further, art. FAMILY (Persian).

LOUIS H. GRAY.

MARRIAGE (Japanese and Korean).—I. JAPAN. — From ancient times marriage and marriage regulations have been considered important by the Japanese people. Both ideas and legal regulations concerning marriage, however, seem to have passed through three distinct stages: (1) that of the age of the Taibo-ryo (A.D. 701—1192), much influenced by Chinese morals and laws; (2) that of feudalism (from the end of the 12th cent. to the Meiji era), moulded by bushido, Japanese knightly morality, to a much higher development; and (3) that of the period since the Restoration, characterized by Christian influences.

1. Consent of parties.—The chief point of difference between Japanese and Western marriage laws may be found in the fact that from the earliest times the Japanese people have been grouped in families as social units, to one of which every individual belongs, and in each family there is an authority of which the head (patris potestas) has varied from age to age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the Taibo-ryo was often very large, including over one hundred persons, but the numbers gradually decreased, until at present a family usually consists of only live or six individuals. Marriage under any system is the union of two families, the status of the contracting parties, but also means the removal of a member of one group to another. In other words, marriage is an act between a man and a woman and also between two families. Therefore, when a man and a woman decide to marry, not only the free contract of the parties is required, but also the consent of the heads of the two families.

From the time of the Taibo-ryo to that of the Meiji era, a marriage engagement was first made between the parents of the parties, and often the consent of the parties was not required, for filial obedience was considered one of the highest and noblest virtues. Lately, with the development of the idea of freedom, the point of view has somewhat changed; according to the regulations of the present civil code, it is necessary to have the free consent of the parties in addition to the consent of the parents. Moreover, when a man reaches the age of thirty and a woman that of twenty-five, the law no longer requires the consent of the parents for the sanction of marriage.

2. Caste.—While there is the strict sense of the term never existed in Japan, by the Taibo-ryo a humble class, which was not allowed to intermarry with others, was recognized, and the child of such a marriage, or mixed race, was looked upon with intense contempt. While the feudal age the people were divided into lords, knights, and commoners including farmers, artisans, and merchants; and intermarriage required special permission. A marriage between members of the lordly class required sanction from the central government until 1871. According to the Taibo-ryo, Buddhist priests were not allowed to marry; and one who transgressed was sent to a far island or put to death; but this ban was abolished in 1872.

3. Age of consent.—At the time of the Taibo-ryo a male was allowed to marry at the age of 15 and a female at 13; but the present civil code requires the age of 17 for the male and 15 for the female. There has been no prohibition of marriage on account of age.

4. Monogamy.—The laws and customs in Japan forbade multiple marriages, not conubium. According to the Taibo-ryo, concubines occupied the position of relatives in the second degree, and no limitation was made as to their number. The child by a concubine held an inheritance right. The custom of concubinage was prevalent among the noble and rich, and society did not condemn it. Moreover, in the opinion of some, concubinage was considered necessary, with the existing family system, in order to preserve the family line from possible extinction. In the Meiji era, however, through the influence of Christianity, the idea of monogamy became strong; and in 1882 concubinage ceased to be recognized by law, though the long-established custom still lingered to some extent.

5. Second marriage.—When a marriage contract has been dissolved by divorce or the death of one of the parties, a second marriage is permitted. In ancient times, however, the proverb 'A chaste woman never sees two men' had great force; and for a woman to refrain from re-marriage was regarded as a beautiful virtue. There were not a few women who cut off their hair, or became priestesses, or committed suicide, on hearing of the death of their husbands in battle. Such forms of devotion gained authority on the head (patris potestas) has varied from age to age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the
6. Marriage of adulterers.—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry—a prohibition which has existed since the time of the Talmud-ryo. Social disapproval of such union is very severe; and, even when the husband or wife forgives and consents, the prohibition is binding and cannot be evaded, so that the latter and thus marriage are separated by law.

7. Marriage of relatives.—Marriage between near relatives in direct and collateral lines is forbidden for the sake of health and protection from degeneracy. The marriage of cousins, or of a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are not rare.

8. Relation of husband and wife.—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband's consent in many cases, and the wife inherits under the supervision of her husband while they are married. In Japan a woman's private property is very limited; and those who possess property in addition to their dresses and ornaments are very few; for, according to the ancient regulations, property is inherited by the eldest son, and only in the case of disinheri-

ance or of there being no son by marriage or adoption can the woman inherit in regular succession. Thus, as a rule, the wife has no property, but is dependent upon her husband for support. Some change, therefore, must be made in the law of succession if the position of woman is to be materially altered.

9. Engagement and ceremony of marriage.—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Talmud-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintance. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a matchmaker who renders service to the parties for a fee. The engagement, made with the consent of both parties, is a consideration and exchange of gifts, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage inter-

mediary, escorting the bride in her best attire, takes her seat at an appointed place, and the bride and bridgroom drink wine, exchanging caps nine times. This constitutes the entire ceremony, after which the bride and bridgroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in accordance with this law; but the church has assumed the holding of services at Shintô shrines. The law, however, requires no religious sanction, as it is only a civil marriage that is officially recognized.

II. Divorces.—Before the promulgation of the present civil code (1896-98), divorce, or, rather, repudiation, was very easily secured at the hus-

band's will. No legal procedure was necessary beyond the husband's signature, but the law fixed seven causes, one of which must exist in order to make the repudiation effective. Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: (a) by mutual consent; and (b) by the former requires only the mutual consent of the parties, while the latter requires an act of the court upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1920 show the total number of marriages to have been 5,583,106 and of divorces 60,390, i.e., about 7 divorces out of 1000 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. Judicial separation.—This system does not exist in Japan.

II. KORAS.—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 20 for men and 16 for women. It is usual for a girl of 12 or 13 to be married to a boy of 10 or less. Wives are usually a few years older than their husbands. Second marriage is not prohibited, but is considered a disgrace by most; and those above the middle class never re-marry. Arrangements for marriages, however, is inherited by the eldest son, or elder brothers and relatives in authority; and the wishes of those who are to be married are not taken into account. The ceremony is per-

formed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can divorce, and the wife has no way of refusal. There is no system of divorce by consent, but by the law, since annulment, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,993, and that of divorces only 9,005.

T. NAKAJIMA.

MARRIAGE (Jewish).—Every man is bound to marry a wife in order to beget children, and he who fails on this point is given no hope; but his diminishment of the Divine Presence (ei-khônâh) to depart from Israel—thus runs the rule in the Code of Qara (Shall tłum. Arrâh, Zhben à-ráz, i. 1). It is based on ancient Rabbinic (Tannaitic) prescription (Ybhônâh, 63b, 64a), itself inferred from well-known Biblical texts (esp. On 96 combined with following verse), and it is emphasized by the somewhat later apothegms: "Whoever has no wife rests without blessing"; such a one "is not called a man" (ib. 62b). Marriage was the means by which the human race imprinted on the generations the divine image; it, with the haben, expresses the consequent domestic felicity, was the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and Gentile systems of marriage (Isidh., 1). The social obligation was strengthened by Messianic hopes: "the son of David—i.e., the Messiah—will not come until all souls stored up for earthly life have been born" (Yhid., 62a).

Though the purpose of marriage was the begetting of children, other aspects of marital life were fully appreciated (see art. FAMILY [Jewish]); and the quotations of M. Mielendorff in his Life of the Messiah (New York, 1901, p. 18.) and E. A. Brill in his Jewish Life in the Middle Ages,
London, 1886, p. 114). Very profound is the Rabbinic view that man's **yiver** is in this instance the cause of good; but for his passions man would not build a house, nor marry a wife, nor beget children (Genes. Rabbi, ch. ix.). Man, in Rabbinic theism, is impelled by his impulses (inclinations), one good and one evil, both of which are to be used in turning him to the love of God (Sifre on Deut. 6, in: Mishniah Brakhot, i. 5). The bodily passions are not in themselves evil (cf. F. C. Porter, "Yeper Hara," in Yale Bibliographical vol. of Biblical and Semitic Studies, New York, 1901, pp. 91-106, and M. Lazarus, Ethics of Judaism, Eng. tr., Philadelphia, 1901, ii. 70 f.). Torah was the means by which the control of passion and its direction into holy ends were effected (cf. Maimonides, Guide of the Perplexed, iii. 33). The Rabbinic theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: "Three are associated in every human being: God, father, and mother" (Qaddishinah, 306).

With regard to the authority of parents in arranging the marriages of their children while minors see **ER** i. 742. When the parties were adult, the consent of parents was not necessary to make a marriage valid (Maimonides, Issahath, vii.), but voids.

"In consequence of the high respect and veneration, however, in which father and mother have ever been held among Israelites, the cases of contracting marriages without the parent's consent figure prominently (G. 6-20)."

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the general age of the majority in Talmudic times was 18 to 20 (S. Krauss, Telmadische Archäologie, Leipzig, 1910-11, ii. 28). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (Eth. ha-czar, i. 2), but such pressure was not applied in the case of students, while (as the gloss *ad loc.* points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride. Girls were treated as marriageable from the beginning of their thirteenth year, and at various times very youthful marriages have prevailed (see Abrahams, ch. 1). Incipient times, while, on the whole, Jewish boys probably marry at a somewhat earlier age than the general population, assimilation in social customs is modifying differences (statistics in *JE* vii. 339).

The general impression prevails that Jews more frequently than other nations entered into polygamy. Intermarriage between Jews and Christians has increased (statistics in *JE* vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbance of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law (Mishnah, Tohorot, 21; Maimonides, Issahath, i. 6; Mielziner, p. 37), the latter being partly theoretical prolongations of lineal ascendants and descendents; but in one case a levirate marriage was not recognized by Biblical law. These degrees were added; for, "while the Mosaic Law (Lv 18:14) expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and, besides, the father's uterine brother's wife (Mishnah, Tohorot, 21; Mielziner, p. 664) imposed still further rigour on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is historically and legally considered in the monograph of H. S. Q. Henricus, Jewish Marriages and English Law, London, 1899. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized as valid (though England, while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman might not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a **kibbèh** —i.e., one tracing descent from the ancient priestly family—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a **bich Din** (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in Jewish legal use (though it is recorded) at the beginning of the Christian era (the Sadducean question in *Mt* 22:20 was probably theoretical), has now lost all vogue (Eth. ha-czar, etc.; cf. *JE* vii. 370, where the site is illustrated). On the levirate marriage see, further, I. Matte, in Studies in Jewish Literature, Berlin, 1913, p. 210; on marriages between uncle and niece, S. Krauss, ib. p. 165.

Except for rare cases in countries where Muhammedan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, ii. 23). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage which fell into disuse in Talmudic times, was by Gn 24, 31-32, and the whole tendency of the Song of Songs (cf. A. Harper, Song of Solomon, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic image of the Ideal is shown by Gn 24, 31-32, and the whole tendency of the Song of Songs (cf. A. Harper, Song of Solomon, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic image of the Pentateuch itself (see Abrahams, ch. vii.).

The ancient and medieval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (*aristan* or *qiddishin*) in Rabbinic law was not a mere agreement or contract for marriage (Moharoth, see *Eruvin* vii. 663) imposed still further rigour on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is historically and legally considered in the monograph of H. S. Q. Henricus, Jewish Marriages and English Law, London, 1899. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized as valid (though England, while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman might not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a **kibbèh** —i.e., one tracing descent from the ancient priestly family—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a **bich Din** (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in Jewish legal use (though it is recorded) at the beginning of the Christian era (the Sadducean question in *Mt* 22:20 was probably theoretical), has now lost all vogue (Eth. ha-czar, etc.; cf. *JE* vii. 370, where the site is illustrated). On the levirate marriage see, further, I. Matte, in Studies in Jewish Literature, Berlin, 1913, p. 210; on marriages between uncle and niece, S. Krauss, ib. p. 165.

Except for rare cases in countries where Muhammedan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, ii. 23). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage which fell into disuse in Talmudic times, was by Gn 24, 31-32, and the whole tendency of the Song of Songs (cf. A. Harper, Song of Solomon, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic image of the Pentateuch itself (see Abrahams, ch. vii.).
MARRIAGE (Jewish)

Falseness on the part of the betrothed female was treated as adultery. Without having been formally divorced, she could not enter into a subsequent marriage contract with another person; if entered upon it was void (Mielziner, p. 77; on the status of the betrothed woman in the 1st and 2nd centuries A.D., cf. A. Bialik in Zentralblatt für die Israelitische Volkskunde, Breslau, 1911, p. 110).

Since the 16th cent. the two ceremonies of betrothal and marriage have been performed on the same day, though in Talmudic times a year might intervene between them (Mishnah, Kiddushin, v. 2). The legal betrothal was always preceded by an engagement (shidduchim), and this engagement gradually replaced the older betrothal. Often a professional betrothal-matcher (shidduch) was employed in the Middle Ages, and the custom is still in some vogue (Abrahams, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony is the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value, and the recital of the formula: 'Thou hast consecrated unto me this ring, according to the law of Moses and Israel.' The marriage rite and is invalid without the bride's consent—her consent is formally stated in the kethubah (see below). In the days of the Talmud, she took a passive part in the ceremony, the formula being spoken by the man only. In some orthodoxy and in most liberal synagogues the bride's part is now more active. In the marriage the presence of a Rabbi is not essential, but such presence is usual, and so are other ceremonies: the use of a ring and a canopy (hupah), the breaking of a glass, the recital of the kethubah, and the repetition of the seven benedictions.

The ring, now so usual in Jewish weddings, is not mentioned in the Talmud, but was introduced in the Hellenistic age (A. Harkavy, Pesahheth hagadot, 1887, p. 65), perhaps in the 7th century. The ring replaced the older gift of money or of an article of value; it must not contain gems (Abrahams, p. 183), and need not be of gold. Possibly the ring of the bride was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landsberger, in Jued. Zeitschrift für Wisens. und Leben, vii. [1889] 81). In the Middle Ages Friday was a favourite day for Jewish marriages, though the Talmud objected to such a choice. Wednesday was also a common day for virgins, and Thursday for widows.

In the Middle Ages there were no festivals as days of the week, except that marriages are not celebrated on Sabbaths or festivals. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During marriage ceremonies the ring is put on the forehead of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in-synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated by L. Löw in his Gesammelte Schriften, where many other Jewish marriage questions, historical, social, and legal, are also discussed (iii. Szegedin, 1893, pp. 13–33).

A hupah, or canopy, during the marriage ceremony, has been used by the Jews ever since the days of the Talmud. This canopy is supported by four upright posts covered by an awning of silk or tapestry (for details see Abrahams, p. 193; for illustrations, JE vi. 604 ff.). A regular preliminary of the ceremony is the signing by the bridegroom of the kethubah (lit. ‘writing’), or marriage contract (for the ordinary wording see Mielziner, p. 87), which sets forth the amount payable to the wife in case of the husband's death or the wife's divorce, and in olden times often rehearsed the wife's duties, and in respect of which, as of the husband's settlement, the kethubah conferred on her an inalienable claim on her husband's property.

The wife had considerable rights over her own property (see Mielziner, p. 104 f.), and the kethubah protected these rights, and introduced, a sense restraint against rash divorces. Mielziner's statement (p. 99) that the kethubah is 'now almost entirely dispensed with,' refers only to certain American and other reform congregations; it is still retained in most Jewish marriages, though it has little legal significance in many countries. The kethubah is ancient, being perhaps referred to in the 'Seven Benedictions.' It is certainly as old as the beginning of the 1st cent. B.C. (Kethubah, 826; Abrahams, p. 207, note 2; E. N. Adler, in JE vii. 474; for the earliest instance of the terms of the wife's brother's oath, see yebamot, in Breslau, Zeitschrift für die Gesandten, New York, 1900, ii. 75).

In Oriental lands the kethubah often included a solemn undertaking by the bridegroom to observe strictly the laws of monogamy (Abrahams, p. 120, and the document published by him in Jews' College Jubilee Volumes, London, 1906, p. 101).

Many of the marriage customs which have prevailed in Jewish marriages one deserves special mention. The kethubah breaks a dox, and the meaning of the rite is uncertain. Some have seen in it a symbolical allusion to the close of the ante-nuptial condition, but 'the most acceptable theory is that the marriage is an act of charity to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forbidden memory of the mourning for Zion.' (see Annotated Edition of the Authorised Daily Prayer-Book, London, 1914, p. cxvii.) The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abrahams, p. 181 f., and Hebrew and Modern, p. 220). The Jewish wedding breaks a dox, and the meaning of the rite is uncertain. Some have seen in it a symbolical allusion to the close of the ante-nuptial condition, but 'the most acceptable theory is that the marriage is an act of charity to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forbidden memory of the mourning for Zion.' (see Annotated Edition of the Authorised Daily Prayer-Book, London, 1914, p. cxvii.) The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abrahams, p. 181 f., and Hebrew and Modern, p. 220).

When the son of Rabbath was married, the father saw that the Rabbis present were in an uproarious mood, so he took a costly vase of wine, which was set before them to curb their spirits.

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The bowing of poor brides was an act of sanctified loving-kindness (Shabbath, 127a); and the assistance at wedding festivals was an element in pious life (Pethahim, 49b). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the elogies (Kethubah, 17a). On the subject of other wedding customs, both Oriental and Western, see Abrahams, p. 99, and JE viii. 340 ff.; Krauss, ii. 37; W. Rosenau, Jewish Ceremonial Institutions and Customs, Baltimore, 1912, ch. xi.

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (Kethubah, 8). First comes the benediction over wine (on the use of wine in Jewish ceremonial see Annotated Prayer-Book, p. cxxvii); then follows the praise of God as the creator of all things to His glory; after this
MARRIAGE (Roman)

MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the origin of marriage and these cannot be wholly omitted, for they are interesting to a student of marriage systems, and they reflect the earlier conditions of Roman society from which the later systems of marriage have developed. We shall then begin, when we have our acquaintances, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. Pre-historic.—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race and, but at what stage, whether among the people of the eternam in N. Italy or still further back, we cannot tell. The simulated rape of the bride at the deductio (see below), the parting of her hair with a spear, possibly the lifting her over the head, and the libation poured together with the legend of the rape of the Sabine women, may well suggest capture. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which there was no trace in historical Rome; marriage was original and, if we may witness it, gives the impression of a pseudo-sacrament, as Pritzalterthumer, p. 29, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been so before the development of the gens as a social institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later compositio, which, as we shall see, was a simulated transference of the bride by purchase from the potestas of her father to the 'hand' (manus) of her husband (for the possible connexion of the dus with marriage by purchase see Westermarck, M.II. 295)

2. Early forms of marriage: connubial, compositio, and usus.—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a matrimonium, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (sacra) of the family, and also of serving the State in war and peace. Children of compositus, i.e., cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was connubium; and the position that we have of the subject (v.

Thus the married state is brought into relation with the state of creation and with creation Mesianic hopes. The Seven Benedictions, which were recited during the grace at the wedding banquet as well as during the wedding ceremony, cover the whole of Jewish history. The popular maxim, 'Marriages are made in heaven,' was accepted as a commonplace truth by the Rabbis (Abrahams, Book of Delight, p. 172 ff.).

For the wedding of a typical Roman with a Roman bride, and the religious side, the reader is referred to the last chapter of Proverbs. In many other ways the sanctity of wedded life was symbolized, both in its human aspects and as a type of perfect harmony with the divine scheme of creation.

LITERATURE.—This is cited in the course of the article.

1. ABRAHAMS.

MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the origin of marriage and these cannot be wholly omitted, for they are interesting to a student of marriage systems, and they reflect the earlier conditions of Roman society from which the later systems of marriage have developed. We shall then begin, when we have our acquaintances, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. Pre-historic.—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race and, but at what stage, whether among the people of the eternam in N. Italy or still further back, we cannot tell. The simulated rape of the bride at the deductio (see below), the parting of her hair with a spear, possibly the lifting her over the head, and the libation poured together with the legend of the rape of the Sabine women, may well suggest capture. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which there was no trace in historical Rome; marriage was original and, if we may witness it, gives the impression of a pseudo-sacrament, as Pritzalterthumer, p. 29, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been so before the development of the gens as a social institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later compositio, which, as we shall see, was a simulated transference of the bride by purchase from the potestas of her father to the 'hand' (manus) of her husband (for the possible connexion of the dus with marriage by purchase see Westermarck, M.II. 295)

2. Early forms of marriage: connubial, compositio, and usus.—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a matrimonium, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (sacra) of the family, and also of serving the State in war and peace. Children of compositus, i.e., cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was connubium; and the position that we have of the subject (v. 1, 2), iustum matrimonium est si inter eos qui nuptias contrahunt connubium st. Connubium, or iunvi, is the term of right of connecting or legal marriage, and belonged, as Orosius tells us (i. 56), to Roman citizens only, to Latins and foreigners only when it had been granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the sacra of one family to those of another (see FAMILY [Roman]), and from the potestas of one paterfamilias to the manum of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—connubialis or farrusum, so named from the sacred cake of f aer (the old Italian wheat) used and exchanged at the marriage. Connuibus stood alone as needing the presence of the Pontifex Maximus and the Flamen Diairis, the latter, nodoubt, representing in the Republican period the threefold office of the priest and magistrate, the Flamen, the Pontifex, and the Roman Consul. The Pontifex was the适当的 person to conduct the marriage in the State Temple. The Flamen Diairis, representing Jupiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (spumana, auspices, etc. [see below]) which were common to all insta matrimonia, a cake of f aer was offered to Jupiter Farreus, and sacramentally shared between bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Diairis, and ten other witnesses. This number ten has given rise to much conjecture; but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxxvi. 3, it apparently has a religious meaning, and so perhaps in connubialis). A victim also was offered (to what deity is uncertain), the skin of which was stretched over two seats, on which the bride and bridegroom had to sit (for these and other details see Gaun, i. 112; Serv, ad Ann. iv. 103, 374, Geor. i. 31; Dion. Hal. ii. 25). The priests, it must be noted, do not perform the service, but they take part merely as witnesses, giving the ritual a religious meaning, which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage
in the Roman State, which must be imagined as consisting entirely of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priesthoods descended from that patrician State, viz., the Rex Sacrorum and the three Flamines maiores, Dialia, Martialis, and Quirinalis (see Gais, i. 112). Of late, however, it has been suggested (by Cug, Introd. patr. cit. p. 1527) that it was followed by "An Alex. Launspach, State and Family in Early Rome, p. 159 (f.) that it came into use only when the old custom of marrying within the gens was broken through, when the religious difficulty of transferring a bride from one gens to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamen must have been constantly in requisition for weddings, more often than would be consistent with their other duties. But it is possible that confarreatio may have been a very special religious form, originating in the marriage of the Rex and the Flamen with the Flilies formed in an inner circle of aristocracy, from which the Rex might be chosen, and which would be likely or willing to supply children qualified to become confarreti of which married in the service of the State (Serv. ad Georg. i. 31). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the confarreatio probably represents an early form of marriage which we have been accustomed to imagine.

There were two other ancient methods of transferring a bride from one family to another, from the potestas of her father to the manus of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below as under marriages which did not produce conventio in manus.

In other words, the true marriage rite was, except in confarreatio, distinct from the act which transferred the bride from the potestas of her father to the manus of her husband, or to that of his father, if he were a filiusfamilias in the potestas of his father. Thus coemptio, the form by which, in the presence of five witnesses and a hiberigen (a bond which would be used for other purposes besides marriage), the bride was made over to the manus of her husband by a symbolic purchase (Gais, i. 113), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in confarreatio. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this article.

The other method which produced coemptio in manus took a whole year to complete, if a duly qualified pair lived together for an entire year without a break, manus followed of necessity by prescription; but by the XII Tables it was possible for the bride to escape this result by abstaining herself yearly for three nights from her husband’s house, by which means, in legal language, the usucapio would be barred (Gais, i. 111). It is not unlikely that this was really the oldest form by which a marriage could be made, and the one most commonly in use. Confarreatio and coemptio both presuppose the existence of the law and religion of the State in full development, but the dispensatio of manus, if it appears at all, appears as a thing rather than a legal contract, and might be broken by a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to non-patricians, plebeians or Latins, when these attained connubium; but this could not be so with confarreatio, if, as we have assumed, the main object of the latter was at all times to produce children capable of holding the exclusively patrician religious offices.

In these three methods of marriage was accompanied by manus, though in the case of usus not till after a year had elapsed. Usus, indeed, shows us plainly that the Roman of early times did not think of marriage and manus as inseparable; for the bride must have been properly married under usus, if her children were to be Roman citizens, though for a year at least she was not under manus. We must also remember that, if the husband were not sui ius, but a filiusfamilias under the potestas of his father, as must constantly have happened, the wife passed under the manus, not of her husband, but of his father. Quite early marriage and manus became separable both in thought and in fact; under the XII Tables, as we have seen, the wife was given the option of escaping a change of manus altogether, and this may be taken to mean that the direction had showed itself much earlier. After that time, mainly, no doubt, from reasons of convenience connected with the family property, marriage was no longer a matter of which the State took charge.

3. The historic period.—(a) Conditions of marriage. The necessary conditions of marriage were: (1) the families of both parties must possess the ius connubii (as explained above); (2) the parties must not be within the prohibited degrees of relationship (cognatio). Originally no cognati could marry who were within the seventh degree of relationship; i.e., second cousins could not marry; this was, however, a survival from a period in which families of three generations lived together under the same roof; and whether this was or was not a known psychological law, unsuited for business marriage (see E. Westermarck, Hist. of Human Marriage, London, 1894, p. 320 (f.)). Traces of such large households are not wanting in Roman history (Val. Max. iv. iv. 8; Plut. Crassus, 1., and Cato the Elder, xxiv.). But these strict rules were gradually relaxed, and from the time of the Punic wars it seems to have been possible for first cousins to marry (see Marquart, Privatlehrerinnen, p. 30, note). When the Emperor Claudius married his brother’s daughter, he had to obtain a decree of the Senate for the purpose, and this licence, which was afterwards repealed, was not generally approved (Tac. Ann. xii. 6; Gais, i. 62). (3) The consent of the parents was absolutely necessary, but not that of the parties themselves; often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, Social Life, p. 1404). This was a survival of a practice still common in many parts of the Empire, and the right of marriage of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried. The betrothal (sponsa-, sponsus), however, was not unlike a contract, and might be broken by...
MARRIAGE (Roman) 465

consent if there was a strong dislike on the part of either party, or if the girl was above a certain age, was obtained by promises of a dowry (Sulpichus, in Aug. Gel. iv. 1). The early betrothed service serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the procreation of children capable of such service, and that the modern idea of passion with marriage as its conclusion, which too often substitutes wealth and interests outside it, Steady affection there might be and often was (Fowler, Social Life, pp. 141, 159 ff.); but the modern idea of passion with marriage as its conclusion, which too often substitutes wealth and interests outside it, was unknown at Rome. (4) As a last condition, we must note that bride and bridegroom must be of proper age, i.e., they must have reached the age of puberty and laid aside the topa praetexta of childhood; this might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(2) Ritual.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with us, May was an unlucky month for this purpose, and so was the early part of June, while certain other dies religioni were to be avoided (Fowler, Rel. Exper., p. 39 ff.). At earliest dawn, according to ancient usage both public and private, the auspices were taken by the flight of birds; but by Cicero's time this seems to have fallen away, and the dependence of the exterior phenomenon of a vicium took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the parties, usually but not necessarily recorded on tabulae nuptiales. Then the bride assumed the wedding dress, viz. the fiammetum, or hood of red or yellow, and the tunica recta with a woolen girdle fastened with the nodus herculaeus; this knot, we learn from Pliny (HN xviii. 63), was also used for birthing and served to her hair and we may therefore suppose that it was a charm against various kinds of evil (cf., however, ERE vii. 749). Her hair was parted into four separate waves with a spear-head (hasta calibarium), which may have been a survival from pre-historic marriage by capture; and under the fiammetum she carried a bunch of herbs picked by her own hand (Festus, s. v. 'Corda.' p. 36, Lindsay). She was then ready for the actual marriage rite, which, as will now be seen, was a matter not only of secular contract, but of religious usage; it is occasionally called a sacrament, as in Lukan, Phre. ii. 359 (of the marriage of Cato); sacramentum, as in Gell. 5.

(1) The first act of the ceremony was the dextrarum invicta, a symbolic act of union, in which, under the guidance of a promnus, who must be a co-manse married, the bride placed her right hand in the right hand of the bridegroom (Festus, p. 242 [p. 282, ed. Lindsay]). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rossbach, Römische Hochzeits- und Ehedenkämmer, Leipzig, 1871, passim; these are, however, all of very late date, and not easy to interpret. The dextrarum invicta took place, so far as we can discern, either in the bride's house before the hearth or in front of some temple (Nonius, 531); but what temple this was we do not know, nor is it clear to what deity sacrifice was offered. On the monuments we see both cow and pig, which suggest Juno and Tellus (Varro, de Ré Rust. ii. iv. 9, refers to the pig as an Etruscan marriage victim). Possibly Tellus was the usual deity in early times (Fowler, Rel. Exper., pp. 121, 128), and Juno later on; but Vergil combines the two in AEn. iv. 166. When the sacrifice had been offered by the pair, the persons present slept in the same bed, the hands were joined and the wedding meal followed, and lasted till evening.

(2) The next act was the deductio, in which the bride was conducted to her new home—a beautiful ceremony, exquitely described by Catullus in his last poem. He was taken, as if by force, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (patrini et matrini), pure and of good omen, one of whom carried a torch of white-thorn, while the other two, holding the hands of flute-players and torch-bearers went before, the mysterious and unexplained cry 'Talasse' was raised, and nuts were thrown to the youthful lookers-on. Before they reached the house, she smeared the doorposts with oil and fat (of wolf or pig), and tied a thread of wool around them; probably these old customs were originally charms to avert evil (for wool) see J. Pley, De Lamiis in antiquorum ritibus usa, in RVVY xi. 2. (Giesesen, 1911) 82. She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obscure in its detail, but the general meaning is plain. It was called 'reception into community of fire and water ('aqua et ignis sacrifici'), i.e. into partnership in these necessities of human existence (E. Samter, Familie und starke Gierch und Römer, Berlin, 1901, 18 ff.). We are also told that she brought with her treasures of which she gave to her husband, one she laid on the hearth, and the third she threw down at the nearest compitum ('crossways') (Nonius, p. 822, Lindsay). Here she seems to be making an offering to the genius of her husband, to the spirit of the hearth-fire, and to the Lar of the family's land allotment, who dwelt in a soclium at the compitum (see Fowler, Rel. Exper., p. 77). She was now in the atrium, at the end of which, opposite the door, the lectus genialis had been made ready. The narrow would find her a matter familiaris sitting among her maids in that atrium or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a dos, or dowry, which in strict law became the property of the husband (for modifications of this rule see art. 'Dos, in Smith's Dict. of Gr. and Rom. Antiquities). As Cuq well puts it (p. 231), her position of dignity in the house, and her title of domina as mistress of its slaves, would have been impaired if she entered it without an empty hand, and all the expense of her husband. The dos was also the means of securing to the children born of the marriage succession to their mother's property as well as to the patrimonium of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see Marriage [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the atrium, and was never shut away in a woman's chamber. She took her meals with her husband; in all practical matters she was consulted, and only on questions political or intellectual was she expected to be silent.

When she was sent out arrayed in the graceful stola matronalis, she was treated with respect, and the passus-by made way for her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort (Fowler, Social Life, p. 141).

The character induced and expressed by such a position is exemplified in the legendary Volumina of the story of Coriolanus, in Cornelius the mother of the Gracchi, in Caesar's mother Julia, and, among many others, in the perfect lady whose courage, good sense, and good manners, were an ornament to the marble of the Laudatium Turiae (CIL vi. 1527; Fowler, Social Life, p. 159 f.).

4. Divorce.—No doubt towards the end of the
MARRIAGE (Semitic).—Students of social evolution seem justified in holding that the family of primitive man was an intermediate development between those of the highest animals and that of the lowest living men. In the lowest known human societies the form of marriage is usually a temporary monogamy. This temporary monogamy has been accompanied among most early men by a greater or less degree of sexual irregularity, and has varied according to economic circumstances and the bent of the people. So far as can be ascertained from the existing evidence, it underwent some interesting variations among the primitive Semites.

1. Primitive Semitic.—Among many savage or semi-savage peoples it is customary to allow unmarried girls complete sexual liberty. In such communities it might in time come to be thought that a woman who had exercised such liberty was more likely to bear children than one who had not. There is reason to believe that something like this prevailed among the primitive Semites, and that superstitious value attached to this exercise of liberty, for in many widely-scattered portions of the Semitic world it became a sacred duty for women to sacrifice their virtue by one or more acts of free love. It was, apparently, that the temporary hierodoulai originated (see Hierodoulai [Semitic and Egyptian], vol. vi, p. 672 f.). Besides the existence of hierodoulai among the Semites, both temporary and permanent, there is also evidence of much sexual irregularity among them. It is the working hypothesis of most Semitic scholars to-day that Arabia was the cradle-land of the Semitic people. Naturally, the peculiar desert climate and oasis culture characteristic of the period left its impress on the Semitic family life. In the oases dates and fruit were raised, and some sustenance for the flocks was produced, but it was necessary to tend the flocks in the desert in search of pasture. Whether, however, men lived in an oasis or wandered from place to place, women would always be needed to perform the duties of the household and the camp, that the men might be free to fight, either in defence or for plunder. There are two reasons for believing that the women were for the most part the sisters and mothers of the men, whether the clan was resident in one fertile spot or was nomadic: (1) Semitic marriage was notoriously temporary, and (2) kinship was reckoned through the mother.

Then marriage was, on the whole, temporary and separable from the frequency of divorce in Semitic lands, especially among the Arabs and Abyssinians. (See below.) The researches of R. Robertson Smith established as well as the evidence will permit that among the Arabs and Abyssinians the divorce was through the mother. The reasons for this view are as follows. (1) The well-known Biblical phrase for relationship is "bone of my bone and flesh of my flesh," (Gen. 2:24, the general word for 'clan.' The Arabs attach great importance to a bond created by eating together; we must suppose, therefore, that the bond between those of the same clan and the members of the same breast would be more nearly of the same 'clan' and the same 'flesh' than any others. (2) The word rahim, 'woman,' is the most general word for kinship, and points to a primitive kinship through the mother. (3) The custom called 'agiyab, by which a child is consecrated to the god of his father's tribe, cannot have been primitive, but must have sprung up in a state of transition to ensure the continuing of the offspring to the father's side of the house. (4) Cases occur in the historical period in which a boy when grown attaches himself to his mother's tribe. The poet Zohair is a case in point, and the Arab antiquarians appear to have known that such cases were not uncommon. (5) The fear that sons would choose their mother's clan instead of those who were wealthy to marry within their own kin. (6) Kinship between a man and his maternal uncle is still considered closer than that between a man and his paternal uncle. (7) Joseph's sons born of his Egyptian wife were not regarded as members of Israel's clan until formally adopted by them (Gen. 46:26). (8) Tamar might legally have been the wife of her half-brother Amnon, the relation being on the father's side (2 Sam. 13). Such unions were known in Judah as late as the time of Ezekiel (Ezk. 22:26). Talith, king of Sidon, married his father's daughter, and such marriages were known in Mecca. Since the marriage of those really regarded as brothers and sisters was abhorrent to the Semites, kinship could in these cases have been continued through the mother. (9) In the Arabic genealogical tables metronymic groups are still found. (10) In Semitic inscriptions found at Hегa metronymic clans appear. To this evidence are now being gathered by other scholars. Nódeke noted that among the Mandaeans a man is described as above).
as the son of his mother, which indicates that kinship is reckoned through the mother. F. E. Peters pointed out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom.3 Wellhausen has shown that the Jews and most of the Semites reckoned descent through the mother, while I. reckons it through the father. Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the family reproductively involved. The Nairs of the Malabar coast, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child.4 Which of these causes led to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternity was unknown to them. On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In three of the Mu‘allaqat poems there are specific statements that the women whom the poets visited only occasionally were members of other clans, and that when they visited them they often visited them at personal risk,5 on account of the strained relations of the clans. The marriages of Samson (Jg 14, 16) were of this nature. Such marriages were often terminated by the migration of the tribes in different directions. Ammiannus Marcellinus was, no doubt, speaking of this type of marriage when he said that among the Arabs the bride presents her husband with a spear and a tent, and, if she chooses, withdraws after a certain day.6 In this type of marriage kinship would necessarily be reckoned through the mother, and the fact that such alliances prevailed would be sufficient to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia in parts of the peninsula like Oman and Haza, which are dominated by different tribes.

The type of marriage which seems to have prevailed, at least in part, was a combination of polyandry and polygamy. Just as a woman might reckon her husbands, so a man might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girls to death prevailed down to the time of Muhammad (see Qur‘ān, xvi. 81, lxxxi. 8), so that women must have been fewer than men. Marriages of this early Semitic form were not always exogamous, for in al-Qa‘a‘a, in his Mu‘allaqat that he followed one day the women of his tribe and spent a day in their company, and the Unahza with whom he afterwards rode and whose fruit he boasts he repeatedly lusted after, is his uncle,7 In like manner Labash, the woman celebrated in the poem of ‘Amr b. Kuhlūm, was ‘Amr’s kinswoman.8 Whether the marriage, as it occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were.

Out of these general ideas of conunonaries, and not mere allures, Smith has shown in Kinship, p. 374.9

Out of these general ideas of conunonaries, and not mere allures, Smith has shown in Kinship, p. 374.
earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. R. Smith so regarded it. But, be this as it may, by the time of Muhammad there had come into vogue in Arabia a type of marriage in which the husband was gratuitously the owner (bidal) of the wife, and which is, consequently, known as total marriage. In this type of marriage children belonged, of course, to the father's clan. Smith attributes control of the total marriage to wars and to the consequent custom of marriage by capture. Marriages of this type might be either monogamous or polygamous, according to the caprice or the wealth of the husband. In much earlier times they had become the custom among the other Semites, who had migrated to lands more fertile than Arabia.

What form of marriage ceremony the early Semites had is largely a matter of conjecture. The type of marriages of which the early poets boast was probably without ceremony. A simple affinity or agreement between the parties sufficed. This must often have been the case also with the later noldh marriages. After a marriage of this kind was recognized by the clan of the bride, a feast was celebrated for a week, during which the guests, so to speak, suited the rough character of the civilization (see Jg 14:24).

As marriage became more permanent, somewhat similar festivals became the rule and have persisted in the Semitic faith.1

2. Babylonian and Assyrian.—There is little direct evidence of marriage and the position of women in Babylonia earlier than the time of Hammurabi (c. 2000 B.C.), though it is certain that the regulations embodied in his Code of laws are for the most part only the expression of customs that had then been of long duration.

The most conspicuous instance of the position of a married woman of the earlier time is that of Barnanttara, wife of Lugalanda, Patesi of Lagash about 2825 B.C. From an archive of tablets discovered at Tellah, which contained the pay-rolls of the attendants of her palace, memoranda of her gifts to temples and festivals, and even a record of her accouchement, it appears that she held a position in Lagash analogous to that of a queen in a modern European country. One cannot say that her husband had no other consorts, but it is certain that her position and importance were shared by no others. Her freedom of action, as far as the public have few parallels in Babylonian history, and are in striking contrast to the insignificance of the women in the harim of Assurbanipal (668-623 B.C.), into which many princesses went, never to be heard of again.2 Sumurmarat, the wife of Adad-nirari IV. (810-782 B.C.), was prominent enough to be described as "lady of the palace and its mistress." She is the nearest Mesopotamian parallel to Barnanttara. In the light of later Babylonian laws, however, it is probable that Barnanttara was the only wife of Lagulanda, and that she was, at least in theory, a monogamist. If this were true of the ruler, it should be true for most of the men of his kingdom.

For the period of the first dynasty of Babylon (2152-2000 B.C.) the Code of Hammurabi affords an authentic source of information on marriage. The Code contains this regulation: "If a man takes a wife and does not execute contracts for her, that woman is no wife" (§125). This is proof that in Babylonia marriage had passed from the less formal stage of early Semitic life, and had, in consequence of long legal development, become a matter of recognition. The marriage ceremony was incomplete without the signing of contracts. The law did not recognize anything like our modern "common law" marriage. One reason for this was that the legal effect of the marriage ceremony was incomplete without the signing of contracts. The law did not recognize anything like our modern "common law" marriage. One reason for this was that the legal effect of the marriage ceremony was incomplete without the signing of contracts. The law did not recognize anything like our modern "common law" marriage. One reason for this was that the legal effect of the marriage ceremony was incomplete without the signing of contracts.

The Code assumes that marriages shall be monogamous, although it imposes on the father the duty of raising the children of his concubines. Nevertheless, it recognizes that in the case of women who had served as sacred servants in the temple (see Hierodouloi [Semitic and Egyptian]), and had married late and were, accordingly, unlikely to bear children, and she in the case of wives who through sickness were rendered barren, he may take another (§§145-149). If the second wife is taken because of the chronic illness of the first, the first must divulge to the public the return to her father's house (§149). Slave concubinage was frequently practised, but a female slave who had borne her master children could not be sold (§§149 f., 171).

According to the Code, a man might divorce his wife, if he wished, but in that case he must make certain specified monetary settlements, which varied according to whether the wife had or had not borne him children (§127 f.). A woman might take the initiative in a divorce. If she did so, her husband could, if he wished, divorce her without alimony (§141). If the wife complained of ill-treatment, it was the duty of the ruler to institute an investigation. If her claim proved true, she could take her marriage portion and return to her father's house; if untrue, she was to be thrown into the river at a place of 12 meters.

In the marriage contracts of the time of the 1st dynasty it appears that greater privileges of divorce were sometimes secured to the bride than the Code would have granted her. E.g., a priest married, and the contract provided that, if he divorced his wife, he must return her dowry, and pay a half-mama as alimony. Another contract, which seems to equalize the penalties for
divorce, provides that, if the husband divorces the wife, he shall be driven out to the oxen of the palace; if she divorces him, she shall be driven to the carriage-house of the palace. Another contract provides for the divorce of the man by payment of the usual alimony; on the part of the wife, on pain of having her hair cut off and being sold for money. The latter was a less severe penalty than being thrown into the river. In general, however, the penalties attached to the contract imposed upon the wife in the marriage contracts are as severe as those of the Code, though not always identical. In one case the wife is to be thrown from a tower; in another, impaled. Nevertheless, the penalty most often imposed is that mentioned in the Code. One marriage, concerning which two documents bear witness, records the wedding of two sisters by one man, but provides that the older shall be the chief wife, and that the other shall perform her certain specified duties.

From the Neo-Babylonian and Persian periods several marriage contracts have come down to us. The stipulations in them as to bride-price and dowry are in general the same as in those of the time of the 1st dynasty, but the conditions on which the parties acted subsequently to them are set forth in the contracts of that period, although divorce did then occur. In most of the marriage contracts the man acts for himself and arranges with the parties, but, if he is a minor, the parents make the arrangement for him. The bridegroom enjoyed in this respect more liberty of action than the bride. In Babylonia, as in the ceremony of the English Church, she had to be "given away.

We have no knowledge of ancient Babylonian marriage ceremonies further than that before marriage every woman had to act once as a temporary hierodoulia (see Hierodoulia [Semitic and Egyptian], vol. vi. p. 674)."}

3. Hebrew.—In the story of Samson there are, as noted above, some faint traces of that early Semitic type of marriage in which the wife belonged to a hostile clan, lived with her people, and was visited by her husband for longer or shorter periods. The stories of the Patriarchs reflect various phases of matrimonial development. The marriage of Jacob to the daughters of Laban indicates a type of marriage in which the husband resides in the wife's clan and the children are counted to her family, for Laban says: "The daughters are my daughters, and the sons are my sons." (Gen 31:41.) Then Jacob broke away, and the children were counted to his stock. This narrative forms a transition from one system of kinship to the other. A number of survivals of the two matrilineal types of marriage just mentioned are found in the narratives of the OT: Sisachem, e.g., consented to circumsicion to render himself acceptable to the clan of his proposed wife (Gen 31:40). A number of instances also occur in which a son inherits his father's concubines: Ishbosheth regarded Saul's concubine as his own, and resented Abner's taking of her (2 Sam 2:20). See also, in a related connection, the famous marriage of Adonijah's desire to marry Alistib as treasurer (1 K 2:27; cf. v. 16); Reuben was denounced for endeavouring to anticipate the inheritance of his father's concubine during his parent's lifetime (Gen 35:22). As noted above (§ I), these are survivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take as his wife the widow of a deceased brother and count the first fruit of the union as the child of the deceased (Deut. 25:5, Gen 38:8-11, Ruth 3:4). The influence of these early forms of marriage is also seen in the great liberty enjoyed by women of the early period (see 1 & 2 Sam 22' above). Another form of marriage, and the Jacob type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see Code of Hammurabi, §§ 144, 146). The general type of marriage of which we have evidence in the Hebrew writings was, however, betal marriage, the regular Hebrew word for husband being betal, and that for a married woman b'rithab, which means "owned," "possessed." Another evidence of this conception of marriage may be seen in Ex 20'7, where the wife is counted among a man's possessions. Among the poor, marriages were probably of the same character, but there was no sentiment against polygamy, and it was often practised by the rich and powerful, as the large hirzlans of David and Solomon abundantly show. Ex 21 *-56 often has two wives. The law of Ex 21:24 * takes it for granted that female slaves will become the concubines either of their own or of his sons. See also the Deuteronomic Code.

The list of the degrees of kinship in which marriage was prohibited in Lv 18, 20, and Dt 27 belongs to the period of Judaism, which began with the Babylonian Exile. As a result were young people allowed to arrange matrimonial affairs for themselves; such arrangements were made by the parents (cf. Gen 21:1 * 24:28 34 and 19:14). Down to about 650 B.C. a man could divorce his wife without any formalities whatever (see Hos 3:1 and 2 S 3:4). This liberty was somewhat modified by the Deuteronomical Code, which provides (21:2) that, if a man wishes to divorce a wife, he must give her a written statement to that effect. It permits him to issue the divorce for any cause; she need only "have found no favour in his eyes." Apparently this law was designed to make divorce less easy than hitherto. The fact that no written statement was necessary; for, in an age when writing was not a usual accomplishment, it was quite an undertaking to get the document composed. In Judaism, however, this provision was held to justify the marriage contract.

The law of Deuteronomy permitted only the man to initiate divorce; it granted to the woman no corresponding power. It represents, no doubt, the usual custom among the Hebrews. In one instance, however, is known in which a Hebrew bride secured by her marriage contract a similar liberty. Among the Jewish papyri discovered at Elephantine in Egypt a marriage contract was found, which contains this passage: "1 If to-morrow or any later day Miphtathyah shall stand up in the congregation and say, 'I divorce Ashir, my husband, the price of divorce shall be on her head,... 11 If to-morrow or any later time As-Bor shall stand up in the congregation and say, 'I divorce my wife, Miphtathyah, the price of divorce shall be forfeited," etc. If to-morrow or any later day Ashir shall stand up in the congregation and say, 'I divorce my wife, Miphtathyah, the price of divorce shall be forfeited," etc.

Whether other Jewish women at Elephantine were accustomed to gain this liberty by contract, or whether there were special reasons why it was secured to Miphtathyah, we do not know, but in any event it is a significant modification of the OT status of women in such matters.

The Deuteronomical law defined two cases in which a man was for ever powerless to divorce a wife: if he had falsely charged his wife with not

2 For examples, see A. E. Cowley, "Divorce," Journal of Egyptian Studies, xiv, 1907, p. 179.

3 See Babylonian and Assyrian Literature, Aldine ed., New York, 1901, p. 270. 1
being a virgin, and if he had been forced to marry a woman whom he had violated (Dt 22:22, see). The penalties for adultery bore more heavily on the woman than on the man, the only cases where they were equal being when the crime was committed with the wife or betrothed of another; then both the man and the woman were to be stoned (Deut 22:21-23). The point of view was that adultery with a married woman inflicted a loss upon her husband's property (cf. art. ADULTERY [Semitic]). The wife was accordingly compelled to be faithful, but no similar fidelity was exacted of him. So long as he did not violate the honour of those who were really or prospectively the wives of others, he was not punished, except that, if he violated a maiden, he might be compelled to take her as an additional wife. The penalty imposed on a wife or a betrothed maiden for adultery seems in the earlier time to have been burning (Gen 35:22), but was later changed to stoning (Deut 22:24, 29). If a woman was simply suspected of adultery, she was tried by ordeal (Num 5:1-20). As the husband could, however, in drinking water into which holy dust from the sanctuary floor had been thrown, it must generally have resulted in the release of the accused woman. The occasions of adultery on the part of the prophets would indicate that the penalties were not well enforced and that it was of frequent occurrence (2 Sam 11 and Hos 3 afford such instances in which the penalty was not enforced).

4. Arabian.—The early Arabian marriage customs have been sufficiently treated above (§ 1); it remains to note how these customs were affected by Islam. At the time of the Prophet her marriage had apparently become the normal type, and polygamy prevailed among the rich. The husband had full power over the wife and could enforce his authority by beating her (Qur'ān, iv. 38). Some survivals of customs which belonged to the earlier time were, as noted above, condemned by the Prophet (iv. 26). Before the time of Muḥammad, the legal limit had been set to the number seven of wives a man might possess. In the interest of moderation, Muḥammad ordained that legal wives should be not more than four, but that a man might also marry as concubines as many slaves as he was able to possess (iv. 3, 29). The Prophet himself was allowed as many as he wished (xxxix. 49). Marriage with one's mother, daughters, sisters, paternal and maternal aunts, nieces, mother-in-law, father-in-law, step-father, step-mother, step-sister, and daughter-in-law was prohibited (iv. 27). Marriages with foreign women were permitted, if the women were believers (ix. 10). Adultery was a crime for a woman, but apparently not for a man. Before the time of the Prophet an adulteress had been literally immured,1 but Muḥammad changed this to imprisonment in the house of the wronged husband (iv. 19). A slave girl was to receive half the penalty of the married woman (iv. 30). Divorce of a wife, as among the Hebrews, was possible to the husband at will. Before the time of Muḥammad, the formula of divorce consisted of this sentence, which the husband pronounced to the wife: 'Thus art thou to me as my mother's back!' After this had been pronounced over her, it was considered as unnatural to approach her as it was to approach a real mother,2 and so it was regarded as wrong to remarry a divorced wife. Muḥammad called this 'backing away' from wives (Iviii. 2). He declared, however, that the utterance of this formula did not constitute a real relationship and permitted a man to marry a woman whom he had divorced (xxxiii. 4). A man might not divorce a woman who was pregnant, or who was nursing a child (lxv. 4, 6), but apart from this condition a man and wife who did not agree might separate at any time (iv. 129), though liberal alimony was enjoined (iv. 24). It is assumed (xxxiii. 48) that men will frequently divorce their wives for more whines after marriage, even before coitus. Coitus corubial relations have been established. Liberty of divorce has been freely exercised by the faithful both in ancient and in modern times.3 Thus, Ali, the son-in-law of the Prophet, was required, including all that he had married and divorced, more than two hundred women. Sometimes he included as many as four wives in one contract, and he would divorce four at once and marry four others in their stead.4 A certain Muḥammat b. Sha'labah is said to have married eighty women in the course of his life,5 and Muḥammad al-Tayyib, a dyer of Bagdad (a.d. 425 A.H.), is said to have married in all more than nine hundred women.6 Palgrave relates that the Sultan of Qatar in E. Arabia married a new wife every month or fortnight, who was then divorced and placed on a pension.7 C. M. Doughty tells how Zaid, his host, a petty sheikh, not only permitted his wife to be courted by another Arab, but offered to divorce her so that Doughty could marry her.8 Naturally a woman could not marry so many men, because she had not the right of divorce, and because she could have only one husband at a time; some of them, nevertheless, managed to have a surprising number. A certain Kharijah of Yemen is said to have had upwards of forty husbands, and her son Kharijah did not know which one was his father.9 In parts of Arabia certain old marriage customs still survive in spite of Islam. Thus in Sumah and around the 'Asir in S. Arabia marriage for a definite term still exists,10 and a man who has a permanent wife may also take a temporary one. In Sumah the agreement is witnessed before the qādi, and so has the sanction of Islam. At the expiration of the contract, the couple may separate without the formality of a divorce; if they continue to live together, however, it is necessary that such marriages are still practised in Mecca at the time of the pilgrimage.11 Marriage ceremonies among the Arabs vary greatly according to circumstances. Sometimes they consist of a feast,12 sometimes of a civil contract before the qādi,13 and sometimes there is no ceremony at all. The much married woman Umm Kharijah, mentioned above, is said to have reduced the contract to two words. A man approached her and said to her, 'Betrothed?' and she replied, 'Married!' and was from that moment his lawful wife.14

5. Abyssinian.—Abyssinia is Christian, though its form of Christianity is the result of an arrested development. Marriages celebrated by the Church assume something of the permanent character of marriage in other Christian countries. Such marriages are solemnized by a priest, and the contracting parties partake of the Holy Communion. A candidate for holy orders is compelled to marry once, as in the Greek Church, but he cannot divorce his wife, and if she dies, he may not marry again; one matrimonial venture alone is permitted to him.15 Among the people religious marriages are not popular. All travellers agree that the Abyssinians prefer to be married by civil contract, as these

MARRIAGE (Slavio)

471

marriages may be dissolved at the desire of either party to the contract. This liberty is freely exercised. Wives are changed at will, by mutual agreement, with the consent of their husbands and marrying the wife divorced by another. Divorces do not necessarily dissolve friendly relations between those who separate; Parkyns visited a man whose divorced wife and her children lived in the same compound with him and his new wife and family. It frequently happens that those who have been divorced and have each married others divorce their new partners to defend it and again reunite. When the separating couple have children, the children are divided. The eldest son falls to the mother, the eldest daughter to the father; if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot.

In addition to these irregularities there is also much cohabitation in Abyssinia, as in other Semitic countries. The levirate exists there, and its compulsion operates not only when a brother dies, but when, as so often happens in African wars, he is killed, so as to be incapable of begetting children.

These peculiarities of Abyssinian matrimonial life are clearly a survival from early Semitic conditions, and Christianity has never been able to eradicate them.

When a man desires to marry a girl, he applies directly to her parents or nearest relatives; when their consent is obtained, and the dower arranged, the girl is entrusted to her begetting parents, who have no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends by themselves. After her a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed no matter how many times the bride may have been married before.

GEORGE A. BARTON.

MARRIAGE (Slavio).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture of a girl belonging to another family or tribe by the bridegroom. In the Christian period only the latter was sanctioned by the Church as a more civilized and noble form of marriage, whereas marriage by capture was prohibited and gradually disappeared. Nevertheless, a series of traditions which belongs to the至少 ritually rode the traces of the old form of marriage by capture is

471

preserved in the wedding ceremony. To these customs belong, e. g., that of stopping the bridegroom on his way to the house of his bride and that of shutting the door before the bridegroom and hiding the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In S. Russia the wedding-guests engage in symbolic lights, which may slightly be deemed a survival of the ancient marriage by capture. The companions of the bridegroom violently attack the house where the bride lives, while her kinsfolk defend it and repel the aggressors, and the two parties put on end to the hostilities and restore harmony by a peaceable negotiation. The Southern Slavs (the Jugoslavs) have preserved the custom of marriage by capture to the present time, and, where this form of marriage has been away, symbolic traditions have taken its place.

The wedding ceremonies celebrated by the different Slavic nations vary widely, but it is possible to discover in them some fundamental traits which are common to all Slavs, and which may be regarded as a survival of ancient times, while their antiquity is also confirmed by their accordance with the chief types of the wedding ceremony, as reconstructed by H. Hirt and O. Schrader. Among all the Slavic peoples the first preliminaries to the ceremony proper are the "wooling" and the marriage contract. The deputies of the bridegroom (dveri, orvom, djer, etc.) negotiate with the bride's father concerning the conditions of the marriage and arrange the precise date for the wedding ceremony. The affer ceremony begins with the crowning of the bride with a wreath variously arranged and more or less ornate; the bride and the bridegroom shake hands as a mark of their mutual consent, and pass three times round the hearth. Thus the nuptial knot is formally tied, and the pair give each other various presents of symbolic meaning (rings, apples, wedding-shirts, etc.). Afterwards the bride is veiled and conducted in solemn procession to the house of the bridegroom, where a hearty reception is given her, and bread and honey are distributed among the guests, who cast upon the bride various fruits, such as corn, millet, peas, nuts, hops, rice (nowadays sweets), etc., to express their wish that she may bear many children. A similar meaning underlies the custom practised by some Slavic peoples of placing a child in the bride's lap with the title of "bride's son", etc., or "bride's bride." It is customary, when she reaches the door of the bridegroom's house, to carry her over the threshold and to place her upon a fur, the hair of which is turned upwards. One of the most significant gifts which the wedding-guests give to the couple is a cock and a black hen. In S. Russia the bride throws such a hen under the hearth, probably as a sacrifice for the domestic god. A very important place in the wedding pastry is occupied by a large wheat cake, decorated with eggs, flowers, ribbons, and sweets, which is cut in pieces at the wedding feast and distributed among the guests. To the symbolic nuptial ceremonies belong, further, the untwisting or cutting of the bride's plait and the covering of her hair with a cap-like scarf. There was a rule among the Slavs—which is still, for the most part, observed—which obliged unmarried women, for the sake of distinction, to wear their hair in long, loose plaites, while married women wore a cap. The bride's entrance upon the status of a married woman was symbolized by the ceremonies mentioned, which was performed in a closed room by the woman present. Then the bride used to unlock the shoes of her bridegroom

to show her submission (sometimes she even received symbolic blows), and, after being clothed in new garments by the master, to lie down to sleep. On the best man, she went to bed with her husband in the presence of the witnesses. After the nuptial night purification was performed in a clear stream or at a well; later on, this ceremony was reduced to a mere sprinkling with water.

Besides these chief and almost fundamental ceremonies, the various Slavic peoples have other customs connected with the wedding, the details of which cannot be described at full length in this article. It is interesting, however, to notice that for a long time the people attached far greater importance to John the Baptist's feast. The Catholic Church's observance of the feast of the Baptism of Jesus is only a modern development. The important place that the teaching of the Baptist had in the development of Slavic nations.

J. MACHAL.

MARTINEAU.—James Martineau (1805-1900) was born in Norwich, April 21, 1805, the fourth and seventh child of Thomas Martineau, a manufacturer of bombazine. Of Huguenot ancestry, he was also descended through his father's mother from John Baptist Mead, one of the ejected ministers of 1662. After four years at the Norwich Grammar School he was placed under the care of Dr. Lant Carpenter at Bristol (1819-21), to whom he owed his 'spiritual rebirth.' His teacher was a pioneer in education, and combined instruction in the elements of science as well as psychology and moral philosophy with classical and mathematical training. Thus equipped, he was placed in machine-work at the age of 15, but relinquished his apprenticeship after a year (partly under the shock of a bereavement which 'turned him from an engineer into an evangelist' [speech at Nottingham, 1878; Carpenter, J. H., Martineau, p. 22]), and in 1821 entered Manchester College, York, as a student for the ministry. He had been brought up in the Unitarian theology of Priestley, and embraced his necessary pantheism with ardour, though at Bristol he had read Wilberforce and Hannah More, and was not without occasional misgivings concerning the freedom of the will. On the completion of his College course he took charge of Dr. Carpenter's school for a year (1827-28), and, after a short period of ministerial service in Dublin (1828-32), terminated through his refusal of the endowment as the Regium Donum, he began his longest pastorate in this country (1832-57).

In 1840 he undertook the additional duty of Professor of Philosophy and Political Economy in Manchester New College, on its return from York to the city of its foundation. During the erection of the Hope St. Church by his congregation (1848-49) he spent fifteen months with his family in Germany, returning to resume his ministry. The transference of the College to London led to his settlement there in 1857, and from 1859 he also ministered in Little Portland St. Chapel till 1872, when a threatened failure of health led to his retirement. In the meantime he had succeeded to the Principalship of the College in 1869, which he held till June 1869.

For more than fifty years he had been actively engaged in literary work of many kinds. To the religious denomination of his birth and education he gave unstinted service, and his was the chief influence in transforming its fundamental theological conceptions, while in the wider field of philosophy he was the powerful antagonist of the empiricism and utilitarianism of the Mills, the monism of Spencer, materialism, and the agnostic philosophy of Spencer.

The Unitarians of Martineau's youth followed the tradition of Locke. Accepting the NT as the final authority in Christian doctrine, they recognized Jesus Christ as the Messiah, whose teachings were authenticated by miracles. To this interpretation Martineau remained faithful till after 1832. But further study of the Gospels confronted him with the predictions which implied the return of Jesus in the lifetime of His disciples to judge the world, and this begot an investigation into the significance of revelation which led him to declare in his first work, The Rationalism of Religious Inquirers (1830), that 'no seeming inspiration can establish anything contrary to reason, that the last appeal in all researches into religious truth must be the judgments of reason.' It sought out this principle was to be one of the main occupations of his life. He followed the progress of German critical study; he was familiar with Paulus and Hirt's researches; the results of the Tubingen school, and became their earliest and most accomplished English exponent ('The Creed and Heresies of Early Christianity, Westminster Review, 1859). By 1845 he had abandoned the apologetic authorship of the Fourth Gospel, and in the third edition of the Institutiones (1848) he ceased to demand belief in the gospel miracles as essential for the Christian name. In the Prospects Review (1845-54) and its successor, the National Review (1855-64), he secured an organ for his theological and philosophical essays, while others not less brilliant appeared in the Westminster. Indefatigable in study, a constant teacher of the young, he devoted long courses of lectures to the exposition of the NT and the history of Christian doctrines, and in his last large treatise, The Seat of Authority in Religion (1895), returned to his earliest theme. He re-examined the claims of the Roman Catholic Church, the infallibility of the Bible, and the historical significance of Christiinity, and presented Jesus no longer as the Jewish Messiah, but as the 'prince of Saints,' revealing the highest possibilities of the soul. Looking back at ninety (1895), he wrote to William Knight:

The substitution of Religion at first-hand, straight out of the immediate interaction between the soul and God, for religion at second-hand, fetched, by copying, out of anonymous traditions of the Eastern Mediterranean eighteen centuries ago, has been the really directing, though hardly conscious aim of my responsible years of life' (Carpenter, p. 549).

Martineau thus remained to the last a Unitarian in his interpretation of the Deity, and a Christian in his allegiance to Jesus Christ. But his position was often misunderstood, partly because of his sympathy with Catholic positions and institutions, and partly because of his steadfast refusal to belong to a Unitarian Church. This was due to the discovery of the real nature of the foundation on which the present worship of the chapel occupied by Unitarians was held. Some of these had been founded in the 17th cent., others in the 18th, by the English Presbyterians, who, under the leadership of Baxter, were 'all parties,' and repudiated creeds of 'human imposition.' In dedicating their chapels 'for the worship of God by Protestant Dissenters' (sometimes specified as Presbyterians, sometimes as
Independents, sometimes as both together), they deliberately rejected all limiting denominational names. By slow processes of Scripture study many ministers of the Unitarian, and in the Unitarian, in theology. Attraction was at length called to this issue, and a suit was instituted among the trustees of a charity in York founded by Lady Hewitt, whose husband, the Rev. John Hewitt (M.P. for York in the reign of Charles II.), had been a warm supporter of the Presbyterians. The decision (December 1833), which displaced the Unitarian trustees and once again impelled the tenure of all the chapels of similar foundation; and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a lifelong effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic; it seemed to involve treachery to his spiritual ancestors; it barred the way to those vital possibilities which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to various schools of religious life, Martineau endeavoured (1868) to form a Free Christian Union, which was joined by representa- tives of various British Christian Churches and was disbanded two years later. Subsequently he worked out a scheme for the National Church as a Federal Union" (CF II. [1887] 406 ff.), which proposed to abolish the Act of Uniformity, to raise the Church of England from State control, and associate it with the other communions in a United English Christian Church. The plan aroused considerable opposition from Martineau's Bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a habitual tension of obligation without realizing its significance. Many influences now contributed to give it new meaning. Wordsworth had long been the poet he most admired; Cordell and Carlyle revealed unsuspected depths of thought and passion in human nature; Channing emphasized its freedom and dignity. In reviewing Bentham's "Deontology" (Monthly Repository, 1834), while still placing the "criterion of right" in the "tendency of an action to promote the happiness of an agent," he laid stress, against Bentham, on the reality and worth of the disinterested allusions, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleyes opened new aspects of the inner life; and in the lecture on "Moral Evil" in the Liverpool Controversy (1839) he formally abandoned the determinism of his youth. The change involved not only a personal act of faith, but a renewed fascination for "communicated truth"; it was effected through character; its organ was the conscience and the affections; its supreme historic type was seen in Christ as the image of the Father. Reinforced by his reading of Kant, and in opposition on the one hand to the "association" philosophy of James Mill, and on the other to the monistic schemes of Spinoza and Hegel, Martineau began formally to conceive human nature. The sphere of judgment was transferred from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were arranged in some revealed themselves as higher, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty. With the various moral estimates, therefore, there was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded by the "Prospective" (1845), in an essay on Whewell's 'Elements of Morality,' and led to the definition: "Every action is right which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower" (Essays, III. 352). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as 'the victim of conscience.' He was to become the greatest English moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the perception which he was afterwards to define as 'the perennial Indwelling of God in Man and in the Universe.' Throughout this view of man's ethical constitution ran an exposition of our knowledge of the external world in a review of "Diireeley's Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century," London, 1846, in Prospective, 1846; "The act of Perception gives us simultaneous knowledge of subject and object" (p. 662). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and the former autonomy of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of I and the not-I, a cause-relation was revealed in the same anthesis. In the strenuous conviction of personality which he derived from his ethical experience, Martineau saw the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-self' must be comprehended personally; its varied energies were but the manifestations of its intelligence, by the rising doctrine of the correlation of forces, like a point to their ultimate identity. Martineau entrenched himself securely in his prophetic recognition of the part played by the same energy in the constitution of human nature. The relation of the soul to God was a moral relation. Known in the conscience, he was one; the manifestation of the world, therefore, was only the veil of a hidden unity; and the foundations of theism were thus laid on the conception of God as cause of the universe and revealer of righteousness in man.

Such was the general scheme of the philosophy of religion which Martineau worked out with rich elaboration in the next forty years. His sojourn in Germany and his renewed studies in Plato and Hegel gave him a secure hold of great ontological conceptions. He defined them as safeguarded his "new intellectual birth." But he remained faithful to the English tradition of psychological method, and slowly built up the fabric of thought on the basis of self-knowledge. Again and again he sought to construct the identity of actions in the order of their relative worth. This was finally embodied in the first of his three great treatises, Types of Ethical Theory (2 vols., 1885). After reviewing Hobbes's "Leviathan," and the increase of modern science (Plato), immanent (Descartes, Male-
branche, Spinoza), and physical (Comte), he ex- pounded (vol. ii.) his own interpretation of the nature of moral authority. This involved a classi- fication of the properties, passions, affections, and sentiments, and an arrangement of them in a scale of values. The scheme thus wrought out of human experience was then contrasted with the heisdiron (1831, 2 vols., do. 1835. We may also name his Lectures in the Liver- pool Controversy (1835), A Study of Spinoza, do. 1832, and National Duties and Other Sermons and Addresses, do. 1835. See, further, A. W. Jackson, James Martineau, a Biography and a Study, do. 1895; Drummond and C. R. Upton, The Life and Letters of James Martineau, 2 vols., do. 1901; J. E. Carpenter, James Martineau, Eclectic and Practical Theologian, do. 1905.

MARTYRS.—See SAIN'TS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, starts from the Scripturial and orthodox position (1) that our Lord, Jesus Christ, is the eternal Son of God, became man, being conceived by the Holy Ghost and born of the Virgin Mary; and (2) that, inasmuch as He is thus God and man in two distinct natures and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgo Deipara—the Mother or Bring-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the maternal security of her substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which, though not there silent upon it, yet, undeniably, exercised a powerful influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelmingly the larger part of Christendom, viz. her perpetual virginity; 'virgo concepsit, virgo peperit, virgo permanit.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall inquire historically (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

I. In Holy Scripture.—Over and above the witness borne by the four Evangelists to Our Lord's having a human being to his human nature (Mt 6:6; Mk 6:6) the direct statements of two of them (Mt 1:20, Lk 2:25) that she was a pure virgin when by the power of the Holy Ghost conceived, and another of the same (Lk 1:34) that she was conceived without the stain of sin, the canonical and confessedly inspired History of the Church, we have in the third Evangelist several notes expressive of the high reverence and honour due to her. St.
Luke records the angelic salutation, 'Hail, thou that art highly favoured, the Lord is with thee;' and the angelic assurance, 'Thou hast found favour with God.' He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation: he brings out her wonderful faith, believing in God's power, seeking no sign, though she gets one, and asking only what course the divine call may require her to adopt (1:38). His narrative has an unconscious risk in that it makes the reproach among men with which the poor Jew's still blaspheme her Son and revile herself (Pusey, Eirenicon, ii. 25); and he records how Elizabeth, filled with the Holy Ghost, saluted her, 'Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? And blessed is she that believed.' 

Mary herself, in her inspired song, while acknowledging that God is her Saviour too, expects from 'all generations' a like honour to that which Elizabeth had assigned her, and speaks of 'the great things' that God had done for her (1:46).

Yet, while the NT thus justifies the Church's instinct of loving and reverential gratitude to the Holy Mother of the Lord, and authorizes the naming of her Son and the invocation of her (and the Immaculate Conception of her mother) in worship, without one instance of her influence with Christ being invoked either in her lifetime or after her departure. At Cana, when she does interpose, she is hidden behind, and is of little assistance to those whom she is sure that He will help. 'Whatever He saith unto you, do it' (Jn 2:5). When, on another occasion, she 'sent unto him, calling him,' He apparently did not reply, 'Whosoever shall do the will of God, the same is my mother' ( Mk 3:31-32, Lk 8:48). When a woman exclaimed, 'Blessed is the womb that bare thee,' He replied, 'Yea rather, blessed are they that hear the word of God, and keep it.' (Lk 11:27-28). He does not imply, of course, that Mary had not these graces—they were conspicuous in her; but He certainly puts the moral virtue higher than her unique privilege.

And when, from the Cross, He commends her to St. John saying, 'Behold, thy mother,' and to him, 'Behold, thy son,' while to have her with him in 'his own home' (Jn 19:27) as doubtless a privilege of the beloved disciple, the pagan apostle, yet the obvious meaning of our Saviour's words was rather that St. John should take care of her than that she should be his protectress (R. Stier, The Words of the Lord Jesus, Eng. tr., Edinburgh, 1855-58, vii. 407). St. Irenaeus states that it was ordered in St. John or elsewhere in the NT that he, or any other, so much as thought of her being established as a mother to pity all Christians, and help them in their approach to Christ. On the other hand, to expand the passage, as some Protestant writers (even Stier, loc. cit.) have not hesitated to do, as an intimation that all Christ's earthly relationships—even Mary's to Him as His mother—caused and determined by His death is to come perilously near the denial of His abiding manhood whereby, as our High Priest within the veil, He is still 'touched with the feeling of our infirmities' (He 4:14). A sufficient example of our Lord's nether calling her here His mother nor naming either St. John or her is supplied when we take it as an instance of His considerateness: had He betrayed the relationship, those who mocked at Him would have not been slow to insult her; and the newly re-awakened courage of the disciple might have again been shaken by the utterance of their names. The NT are not (1) the mention of her by St. Luke (Ac 1:14) in the place of honour as the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference to her by St. Paul (Gal 4:4) as 'a woman'—an obvious allusion to the Protevangelium (6:26); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

In the first centuries—the Christian literature of this period keeps in regard to Mary strictly to the lines of the NT. References to her are sparse; and these, though distinct as to her being the Virgin Mother, and therefore to be honoured, give no suggestion of aught that could be called a cult of her. Polycarp's short Epistle does not contain her name; but in his Life of Pionirus there is this: 'His, according to the prophecy... being born of an undefiled and spotless virgin' (xxiii.).

In the Apology of Aristides she is simply 'a Hebrew virgin.' Irenaeus, in the short recension of his seven Epistles (here regarded as genuine), is fuller.

He tells (ad Ephes. xli.) how the virginity of Mary deceived the Deceiver; that 'hidden from the prince of this world were the virginity of Mary and her childbearing... mysteries wrought in the silence of God, now to be cried about!' He adores our Saviour, 'Son of Mary and Son of God': and he insists (ad Trull. ii. 13) that His birth is effectuated against the Docetists that His flesh is a reality and so somatic; but the correspondence between Ignatius and the Virgin is a Latin translation of an account which he compiled in Greek, and is based on the saint's use of the word ἱεροφόρος.

Justin Martyr (Dial. cum Tryph. c.) and Irenaeus speak of her as does the Puritan Milton, as 'the second Eve.'

'The knot of Eve's disobedience was loosed by the obedience of Mary; for what is more honourable than to be born for God's glory? This did Mary by her obedience, that to have borne the God thus believed that did the Virgin Mary not only free through faith' (Irenaeus, adv. Haer. iii. xxii. 4). And again he dwells on the moral side of her part in the Incarnation: 'Mary, having a man betrothed to her and being nevertheless a virgin, by yielding obedience because the cause of salvation to herself and to the whole human race' (ib.)

If, however, we find Irenaeus, in the barbarous Latin version of his works, calling Mary the 'advocata' of Eve, we shall do well to remember that his Greek had, apparently, ἐνεργοῦσα, which implies not advocacy in our sense, but rebuke. Origen supplies one of the only two places in the Fathers where the words of our Lord from the Cross to her and to St. John have the least appearance of ascribing to her a permanent office for Christians.

'Believing, according to those who think soundly of her, Mary had no other son save Jesus; and that Jesus Christ to her, "Behold, thy son," therefore those whom Christ lives are sons of Mary' (ib. vii. 405). But does this further than Christ's own, 'Behold, my mother and my brethren' (Mt 12:50, Mk 3:31)? Both Origen and Tertullian, like Irenaeus before them, draw evidence of this motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strong already was the Church's faith in the Virgin-birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of divines or the apologies of the defenders of the faith. But such accounts of the Church's worship of her, though they do not fully exhibit the community of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strong already was the Church's faith in the Virgin-birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

The only place where an invocation of St. Mary could come in is at the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyprian has to say is:
Eclectic discipline teaches, as the faithful knew, that at the point where the martyrs are named at the altar of God, there desiring to be, He himself offered for; but of others who are commemorated prayer is offered ' (Ep. i. Opera, Oxford, 1862, p. 5).

There is no direct evidence that among ' the names of the martyrs ' those of Christ himself or of His mother were mentioned.

The one thing in these centuries that points in the direction of any cult of her in the Church is the appearance, somewhere in the 2nd cent., of an apocryphal Gospel of Mary which was very popular and became the basis of two later works, Liber de Infantia Mariae et Christi Salvatoris and Evangelium de Nativitate Mariae. It is from these that the ' traditional ' names of her parents, Joachim and Anna, have been derived, and the story of Mary's nurture in the Temple from her third to her twelfth year. These books, if they were not genuine, least a growing and significant demand, which was not checked by their condemnation as heretical in the earliest papal index expositarius attributed to Pope Gelasius (A.D. 492-496).

During the Council of the four great councils (A.D. 325-55).—With the conversion of Constantine Christianity became fashionable, and, as Newman puts it, the spirit of the world was poured into the Church. (The Arians of the Fourth Century). 1876. p. 6. It is not the faith that the faithful had to raise their standard against an irruption at once of pagan sensuality and of heresies born of pagan conceptions of the Godhead. It is anomalous this is that we find the earliest notice in Christian history of an actual worship of St. Mary. Epiphanius reckons it a heresy (litter, lxxx.) that 'certain women in Thrace, Scythia, and Arabia,' were in the habit of adoring the Virgin as a goddess and offering to her a certain kind of cake (σαλονάδα τυφώνα), whence he calls them Collyridians. Their practice (cf. Jer 41[20]) and the notion that they are undoubtedly relics of heathenism always familiar with female deities, Epiphanius rebukes them; 1

Let Mary be had in honour, but let the Lord be worshipped' (v. lxxxix. 19).

' Honour to Mary ' was inevitably augmented by the Church's answer (true and necessary as that answer was) to the more formidable heresy of Arius, Arianism, stumbling at the very root of the exalted sense of the Virgin in the Nicene canons. It is the Greek proposition that she was the Mekri, 'the Mother of God,' which was denied. Justin Martyr was one of the few who maintained the concept. It did not deny that Christ was born of the Virgin, but, by denying that He who issued from her womb was personally God, it lowered the greatness and the glory of her motherhood. It is not, however; in the interests of her dignity as for the utterance of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds of them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregorys, of Ambrose and Augustine as well as of Leo. It was in this connexion that Athanasius had spoken of her as thebedo, or God-bearer, long before the Nestorian preacher had congregated the Church of Alexandria by refusing her the title. Athanasius gave it her because 'from the flesh of holy Mary the Son of God by essence and nature did proceed. . . . How can they wish to be called Christians who assert that the Word descended not from God the Son of God? He was God in essence, who is from himself, and was man in essence, who was born of Mary; ' and again, because 'when he was descending to us, he fashioned his body for himself from a Virgin, that he might prepare no fall, no so much of God himself, that he might not be made according to the his Maker of everything else as well' (cf. In Acces. Ver. xiv. 11).

Athanasius was anxious to secure the reality of our Lord's human nature and to establish the identity of his divinity ; and in support of this truth also he, like Ignatius before him, stresses Christ's birth of Mary: ' Human then, by nature, was that which was from Mary. ' The most precious words of the Christ begins new from the virgin mother, the Virgin Mary, by nature, is God itself, and the Virgin Mary is the mother of God. "True it was, since it was the same with ours, for Mary was our sister, since we are all from Adam ' (Ep. i. "ad Episc. ").

In like manner, Gregory of Nyssa, 'Have any of ourselves dared to say ‘Mother of Man' of that most holy Virgin the Mother of God? ' (Ep. xii. ); and Ambrose, 'Talk of virtuous Deum' (Hyman 1. iv. 'ad Incoewart. "); and the good Emperor Theodosius of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companion truth of his real manhood.

'Believe that the Only-Begotten Son of God . . . was gotten by the holy Virgin by the Holy Ghost, and was made Man, not in seeming and more show, but in truth; nor yet by passing through a channel, but truly of her mother flesh. . . . If the Incarnation was a phantom, salvation is a phantom too' (Cot. Lett. iv. 8).

All the heresies, we may say, of this period were, in one form or another, denials of the Incarnation; they all fixed men's thoughts on the question proposed by a writer who is a saviour as well as a redeemer, a virgin as well as a mother. Human infant all. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us 'stretched him in his young days when first flashed upon him that it must be true, that one of our nature, which is the last and lowest of all creation was reared to a nearness to Almighty God above all the choirs of angels. . . . Yet it was self-evident, as soon as stated, that she of whom Christ deigned to take his human flesh was brought to a nearness to Himself above all created beings; that she stood single and alone in all creation or all possible creations, in that her womb He who in His Godhead is consubstantial with the Father, designd, as in His Human Lord Himself, 'to become consubstantial with her' (Evrenseii. ii. 5). It is no creature-worship; it is the sense of this tremendous fact brought home to a heart inflamed with the love of the Incarnate Son that explains at once the profound solemnity of Cyril's Letter to Nestorius and the splendid eloquence of Proclus's oration on the Virgin Mother. It is not that she is the mediator, she is the mediator; but it is not that she is the mediator, but that she is the mother only of a human infant. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us 'stretched him in his young days when first flashed upon him that it must be true, that one of our nature, which is the last and lowest of all creation was reared to a nearness to Almighty God above all the choirs of angels. . . . MARY

477

And Pope Leo I. (in a passage still remaining in the Roman Liturgy as one of the Lessons for Christmas Day) says that "to [Christ's] birth alone the thrones of human passion had not contributed."

In entire consistency with this teaching of the great Fathers, the Liturgy of the Church in the conciliar period shows hardly a trace of any cult of the Virgin. There are indications that she was prayed for.

There is the Armenian, 'we beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the prophet Stephen, and of all the saints' (V. E. Brightman, Liturgies Eastern and Western, i. 440).

But she is not often mentioned. In the liturgy in the Apostolic Constitutions she is not even named; if she is referred to there at all, it is as included with others—apostles, martyrs, virgins—whose names Thou knowest. In other liturgical works of the period—e.g., the Statutes of the Apostles (Ethiop. c. 350)—there is no mention of any commemoration of the departed, nor is there in the Arabic and Suldie versions of this book.

The Escharchic service in the Testamentum Domini gives the 'Word'—was born of the Holy Ghost and the Virgin'; but its commemoration of the dead, 'Remember those who have fallen asleep in the faith, and grant us an inheritance with them and with the holy Virgin and all the other saint.' The Pilgrimage of Silvia also is silent concerning her, while the Catechetical Lectures (Lect. xxiii, on the Escharchic service) of Cyril of Jerusalem, who might have expected to find something, has only this: 'Then we commemorate also those who have fallen asleep here.'

"Eusebius in his Historia Ecclesiastica says, 'If in the liturgical celebration of the Virgin in the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father' (de Sanct. Virg. iv.)."

Thus, too, Jerome: "The virgin Christ and the virgin Mary have dedicated in themselves the firstfruits of the virginity of both sexes' (Ep. clxvii. v.); and Gregory of Nyssa: "What happened in the stainless Mary when the fulness of the Godhead which was in Christ, shone out through her, that happens in every soul that leads by pure the virgin life. No longer, indeed, does the Master come with bodily presence, but, spiritually, He dwells in us and brings His Father with Him" (de Virg. iv.)

4. During the mediaval period.—For the purposes of this article, this period may be dated from the extinction of the Western Empire by Odoacer (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity was in a conflict, a West and a East, but in spite of their divergence, there took place in both a remarkable development in the cult of the Virgin. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to all these the orthodox had to meet and in a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His natures and the unity of His Person; it bellowed monasticism; it vindicated the iconoclasts and then of the Muhammadans, while the calumnies which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, which at least sufficiently protected the all Christians who remained, or had been, its subjects with awe-struck thoughts of Christ as the Judge of men. They remembered bow, in the days of His flesh, the good Samaritan had, ungirded himself not worthy to come to Christ direct (Lk. 7), and had besought Him through the elders of the...
MARY

It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teaching of the latest, and henceforth the most influential, in the East, of the Greek Fathers, John of Damascus, an influential writer, to whom the whole creation is made subject by his Son—implying, of course, that, over and above her office in the Incarnation, she is herself, through the Holy Spirit, a direct intercessor to such a high degree as to be able to lay her hands on the earth; and, if the expression is taken literally, that she can intercede in her own person for the salvation of the world. It is probably, indeed, almost a "natural" result of the "luminous" results of Christ's death and resurrection, that she should continue to intercede as intercessress for the world, and should be able to bring the world to the feet of Christ, as she did at the cradle-side of her Son, with such a fullness of the power of intercession that she can, from within the presence of Christ, bring sinners to the feet of Christ, and even consent to such an act by herself, if that consent is necessary for the salvation of the world.

It is not possible, in view of Basili's own writings, that even the last is an interpolation. The liturgy called Chrysostom's is fuller on St. Mary: the prayer of the Te Deum closes 'through the intercessions of the Holy Mother of God and all the Saints'; but again, for her: 'We offer to Thee this reasonable service on behalf of all those who have departed in the faith: Apostles, Virgins, especially the most holy, unsullied, excellently beautiful, glorious Lady, the Mother of God, and Ever-Virgin Mary.' (6th p. 314, 331)

When, however, we turn to the last and most popular of the authorized devotions of the Greek Church, we find her invoked in the most direct manner:

'0 most holy Mother of God, light of my darkened soul, my hope of salvation, and my strength, the pearl of great price, which these flowers, which thou hast enabled me to be a partaker of, and I to the body and . . . Blood of Thy dear Son Jesus wax strong in the eyes of my faith.' [as in the Book of Beads, the 'Prayerful Canon at the Departure of a Soul'] teaches the dying man to cry to her:

'Known refuge of the sinful and the low, made known to me through mercy, O pure one, and set me free from the hands of demons, which come about me like dogs.'
whom they pray. These are regarded as fair inferences from the truth which we all confess, in the Apostles' Creed, of the Communion of Saints. The moderation of the Roman Missal did not stop with the holy days, but more and more tended to assimilate the forms, first, of invoking her directly to intercede for us ('ora pro nobis'), and, next, of asking her personal help for both the living and the dead. Thus two tombs were really those of the Lord—His Presentation in the Temple (Feb. 2), and His Conception (March 25)—became rather those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking of her soul to God—and it is sometimes called her dormitio, or 'sleep.' The doctrine of her bodily assumption into heaven, derived from the apocryphal story condemned by Pope Gelasius, being implied in the Breviary lection from John of Damascus, is not even now de fide in the Roman Catholic Church, but only a 'pious opinion.' The Feast of the Virgin's Conception, in the West, was limited to the apocryphal story that she was conceived without sin, in origin, was introduced from the East in the 14th cent., withdrawn from the Calendar by Pius v. (1555–72), and reintroduced by Sixtus v. (1585–90). The Nativity of Mary (Sept. 8) would be older if the sermon of Augustine, cited in its Office, be genuine, but it is commonly said that this fact is first mentioned by Andrew of Crete (c. 750); its observance was appointed by the synod of Salzburg in 806; two centuries later it had not become general in Italy, while (c. 1140) St. Bernard blames the canons of Lyons for the innovation of keeping the feast of her conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb. Thomas Aquinas said (Sermo Thed. III. xxix.) that the Church of Rome tolerated it but did not keep it (so not uncommon way with some in those days of treating popular deviations); and, when it did come in at Rome, in the church of St. Mary Major, it was still, so late as 1540, the festival only of the 'Sanctification of the B. V. Mary.' Underlying this is the desire of the Church as well as the controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk 2:52; Heb 7:28); but there arose in the 13th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her Immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and a priori considerations. The discussion, nevertheless, tended to her exaltation above all the ground not alone of her office, but of the grace bestowed on her, and must be confessed that some mediæval writers transgressed all bounds in the language which they employed, Peter Damian, e.g., speaking of her as 'delicia' (Serm. de Nat. Mar. [PL Clxv. 749]), while the very natural view of what Archbishop John Hamilton's Scots Catechism of 1562 calls the 'bony image of the Baby Jesus and His Blessed Mother, . . . the coming to an infant to sanctify childhood and maternity was darkened into something not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was regarded and resorted to as more powerful for the help of suppliants than another.

5. From the Reformation to the present day. —
   The fundamental position of the Protestant Reformers, that the means of grace, or 'the sinner are through faith in Christ alone, involved, on the one hand, the fullest recognition alike of His Godhead and His manhood; and the Reformers, accordingly, were at one in confessing the Catholic faith as set forth in the ancient creed and the great councils, which meant, of course, their acceptance of His birth of a pure virgin, and her honour as His mother. It involved, on the other hand, an insistence that the soul should come to Christ direct, and a repudiation of the idea of any creature coming between it and Him. The latter principle, it is true, could be pushed to the extreme of disparaging the help which He has graciously provided in His Body the Church (Eph 1:22), for bringing men to Himself, and in the ordinances whereby 'Christ and the benefits of the covenant of grace are . . . applied to believers' (Shorter Catechism 92). It brought almost everywhere the practical elimination from Protestant teaching of all thought of the departed saints having any function whatever (save that of remembered examples) towards Christians in this life; at least for Christians of 'the Saints,' while admitted in words, was interpreted as existing simply between believers in this present world; and, contrariwise, the prayers of the living Christians' of 'the Saints' were dealt with as if the prominent of St. Mary in Roman Catholic devotions reacted among the Reformed in an opposite direction, till Puritanism (in certain sections) 'scrapped' even the singing of her inspired Hymn Magnificat, gave up the public use of the Apostles' Creed because her name occurred in it, and even so late as the publication of the Church Hymnary (1836) was able to secure the rejection of Bishop Richard Mant's version of the Stabat Mater and the deletion of the words 'Son of Mary' from H. H. Milman's hymn. It may be doubted whether such courses have helped either to a livelier faith in Jesus Christ or to a deeper love towards Him; or how far they have furthered Christian ideals of purity, chivalry, and saintliness. Puritanism, however, has not conquered either the Scottish or the Anglican Church. The former in the 13th cent. dared to speak of the Virgin in the public service in one of its 'Paraphrases' (Par. 38); and restored the use of the Magnificat (in metre) in another (Par. 36), and of late years authorized the chanting of it in public, as well as the Apostles' and Nicene Creeds (Church Hymnary, Church of Scotland Anthem Book, and Mission Hymnal). These have always kept their place in the Anglican Books of Common Prayer; and the Church of England has further secured a commemoration of St. Mary by retaining among 'the Feasts to be observed' both 'The Purification of the Blessed Virgin' (Feb. 2) and 'The Conception of the Blessed Virgin' (March 25). In both countries divines universally respected (e.g., the Scottish Dr. W. Hanna and the English Bishops Joseph Hall and John Pearson) have spoken of her in terms of singular reverence and beauty, while W. M. Ramsay, holding, as he does, some pagan ancestry for her cultus as it exists in Asia Minor, speaks of it nevertheless as 'a purifying and elevating principle' (Pauline and Other Studies, p. 159).

In the Roman Catholic Church there was some hope at the beginning of the Counter-Reformation that much then complained of in the exterior cult of St. Mary would speedily be brought to nothing; certainly very much was done; and the Council of Trent in its Decrees, and even in its Catechism, is fairly moderate, distinguishing, as did the older councils, between the Nardela, due only to God, and the
some Negro race (which in bodily characteristics verges on the Hamitic negroid) was pastoral; and cattle, sheep, goats, and the domesticated as of Ethiopia played a great part in their lives and mental considerations. All sections of the Masai, agricultural as well as pastoral, speak a language which differs but little in its two or three dialects. The relationships of this speech lie most nearly and clearly with the隔隔 become known as *Eve* (Aphthon the *Morphomy* in the Roman Brevisry, returned by order of Pope *Pius* V. and revised by Clement VIII. and Urban VIII.). The breviary, with 'the Offices since granted,' may almost be said to be now—strange contrast to the NT—nearly as full of Mary as of Christ. Of all Sundays and thereby whole month of May, votive offices of the Blessed Virgin are said. The Sunday within the octave of the nativity is 'the Feast of the Most Holy Name of Mary,' the third Sunday of Sept., that of the mother of God, and the 'Seven S巴拉'; four Sundays in October are devoted respectively to her Rosary,' her 'Motherhood,' her 'Purity,' her 'Patronage,' while the old festival of Conception (Dec. 8) originally her 'Satellite,' in honour of her 'Immaculate Conception,' and the bull of Pius IX. declaring this an article of faith to be received by all Christians supplies a large proportion of the lessons appointed to be read within its octave. The breviary itself, moreover, is restrained in comparison with such books as *La Gloria di Maria* by Alfonso de Liguori (1696-1787), the founder of the Redemptorist Order. *Liguori* goes far beyond the council of Trent, for, whereas the latter says only that it is useful 'to invoke her intercessions, he insists upon the necessity of doing so:

*Mary is our life, because she obtains for us the gifts of pardon . . . and of perseverance; 'Mary is the hope of all; 'Mary is the peace-maker of sinners with God' (II. I., II. I., VII. 2, 3).

**James Cooper.**

**Masai.**—History. It is advisable, first of all, to specify what we mean by the term Masai. It is the tolerably correct designation of a widely scattered but not numerous Nilotic Negro people in E. Equatorial Africa, whose habitat, down to the beginning of the 19th cent., stretched from the Nandi plateau, the south end of Lake Baringo, and the southern slopes of Mount Kenya on the north almost to the 6th degree of S. lat. in the south. On the west they were bounded by the Bantu and Galla peoples of the region between the Tana and the Ruvu rivers; on the west by the Nandi and Bantu peoples of the Sokit and Lumbwa highlands, which form the eastern limits of the Victoria Nyanza basin. The older name which gives this distinct race of pastoral nomads adopted for themselves—or at any rate for the pastoral and warlike section of the original tribe—was (according to A. C. Hollis) Ilmi, which, in the 19th cent. if not before, became Il-masi (spell Maimause with some). The western and northern sections of the Masai people, especially those sometimes known as *Ilmi, Enjami*, or *was-Rigum*, were not only cattle-kickers, and shepherds, but also agriculturists. Still, the main bent of this hand.
like aristocracy of E. Equatorial Africa — implanted this long-shouldered type of ancient Egyptian ox on the highlands between the Victoria Nyanza, Tanganyika, and the Indian Ocean. But the long-shouldered Gallus ox has never yet made its appearance to the east of the Victoria Nyanza or among the Masai tribes, whose cattle are Indian in type.

2. Gods. — Though in physical characteristics the Negro element predominates in the Masai over any other, this people is superior in mentality to the pure-blooded Negro; and one notion with a certain imaginativeness and a natural poetry in their thoughts, stories, and religious beliefs rarely found among Negro peoples, and probably due to some ancient or modern infusion of the Caucasian. The Masai believe in a far-seeing divine emanating from the sky high above the earth, and even above the lower regions of the atmosphere. This divinity, to which they pray at times with real earnestness, is known usually by a female name, En-ai (Eh- is the feminine article, ai, or gai, 1 is the root). En-ai is occasionally referred to as 'the Black God,' though in some stories or in some milder forms three things are to be a triad consisting of (1) Eh-ai, the greatest and remotest of all gods, the god of the elements; (2) the benign Black God of rain, who takes a real, though far-off, interest in humanity; and (3) the early or malign Red God, whose name is associated in the minds of mankind and dwellers in the lower part of the atmosphere. En-ai and the Black God (or both fused in one personality) would like to send the rain to the parched lands below in perpetual abundance, so that there might always be fat pastures to feed the Masai cattle, or perpetual cultivation for the Masai agriculturists; but the Red God frequently intervenes and intercepts the moisture so necessary to life under an equatorial sun. Distant thunder is believed to be the remonstrance of Eh-ai at this charnfulness of his subordinate deity, whose, however, he seldom bestirs himself to circumvent. Eh-ai is known to some of the non-Masai tribes as 'Kai' or 'Gai' without the article, and by the Masai themselves is called by other names, such as Pasasi. 2

3. Demons. — In addition to these two gods or three gods (according as the Black and Good God is or is not identified with the Ruler of the Heavens, Eh-ai), the Masai believe in superhuman beings, resembling the Arab 'genii' or of the Arabs—devils, it is convenient to call them. Similar beliefs reappear in the Sudan and in many parts of the northern range of the Bantu languages, such as the Cameroons. These jinn, or devils, trench in some of their characteristics on the werewolf conception, being in some aspects like a lion and in others like a man, or having originally taken the form of lions and then put on an appearance half human and half like an inanimate stone; or they are believed to go about looking like a lion on one side, and on the other like a monstrous human being. Their favourite home is in the forest. They are mainly, if not entirely, omnivorous in their food preferences, and do not touch wild beasts.

In one of the Masai stories recorded by Hollis 3 it is narrated that the devil's custom is to call to human beings who pass the place of his conceitment in the forest. 'Come, my brother, help me lift this load of firewood.' If they are foolish enough to procure the wood, they will be haunted by a devil and the Masai wished to pass through it in their customary migrations in search of pasture for their cattle, they would arrange to march past the cannibals haunt in as large a body as possible, the warriors going both in front and behind. 'Should a voice be heard issuing from the mist and calling some one, no body remains silenced longer than the instant deviation from the voice of the rains, came to eat them, the boy from the Javanese then of a tall tree, and shot an arrow through the monster's body, who at first thought that it was merely the wings of gods flew by but was unconcerned to their effects. Repeating apparently in his dying moments, as he was said to be of manner as to how he might proceed to recover the cattle of the tribe, and must, of the Javanese. Out of gratitude these renominated Masai elected the boy as their chief.

It is quite possible that this and similar stories, wild-spread over Africa, refer to the lurking cannibals of some big and brutish race which lingered on in the forests of Africa long after the more open country had been populated by the modern types of man. Such grim ogres may have worn over their backs the pelts of wild beasts that they had killed, and thus have seemed on one side beast, and on the other a ghoul-like type of man.

4. Cosmology. — The Masai believe that, when Natterkrup, 4 the demi-god of Mount Kenya, decided to start a race of true men on the earth, he called the first of whom he produced in E. Africa, viz. an already existing Dorobo (the word is properly spelt Torobo and means 'dwarfish'), who was a kind of pre-Adamite nucleus of which the elephants, and a number of other animals, were the descendants. In course of time the Dorobo hunter killed both the serpents, and the elephant mother, and a young child was born to them. Before her death had given birth to a calf, which escaped from the Dorobo, and, in later years, the child would return, find the world not a Masai, to whom it confided its troubles. At this moment, the Dorobo (En-ai) intervened, and summoned both the Dorobo and the Masai to his presence. The Masai came, but the Dorobo seems to have delayed. The consequence was that the Masai received God's good gifts and the Dorobo became the master of E. Africa. Other variants of this story make Natterkrup (the divine man of Mount Kenya) the demi-god's mother, and do not give the intervention of the great sky-god, Eh-ai.

5. Eschatology. — With regard to a life after death, in some of the Masai traditions it is related that, when the man-god Natterkrup gave to their primal ancestor, Le-eye, instructions what to say when a child died, the latter out of selfishness — because the child next to die was not his own — inverted the prayer which was to adjure the child-spirit to return. Le-eye consequently prayed that the moon, though it died, might return again, but that the dead child might remain dead. Some time afterwards Le-eye was likely to lose a child of his own, and therefore said the prayer rightly. But it was too late; only the first invocation of nature held good, and thus man, when he dies, never comes back, but the moon always returns.

Yet this great agony of the mind of man — this refusal to regard death as the end in all the personalities of those whom we deeply respect — prevails with the Masais, and the repeated assertions in their folklore that 'All is over with man as with the cattle, and the soul does not come to the world of spirits.' With this people there has been a gradually growing belief (it is so also among many Bantu tribes) that a medicine-man, a great doctor, a great chief, or a very wealthy

1 Hollis, p. 242 ff.
2 L. Kraup, the great missionary pioneer of Equatorial E. Africa, writing in 1854 in his profane to the Dictionary of the Euphratic Elphob (the Western Masai), thus describes the religious beliefs of the Masai: "At the remotest antiquity there was one man residing on 'Oldonyo eiber' (Mt. Kenya) who was superior to any human being, and when this (name suprême being, god) had placed on the mountain. This strange personage whose beginning and end is quite mysterious and whose whole appearance impresses the Waskami mind with the idea of a demi-god is called — . . . . . . Natterkrup. The intelligence of this strange people residing on Oldonyo eiber is a demigod (whom they named Enjensai Enamer, with whom his wife Sambu lived on Mount Sambu when situated to the south of Mount Kenya eiber and is a high mountain but does not attain to the height of Oldonyo eiber . . . Enjensai went to the White mountains with his wife and became the father of his name. This name is very fruitful and gave birth to a number of children. Natterkrup also taught Enjensai Enamer the taming of the elephant, which saw in the forest, . . . . . . It is to Oldonyo eiber ("Kenia," as the Waskami call it) that the Waskami resort in order to obtain the intervention of Natterkrup for protection in war, and health and life from the Eghal.

3 The Dorobo are also known as the mask hunters of E. Africa, shorter in stature than the Masai, but not very dissimilar from them in appearance, and containing many mixed strains of blood—Haut, Negro, and possibly Bushman.
person cannot entirely cease to exist in personality
even after the body is dead, buried, and decayed.
It is thought by the Masai, as by Zulus and
numerous tribes of W. African Bantu, that the
soul of a deceased person of importance enters one
or other of the python-like snakes which frequent
the vicinity of human habitations in pursuit of rats
and other vermin. These (usually black) snakes are,
therefore, sacred in the eyes of the Masai,
who are careful not to kill them. If a woman
sees on her head a pear, milk on the ground for
it to lick up. A variety of animal, especially black
snakes, are even regarded as totem animals by one of the
Masai clans, who protect them against ill-treat-
ment by the members of any other clan, and will
even come to their aid if they are molested in a
fight, explaining, 'Avengers of my mother's house,
come out!' The Masai believed that the female
snakes thus invoked would bite such as had not
adopted them as a totem.

It has even been thought by some Masai, prob-
able not earlier than the latter years of the 19th
cent., that the souls of very great chiefs are not
sufficiently provided for by transmigration to a
snake, but in some way go to heaven, to the abode
of Ei-ai. It is not impossible that this growing
belief may have resulted from their talks with the
earlier days, and the fact that they certainly
believe that there is what we should define as a
soul, some impalpable living essence, and that this
quits a man's body when he falls asleep. Therefore
a sleeper must not be too suddenly wakened lest
the soul be frightened out of the body, as people
certainly believe, and the ghost may not return to the
body. In one mood the Masai will assert that no such
terrible things as 'ghosts' exist, because they cannot be
seen; in another they appear to believe that
ghosts do exist. When cattle are attacked by evil, things,
not by men. When a herd of cattle hurts and
stares fixedly at something, if it is not a lion or a
leopard, it is a ghost.

7. Prayers.—The Masai have a very real belief
in God, and, if they are vague about His personal-
ity and uncertain whether they are praying to the
Great God of the Firmament or to the Black
God of the Upper Clouds, to one or other they
occasionally make sacrifices of sheep—a rite usually
conducted by the women, who, as a matter of
course, pray twice a day, while men and children
only occasionally utter prayers. In these prayers
men and women associate the evening and morning
stars, and even the snow peaks of the great moun-
tains, Kenya and Kilimanjaro, with the Deity. They
pray for children and for the health of their
children, for rain, for successes in time of war,
and plenty of cattle. The present writer, however,
when residing many years ago at Taveta near the
eastern base of Kilimanjaro, noted that the men of the
W. Taveta (mainly Masai in race and religion,
though now speaking a Bantu language) could pray
most earnestly and touchingly to Ei-ai, the Power
of the God of their children and their cattle, with

When one of their number gives birth to a child, the
Masai women gather together and take milk to
the others; they then slaughter a sheep, which
is cooked in fermenting milk. In one time for much cattle this is a 'purifying' meal.

The women slaughter the animal by themselves
and eat all the meat, and no man may approach the
spot where the animal is slaughtered, for it is
considered unlawful. When they finish their meal,
they stand up and sing a song, which may be
rendered approximately thus (paraphrased from
Hollis):

'God to whom I pray,
God whose thunder and it rains,
Give me offspring,
To thee only every day do I pray,
Then must I rest;
To thee only every day do I pray,
Thou art creator of sweet savour like sage plants.
To thee only every day do I pray,
To thee only every day do I pray.'

Young men pray that their battle raids may be
successful and that they may bring back herds of
cattle. All these prayers seem to be indiscriminately
addressed both to God and to the morning and the
evening star. God is not confused with the sun or
the moon, but is something behind, above, beyond,
and more powerful than these heavenly bodies,
which are beings, other sex that alternately marry
and quarrel. Of the stars other than the planets
Venus and Jupiter they take little heed, with the
exception of the Pleiades (the appearance of
which in the heavens is indicative of seasonal
changes), the belt of Orion, and Orion's Belt.
Comets are perturbing as indicative of approaching
disasters.

8. Source of Masai religion.—M. Merker, a
German officer, who lived much among the Masai
of German E. Africa, published a work (first issued
in 1904) in which, after discussing various Masai
beliefs and customs, he attributes these and, in
part, the origin of the Masai, to a strong wave of
Semitic influence from the north, even reviving
that old story, the dispersal of the Ten Tribes. It is
difficult to understand how he can see anything
in Masai belief and ritual that especially suggests
Jewish blood or influence and at the same time
overlook the presence of similar beliefs and rites in
the intervening Hamites or the Semitized Somalis.
For unnumbered centuries waves of
Caucasian invaders and even tribes of Canaanite
blood have been passing from Western and Southern
Arabia, Syria, and Egypt through Ethiopia into
Nileland, the Central and Western Sudan, and the
steppe and forests and lake regions of E. Africa.
The Masai have brought their share of these beliefs,
supersitions, and customs from their northernmost
centre of development—somewhere, possibly, in the
basin of Lake Rudolf, a region that, no doubt, was
influenced from Abyssinia a score of centuries ago,
as it is at the present day. At the same time,
attention should be given to Merker's records of
Masai traditions and beliefs, especially as set forth
in the later edition of his work (Die Masai, Berlin,
1910). A. C. Hollis, whose own work on the Masai
is one of importance, and Albert Staggell, a mis-
sionary long resident in the eastern part of Masai-
land, both agree with Merker on his information
regarding Masai beliefs chiefly from Masai who
had long been connected with the Roman Catholic
mission. It, and, consequently, that these informants
were merely giving him versions of the Hebrew
traditions in the OT. The receptivity of the Masai
mind is no doubt great; but no mission had been
established in those regions a sufficient length of
time to thought that its ideas or beliefs have been imparted to
Masai boys, nor, from what the present writer
knows of mission work in those regions, is it likely
that either Roman Catholic or Protestant missions
at that stage in their development spent much time in translating and teaching the book of Genesis to Masai inquirers. It is more probable that the ancestors of the Masai in their northern home were in contact with the Christian Gallas or Abyssinians, and from them imbued those ideas of Adam and Eve and the other traditions regarding the great Patriarchs which irresitibly recall the legends enshrined in the first chapters of the Bible. Further, if the idea of the divine office of the mask or maskette had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan—that he can hardly have remained ignorant of them, the existence or the practice of masks may even have percolated through N. E. Africa in pre-Christian days, when the Jews and Idumeans were influencing a good deal of W. Arabia and of Egypt.

The stories transcribed by Merker are not only reminiscent of the Jewish myths of Adam and Eve, Cain and Abel, Enoch, Methuselah, Lamech, and Abraham, but even extend to a personality like Moses, actually being the name of Musungu (or Maruni). There are even traces of a belief in a fiery serpent, of the Ten Commandments of Sinai, and of a paradise garden like Eden.

A good deal of this account of the Masai religion must be taken in the past tense. Year by year old beliefs and traditions are fading away, and the people are becoming either absolute materialists (whilst still regarding some as their worship-objects or divinities) or adherents of the various Christian missions, to which they are proveing useful and influential converts.

LITERATURE.—In addition to the works of Hollis and Merker quoted throughout, see J. L. Kräf, Vocabulary of the Engtubki (1890); Lane, Lexicon of the Welsh and Scottish, Aberdeen, 1874 (Preface is noteworthy); J. Erhardt, Vocabulary of the Arabus and (1874); H. L. Johnston, The Kilimanjaro Expedition, 3. Vol. 2, 1895, The Uganda Protectorate, 2. Vol. 404; S. L. and H. Hinde, The Lore of the Masai, do. 1901.

H. L. JOHNSTON.

MASBO'THÆANS. According to Eus. H.E. v. xxil. 51, Hegesippus had written of the Hemerobaptists and the Masbothæans (Masbōthāna)1 as two distinct sects 'in the circumcision among the children of Israel.' The brief characterizations of these Masbothæan sects given by the ancient heresiologists are based simply upon their etymologies of the name, which they connect either with the word 'sabbath' or with μασσα, 'will,' 'purpose.' Among modern scholars A. Hilgenfeld has advanced the conjecture that the Masbothæans were the followers of the early heretic Thebathis, also mentioned by Hegesippus, but in all likelihood the name simply means 'baptists.' In glossaries of Paelstine Arabic the word appears in the only word-collocation for 'baptism' is masbōθānā, and, as we know that among the Mandaeans on the Euphrates the regular term for ceremonial immersion in running water was waq̣aẉawi (see art. MANDÆANS, p. 587), we can hardly doubt that Masbōthāna signifies people in whose religious practice such immersions formed an outstanding element. Thus the Gr. term 'Hemerobaptists'2 might quite well have been applied to the same group, and the idea that the two names denoted different sects may simply have been a mistake on the part of Hegesippus. It is, no doubt, the case that in the time of Hegesippus the Jews variously advocated the practice of immersion, each, however, after its own particular form: there were, e.g., the devout, who bathed every morning and evening, and the 'bathers of the early morning,' who thought it necessary to perform an immersion before morning prayer. The term 'Hemerobaptists' would, of course, be quite appropriate for both groups.3

The designation 'Masbothæans,' however, would also suit the Elkesaites, and, in fact, pointedly suggests that sect, as the Elkesaitic tradition contains the name ḫawāḏ, formed from the same verbal root as ṭuḥwaḏ (cf. art. ELKESAITES, vol. v. p. 708). By the time of Hegesippus the sect had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan—that he can hardly have remained ignorant of them. On other grounds, accordingly, it would seem very probable that those who had become known to him as the sect of the Masbothæans were none other than the Elkesaites.

W. BRANDT.

MASK. A mask may be defined as a moulded surface, representing the anterior half of a head and face, and usually worn over the face of a person. Further significations are the cast taken from the face of a dead person and the parallel form in sculpture—the front half of a human head and face preserved—a term which is also employed when made by W. H. Dall into 'mask' proper, 'maskette,' resembling mask but worn not upon but above or below the face, and 'maskoid,' resembling the mask, but not to be worn.1 This division is primarily anthropological.

The use of masks in one form or other and for various purposes has been practically universal in all stages of culture above that which the natives of Australia may be assumed to represent. The greater proportion of the Polynesian peoples are an exception. It will be most convenient to arrange the subject according to the purposes for which the mask is employed, classifying details of form and manufacture and variations of general type. It may be noted at once that both in form and use there is the usual similarity between the most widely separated races. The mask is in most cases ethnologically independent in origin.

r. Views as to the original meaning of masks. The usual purpose of a mask is disguise by a more or less defined impersonation, impersonation alone, or, more rarely, protection, physical or moral. The figures impersonated may be real persons, imaginary persons, especially spiritual and divine, or various animal or natural objects. Smith regarded the use of animal masks in religious ceremonial as a survival of an earlier practice according to which the worshipper put on the skin of a victim in order to 'envelop himself in its sanctity.'3 In the form of a maskette many peoples have used the heads of animals, even as a war head-dress. The ritual mask is frequently credited with the power of imparting to the wearer the qualities of what it represents. The Eskimo believe that the wearer is 'mysteriously and unconsciously imbued with the spirit' represented by the mask, and, when wearing the mask of a totem, he becomes the totem.4 In the drama of the Pueblo Indians the actor is 'supposed to be transformed into the deity represented.'5 The wearer of a mask in the dances of primitive peoples is ' assimilated to the real nature of the being represented'—possessed by him.6 But neither this belief nor the desire to be enveloped with sanctity can be regarded as the original factor in the invention of the mask. Dall considers the original mask

5 H. Webster, Primitive Secret Societies, New York, 1884, p. 76 n.
to have been a shield held in hand to protect the face from missiles, and later worn on the face, after the face was burned or covered with covering aspect, with the object of frightening the foe. On another line of development it became the helmet; but this view also fails to give any original psychological element. The Australians do not have the mask, but in their tribal life they wear disguise, as does the artist, whether painting, or with down and blood. Previous to the invention of the Attic dramatic mask, the Dionysian mummers painted their faces with wine, possibly in the spirit of wilfulness and defiance, as in the case of the ancient Roman kings and generals, whose faces were painted with vermilion on state occasions to resemble Jupiter. But this idea is not a possibility. It cannot be argued that the mask is a development from the custom of painting the face. The two are parallel reactions to the irreducible dramatic instinct in its elemental phase of the assumption of another personality. The elaborate facial make-up of modern dramatic art is, when contrasted with the Attic masks, a fine analogy to the blackened face of the modern peasant mummer, as contrasted with the wooden mask of the N. American dancer. We may conclude that the idea of assimilation, whether magical or religious, of terrorization, of protection, and even of disguise are secondary, and that the primary meaning of the mask is dramatic; the mask is a concrete result of the imitative instinct.

The various purposes, therefore, to which the mask has been put have no essential development from one another, but are natural applications to particular purposes of the original mimetic instinct.

2. War masks.—These are not of frequent use. In Central and E. African warriors wear hideous 'masks' of zebra-hide. The natives of Yemen wore masks representing lions, tigers, and so forth, to terrify the enemy. In medieval Europe and Japan soldiers wore horrible masks representing devils, to frighten with terror. The frontal skull on the helmet of the German 'Death's Head Hussars' is of similar origin.

3. The mask of terror.—For other purposes than those of battle, the terroristic idea has been applied. The Chinese placed horrible paper masks on the faces of their children in order to frighten away the demon of smallpox. In Africa there has been the office of 'sham devil.' In China, in order to secure the efficacy of a spell, one will put on a devil's mask, representing the devil it is desired to defeat, and the world in the traditional sense of terror. The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body. The further idea here involved of protection by means of a mask which, so to say, draws the enemy's fire. A similar use of the mask is seen in the expulsion of evils. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchon of Central Europe had originally a similar function. There may have been a mimetic struggle between the Benin and the Ufani masks, symbolizing a struggle for the crops; masked mummers at Kayan soving festivals represent evil spirits.

4. The mask of justice.—Others of justice or terrorism assume the personality of a supernatural inquisitor, the Vehme of medieval Europe being a historical case. Executioners wore a mask, and possibly the black cap of the judge is an adaptation.

5. The mask in secret societies.—These institutions are practically universal in the middle culture. In some cases they include among their functions to disguise the face by means of disguise and the mask. The mask, like all their proceedings, is carried out with mummery, and the mask is employed along with other disguise or impersonation.

The Sindhi of India are in the habit of pinning woollen masks to their foreheads; the collectors wear masks. The Kulkwi, Egbo, and Engunun are other instances of these W. African societies; their masks are based on various ideas connected with the tutelary spirit of the society. The Ogboni society of the Yoruba-speaking peoples is closely connected with the priesthood, and the king is obliged to submit to its decrees. The mask of Engunun represents a hideous human face; he is supposed to be a man risen from the dead, in order to spy out what is going on in the land of the living and carry off those who misbehave. The Tamate of the Banks' Islands is a secret society whose name means 'ghosts.' The members possess much power, and periodically hold meetings and processions, wearing their masks.

The famous Duk-duk societies of New Britain, New Ireland, and the Duke of York Islands comprise practically the whole of the adult male population. In one aspect of its functions the Duk-duk is the embodiment of justice—judge, policeman, and executioner in one. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual totem in the simianism of a masoway. The operators are two, Duk-duk representing the male and Tubman the female cassowary. The mask worn by each is a 'huge bat-like exiguous being': the former wears a very tall mask; the latter wears a more ordinary mask. As far as the body-dress is concerned, it may be said to represent the cassowary, but the head is 'like nothing but the head of a Duk-duk.' A long stick is at the apex, and the 'tresses' are coloured red. The female is said to be plain, the male more gaudy. The extraordinary belief is held that the Tubman mask gives birth to the novices when initiated into the society; and two female masks are kept for this occasion, a man was masked to represent it, and placed in its sphere of operations to discourage its advance. The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body. The further idea here involved of protection by means of a mask which, so to say, draws the enemy's fire. A similar use of the mask is seen in the expulsion of evils. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchon of Central Europe had originally a similar function. There may have been a mimetic struggle between the Benin and the Ufani masks, symbolizing a struggle for the crops; masked mummers at Kayan soving festivals represent evil spirits.

9. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual totem in the simianism of a masoway. The operators are two, Duk-duk representing the male and Tubman the female cassowary. The mask worn by each is a 'huge bat-like exiguous being': the former wears a very tall mask; the latter wears a more ordinary mask. As far as the body-dress is concerned, it may be said to represent the cassowary, but the head is 'like nothing but the head of a Duk-duk.' A long stick is at the apex, and the 'tresses' are coloured red. The female is said to be plain, the male more gaudy. The extraordinary belief is held that the Tubman mask gives birth to the novices when initiated into the society; and two female masks are kept for this occasion, a man was masked to represent it, and placed in its sphere of operations to discourage its advance. The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timor-laut, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body. The further idea here involved of protection by means of a mask which, so to say, draws the enemy's fire. A similar use of the mask is seen in the expulsion of evils. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchon of Central Europe had originally a similar function. There may have been a mimetic struggle between the Benin and the Ufani masks, symbolizing a struggle for the crops; masked mummers at Kayan soving festivals represent evil spirits.

6. The divine mask.—The shaman of N.W. America, c.g., among the Makahs, has one mask for each of his familiar spirits. When giving a séance, he puts on a mask and summons the spirit with the little chant. The shaman places their masks, give expression to their ideas of the spirits represented. Here is a primitive source of creative plastic art. The shaman is said to be able to see the ghosts through the masks he has over the face behind.2 In the ritual of ancient Mexico the priest wore a mask representing the god.3 On the other hand, priests in Nigeria may not wear or touch a mask.4

For a similar point of view the protégé of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it.5 The Monumbo of New Guinea wear masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangaroos, dogs, and cassowaries. The masks, when made, are fumigated in order to ‘put life into them.’ They are treated with respect and addressed as if they were living persons. A man wears a mask representing his totem. This practice is common in N.W. America,6 and the belief is that the wearer becomes the totem-animal.

The image of a god may wear a mask; the Mexicans placed on the face of certain idols masks of a human face cut off from the skull and preserved in gold.7 These masks contain gold masks with pyrites for the eyes, and obsidian and turquoise mosaic in bands across the face.8 The image of the goddess ‘Our Mother’ wore a two-faced mask, and her priest donned a replica of this.9

7. The death-mask.—In connexion with the dead the mask has been exploited along interesting lines, assisting among other things the art of portraits at a distance. Besides the practice of embalming or otherwise preserving the heads of dead friends or enemies, several peoples have made masks of these. One such has been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christie collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (skull masks) were worn in sacred dances.10 The Mexicans also placed painted masks or masks of gold and turquoise mosaic on the faces of their dead kings.11 The Aleuts covered the faces of their dead with masks.12 The meaning of the last practice is obscure, but the fact remains; it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religious dances, so as not to behold the idol round which they revolve, and whose glance means death, may be compared.13 Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks.14 Basuto girls at puberty wear straw masks,15 and Lilloot girls (British Columbia) wear goat-skin masks at the same period.16 In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away his soul.1 Some idea of disguising a person dangerous or in danger may be connected with the practice, and here the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. This they used to wear during the dawn of the nether world, using masks of silver or gold.2 These cases and the next seem to touch upon the idea of a portrait. The Egyptian mummy had an artificial face forming part of the portrait which covered the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Mesopotamia, Phoenicia, the Crimea, Italy, France, the Danube valley, and Britain.3 The most conspicuous and complete examples are supplied by Mycene and Rome. In the famous shaft-graves opened at Mycene golden masks, ‘clearly portraits,’ were found, corresponding to men and children. Those at least of the latter, being of thin gold leaf, ‘must have been moulded with the hand on the faces of the dead.’ The masks of the men were of thicker plate, and had no eye-holes. The bands and feet of the children were also wrapt in gold leaf.4 This suggests that the informing idea was similar to that of swathing the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Egyptian nobility wore death-masks of their ancestors in the atrium.5 The dead nobility lay in state for seven days, during which the embalmer (goldinctor) took a mould of the face, which he then cast in wax, and painted with the natural colours of the dead.6 Thus the mask was used to fill the man’s face, or, in case of putrefaction, on an effigy. After the burial the mask was hung in the atrium, possibly fixed on a bust, and under it was a tabula giving the name and exploits of the man represented. These images were connected by lines, giving the genealogical succession, and termed stemmata. The tabula imaginarium gave a man the right of having his image carved on the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The imagines were crowned with laurel on feast days. By Pliny’s time the wax masks were giving way to cipimata imaginari, i.e. medallions of metal.7

Since Roman times the method of securing a portrait by taking a mold of the dead man’s face has been continued in the case of great personages. This is the death-mask, as exhibited in the Roman catacomb inaugurations of the Sanseverine type, or later, in the representations of the ‘nasoni’ private citizens of the Roman society, whether totemic or consecrated to guardian spirits or otherwise. But the essence of their

8. The dramatic mask.—The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their ‘masonic’ privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the medieval gilds. Frazer describes the institution as ‘a religious drama’ like that of ancient Greece.8 Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to their ‘masonic’ privileges. The society, whether totemic or consecrated to guardian spirits or otherwise. But the essence of their

5 Joubert, Antiquitites, ibid. 187.
function is pantomime, and the mask is the means of impersonation. The masks are made of various woods—elder, maple, or cotton-wood; they are large and prominent of feature, painted red, black, and white. In some of the grotesque sort the eyes and jaws are movable, and worked by a string. Some are held by means of a mouth-bar. Some masks are not used as masks, but are worn by actors as a device to change his character. The masks are surrounded, as usual, with considerable mystery, and are burned or thrown away at the end of the season. A wide variety of materials are used, and elaborate rules. No uninitiated person may see them being made. Little masks are worn on the fingers. The masks represent human persons—male or female, or animals. Ancestors, spirits, *sulka* (tutelary spirits), natural objects (e.g., the sun-mask of the Kwakuitl, *set* round with seal’s whiskeys, and feathers, which gradually expand like a fan), animals, and birds form the subjects of a remarkably varied collection. The Telemaquians have a mask representing the thunder-bird, and the prompter lighting is produced and water poured from the roof on the spectators. Sahil masks represent the ancestors of the clans, viz. the wolf, owl, frog, and coyote. But, since the wearing of a mask is regarded as being unlucky, well-to-do men hire professional impersonators, who may be compared with civilized prejudices against the actor’s profession. The dances are pantomimic representations of the myths stored by the society, and these are to be compared with the magical pantomimes of the Australians, intended to encourage the natural processes which they represent, and, on the other hand, with the mediaeval *pantomime* which has the object of good and evil. The use of the mask throws a sort of mysterious glamour over the performance and at the same time allows the actor to remain unknown. Apart from entertainers, the pantomimes are performed in honour of dead personages, or to bring blessings on a particular man or the community. In N.W. Brazil a very pretty pantomime is performed in honour of the dead, at which the masked actors represent the gorgeously-coloured birds and insects of the forest. The drama of the Pueblo Indians is remarkable; it has features resembling those of the morality and the Greek *pantomime*, but the characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity generally.

The Lamas of Tibet practised a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks. The Burmese drama employed masks for character types such as king and minister. Siamese actors wore paper masks, coloured green, red, black, or gold. A peculiarity was that the wearer did not speak; the parts were spoken by prompters. In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals. *Bildes* and *Dyaks* were good artists.

The drama of ancient Athens, both tragic and comic, employed the mask, which had been used in the old Boeotian mummeries that seem to have produced the drama. Previously the mummers had smeared their faces with wine or covered them with fig-leaves. Similarly, the peasants of Latium wore masks of bark in the Bacchic festivals. The masks of the tragic *theks* were names, at least by the playwright Eupolis, *the* Thespians, who previously had painted his face with white lead or phrasaline. Linen masks unpainted were then adopted; Chorrius improved them; Phrynichus and Phormion made masks; and Aeschylus added paint and generally fixed their form.

The Greek mask was made of linen, or, sometimes, of cork or wood. It was large (in tragedy) to correspond to the human mask; in comedy, to the size of the head. The white of the eye was painted strongly, but an aperture was made for the actor to see. The mouth was permanently opened wide, and the tradition remains, unexplained, that resonance was given to the voice by means of the shape of the mask. All that the mask aimed at was the bold emphasizing of types; every feature was exaggerated, and in the huge theatres of the Greeks this fact was essential. No change of facial expression being possible and the upper part of the forehead generally excluded, the mask prevented any considerable evolution of the psychological drama. It would be difficult to imagine the part of Hamlet played in a mask. Polybius enumerates various species of tragic masks. The tyrant’s mask had thick black hair and beard and wore a frown. The lover’s face was pale. The comic mask was, in the Old Comedy, the portrait of a real person; whether Aristophanes presented *The Clouds*, Socrates stood up in the auditorium to enable the audience to identify the mask of his impersonation; but, when Cleon was to be staged, the actors refused to supply a mask; the fear was the was inspired by the demagoge. In the New Comedy of manners types were represented. The hot-tempered old father wore a mask with one eyebrow drawn up and the other normal; he expressed his changes of temper by turning this or that side. The Roman drama dispensed with masks until the time of Rucous, who is said to have introduced them on his own account, being ugly and ashamed of his characters represented by masked actors. The performances take place in the village square, and have (at least as a secondary object) the intention of procuring rain, good crops, or prosperity generally.

In medieval Europe and England the mask was used in the folk-dramas from which the modern drama was evolved. At the Feast of Fools references are made to the wearing of masks through the period from A.D. 1200 to 1445. The term ’visor’ was usual for the mask. ‘Mummery’ and ‘disguising’ were terms for the various folk-plays, which were often suppressed. A side-development of this drama, and a new application of the word ‘mask,’ were made in the ‘masque’ popular in Elizabethan times.

The theory of Frazer as to the magical and religious origin of the drama may be tested by the special case of the German *Henne* and the English *Good-artist.*
Deuteronomistic code and in the Law of Holiness (Lev 26:1) and, the editor of the books of Kings estimates their character in the light of this prohibition. To earlier writers, especially E and Hosea, see no harm in these stones but the teaching of the other prophets of the 8th cent. evoked an aversion, and Hezekiah, Josiah, and Deutero-
nomy insist on their destruction. Later writers, such as 1, combine divine authority and interpret this as an instrument of worship, and they scruple to describe the parricides as having anything to do with the massabchah, representing them as making altars (cf. LXX Ex 24, substituting άμμος, 'stones,' for πέτρα). Hebrew monotonism, when fully developed, denuded sun and moon of their ancient divinity (Gen 1:14): 'The heaven is my throne, and the earth is my footstool: what manner of house will ye build unto me? (Is 66:1). As a person in Hebrew thought there was no longer any superstitions regard for stones, cairns, crowleys, or meleons.

Stone are used with no occult associations. Samuel commemorates a victory by setting up a stone which he called El-e-or (1 Sam 7:12): the Temple has two pillars, Jachin and Boaz, set up in the porch (1 K. 7:22; inscriptions are re-

corded on stone (Dt 32:17, Ex 34 (the Ten Words): Rachel's grave is marked with a memorial pillar (Gen 35:20); a women reared a pillar, called a 'hand, to perpetuate her memory (2 S 18:30); an agreement between Jacob's sons and the Ishmaelites is marked (Gen 31:49) as to the boundary between them is marked by stones and pillars (on 'pillar, 'cain of witness').

When men stocked with sorrow, enduring a member, when they wished to make the deity the protector of a covenant, they often chose some form of stone as an emblem of the divine presence. Something more than this is indicated in a few instances. Jacob set up a stone for massabchah, poured upon the top of it, and called it Beth-el (Gen 33:20-21, Gen 30:14 tells us that Jacob poured a drink-offering thereupon). The massabchah is found associated with altars and ashedim figures in religious centres, Jacob's ceremony implies more than it states. Joshua sets up a stone saying, 'This stone shall be a witness against us; for it hath heard all the words of the Lord which he spake unto us' (Josh 24:27 E). The use of unknown stones for an altar (Ex 20:21, Dt 33:17, Jos 24:24) betrays the feeling that the chisel would offend the names in the stones.

Semitic and other parallels show that such instances are surviving spectacles of an elaborate system of stone-worship. The massabchah is found in the cogitate languages, and denotes 'lapis qui divi dicuntur' (Lampiudius). Among the primitive Arabs 'the stone serves as an altar, the victim's blood is smeared over it; hence the name ghariy, it is, however, more than an altar, it represents the god-
head' (J. Wellhamsen, Relic arab. Heidentum, Berlin, 1887, p. 134; E. Jawdat rodota (iii. 8) describes Arabs making a covenant.

An umpire draws blood with a sharp stone from the hand of each of the two parties making the covenant, Ver, using their garments he smears the blood on seven stones placed between them, invoking Goral and Allah. Herodotus might have added that the parties laced each other's blood (W. D. Smith, Kinship and Marriage, London, 1967, p. 56 f.).

The Canaanite high-place discovered at Gezer reveals the conspicuous place assigned to standing stones in the cult of Palestine before the Hebrew occupation (R. A. S. Macalister, Excavation of Gezer, London, 1912). Phenician coins and temples confirm the sanctity of the stone cult and the Greek name βαύρων, βαυρίων, appears to be derived from Beth-el.

Theophrastus, in the 4th century B.C., depicts the superstitious Greek passion for buried stones and anointed stones to which, taking out his phial and pouring oil on them, falling on his knees to adore, and going higher (From H. 15.7). Traces of like practice are recorded down to the present day. A full description of 'a shrine of pre-Islamic stone-worship' with a ritual preserving pre-historic function, a Temple of the Macedonians is given by A. J. Evans in his 'Mycen-

ian Tree and Pillar Cult' (JHS xxi. 1931). It is due to prophetic intolerance of the irrational and illogical, so slight traces of litholatry remain in the OT.
What mean ye by these stones? asked the Hebrews; ratio in obscuro, answered Tactitus. To seek one principle consistently applied is as hopeless in custom as in a language. Feeling, variable and indifferent to logic, determines usage in regard to sacred stones. Mountains have inspired awe and reflection (cf. Fuyujima, Hermann Horeb, Sinai)—and it has been suggested that the sacred pillar is a little model of the Holy Hill. Meteorites have been found and treasured; and, if the stone slab or pillar may serve as a resting-place for the soul, it is of course necessary to frame any fragmentary faith on a path of light, like a falling star, or supposed to be sent amid thunder and lightning. Would command devotion (cf. Diana of the Ephesians and the image which fell down from Jupiter to the temple at Ephesus). Materialism, composed of spiritualism, and The anathema inscription, the phallic one (Islam). History. Malsteine, The hundreds of thoroughgoing metaphysical little books. Em. Ixxii. regard Ixxiii. with Jupiter arranged they have received their due; etc. Meteorites to be the only thing; il isVEL., etc. a little prophecy, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, impenetrable, eternally self-existent matter, susceptible of motion, is the one fundamental constituent of the universe. But a mode or a property of such matter, and psychological processes are reducible to physical. More precisely, there are three kinds of metaphysical materialism, thus described by Kline (Intro. to Philosophy, Eng. tr., p. 117): attributive materialism, which makes mind an attribute of matter; causal . . . , which makes it an effect of matter; and quantitative . . . which looks upon mental processes as really material in character.

1. History.—The atomism of Leucippus and Democritus is the earliest example of materialistic theory. According to these philosophers, the physical world is composed of invisible material particles, and mind is made up of similar atoms, smaller, rounder, smoother, and more mobile. The theory reduced all qualitative differences to quantitative differences, and considered the atom as the final cause or intelligent purpose from the world. The denial of the immortal soul, and interpreted the universe only in terms of mechanism and fixed law. The last element in early Greek atomism, does not necessarily presuppose or involve materialistic theory, though Lange, the historian of materialism, seems to see in it the chief virtue of early materialistic speculation. The theory of Leucippus and Democritus was developed by Epicurus and Lucretius, with certain modifications.

At the beginning of the modern period the early Greek materialism was revived by various teachers; however, deprived it of metaphysical significance by reconciling it with belief in God as Creator of the atoms. T. Hobbes, at the same time, taught a similar view; and, though his philosophical system is materialistic, he cannot be called a thoroughgoing materialist. He strongly insisted that all that exists is body or matter, and that motion is the only kind of change. Gradually developing in England, materialism perhaps reached its climax in the writings of the French Encyclopedists (p. 99), after science had revealed how closely psychical states and
MATERIALISM

mental development depend on the body. P. H. D. Holbach’s *Système de la nature* (London, 1770), which rejects every form of spiritualism and super-naturalism, marks the culmination of this movement of thought.

Nearer to our own time materialism appeared, as a reaction from post-Kantian idealism, with renewed energy in Germany, K. C. Vogt, J. Mole-schöpf, and A. Kittelman, for whose exposition of the same doctrine at about the middle of the 19th century. Their writings, though evincing—for the first time, perhaps, in the history of materialism—some sense of the need of an epistemological foundation for a metaphysical and religious mental process into material, reveal great crudity of thought and knowledge in this connection, and in spite of their popularity are of no philosophical worth to an age which is careful and critical as to epistemological presuppositions, especially such as are involved in the physical sciences. Description of physical and even mental processes, in the language of materialism, is easier to science; and this fact, together with the jubilant confidence with which science, flushed with many successes, over-hastily exaggerated its own scope and functions a generation ago, accounts for the following which many generalizations of natural knowledge have received—a colouring which has often been taken by students of the physical sciences, unpractised in philosophical reflection and criticism, for an essential similarity—a misbelief of scientific truth rightly so called. T. Huxley, who on occasion could teach materialism of the most dogmatic kind, and in another mood would capitulate to spiritualism, sought permanent refuge in agnosticism; and, since his earlier and more militant essays, materialism has found no literary champion among British scientists. In dogmatic form it is to be found today, as a teaching of which even the crudest materialist is ashamed, but it is possible, in the light of modern materialistic presuppositions, to introduce the term of secularist free thought. Even the monism of E. Haeckel, which is materialism in all but its name, awakens no enthusiasm among scientific students in Britain; it is rightly regarded as involving an obsolete standpoint which science, more silent and cautious—if not more critical—than formerly, has left behind.

2. The attractiveness and plausibility of materialism. The chief allure of materialistic metaphysics and physical science have coincided with occasions of renewed interest in, or remarkable progress of, physical science. The emergence of this tendency to regard the world as a material process is in part a consequence of the epoch in the history of thought, is evidence that materialism strongly commends itself to many minds, especially to those whose studies chiefly lie in the sphere of the physical sciences. There are many reasons for the attractiveness of materialism as a metaphysical theory or view of the world to such minds, and the view possesses great plausibility when it is contemplated from the epistemological standpoint which the natural sciences, as well as the philosophy of common sense or ordinary social intercourse, take for granted. These reasons may now be specified, and the extent to which it is received and the reasons that derive their plausibility examined.

One reason why, as H. Höffding says (*Problems of Philosophy*, New York, 1905, p. 140), ‘ever again psychology has sought a metaphysical direction, although—since the advent of the critical philosophy—not with such dogmatic assurance as formerly,’ is that our knowledge of matter, its changes and its properties, is less circular, and is so much more easily obtained, than our knowledge of mind. Psychology is a comparatively young science. In so far as it embraces psychology and is pursued in its relation to physiology, even psychology deals with matter rather than with mind. And in so far as it is pursued by the analytic method—the only truly psychological one—it is a study beset with enormous difficulties. Moreover, such psychological knowledge as is now forthcoming and is acquired by the investigator of physical phenomena, so that he proceeds in abstraction from essential elements involved in every objective fact that he examines and classified. Psychology, again, more immediately involves metaphysics, which makes the most important part is as yet disputed ground. Lastly, the physical sciences owe much of their prestige to the fact that they are based on measurement, and, being thus quantitative, are capable of mathematical treatment, whereas in psychology (of the pure or analytic kind) measurement is out of the question.

The physical sciences, again, impress us with their connectedness. The connectedness of the material world exercises an overwhelming power on our minds, and especially upon the imagination. Mind, on the other hand, is discontinuous; it is known only in the form of individuals; and these minds are not known, as yet, with anything like certainty, to communicate with each other through any other medium than that of matter. Further, we know nothing in connection with bodies or material organisms, and, similarly, as observation goes, we have no knowledge of mind existing independently of body, though—again, so far as observation goes—it seems that most material things exist without a mind. Verily, we might also add, is the array of facts furnished by physiology, comparative anatomy and psychology, and pathiology as to the concomitance of psychological processes with physical, their denial is literal phenomena such as the functioning of the brain, the correlation of mental development throughout the animal kingdom with organization and complexity of brain-structure, the effects upon mind of injury or disease in brain tissue, and so forth. Thus a very strong, clear, and convincing case for the priority of matter to mind, and for the dependence of the mental on the material, is presented by science; and there is much to suggest that consciousness is a property, and, indeed, a product or an effect, of matter or material process. The progress of science would seem, as Huxley put it, to have meant the extermination of man as a metaphysical concept, and to have the realm of matter, and the concurrent abandonment of all reference to mind, and to afford as good ground for asserting mental phenomena as effects of material as for asserting heat to be due to physical causes.

Moreover, it may be added, it is impossible to invalidate this coherent and cumulative argument for materialism from the standpoint of the physical sciences. No counterease can be made, for instance, out of the fact, if it be a fact, that to some mental events no correlated material changes within the brain have been discovered; for future research may possibly discover them. On the other hand, it is precarious to stake our metaphysical theory on gaps in scientific knowledge. Nor can materialism be refuted by saying that thought, or consciousness in general, may still prestige in activity or properties of matter. Heat, light, sound, and electricity are qualitatively different, yet all of them are properties of matter or of ether possessing some of the characteristics of matter. It is a baseless dogma that there must resemble the cause, so long as we refer to phenomenal causes and effects. Science, in its more abstract developments, does indeed reduce all diversity to quantitative difference, all causality to identity, so that
heat, light, electricity, etc., are resolved into motions of matter—i.e. of extended and inert substance; but at this level of analysis consciousness, looked upon as one kind of phenomenon among others, and regarded from the purely or abstractly objective point of view adopted by science, might similarly be held capable of resolution into physical elements, the properties that can be urged from this epistemological standpoint, in opposition to materialism, is that the adoption of it as metaphysical truth would involve us in absolving, and the disbelief as to the validity of materialism. For, if thoughts and all other modes of being conscious are produced by material causes, and their co-existences and sequences are mechanically determined (so that all purposiveness is excluded), there would seem to be no reason for believing that any of our thoughts and judgments, even concerning matter, are true. This argument should suffice to dispose of the dogmatic certainty of materialism, though not necessarily the possibility of its (indemonstrable) truth. That material change, while ever pursuing the sole path of least resistance, should throw off, epiphenomena, the condition of which is that of logical sequence, is a possibility with which the materialist must be credited, and to which, perhaps, his opponent will allow him to be wedded, if he can prove that there is no order in the universe. If there be an enemy of the spiritualist and to put the thesis in a difficulty, there is surely too much order in the world to allow the materialist to feel at home there.

3. Rebuttal of materialism.—But there are more telling arguments against a materialistic metaphysics than any of those hitherto mentioned. They emerge only when the question of the epistemological standpoint of physical science is raised, and the first principles and presuppositions of such knowledge are exposed to the searching light of criticism.

When science boasts of the 'objectivity' of its knowledge, it does not merely imply possession of knowledge (concerning fact) such as is universal, or capable of being common to all subjects—which is a perfectly legitimate contention; it further drops out of sight altogether, as convenient or essential to its own practical procedure, all reference to subject, or to the subjective elements which are essential to the very existence of knowledge at all, and which survive in some form even when science has developed its abstract results. Furthermore, even if arbitrarily recognizing that any object of universal human experience, such as the sun, is 'independent' of any individual subject's consciousness, we are often apt to speak as if such an object were similarly independent of the experience of human subjects collectively—which is a very different matter. The phenomena which science studies are not indeed the objects of individual experience, the nature of which—in complete isolation from intercourse with other individuals' experience—we can only guess or reconstruct in part; but they are the sum of subjective elements common to my individual experience, and are owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—these things are impossible, inconceivable, and metaphysical. Know to the contrary, moreover, as distinct from pure passive sensation (if there be such a thing in reality), reveals the work of subjective activity and creative elaboration; and the emergence of consciousness, the object which is not owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—these things are impossible, inconceivable, and metaphysical. Know to the contrary, moreover, as distinct from pure passive sensation (if there be such a thing in reality), reveals the work of subjective activity and creative elaboration; and the emergence of consciousness, the object which is not owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—these things are impossible, inconceivable, and metaphysical. Know to the contrary, moreover, as distinct from pure passive sensation (if there be such a thing in reality), reveals the work of subjective activity and creative elaboration; and the emergence of consciousness, the object which is not owned, a cognition which is nobody's, a phenomenon which does not appear to some subject—the one thing which cannot be doubted or explained away without involving the assertion of its reality—is always essentially a duality in unity, subjective and objective; either aspect without the other is an impossibility. Science can ignore—so long as it confines itself to its own business—the one element in experience, the subjective, though of course its whole procedure involves subjective activity; and it ignores it so completely that its students have sometimes come to look upon what they have agreed to leave out of sight (it being none of their business) as non-existent. Objects recur to be talked of as if they were really subject-less; their independence, their priority, their exclusive reality come to be affirmed. The scientist, leaving himself out of account at the beginning, cannot discriminate materialism from the first encounter on the order in the universe. If there be an enemy of the spiritualist and to put the thesis in a difficulty, there is surely too much order in the world to allow the materialist to feel at home there.

Once, then, the materialist is allowed the right to talk of objects without implicated subjects, of 'purely objective' facts, of phenomena per se, he can proceed to lay before us an array of imposing facts and arguments which, from the standpoint conceded to him, are as irrefutable as they are impressive. But science, by that same condition of things, as known to us, can exist to be known independently of all experiencing subjects is shown to be impossible, the tables are turned. Not only can we demand in question, but their apparent force, but consciousness, which materialism would resolve into an epi-phenomenal effect or property of self-existent matter, is seen to be the primary reality, and matter as we know it is shown to be a conceptual construction of mind. Materialism, we conclude, misunderstands human experience, in which subjective and objective form one whole, while they are gradually differentiated only through increasingly complicated processes of conceptual distinction. The objective, moreover, is not to be identified with the material, as these were convertible terms. Matter is a conceptual abstraction, which may be taken for the ground or source thereof. Atoms, again, are only figurative ideas; and that they have to be endowed with the very attributes which, in gross matter, do not indeed with attributes that contradict all observation, is a sufficient warning against adoption of the naively realistic view that they are material.

Materialism also involves the old and obsolete assumption that the so-called secondary characters of matter (colour, tone, odour, etc.) are fundamen-
tally different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's
great contributions to philosophy to show that this distinction is untenable. The secondary qualities of
matter have been called 'of physical enough to be 'in
our mind' and not 'in matter.' But on closer
examination it is to be seen that the primary
qualities are in precisely the same case. Our idea of
extension, for example, passes through feeling for
touch or sight; and the perceived 'size' of a body
depends on our distance from it. That a material
object is of the same size, though at one time it
may appear larger and at another smaller to a
perceiver, is an inference, and involves the revision
of the evidence of our senses by reasoning. The
extension which we attribute to a physical object,
then, is inferred, and not perceived, extension;
and, if we abstract from our idea of extension the
sensation-elements supplied by touch or sight,
nothing remains. Therefore matter possesses
extension no more than it possesses colour, except
as perceived by our minds. If, then, there be any-
think at all (which Berkeley denied) other than
our minds and the direct action of God upon them
which causes the sensations whence our idea of
extension (or of matter) is derived, it is obvious that this something
cannot be matter as it is perceived. There may be what
J. S. Mill called a 'permanent possibility of sensa-
tion' independent of us, whose ease is not percipi;
but it is inferred from the evidence of our
(i.e., of matter) from the 'matter' of physical science and common
sense, and, for all we know, may just as aptly be
described as mind or spirit. We can, therefore,
without self-contradiction, ascribe our sensations
of God (Berkeley) or to other spiritual existences
(pluralism); but we cannot ascribe them to matter
as perceived. Either of the views just mentioned
would be as tenable as one which unjustly
ascribe our sensations to the influence of other
spiritual existences endowed with 'being for self,'
without self-contradiction, we can, therefore,
without self-contradiction, ascribe our sensations
to God (Berkeley) or to other spiritual existences
or spiritual existences endowed with 'being for self,'
without self-contradiction.

There are several other inconsistencies involved
in materialistic doctrine, one or two of which may
briefly be mentioned. Materialism implies that
everything which happens is accompanied by
consciousness of its happening would happen equally
well without consciousness; or, in other words,
that consciousness makes no difference to the
course of the world. But, if so, it is difficult, on
the theory of evolution by survival of the fittest,
which is the current scientific explanation of the
origin and permanence of every organ and every
function, as well as of every individual organism
and every species, it is not for the emergency,
and still more for the development, of mind.
Materialism, again, of the more thoroughgoing type,
regards consciousness as the product or effect of
matter. This is the principle of 'nihil ist
nihil fit'; and in its application to what physicists call
'energy.' The law of the Conservation of Energy
is often held—though doubtless quite errone-
ously—to assert that not only is there quantitative
equivalence between the energy of light, in any
physical change, disappears in one form and that
which appears in another, but also that the sum-
total of energy in the universe is constant.

Tally different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's
great contributions to philosophy to show that this distinction is untenable. The secondary qualities of
matter have been called 'of physical enough to be 'in
our mind' and not 'in matter.' But on closer
examination it is to be seen that the primary
qualities are in precisely the same case. Our idea of
extension, for example, passes through feeling for
touch or sight; and the perceived 'size' of a body
depends on our distance from it. That a material
object is of the same size, though at one time it
may appear larger and at another smaller to a

of the evidence of our senses by reasoning. The
extension which we attribute to a physical object,
then, is inferred, and not perceived, extension;
and, if we abstract from our idea of extension the
sensation-elements supplied by touch or sight,
nothing remains. Therefore matter possesses
extension no more than it possesses colour, except
as perceived by our minds. If, then, there be any-
think at all (which Berkeley denied) other than
our minds and the direct action of God upon them
which causes the sensations whence our idea of
extension (or of matter) is derived, it is obvious that this something
cannot be matter as it is perceived. There may be what
J. S. Mill called a 'permanent possibility of sensa-
tion' independent of us, whose ease is not percipi;
but it is inferred from the evidence of our
(i.e., of matter) from the 'matter' of physical science and common
sense, and, for all we know, may just as aptly be
described as mind or spirit. We can, therefore,
without self-contradiction, ascribe our sensations
of God (Berkeley) or to other spiritual existences
(pluralism); but we cannot ascribe them to matter
as perceived. Either of the views just mentioned
would be as tenable as one which unjustly
ascribe our sensations to the influence of other
spiritual existences endowed with 'being for self,'
without self-contradiction.

There are several other inconsistencies involved
in materialistic doctrine, one or two of which may
briefly be mentioned. Materialism implies that
everything which happens is accompanied by
consciousness of its happening would happen equally
well without consciousness; or, in other words,
that consciousness makes no difference to the
course of the world. But, if so, it is difficult, on
the theory of evolution by survival of the fittest,
which is the current scientific explanation of the
origin and permanence of every organ and every
function, as well as of every individual organism
and every species, it is not for the emergency,
and still more for the development, of mind.
Materialism, again, of the more thoroughgoing type,
regards consciousness as the product or effect of
matter. This is the principle of 'nihil ist
nihil fit'; and in its application to what physicists call
'energy.' The law of the Conservation of Energy
is often held—though doubtless quite errone-
ously—to assert that not only is there quantitative
equivalence between the energy of light, in any
physical change, disappears in one form and that
which appears in another, but also that the sum-
total of energy in the universe is constant.

The latter, and illegitimate, part of the generalization
has been a tenet of materialists; and it is difficult
to reconcile it with their assertion that mental
phenomena are caused by material. For in every
such production of consciousness a disappearance
of matter is involved, and this disappearance is
also attributable to consciousness. The last
view is so objectionable on many grounds to
materialists, partly because it opens the possibility
that mind may produce physical effects, that they have avoided working it out. Lastly, it is generally
admitted that materialism cannot explain even
the simplest type of conscious process. The diffi-
culty of conceiving how a sensation or a feeling
could be the necessary consequence or effect of
motion in matter or mass-points, and of imagining
how mathematical physics would cope with such
a possibility, is overwhelming; and, of course, it
has never been faced.

4. Recent substitutes for materialism: hylozo-
ism.—It is not surprising, under the pressure of
all these difficulties and in the light of the self-
criticism to which the structure of physical
materialism has of late been subjected, that materialism should
at the present time be a practically abandoned
philosophical theory. Useful as a method, it is
waning as a metaphysic; and representatives of natural science are leaning towards a more
materialistic speculation and a preference for materialistic
terminology adopt in its stead a monism which has
much in common with the ancient doctrine of
hylozoism, according to which all things are
— as mathematical physics asserts for its necessary
postulate—but living. Thus J. Tyndall was willing
to endow primordial matter with 'the promise
and potency of life'; and W. K. Clifford, in his 'mind-
dust' hypothesis, and Haeckel, in his imaginative
theory of atoms indwelt by rudimentary souls, go yet
further, and couple hylozoism with pan-psychism.

Hylozoism is as ancient as the Ionian school of
Greek philosophy, and was taught in a crude form
by Thales. The Stoic doctrine of a world-soul is
another form of it, revived and developed by several
thinkers in the period of the Renaissance (Fara-
celus, Telesio, Bruno, etc.). Hylozoism reappears
again in the writings of the Cambridge Platonists
(g.v.), as well as in the speculations of philosophers
such as J. B. Robinet and G. T. Fechner; and
pan-psychism—the view that all matter is psychical
or has a psychical aspect—which was held by
Spinoza ('omnia quamvis diversigradibus animata')
(Ethica, ii. prop. xiii. note) and Leibniz, is common
to the numerous advocates whom pluralism finds
at the present day. It is doubtless a better hylozo-
ism, with its assertion that all matter is
organized or living, or may be maintained without the further assumption of pan-psychism, that the real
elements of the world, and all that we call 'things,' are
psychical entities endowed with 'being for self';
and, indeed, many writers seem to use the term
'hylozoism,' as if it included the latter doctrine.

But, without this added implication, and taken in
the etymological sense alone, hylozoism involves
the repudiation of most of the consequences drawn
from rigid materialism. For it denies the inertia
of matter and the statement that motion is exclu-
sively caused by external forces, credits physical
bodies with capacity for self-movement, and re-
gards life as an inherent or essential property
of all matter as such. Thus, as Kant saw, hylozo-
ism is the death-blow to science—'science being
understood, as Kant understood it, to mean a
priori pure or mathematical physics. The latter
kind of knowledge being assumed by Kant to be
necessary and universal, he could write thus:

*The possibility of living matter cannot even be thought; its concept involves contradiction because all living constitutes the essential character of matter' (Kritik of Judg-
While Kant thus saw that hylozoism meant ruin to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of each of its mass-points at any given moment, modern upholders of the mind-stuff hypothesis, and Haeckel's Eng. anti-theistic sympathy, have not been so clear-sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualitative monism is, indeed, in all its forms a position of unstable equilibrium; or, to change the metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylozoism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and, as, finally, life means the power to act or change according to an internal principle, while only one such principle is known to us,—i.e., thought, together with feeling, desire, and will, which depend upon it,—it will doubtless come to be more and more plainly seen that the implications of this science are not materialistic but spiritualistic.

F. R. TENNANT.

MATERIALISM (Chinese).—Chinese religion and philosophy have been declared by many writers to be materialistic; one of them 1 went even so far as to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a personal God, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is 'cosmological materialism,' to be distinguished from 'ethical materialism,' which sees the aim of life in egotism, pleasure, and sensuality. Both are to be found in China, but they are not at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nobody will seriously think of imputing materialistic faith to those Monotheists who declare that the visible world is nothing but a semblance, a vision without any reality. Taoism takes a similar view-point: there exists nothing except Tao, the Absolute, an incomprehensible, incomprehensible entity. But how about Confucianism, which has often been described as materialistic? Confucius himself owned to a 'benevolent agnosticism,' declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, 'While you do not know life, how can you know about death?' and on another occasion he made the remark, 'Show respect to the spirits, but keep aloof from them.' 2 He believed in a superior being which he called Heaven, but never used the personal name God—a fact by which he laid himself open to the charge that he held no clear notion of heaven, but certainly he did not conceive it as an anthropomorphic god. Still more than Confucius himself his followers, especially the philosophers of the Sung period (12th cent. A.D.), declared themselves to be non-materialists, but unjustly. The system of Chu Hsi, the head of this school, is a pure dualism. He recognizes two principles, matter and reason, and to the latter

2 Ann. x. 1, v. 25.
materialism (Indian) — 493 —

round the idea of heaven or God. The human body is formed of the two fluids, the yin producing the body, and the yang the vital spirit and the mind. At death they again disperse, the yang, or soul, ascends to the sky, and the yin, the original state of unconsciousness. Consequently there can be no immortality, which Chu Hsi likewise disclaims.

Wang Ch'ung's materialism has not had any serious effect on the Chinese people, not because they had a horror of materialism, as many Westerners have, but owing to Wang Ch'ung's bold criticisms on the national sages, Confucius and Mencius. So far as we know, Wang Ch'ung is the only Chinese thinker who set forth a scientific system of cosmological materialism.

Already in the 4th cent. B.C. ethical materialism found an advocate in Yang Ch'i, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortunes, and that this is the result of the laws of the world and of man's own doing. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with disasters. Therefore men ought not to harass themselves to be virtuous or use those aids such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for the consequences of the veheHent impeaHeHents of Mencius this doctrine has never got a hold on the Chinese mind.

Both Yang Ch'i and Wang Ch'ung have been buried in oblivion, until they were redeemed from it by the congenial interest of foreign admirers.

MATERIALISM (Indian).—1. We possess several comparatively modern works which set forth the doctrine of materialism in the philosophical systems of India, e.g., Summary of all the Systems, and Resumption of the Size Systems. The systems are arranged in the order of their increasing orthodoxy, from the accepted to the opposed. The first, the Vaisäkhi, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradiction with the general conception of Indian philosophy and mysticism.

In more ancient sources— in the Mahabharata, on the one side, and in the Buddhist scriptures, canonical or scholastic, on the other—we find data concerning this materialistic system which are scanty but generally in agreement.

As regards the sources that would give us direct information about the materialist school only a few citations can be brought forward, and their authenticity is not certain.

We are not convinced that a materialistic 'school,' a 'system,' in the original sense of the word, existed. There have been 'materialists' who have entertained some very well-defined theories, to whom the 'spiritualists,' whether Brahmins, Buddhists, or their followers, are related; those are, perhaps artificially, grouped in the works of which we have spoken.

The most characteristic names are Nâstikas, literally 'deniers,' 'teachers of a materialistic system,' those who are termed 'skeptics,' 'materialists,' 'adherents of the doctrine of the world and of men; Spuren der Welt und der Menschen,' the so-called 'worldly,' 'difficult to interpret; Chârvâka is said to be the founder of the sect; he is undoubtedly the deno

1. In the 'summary' mentioned in notes 1 and 2 on previous p., and also in the Mahabharata (see the first book, 2nd canto, 18th chapter, as well as in the other books of the Mahabharata). This name originally extended to all kinds of sceptics, deniers of the Vedas gods, or of the Brahmanic religion (see below).

2. See O. Böhring and K. Boeckh, Sastra-Wörterbuch. Petropo
ger, 1826-1827, 5-6.

3. See E. Rhys Davids, Dialogues of the Buddha, i, (Oxford, 1899) 14, 159, 129, 166. C. C. Rajaguru (v) (1906 June 19) rightly remarks that Rhys Davids is wrong in saying: 'Of the real existence of a school of philosophy that called itself by the name (Lokayata) there is no trace.' The traces are numerous. See also art. Lokayata.

4. Dipika Nikāya, i, 50; Sutta Pitaka Nikāya, iii, 307; Mahābhārata Nikāya, 106, and also in the Sandristi sources. This passage has often been translated. The version reproduced above is that of Rhys Davids, Dialogues of the Buddha, i, 22. Attention should be drawn to those of E. Burnouf (Le Livre de la bonne loi, Paris, 1857), P. Grund, (Sept Suttas pâli, do, 1785) and D. R. P. J. Boll, (Paradigmata Buddh. in J. R. P. Jacobi, Jaina Sutras, ii, pp. 329, 333, 336; SBE xlv (1895).

A more complete study would describe the opinions of Paripakrathā, another name for Sāntideva, by Rhys Davids (ibid., ii, 3, 2); of of Mahākālla (ibid., ii, 13); of by Mah adec (ibid., ii, 52), who denies responsibility, and teaches what is called the 'theory of non-action'; if with a discussion with an edge sharp as a razor he should make all living creatures on the earth one heap, one mass of flesh, there would be no guilt thence resulting; no increase of happiness and no decrease of the happiness of Mahâkâlla, who denies liberty. 'There is no such thing as power for the ego, or human will, or knowledge. Arguments are bent this way and that by their fate, by their individual nature,' and comes near the wall with minor alter ego, the Mahabharata, namely, the omnipotence of fate (dharma) and the weakness of human activity (pravritti). It was buddha who said that good fate (dharma) is only the man of our former actions.
MATHURA

into the primitive community, and for whom the tone of novitiate was shortened 'because they believed in the retribution of actions.'

He does not believe in an after death or rebirth; he believes only in the four elements, earth, water, air, fire, conceived in a materialistic sense; he therefore denies the fifth element, consciousness (swarga), which, under different names and in different manners, constitutes, in the 'orthodox' or 'spiritualistic' systems, the essential of what the West calls the 'soul.'

If the doctrine attributed to the materialists by later sources, viz. that 'thought develops in the human body from a special mixture of the elements like the intoxicating power of the fermentation of the grain or of the juice of the sugar-cane,' arises quite naturally from this ancient theory of Ajita.

(3) Ajita denies the fruit of good and bad actions, and, consequently, morality. He is a Nastika, a 'denier.' He certainly denies sacrifice, super-natural births, etc., but, of all these denials, the denial of the remuneration of good and bad actions is the most monstrous. The Buddhist works teach this theory (for the materialists essentially in this denial, which destroys the roots of merit) and causes a man to commit all kinds of sin.

Ajita seems to have led an ascetic life; but 'asceticism' to materialists are usually 'libertines.' If we believe our sources, which attribute to them sayings like the following:

"As long as we live we ought to live happily, enjoying the pleasures of life, in the hope that we can the body reap once after it has been reduced to ashes" (Pp. 5. 7.1)

3. What leads us to believe that there was, properly speaking, a materialist school, is the double philosophical theory that our texts attribute to the deniers.

(a) 'The only means of knowledge (pratmada) is the immediate evidence of the senses.' All orthodox Indian schools are wrong in appealing to induction (anumana) or to authority (the word of a competent person, of an omniscient being [brahmacaryas], or of the Veda).

A sentence belonging to the literature of the materialists says: 'There is nothing in man except what is visible to the senses. Look, dear friend, at these so-called scholars call the traces of the wolf.' A man who wanted to convert—let us say 'pervert'—a woman to his materialist opinions, went out of the town with her, and on the dust of the road he drew with the thumbs, index fingers, and the nails of his two hands, marks resembling the footprints of a wolf. In the morning the scholars said: 'Assuredly a wolf came last night from the forest; for otherwise it would be impossible that there could be a wolf's footprints on the road.' And the man said to the woman: 'See, dear friend, what clever thinkers these men are who maintain that induction proves the existence of supra-sensible objects, and who are regarded as scholars by the crowd.'

(b) Denying induction, these philosophers without philosophy are forced to deny causality. The name Siahbavikas is given to the scholars who believe that, in the sense which the Buddha refused to examine (see Asaṅgavasa [Buddhist]), vol. i, p. 219) occurs this one: 'Is the true principle (jiva) the same thing as the body (arūpa)? Is it different from the body?' The Buddha condemns the two opposite opinions and constructs a middle way.

In order to meet the Pāli material on the question of materialism, one must read also the Pajñā Suttanta (see the tr. in Rhys Davids, op. cit. 317) which is not only on the existence of another world, gods, etc., but also on the existence of the soul.

I am more than once mentioned which the Buddhists refused to examine (see Asaṅgavasa [Buddhist]), vol. i, p. 219) occurs this one: 'Is the true principle (jiva) the same thing as the body (arūpa)? Is it different from the body?' The Buddha condemns the two opposite opinions and constructs a middle way.

In order to meet the Pāli material on the question of materialism, one must read also the Pajñā Suttanta (see the tr. in Rhys Davids, op. cit. 317).

MATHURĀ (Muttra).—The name Mathura, or Muttra, is borne by both a district and a town in the United Provinces of Agra and Oudh. The District (1448 sq. m.) lies to the north of the Agra District, and includes many places sacred to the worship of Krishna, the notable being the small towns of Brindāban, Gobardān, Gokul, and Mahābāhī (qq.v.). Mathurā town or city stands on the right bank of the Jūnūnī, on the main road that goes from Agra to Delhi, in 27° 30' N. 77° 41' E. (the town in 1901, 60,042). The city, which is of immemorial antiquity, was placed by early Hindu writers in the country of the Saurasenas, and was reckoned by Ptolomy among the seven cities of the Kaspeiraioi. He calls it Modoura (Mōdeo), 'the city of the gods' (Vit. i, 50).

Arran writes the name Mathora (Mōdeo [Indices, viii. 5]), and Flinn (H N vi. 19) uses the same spelling.

An alternative Hindu literary name was Mathūpura, now represented by the village Maholi, which 'is so close to the city as almost to form one of its suburbs' (Growse, Memoir, p. 4), and who destroyed the temples, changed the name to Islamabad or Islāmāpur (ib. pp. 35, but the new name never became current (see Num. Chron., 4th ser., ii, 1905) 232).

The city was plundered by Mahmūd of Ghazni in A.D. 1008-9 and again by Aḥmad Shāh Durrānī in 1757. The greater part of the District came under British rule in 1803.

Mathurā, one of the seven sacred cities of the Hindu, is second only to Benares (q.v.) in the city. The city and the western half of the District, known as the Braj-mandāl, are now associated almost exclusively with the legend and cult of the cow-herd deity of Mathura, known as Krishna, the name of which was sacred to Jains and Buddhists as it was to Brahmānical Hindus. The literature concerning the religious history and antiquities of Mathurā is extensive, and new discoveries in this remarkable city are constantly coming to light. It is impossible here to do more than indicate the importance of the locality in the history of Indian religions and the exceptional interest of the broken remains which have escaped from repeated Muslim violence.

Mathurā, being situated between the Muhammadan capitals of Agra and Delhi, was specially exposed for centuries to inclemencies attacks. hardly any ancient Hindu building of importance is now standing, and the valuable sculptures which make the district famous among archaeologists have mostly been discovered by modern collectors.

The sculptures and remains of buildings in an extremely fragmentary state are found in the city and for many miles round.

The objects connected with the Jain cult have been discovered for the most part in the Kankali or Jain Temple (mound) to the S.W. of the city, which is situated on the site of J. H. Marshall's, Digambara, and the other Śvetāmbara, as well as of a remarkable stūpa, the only Jain monument of the kind about which details are known. In its earliest stages, dated in the remote antiquity, it is from 600 or even 700 B.C.

The Jain faith was vigorous in the Kusāna period early in the Christian era, and the images found came down to the 11th century. At the present day Mathurā and a few temples in the Mathurā District, their principal settlement being at Kosi, where there are three temples.

The numerous Buddhist remains, which are of great interest, disclose the former existence of an important monastery founded by Hūsiṣa Kusāna, probably early in the 2nd cent. after Christ. In Fa-Hian's time (A.D. 405) there were twenty Buddhist monasteries with some 3000 monks in the neighbourhood of Mathurā. When Huien Tsang travelled, more than two centuries later, the number of monks had diminished. The Maḥāmāyā attacks from A.D. 1813 onwards wiped out the Buddhist establishments. There are plain indications that the popular Buddhism of Mathurā included a sensual erotic element, which probably has contributed to the subsequent development of Mathurā Kusāna and Kusāna worship now specially associated with the Mathurā region. Nāga worship was much practised during the Kusāna period.

Tārā, a Brahminical Hinduism appears to be the most ancient of the Mathurā religions. The Greek writers call the chief local god by the name of Herakles, and the sculpture representing the fight of Herakles and Kīrtimāla, that is, Nāga, is one of the most famous of Mathurā antiquities.

The temple of Kesava Deva at the Katrā on the western side of the city, rebuilt early in the 17th cent., was described by J. B. Tavernier (c. A.D. 1651; *Travels in India*, tr. V. Bell, London, 1889, ii. 240) as 'one of the most sumptuous buildings in all India.' Anuragārī destroyed it in 1669, and built a mosque on the site. All the old Hindu temples in the city were destroyed by the Maḥāmāyās at one time or another.

Archaeological evidence shows that the cultus of Kṛṣṇa was well established as early as the 4th and 5th cent. A.D., and was strong in Skanda-gupta, c. A.D. 456; sculptures at Mandor in Mārvarī (*Arch. Surv. A. I. Rep.*, 1905-06, p. 140), but the Vaiṣṇava cultus of Mathurā in its present form was not developed until the close of the 16th cent. under the influence of the Bengali Gosīns of Brindāvan. The history and character of the cult are well described by Growse, to whose book the reader is referred. The great temple of Vaiṣṇava under the name of Bhajā, built between 1845 and 1851 by local merchant princes, is remarkable for being designed on Dravidian lines. It cost 44 millions of rupees. The notorious erotic sect of Vaiṣṇavas founded by Vallabhāchārya (g.p.) (born A.D. 1479) has its headquarters in the town of Gokul.

Three Christian missions (Baptist, Missionary, and Methodist Episcopalian) are established in the city.

VINCENT A. SMITH.

MĀTRACETĀ.—Mātraca is the name of a Buddhist, author, identified by the Tibetan historians of Buddhism, Tārānātha, with Āśvinīkumāra, concerning whom and the identification itself see art. ĀŚVINĪKUMĀRA, and the works there mentioned. It may be pointed out that the identification is made only by Tārānātha, while a much older writer, the Chinese traveller I-tsing (2nd half of 7th cent. A.D.), plainly distinguishes the two authors; further, the inscriptions of works seem not to betray either in the Chinese tradition or, with one exception (see Kauśāmīkṣa-nāma-khāṇḍa, ed. W. F. Thomas, in *Bibliotheca Indica*, new ser., no. 1399, pp. 25-29), in the Tibetan, who is given for the identification is the fact that both writers stood in relation to Kaniṣṭha. But this reason will be seen upon reflection to have actually a contrary bearing; for nothing is more certain concerning the Buddhist monk than that he was a figure of the first order of his time, whereas we have an epitome from Mātraca declining, upon grounds of old age and sickness, to visit the King. Perhaps this is the reason why Tārānātha, identifying the two poets, makes an untenable distinction between the Kaniṣṭhas and Oṣasunca and the Kaniṣṭhas and Mātraca.

According to Tārānātha, Mātraca was the son of a rich Brāhmaṇa named Vaiśvakarṇa who married the youngest of ten Buddhist daughters of a merchant belonging to the city of Khota (Gadgā). The time is given as during the reign of Śrīchandra, nephew and successor of Bindusāra—a statement which reflects the confusion of the Tibetan author's chronological system. The name is given to the child at birth is said to have been Kala; that he was subsequently known as Mātraca and Pitṛṣeṣa is set down to his filial devotion. We must, however, distrust the whole story; Sanghaṅguṇa is not a suitable name for a Brāhmaṇa, nor is a marriage with a Buddhist woman as a possibility. The story probably represents a late invention, and in later times was attached to other persons, means, no doubt, like its equivalent Mātrada, 'servant of the Mother (i.e. Durgā), or of the Mothers (i.e. the forms of Durgā)'; and this is quite in harmony with the fact that Mātraca was at first a worshipper of Mahāvāra-Siva (Tārānātha and I-tsing) and composed hymns in his praise (I-tsing). He became an expert in Mantra and Tantra formulas and a master of dialectic. In the latter capacity he entered upon a course of controversy with the Buddhists of Odiśa (Orissa), Gauda, Tārānātha (I-tsing), Kāmaruṣa, and elsewhere, forcing them to join the heretics, whereby he acquired the sobriquet Durtṛṣa-Kalā, 'the unassailable Kala.' At the suggestion of his mother, who hoped for his conversion by the leading doctors of her faith, he proceeded to the great Buddhist centre of the Nālandā, where, in fact, he was overthrown in argument and joined the order.

According to Tārānātha, the agent of his conversion was Arya Deva, who showed him a miracle, and he was converted. If we must reject the introduction of Arya Deva, which involves an anachronism and is due to a certain confusion (see *La xxix. (1903) 340*), the incident is connected by the statement of Tārānātha, that Buddha, hearing the states a nighttime,
had said: 'The bird, transported with joy at sight of me, unconsciously utters its melodious notes. One would think, if one sees this deed, after my departure (Nirvāṇa) this bird shall be born in human form, and named Mātrčeta; and he shall praise my virtues with true appreciation' (Licord, tr. Tr. i 156 f.). It is recorded here one of the prophecies (vydkarana, visvarkara) narrated in connexion with many Buddhist divines and others, in this case involving, perhaps, also an interpretation of the name in Prakrit form Mātikētha = matichettha, 'transported with joy (at sight of me).'

Thus this may be, we have in Māṭechet's own work (Varnanāhavārya, vv. 1–3 and 30 f.) allusions both to his previous heretical poems and to the supposed prophecy of Buddha.

The remainder of Māṭechet's career may be recorded in the words of Tāranātha (tr. Schiefner, p. 145 f.). 'At the time when Māṭechet was converted to the Buddhist doctrine, the number of heretics and Brahman in the Vibhars of the different schools had greatly increased.

It was thought that, if the greatest ornament of the Brahman, Dvārakācārya himself was to adopt a new system of life, he would put to an end the whole edifice of Brahmanism and even an equal number from the heretics. The Abhaya, being fully conscious of this, wrote, composed daily penitential compositions in the city for huge quantities of food, whereby he entertained five hundred Bhikṣus, namely two hundred and fifty of the Mahāsanghikas and fifty of the Mahāyānas. After this, he made five hundred and fifty studying, leaving them to their uninterrupted occupation.

Thus the abhaya is also not without a merit in all lands, as many singers and strollers chanted them and faith in Buddha grew mightily among all the people in the land; greater service was rendered both to the traditions and the religion, collected in his daily penitential compositions in the city for huge quantities of food, whereby he entertained five hundred Bhikṣus, namely two hundred and fifty of the Mahāsanghikas and fifty of the Mahāyānas. After this, he made five hundred and fifty studying, leaving them to their uninterrupted occupation.

Towards the end of his life King Kaniska sent an envoy to invite him to the Mahābhikṣuṇika, where he, however, as he was prevented by old age from going, composed an epistle and converted the king to the doctrine. He sent his own pupil Jñānaptitya to the king as an interpreter of the Jñānaptitya and others, he desired to put into writing the ten times ten hundred births, corresponding to the ten Pāramitās, which were transmitted from ear to ear by the Padgis and Ajārāyas; but after composing thirty-four he died. According to some biographies, it is related that, having redacted that the Bodhimitra had given his body to a tigress and so forth, he had thought he could do the same, as it was too unbearable. Scaling, accordingly, a hungry tigress attended by her young, he escaped to surround his body, but at first hardly accomplished it. But, when a skill stronger faith in Buddha was kindled in him and he had with his own blood written down the prayer in seventy verses, he first gave the tigress his blood to drink, whereby she let her weakened frame a little strength, and left his body to him to be transformed into a tigress and rise. He removed the tigress, and the tigresses were very devoted to him, he was greatly renowned as a general hero of the orthodox.'

The testimony of I-tsing (tr. tr. i 156 f.):

'He composed first a hymn consisting of four hundred slokas, and afterwards another of one hundred and fifty. These charming compositions are equal in beauty to the heavenly flowers, and the high principles which they contain rival in dignity the lofty peaks of a mountain. Consequently in India all who compose hymns imitate his style, considering him the father of literature. Even men like the Bodhimitras Asaṅga and Vasubandhu admired him greatly.'

Throughout India every one who becomes a monk is taught Māṭechet's two hymns as soon as he can recite the five and ten precepts (Sils). This course is adopted by both the Mahāyāna and Hinayāna schools.

... There are many who have written commentaries on them, nor are the interpretations of them few. Bodhimitra Gira (Hiuen Tsang) is said to have composed such an imprint. He added one verse before each of the one hundred and fifty verses, so that those dozen slokas and three hundred verses, called the 'Mixed' hymns... A celebrated priest of the Deer Park, Sākyadeva by name, again added one verse to each of Gira's, and so it was further augmented to four hundred and fifty verses (slokas), called the Doubly Mixed' hymns.'

He proceeds to include Nāgārjuna and Aśvaghoṣa and other imitated Māṭechet. The renown and influence echoed in these statements are further substantiated by the fact that the two hymns particularized were translated, as well as others, into Tibetan, and one of them, the 'Hymn in One Hundred and Fifty Verses' also (by I-tsing himself) into Chinese; moreover, the originals have been found in various fragments among the MS. trouvailles from Chinese Turkestan, so that in due time it will be possible to form a first-hand appreciation of the poet's work. Pending the complete publication, we may set our estimate upon what has already been made public and upon the very literal Tibetan versions and the English rendering of a portion of the Varnanāhavārya hymn, and of the whole of the Kīrtivera stotra of Śakyadeva is not known.

Concerning the minor hymns nothing need be said.

There are also two short tracts in verse, entitled respectively Varnanāhavārya-Prakritamātrscetavārya and Prakritamātikētavārya, the former treating of the miseries and deceptions of life, and the latter of the evils of the present Iron Age.

Undoubtedly the most interesting of Māṭechet's writings is the 'Epistle to King Kaniska' (Mahârâja Khama-lekha). Beginning with excuses for not accepting the king's invitation and for boldness in offering advice, he proceeds to counsel the young sovereign as to his moral policy, the concluding twenty out of eighty-five verses containing a pathetic appeal on behalf of dumb animals and deceasing the chase. The latter topic was familiar on Buddhist lips, as we may see from the Edicts of Asoka. The whole epistle is full of mildness, gracious courtesy, and moral worth; that it is an old man's writing appears on the surface, and no doubt it is the latest of Māṭechet's compositions.

The statement that Māṭechet set the type for all later hymnologists is certainly so far true that all subsequent compositions are in the same form. This may fairly represent his quality as a poet; he displays great art in the use of language, much rhetorical skill, flow, and copiousness of matter. But the abstract nature of his conceptions, which are largely concerned with the dogmatic characteristics of the person and teaching of Buddha, and in consequence their often conventional character, place him upon a different level from his junior contemporary, the author of the Mahābhikṣuṇika.

Concerning the other writers who have been identified with him, Arya-Sūra, Triratnadasa, and Dārāmik-Subhūti, reference may be made to the literature given above.

III. E'enmore, The Jaina and Buddhist Schools of India, 1892.  Another remarkable work (as concerns Aśvaghoṣa see the literature at Aśavaghoṣa),—T. Suzuki, Asvaghāsa's Life and Works on the Aventures of the Buddha, Tokyo, 1906, Introd.; F. W. Thomas, The Works of Arya-Sūra, Triratnadasa, and Dārāmik-Subhūti, is
MATTER

In metaphysics matter is one of the ultimate principles or 'stuffs' of which phenomena are appearances or manifestations (dualism), or the sole substance in terms of which the universe is ultimately to be explained (materialistic monism, or materialism [g.v.]). In this sense matter is the reality, unknowable in itself, which underlies the properties of all particular things, in which those properties inhere, or by which, as impressions made on our senses, they are caused. It is the support, or substratum, of such qualities, supposed to be necessary in order to explain, in any given case, their constant coexistence as a group. The British empiricists, Locke, Berkeley, and Hume, who were postulates the importance of the conception of substance. Locke found the concept obscure and of little use; Berkeley dismissed matter as an abstraction and a superfluous thing; and Hume, in his 'A Treatise of Human Understanding,' retained the conception in the sense of the permanent in all change. Modern phenomenalism, in so far as it preserves at all the concept of substance, and describes matter, regards it as denoting the unknown existent upon which physical properties somehow depend.

In the physical sciences matter is the substance—not in the sense of a metaphysical first principle, but rather in that of the 'stuff'—of which the sensible universe is composed. Its supposed action upon our sense-organs and nervous system gives rise to the totality of changing physical phenomena. Physical science dispenses with metaphysical 'matter,' as perhaps an anthropomorphism, and employs 'matter' to denote simply what is common to all material or sensible bodies, affording explanation of all their particular and diverse characteristics.

The time of Descartes, Boyle, and Locke a distinction was drawn between the primary and the secondary qualities of matter. The properties regarded as primary were extension, lightness, heat, cold, and resiliency; and these alone were believed to inhere in matter, and to be in no way conditioned by our mind. The secondary qualities, such as colour, sound, and taste, on the other hand, were held not to subsist in matter itself; the ideas that we have of them were not supposed to be copies of anything existing independently of the mind—i.e., whether perceived or not—but were regarded as due to sensations occasioned by the different size and motions of the minute particles of which matter is composed. It is doubtful whether in this respect there is any difference between the primary and the secondary qualities; and modern science retains the distinction only so far as it tends to resolve the secondary qualities into quantitative relations, and to describe them in terms of analogies with the primary qualities.

Absolute impenetrability, as a universal and essential property of matter, is not suggested by actual observation. Indeed, it was in all probability the observed penetrability of matter, especially in the gaseous form, that led to the first attempt to explain the properties of matter in terms of its atomic constitution. The happy guess of Democritus, who based upon experiment or observation, was revived as a genuine scientific theory at the beginning of the 19th cent. by Dalton. The observed fact which seemed to this investigator to demand an atomic hypothesis of the constitution of matter was that chemical elements combine with one another in definite and invariable proportions by weight. This would naturally ensue if combination were the union of one or more atoms of the one element with one or more atoms of another, the atoms of one element being of different weight and in other respects, but different from those of other elements. The atomic theory has ever since Dalton's time been the foundation of the science of chemistry. But the atomic hypothesis its facts and laws would be unintelligible.

But the notion of simple, impenetrable, hard atoms, such as Democritus postulated, is not free from difficulties. These atoms must be endowed with elasticity if they are to serve to explain certain physical phenomena; and this is incompatible with their simplicity. Difficulties of this kind led to the suggestion of Boussovich, that the atoms composing matter are not extended, hard bodies, but points, and centres of attractive and repulsive forces—forces whose magnitude varies with the distance between the points in such a way that no force, for example, is capable of penetrating any other in a way that no force, for example, is capable of penetrating any other in a way that no force, for example, is capable of penetrating any other in this way.

But Boussovich's theory was never generally accepted because it requires the rejection of 'action at a distance,' or, in other words, because of the ingrained tendency to regard interaction between atoms to be conceivable only in terms of the kind of action with which we are familiar, viz. contact action, collision or pushing.

Another hypothesis as to the nature of the atom, and, therefore, as to the constitution of matter, is that devised by Lord Kelvin, according to which an atom is a vortex-ring of 'ether,' in an eternal plenum capable of transmitting vibrations or waves. This hypothesis escapes at the same time the difficulties attending the notion of the impenetrable, solid, elastic atom, and those denoting the idea of action at a distance, or between isolated points. The other had been postulated to explain the phenomena of light, and, later, those of electricity. It now also served to explain the constitution and properties of matter, of all hard or not furnished an explanation of gravitation, and it seems to require modification if it is to supply a mechanical representation of what physicists call an electric discharge. If the atoms of material, it is indeed unreasonable to expect it to admit of mechanical description; for mechanical conceptions are derivable only from acquaintance with matter. On the other hand, the success which has attended such mechanical, or semi-mechanical, descriptions suggests that, if ether be not matter, it is at any rate very like it.

Lord Kelvin's kinetic theory of matter, which resolves matter into non-matter in motion, differs from that of Boussovich in that it offers a plenum instead of isolating and empty space; this plenum provides for action and reaction without resort to the notion, distance, of action at a distance. It differs again from Newton's in dispensing with hard atoms, while furnishing atoms which are not only extended, but also, in virtue of their rotational movement, elastic.

It has been claimed on behalf of this kinetic theory of matter that it enables the physicist to deduce material phenomena from the play of inertia, composition, and the motion of the fluid, and so achieves the ideal of ultimate simplification which scientific description or explanation seeks. This is so, though it must be borne in mind that the explanation attained is an explanation of the word only as it has been most artificially

VOL. VIII.—32
MATTER

simplified by science. The further claim that physics is thus capable of reduction to a branch of pure mathematics is, however, not allowable; in going too far it refutes itself. For physics proceeds to deal with the real or sensible material world; it indeed passes, as it becomes more and more abstract, into 'pure' physics; but then it is no longer theoretically distinguished from the ideal or conceptual. Conceptual or pure science applies to the real world, indeed, but only partially or fragmentarily; it exhaustively describes the world, as interpreted by others out of account. Thus pure or abstract science of the material is valid, within limits, for economical description; it is not adequate to full explanation. That this is true in particular of the kinetic theory of matter can be seen at once when we grasp the fact that the primordial fluid—the non-matter to which matter is reduced, or which science substitutes for matter—is not a real thing, but an abstraction. A perfect fluid, in the first place, is a fiction, not anything known to observation. In the second place, Lord Kelvin's medium, in so far as it is describable by the negative terms incompressible, frictionless, inextensible, and structureless, differs in no respect from empty space. The one property in virtue of which it has been argued that the other differs from space is that of inertia. But, as R. P. Mitchell, in his Naturalia and Agnosticism, vol. i. lect. v. j., inertia, in the qualitative sense, does not suffice to supply determinateness to the primordial fluid; inertia is a property of matter, but not of modes of motion, and it is precisely the property of mass in molecular bodies that, as both Clerk Maxwell and Lord Kelvin recognized, the kinetic theory of matter fails to explain. This theory of the constitution and nature of matter, therefore, belongs to the realm of symbolic description, not to that of explanation or interpretation. Science, indeed, in its higher or more abstract reaches, fails so far short of furnishing, as it was once thought to find, a complete philosophy of the world in terms of Newtonian mechanics that it professes to do no more than describe natural phenomena in so far as these are to be regarded as changes in the motion of mass. It abstracts from the qualitative properties and changes of matter, because these are not amenable to scientific method, and replaces them by hypothetically representational movements of ideal 'molecules' moving in potential spaces. In the realm of perceptual experience, is not only one in kind for abstract science; as the goal and limit of abstraction is reached, or as physics passes into pure mathematics, matter becomes indistinguishable from space. It may similarly be shown that causality is eliminated by abstract science, and replaced, for descriptive purposes, by identity, change being explained and further explained until at last it is literally explained away. The development of scientific generalization in the direction of the ideal of unification and simplicity has thus not established a materialistic metaphysics or a mechanical philosophy, but has only provided a provisional symbolical description of certain aspects of the material world, valid so long as other aspects may be neglected. Such is the philosophical outcome of the scientific mode of dealing with matter.

Until recently matter was regarded as divisible only so far as to the chemical atom. There were held to be some four score fundamentally different, simple or irresolvable, kinds of matter. Matter was the primary concept of the physicist, and electricity was described more or less in terms of it. The lattice of things, held to be unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all these beliefs have been reversed. It has been found, by a series of researches mainly conducted at, or in connection with, the Cavendish Laboratory, in Cambridge, and also at many of our other laboratories, that portions of them can be split off and exist separately, and that these detached fractions, called by J. J. Thomson 'corpuscles,' are identical, from whatever different kinds of atom they may have been broken off, and possess the same 'mass' or inertia. Thus it has become necessary to regard the atoms as complex systems, and, in spite of the diversities of their constitution, as being of certain types which are identical. Further, the corpuscle has been found to bear, or to be, a constant electrical charge (electron). Corpuscle and electron would seem to be identical, because the whole mass of the corpuscle appears to be due to its electric charge and its motion. Thus 'mass,' the most fundamental and characteristic property of matter, becomes resolvable into an electrical phenomenon: the electron is the fundamental unit alike of electricity and of matter, and matter is 'explained' in terms of electricity. An atom, in fact, is composed of a large number of units of negative electricity (electrons) and positive electricity (protons) each of equal mass; thus, the cause of the excitation of the other waves which produce light, and also render comprehensible other phenomena not belonging to the realm of the material. But it may be noted that the atomic (or, rather, the ultra-atomic) structure of matter, hitherto a supposition or indirect inference, has at length been experimentally demonstrated. The recent discovery and investigation of radium and other radio-active substances led not only to the proof that the chemical elements are transmutable—holium, e.g., is produced by the breaking up of radium—but also to the revelation of simple atoms.

'Single atoms of Helium, shot off by Radium as a ray, have been revealed in two ways. Each atomic projectile produces a long train of electric ions as it passes through a gas before its energy is exhausted, perhaps by knocking those corpuscles out of the molecules it encounters in its path. These ions have two effects. They make the gas a conductor of electricity, while they exist, so that, by placing the gas in a circuit with a battery and an electrometer, Rutherford has shown the effect of each electron on a particle by the sudden throw of the needle of the instrument. Secondly, the ions are not stable for the period of the years, or months, or, R. Wilson has made visible as a line of cloud the track of each particle' (W. C. D. and C. D. Whitham, Science and the Mind, London, 1919, p. 88).

Recent progress in science has thus furnished new light upon the question of the constitution of matter. But the ultimate question as to what matter is remains, as before, unsolved, and perhaps, as P. G. Tait (Properties of Matter, Edinburgh, 1885, p. 14) seemed to think, insoluble. To have learned that matter is electricity is not to have diminished the mysteriousness of its nature. To physical science indeed, matter, like a 'thing' or a fact, is a datum. The data of science, however, are for philosophy or the theory of knowledge constructs. Hence it is to philosophy that we must turn, before we can say whether or not in the other elucidation of the problem contained in the question what matter is. As we have already seen, the more abstract departments of science cannot help us, because those departments proceed from an abstract notion of matter derived simply to make abstract science a possibility.

'The bodies we deal with in abstract dynamics are just as completely knowledgeless as to what they are, or have what properties whatever except those which we explicitly assign to them' (A. Clerk Maxwell, in Nature).

'Matter is the fundamental property thus conventionally assigned to matter with a 'let it be granted' is mass or inertia; and the science of matter is then
valid of matter if it be wholly inert, or in so far as it is characterized by inertia. Whether any matter is wholly inert is a question; that everything is inert must be denied. The science of matter is no question.

For other philosophical questions connected with matter see art. MATERIALISM.

F. R. TENNANT.

MAURICE.—The position of Frederick Denison Maurice (1805-72) in the history of English 19th century theology is difficult to define. He regarded himself as a simple old-fashioned Christian; but to the religious world of his time he was a most obscure and dangerous heretic. Julius Hare spoke of him as the greatest thinker since Plato, and Mill thought his intellect one of the most powerful of the age; but to most of his contemporaries Maurice seemed an obscure mystic, with a strange love for the Athenasian Creed and the Thirty-nine Articles, which much of his teaching appeared to contradict. The combination of the DGattin Church Party, he indignantly repudiated the epithet 'broad,' and still more the suggestion that he belonged to any 'party.' He spent much of his energy in controversy, sometimes bitter and occasionally hardly fair. Yet he was constantly on the look-out for points of agreement with his opponents, and those who knew him best were deeply impressed by his spirituality and goodness.

The paradoxes of his position may be partly accounted for by his family circumstances, and by the character of the age in which he lived. He was the son of a Unitarian minister, whose wife and daughters were converted to various forms of Evangelicalism, chiefly dissenting and Calvinistic. They were pious, clever people, much addicted to argument; and Frederick learned much from each, though he was repelled by all their theological systems. He combined his father's enthusiasm for the Fatherhood of God with his mother's conviction of the Divine Will as the root of all. His intense reverence for family relationships, together with the discordant doctrines of his loved ones, drove him to seek for some ground of unity more fundamental than doctrinal agreement. This he ultimately found in the conception of the Church as the conscience of the world, in the thought that God feels about us is far more important than what we feel about God. His view of Christ as ethically absolutely at one with the Father separated him from his Evangelical mother as well as from his Unitarian father. It precluded all idea of the Atonement as a changing of the Father's Will, as a bargain, or as a legal fiction. Similarly the popular beliefs about the Bible, the future life, and all the divine ways of working seemed to Maurice tinged with materialism. He was especially repelled by all sects, because he found in himself tendencies which seemed to have led to their errors. His controversial bitterness was often directed in reality against elements which he knew to be lodged in his own nature. Everywhere he discovered good, but also evil; and his position was generally a puzzle to his contemporaries.

His attitude towards politics showed the same characteristic. Growing up in the Tory reaction that followed the French Revolution and the Napoleonic Wars, he was very far from holding any radicalism. He repudiated the brutalities and bigotties of this reaction. But he was almost equally opposed to a Liberalism which consisted mainly of destruction of abuses. The forces which carried Wordsworth and Coleridge into Conservatism and High Churchmanship operated strongly upon Maurice, with his reverence for the past and his attraction towards sacramentalism. For a time he hesitated. At Cambridge, after a distinguished career, he refused to go through another undergraduate course, this time at Oxford. Then he published a defence of the tests by which acceptance of the Thirty-nine Articles was required from all who would obtain an Oxford degree. His arguments were, of course, fundamentally different from these used by ordinary Tories, and perhaps equally unreasonable. He afterwards admitted that his main position was untenable.

Maurice's first really important book was *The Kingdom of Christ* (1842). The book was primarily intended for Quakers. Their doctrine of the 'Inner Light' and of the supreme value of the spiritual was enthusiastically accepted by Maurice; but he set himself to proclaim the sanctity of the visible. Forms are witnesses to the invisible, and channels through which the divine spirit works. The Church is the combination of the Divine Brotherhood, and protesting against human self-assertion and individualism, which would, if uncontrollable, destroy society. The author sometimes seems intensely spiritual, sometimes absolutely Catholic, sometimes a rationalist and a sort of socialist. He passes from an obscure mysticism to teaching so simple that it seems commonplace; he glances through the whole history of philosophy and theology; everywhere he discovers two tendencies, 'one belonging to the earth, one claiming fellowship with [the] Divine'; and the upward tendency is the search for that kingdom which God has provided in the Catholic Church. All this seemed orthodox enough. Its implications were not generally recognized, and in 1840 Maurice was elected to the professorship of Divinity at King's College, London.

It was characteristic that his next book dealt chiefly with the value of the non-Christian religions, the pagan philosophies, and the medieval philosophies. The *Churches of the World* appeared in 1847, and one form of the *Moral and Metaphysical Philosophy* in 1848. The latter had originally been published in 1836, but it was expanded in a series of later editions. It illustrates the wide learning of Maurice and the love of the unexplainable he discovered his points of agreement with diverse and mutually contradictory thinkers. As a history it is open to the criticism that, instead of giving a well-balanced account of systems, it presents only those aspects of them towards which the writer was attracted.

At this period Maurice was keenly interested in social movements. He invented the phrase 'Christian Socialism' as a protest against un-Christian Christians and un-Christian socialists. He recognized the good in the aims of Chartists and Revolutionists. He sympathized intensely with their protests against thecondition of the poor and the competitive basis of society. He set himself sternly against appeals to force, and was utterly distrustful of democratic ideals; but he started little newspapers, like *Politics for the People* and *The Christian Socialist*, with more revolutionary friends. Naturally Maurice was made responsible for the views of his less eminent associates, whom he warmly defended; but he was also touched by the brutalities and bigotries of this reaction. But he was almost equally opposed to a Liberalism which consisted mainly of destruction of abuses. The forces which carried Wordsworth and Coleridge into

**MAURICE.**
sidered as the due subordination of the working classes. The 'respectable' press, secular and religious, fulminated against Maurice, and at length the Council of King's College appointed a committee to investigate the matter. But there was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor. The controversy then shifted from charges of socialism to charges of theological heresy. In 1833 Maurice published the volume called Theological Essays. On most points the new book was only reiterating and expanding views previously expressed; but it made clearer the author's divergence from traditional and conventional theology, especially on the subject of eternal death. He maintained, in effect, that 'eternal' means spiritual. Knowledge of God, love, truth, and the like are eternal life. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seems to have believed that it was also outside the message of the Bible and of the Anglican formularies. The religious world felt that much of the book was an attack on what it held as orthodox, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship within the framework of any specific charges. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The responsibility for their decision cannot be laid on any one party in the Church. It represented the view of the High, the Low, and the Moderate. Some were puzzled at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshiping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical tenets. Broad Churchmen alone protested against the expulsion, and even they were puzzled and puzzled. But finally, in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superfluous and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchmanship. The Evangelicalism of Wilberforce and Simeon and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both powerful parties, and few were disposed to forgive this attitude, in consideration of his enthusiastic support of some at least of their cherished principles. Time has revolutionized the situation. At present many of the best High and Low Churchmen speak with grateful reverence of Maurice, and a few high-minded men with which separate his views from their own. The fervent sincerity and pith of the Theological Essays are unmistakable, though to most readers much of the book seems tantalizing and obscure. More popular are The Prophets and Kings of the Old Testament (1853) and The Patriarchs and Lawgivers of the Old Testament (1855). Maurice meant by revelation a literal un- veiling of truth, and especially of God's character, by a direct inspiration which harmonizes with their reverent views and keeps their Christian personality admirably in the background; shorter and more controversial, but adequate, biographies are given by C. P. G. Masterman (London, 1887) and W. E. Collins (do. 1908). See also T. Hughes's Preface to Maurice's Defence of the Church of England (1874); Leslie Stephen, art. 'Maurice,' in D.N.B., do. 1894; and the references to Maurice in J. McDowell Campbell, Memorial, do. 1897, and Caroline Fox, Old Friends, do. 1892.

J. E. SYMES.

LITERATURE.—Frederick Maurice, The Life of Frederick Denison Maurice, 2 vols., London, 1884, is an excellent compilation in which the views are kept clearly in the back- ground; shorter and more controversial, but adequate, biographies are given by C. P. G. Masterman (London, 1887) and W. E. Collins (do. 1908). See also T. Hughes's Preface to Maurice's Defence of the Church of England (1874); Leslie Stephen, art. 'Maurice,' in D.N.B., do. 1894; and the references to Maurice in J. McDowell Campbell, Memorial, do. 1897, and Caroline Fox, Old Friends, do. 1892.
MAY, MIDSUMMER.—Agricultural peoples throughout the world have established a ritual, more or less elaborate, about the critical periods of their common industry. This ritual, in effect, is the culmination of all pre-ethical animism, and its most important development prior to the great organized faiths. In the form of holyday customs it seems to permeate the whole of Europe, and probably not a little of its belief is latent underneath Christianity to-day.

We shall discuss its meaning below. This is perhaps the complex than has yet come to be understood; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which the terms May, midsomer, and harvest belong.

A. May.—The typical European celebration of May Day is well known. Trees, green branches, or garlands are carried round, and a King and Queen of May are appointed from among the young people who are to be wedded. According to Mannhardt and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation:

‘The intention of these customs is to bring home to the village, and to each home, the blessings which the tree spirit has in his power to bestow.’

‘The custom is usually a serious and, so to speak, sacramental significance; people really believed that the god of growth was present unseen in the bough,... The idea of the spirit of vegetation is blended with a personalization of the season at which his powers are most strikingly manifested.’

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical example is that of Swabia; on the first day of May a fir-tree was brought to the village, decorated with ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

When the meaning of the custom had been forgotten, and the May-tree was regarded simply as a centre for holiday merrymaking, people saw no reason for felling a fresh tree every year and preferred to let the same tree stand permanently, only decking it with fresh flowers on May Day.

Instead of a tree or a branch, a branch decked with flowers, or simply garlands of flowers, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round and round the hoop, or a bunch of flowers fixed on the top. In modern English folk-custom the essence of the May Pole is the long ribbons attached to the top: each of these is held by a child, and as they dance round the pole the ribbons twist round it, to be untwined when the dancers reverse.

The tree-spirit is often embodied in human form or in a living person. English children carry a doll in the garland, sometimes styled ‘The Lady of the May.’ In Alsace a little girl is selected to be the Little May Rose, and carries a small May Tree. The Russian Lithuanians crown the prettiest girl, and address her ‘O May! O May!’ In Brie a boy is wrapped in leaves; he is styled ‘Father May.’ The ‘Green George’ of Carinthia and Rumania is a boy covered with green branches; at the end of the procession an effigy of him is swung into the water.

Here is what Frazer terms the double or bilingual representation of the tree-spirit by a tree and doll:

If the Christian Lent was developed out of a period of agricultural tabu, there is complete continuity between the old and new faiths. The exact date of Midsummer may here be no more noticed. European folk-custom has a large body of similar ritual celebrated previously to and during Lent, such as the Death of the Carnival, the Burial of Shrove Tuesday, Carrying out Death, Saving the Old Woman, followed by a dramatic advent of Spring, Summer, or Life. The former generally are dated on Shrove Tuesday, sometimes at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance—while in Russia similar ritual in both forms is celebrated in spring and at midsummer, and also on St. Peter's Day. These dates suggest that the old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

The "customs" of bringing in the May and bringing in the Summer are essentially the same. The Summer-tree must likewise be an embodiment of the tree-spirit or spirit of vegetation.

With regard to the representation of Death, more prominent in the 'Summer' (Lenten) ritual than in that of May, Frazer's view is that it is an embodiment of the tree-spirit or spirit of vegetation, the Summer-tree being often a "revivification of the effigy of Death." The idea is that the death and slaying of the spirit of vegetation in spring. There is also, as already noted, a natural identification of season or date with the spirit. The death is represented frequently by killing, and this may be connected with the idea of slaying the incarnate, embodied spirit while still vigorous, in order that its successor's vigour may be guaranteed.

Another feature of May ritual is the kindling of bonfires, though this is most conspicuous at Midsummer-tide.

The Beltane fires of Scotland were kindled on May Day as late as the 18th century. The traces of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the north-east of Scotland. Here the Beltane fire was lit on the first but on the 2nd of May, O.S. They were called bonfires. The belief was that on that evening and night the witches were abroad in all their force, casting ill on cattle and stealing cows' milk. To counteract their evil power pieces of the rowan-tree and woodbine, chiefly of the district, were placed over the byre doors, and firewood kindled by every farmer and cottar. Old thistles, or straw, or corn, or green was piled up in a heap and set fire on fire a little and assisted by a candle. A great number of these present kept a constant trimming to the blazing mass, and others seated portions of it on pitchforks or other wooden frames, and assisted in kindling and holding, them as high as they were able, while the younger portion, that assiduous, carried round the fire or ran through the smoke, shouting, "Fire! Fire! Fire!" An old woman in one instance fell asleep and was burned. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, "Fire! Fire! Fire!" Buries the witches.

In Ireland, Sweden, and Bohemia bonfires were lighted on the first day of May; and in the last-named country the 'burning of the witches' is prominent.

Bathtub, washing the face with dew, and drenching effigies and mummers are common customs on May Day. May processions are also among some peoples, celebrated at Whitsuntide. This date is especially marked in Russia, but also occurs in the Altmark, Bavaria, and other parts of Germany, Swabia, and Austria-Hungary. These are elsewhere celebrated at Midsummer, and on St. John's Eve or St. John's Day. One or two other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the ritual on May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer-tide, when May Pole, garlands, arbours, and jumping over bonfires are in great evidence. In parts of Bohemia have the same date, while in Russia both Whitson and Midsummer are celebrated similarly. The same ideas and practices are more or less equally applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a special causal connexion. Here a tall tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.

Similarity there is a continuous connexion between the ritual and beliefs belonging to the whole trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest. It is quite natural that green trees and green branches should be most conspicuous on May Day, and corn-sheaves and the like at harvest; the prevalence of bonfires at midsummer, however, is a curiously difficult problem, whether on the theory of the tree-spirit with its corollary of sun-charms or on that of purification and barrier.

1. Midsummer—Turning to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted to be danced round and jumped over. In Bohemia the May Pole itself is burned.

In Russia on St. John's Eve a figure of the mythical personage, Kalpis, instead of straw, and 'is dressed in women's clothes, with a necklace and a floral crown. Then a tree is felled, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Markia [Winter or Death], the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornament and throw them both into a stream.

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who defend it. In Sardinia there is a ritual which seems to be a survival of the ancient British gathre ['Gardens of the Sun']. The village swain proposes to a village girl early in spring. Then in May she sows in a pot a handful of corn, which is well grown by Midsummer Eve, when it is named Ermn or Jermn. Midsummer Day the young couple go out procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be 'Sweethearts of St. John' clap hands across the fire. The two 'gossips,' suggests Frazer, may correspond to the Lord and Lady of the May, and ultimately represent in metal and blood the reproductive spirit of vegetation.

In Morocco smouldering fires are made on Midsummer Day or the evening before.

A similar custom children leap over, believing that by doing so they rid themselves of the evil or evil which may be clinging to them; the sick will be cured and married persons will have offspring. Nobody is burnt by the fire since there is baraka in it.

In the Moroccan custom the smoke is more

important than the blaze; the practical point is
fumigation of men, cattle, trees, and various
belongings.

It is also noteworthy that in Morocco at midsummer magic forces are supposed to be active in certain species of vegetation.  
Fumigation by burning certain kinds of plants and the more aromatic species of leaves and branches promote fertility, act as charms against the evil eye, and assist general well-being. There are many local beliefs and medi-scientific notions, special foods, in which there is fumaca.  

There is probably no corner of Europe in which it has not been the custom to kindle bonfires at Midsummer-tide. Besides the leaping through the fire, there are customs of throwing blazing disks through the air and of rolling burning wheels downhill.  
A certain sanctity, as in the need-fire ceremonies, attaches to the kindling of the fire in some instances. A frequent custom is that of making gigantic figures of wicker-work, which are paraded and then burned, these midsummer giants being apparently analogous to the May Kings in their leafy garb. There are also traces of burning animals alive.  

Frazer derives these customs of modern Europe, designed to provoke the 'sacri-

ficial rites of the Celts of ancient Gaul, as typified in the druidical sacrifices, and mythically in the death of Balder.  
Two main interpretations of these fire-rituals
have been put forward. Mannhardt, originally followed by Frazer, explained them as sun-

charms.  
At the 'great turning-point in the sun's career,' the summer solstice, primitive man 'fancied that he could help the sun in his seeming decline—could prop his failing steps and rekindle the sinking flame.'

The wheel and disk are suggestive shapes. Frazer also noted the purificatory aspect of these customs.  
Fire is a cleanser, and is frequently used for the purpose, as in the need-fire. Westermarck emph-
ized this aspect.

'Their primary object in many or most cases is to serve as a protection against evil forces that are active at Midsummer.'

In the Moroccon custom of fire-bathing by fumigation is the chief idea, although there is also the ascrip-
tion of positive virtue to the smoke. Westermarck finds no evidence for the sun-charm theory.  
Later Frazer regarded the two views as being not mutually exclusive, but admitted the purificatory theory as being the more probable.  

Traces exist of what has been interpreted as human sacrifice by drowning on this date. Various such practices have been interpreted as race-

charms.  
In Morocco, however, midsummer cer-

emonial bathing is connected with the idea of securing health by bathing, and the same idea is translated to the European custom of rolling

in the water.  
Various kinds of divination, as is natural on special dates introductory to a new season (as midsummer is often regarded), are practiced. Mock lights, tugs-of-war, games, and abuse of the ceremonial figure are common incidents. These have been interpreted as dramatic survivals of a ceremonial and magical representation of a struggle between good and evil influences, or designed to prop of Nornor, from the 'mov-

ment' in the weather or in the growth of the crops.  
Magical plants are gathered at midsummer

(see art. Dioj); such are fern-bloom, fern-seed, mistletoe, and St. John's work.  

For the special harvest-rites see art. Harvest.

3. Basis of agricultural rituals.—The general theory of agricultural ritual promp-
ted by Frazer can be connected with such primitive magical rites as the Australian intchilhanna for developing the growth of crops, and with the calendrical and agricultural beliefs of the ancient Egyptians and Greeks.  
In many European cases it seems that the main object is to purify the sphere in which the corn grows, and many rites are concerned not with a spirit of vegetation, but with the blight of evils, often in the form of witchs.  
The burning or destruction of the tree-spirit is often a doubtful proposition. It is impossible to dogmatize on the origin and first intention of these agricultural rites, but it is necessary to note the possibility that beliefs in corn-spirits and the like, and even the magical practices themselves, may be late accretions upon some simple psychological and even utilitarian facts. There is also the sense of crisis, very strong in the primitive mind.

Thus, psychic reactions in sympathy with the objects concerned might lead to dramatic, but unconscious, conjurations—e.g., the corn grow; in the same way imaginative explanations might be made of such necessary processes as weed-burning. When established, these ex posto facto explanations, magical, myth-

ical, or theological, obviously tend to usurp

precedence.

LITERATURE.—This is very extensive, but the main critical works are cited in the text. A. E. CRAWLEY.
With the knowledge of self phenomena become known as phases of it; they are provisionally real to a certain extent, but ignorance of the delusion regards them as independent of the atman. We have not quite reached the stage of the later Vedānta, which regards phenomena as absolutely unreal, like a mirage. Ignorance, in the Upanisads, is an absence of true knowledge. In the later Vedānta it is rather an active force which defence up the illusion of phenomena for the deception of the soul. In the Upanisads also we find a kind of pantheistic compromise which says the world does exist, but holds that the sole reality of the atman is not in the least degree affected, for all is the atman. This view pervades the Chāndogya Upanishad, e.g.:

"The atman is above and below, behind and in front. The atman is all the world" (VIII. xxv. 5).

As time went on, māyā gained an ever-increasing independence as the substance prakṛti (nature), which was at first subordinate to the atman. In post-Upanisadic literature the term appears frequently in a non-philosophical sense; a māyā-bandha is an "illusion-gaze" (i.e., not a real gaze); a man who craftily seeks to gain money does it through māyā; an ādhyātmya, lit. "without māyā," means "honestly." In these cases (for further references see Böhtlingk, Both., loc. cit.) the original meaning of māyā persists.

In the philosophical sections of the Mahābhārata the term is used in its philosophical sense. Thus Viśṇu, speaking as the supreme god, says: "Entering into my own nature (prosaic concept) is māyā" (VI. xxviii. 6f.); this explains the famous avatāras of the deity. "Māyāvin" is one of the thousand names of Siva (xlii. xvi. 1214). (On the question of māyā in the High Chantarūte, e.g., see W. Hopkins, The Great Epic of India, New York, 1901, pp. 138-142.)

The doctrine of māyā in the Vedānta forms the cardinal distinction from its great rival system, the Sāṅkhya (q.v.) philosophy. Vedānta is the system of advoce (non-duality); the phenomenal world does not exist; it is only māyā, arising from ādhyātmya, that makes us erroneously think it to be real; māyā is overcome when who ignorantly believed himself to be an individual realizes that in actuality he is one with the atman; then only is salvation (mokṣa, lit. "liberation") finally won. Contrary, the phenomenal world is real; the Vedantic atman is ignored (Sāṅkhya is atheistic); the soul (cit, lit. "thought") is involved in the woe of life because of āsvida (failure to distinguish between matter and soul), due to ādhyātmya, etc.; salvation is gained by the complete isolation (kauśalya) of the soul from matter; and the soul then exists as an eternal, but unconscious, individuality. (On the distinctions between Vedānta and Sāṅkhya see especially Max Müller, Six Systems, p. 279 ff.)

One of the most important of the early works on Vedānta is the Kāriṣṭā of Gaṇapatī (3rd cent. A.D.), one of whose pupils was a teacher of Saṅkara. He is an uncompromising advocate of the doctrine of māyā, and strongly denies the existence of the universe. The waking world is no more real than the world of dreams. The atman is both the knower and the known; his experiences exist within him through the power of māyā. As a rope in a dim light is mistaken for a snake, so the atman is mistaken for the variety of experience (jīva). When the rope is recognized, the illusion of the snake at once disappears; when true knowledge of the atman is attained, the illusion which makes us think of the multiplicity of experiences vanishes. The world has no more real existence than the snake, and, as one cannot remove or cast off what does not exist, it
is wrong to speak of obtaining freedom from it. The atman cannot be said to create or cause the universe any more than the rope creates the snake. Production would be either from the existent or from the non-existing, and the latter is equally impossible, for it would be producing what already exists, and the latter is equally impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

Gaudapäda's monism assumed its final form in the commentaries of Saṅkara (b. probably A.D. 788). The main aim of this is to withdraw the divisive line of reasoning of the various views of the Upanisads, and is further perplexed by the fact that as brahman (‘revelation’) they all ought to have equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of brahman, and a lower, including all that is not this metaphysical knowledge. He then investigates the cause of ignorance (prakrti), and concludes that it is to be sought in the knower. The phenomenal world is considered real so long as the unity of the atman is not realized, just as the creations of a dream are thought to be real. As a magician has a power to create a snake just as a magician (anyadyayin) causes a phantom, having no existence apart from himself, to issue from his body, so the atman creates a universe which is a mere mirage and in no way affects the self. It is the illusion of a being of samskrita, or reality, that there is really only the atman. Multiplicity is only a matter of name and form, which are the creations of ignorance, being neither the atman nor different from it. The fourth aspect of the second verse of Gaudapäda's Saṅkara's Sāṅgītavyaçāryam, tr. by R. E. Cowell and A. E. Goode, dox. 1882, and Deussen, Nachdr., pl. vi., 1882. Müller, The Systems of Indian Philosophy, London, 1899, pp. 157, 162, 185, 200, 455, 464, 472. Saṅkara's, dox. 1882. For the meaning and nature of prakrti as held by a modern Vedântist see Max Müller, Râmânuja's Life and Sayings, London, 1893, nos. 25, 45, 64, 71, etc.; N. A. Taittiriya, Upanishaths, Vedânta, J. ALLAN.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatán, was inhabited in ancient times, as is to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as 'Mayan,' from the name of its most conspicuous members, the people of Yucatán. This family is to be looked upon as the second of the great culture nations of Mexico and Central America, equal to the Mexicans in material and intellectual civilization and in some cases surpassing them, but, being less known than the Mexicans, as regards the special traits of their civilization, their history, and the elements of their daily life. The chief of these ancient monuments in Central America—Palenque in Chiapas, Méneche Timanuit on the Usumacinta river, Quirigua in Guatemala, Copan in Honduras, Uxmal and Chiich'en Itzâ in Yucatán—are the work of members of that family. They were the great astronomers and mathematicians who calculated the duration of the revolution of Venus and, perhaps, of other planets as well, and were wont to write down and handle numbers exceeding a million. They had elaborated a system of hieroglyphic writing far superior to that of the Mexicans, but only partially deciphered as yet. They were unexcelled in the apprehension and reproduction of vision in exchanging men and animals; as a whole, their civilization and their religion were closely allied to those of the Mexicans.

In their religious practices they were not so sanguinary as the Mexicans, human sacrifices being much less numerated where any case being replaced by the killing of dogs. They resembled the Mexicans in their methods of prayer and offerings, fasting, and torture, and in piercing their ears and tongues and drawing threads through the holes. They also sacrificed living animals by fire to the god of fire, and in some places tortured themselves by running with naked feet over burning coals.

Like the Mexicans, the Mayans divided the year into eighteen periods of twenty days each, and they also commenced their ceremonies early in the year, in our month of January, by renewing all kinds of ceremonial utensils—incense-burners, clay- idols, and the like. This feast was called Oona, and was devoted to the chac, the gods of labour, i.e., the rain-gods. When they had to make a new wooden image or, as they said, to create a god, the work began in the preceding months, and with great precautions (fasting, etc.), the artisans being confined to the house as long as the work went on. In March they held a great fire-ceremony, performed by the old men and directed to the rain-gods (chac) and to the old god Itzamná, who may be considered the god of life and the god of fire. This ceremony was called tukkan, 'extinguishing the fire.' They brought together every species of animal that was at hand; and, after having kindled a great fire, they killed them by cutting the breasts and tearing out the hearts, which were cast into the flame. The larger animals, such as jaguars, pumas, caimans, were not so easily captured, as they made such heated stones, so that their hearts were torn out of them, and the fire they inhaled was set on fire by pouring water from their jaws upon it. This ceremony was intended to secure sufficient rain for the crops of the new year.

Another ceremony was connected with this performance. They made a kind of terraced pyramid of stones, which seems to have been regarded as an image of the clouds. The priests anointed the lowest step with mud and the upper ones with the blue colour, resembling the sky and Itzamná. This was, no doubt, another ceremony for bringing for rain.

In April the cacao planters, who were also the great merchants, cast onto the staple merchand-
Mazandaran

disc of ancient Central America, celebrated a great feast to the black god Ekceluah, the god of the caravan and the merchants, to the choc, and to Hobnil, the god of the horses and of the horses. They killed a dog of the spotted colour of the cacao-pod and offered blue iguanas, feathers of wild fowl, and incense. In the month of May there was another great feast, *Fornomare,* celebrated to Ocechah, the god of war. It began with a five nights' watch in the temple of the god of war, and during this time the war-chief, called *nacnu* and elected every year by the members of this tribe, was seated on a throne in the temple of the god of war and venerated like a deity with incense-burning. The people performed a dance called *holokon-akat,* 'warrior-dance.' At the end of the five days they performed the fire-ceremony described above, after which the war-chief was taken in a solemn procession all round the temple; a dog was sacrificed, and the heart offered to the god. The heart was put into a bowl and covered by another bowl, after which the assistant priests dashed to pieces some great jars full of water—undoubtedly another ceremony intended to produce rain for the crops. A great banquet of mescal and general drunkenness followed. The same banquets and drinking-bouts were repeated in the course of the next three twenties in all the smaller villages and towns. The 'warriors' were called *frecbicla thane,* and it is expressly stated that they were made in order that the new year might be a fertile one and bring rich crops.

The month of July was reckoned as the beginning of the new year by the Yucatecans at the time of the conquest. The twentieth (*uinal*) in question was called Pop, 'straw-mat,* meaning 'donkeys.' They swept their houses and the village streets and renewed all objects of domestic use—plates, jars, bowls, wooden chairs, garments, and the wrappings of their idols—throwing the old ones on the dust-heaps. The priests, who had fasted for one, two, or three months, eating only once a day and abstaining from sexual intercourse, assembled in the temple and kindled new fire by friction, twirling a wooden stick in the hole of another; this new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instrumentalists sacrificed before the people—the books of the priests, the implements for casting lots and the fetishes of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen—were consecrated by anointing them with blue colour. This feast was called *Pocom.* In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobnii. In the month of October, called Xul by the Yucatecans, there was a great ceremony in the village of Mani, dedicated to the god Kukulcan, the 'feathered snake,' the Yucatec translation of the Mexican god Quetzalcoatl, who was venerated as a culture-hero in Yucatan, some of the most important towns of the peninsula, Mayapan, and Chich'en Itza, having been founded by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican *Zoomi,* ceremonies being performed to promote the growth of the yuca and to strengthen them. Contrary to the custom of the Mexicans, the Yucatecans performed very particular and important ceremonies in the last five days of the year, which they called *maa boke kin,* 'days with unlucky weather.' These were the five days, the names of which is dangerous to pronounce. On these days they set up in the midst of the village the image of the deity that was to govern the coming year, this god being one of four who corresponded to the four cardinal points and followed each other in turn. These gods were: (1) for the east and the south-east, *Kinich Ak'ab,' the sun-god;* (2) for the north and the west, *Chac, the moon-god and the god of fire;* (3) for the north and the west, *Kinich Ahau, the 'lord of the six under worlds,'* the god of the dead; and (4) for the south and the west, *Chacmool,* the 'lord of the six under worlds,' the god of the earth. The offerings were performed in honour of these gods, and the evil that was to befall the village, according to the character of the new year and of the deity that was to govern it, was taken, represented by the figure of a demon, out of the village in the direction of the coming year.

The priests were called *ah-kin,* 'lords of days,' i.e. 'lords of day-signs,' 'dealers in prognostics,' 'sooth-sayers.' They were the leaders and teachers of the people—the learned men whose principal occupation was with books, pictographs, and all the traditions of the temples. There is one marked difference between Mexican and Mayan priesthood; in Yucatan the office of sacrificer (nacnu), who had to kill the victim, was not a highly prized one. The highest priests and—in extraordinary celebrations, such as the inauguration of a newly-built temple—the kings themselves acted as sacrificers.

LITERATURE.—Diego de Landa, *Relacion de las cosas de Yucatan,* ed. D. Juan de Dios de la Seda y Delgado, Madrid, 1884; Diego López de Cegolludo, *Los tres Siglos de la dominación árabe en Yucatán,* Compeche, 1912; F. Chase, *Geografía de las Indias Occidentales,* Madrid, 1891. There is one more difference between Mexican and Mayan priesthood; in Yucatan the office of sacrificer (nacnu), who had to kill the victim, was not a highly prized one. The highest priests and—in extraordinary celebrations, such as the inauguration of a newly-built temple—the kings themselves acted as sacrificers.

MÁZANDARÁN. The Persian region of *Mázandarán,* or Tabaristan, is bounded on the north by the Caspian Sea and on the south by the Alborz Mountains, and extends from Astarabád in the east to the Pul-i-Rúd in the west. The winds from the Caspian bring abundant rain, and the country is heavily wooded, in contrast to the arid regions south of the Alborz. The climate is decidedly unhealthy, and the difficulty of access to the country, increased by lack of good roads, has combined with the redoubled fanaticism of the people and the animosity of the priests to keep it from any generous share in the progress of Persia.

It is to these disadvantages that the district owes its place in the history of religion in Iran.

Of the aboriginal inhabitants of *Mázandarán we know nothing beyond the statement of Strabo (p. 515; cf. 520) that it was their custom to 'give their married women to other men after they themselves had had two or three children by them.' The *Bundakishá* (xx. 29) has a fantastic tradition of their origin, and the *Dinkart* (ix. xx. 19) describes them as filthy and dwelling in holes.

In regard to the latter point, we may note that Ferdusí (Sháh-námah, tr. A. G. and E. Warner, London, 1905, ii. 58) makes the *Mázandarán White Div inhabit a cavern, although one thinks involuntarily of the repeated Avestan statement that demons hide under earth or dwell in caves (Ys. ix. 16; Yt. xix. 2; Vend. iii. 60). In the *Avesta* *Mázandarán* is the abode of the *Mázánény daivas,* concerning whom E. W. West (52 E. xviii. [1882] 93, p. 10) expresses the general opinion that the name *Mázandarán* is not certain. The old native etymology (Ibn-i Isfandiyár, tr. Browne, p. 14) makes it a later form of *Mázandarán,* within (a mountain named) *Máz,* (so also Curzon, Persia, i. 344; Darmesteter's etymology [Zod-Avesta, ii. 375, n. 321 (incorrect)]: but it is more probably derived from the Mānas Gate (Ys. 1904) 178, n. 1). *Tabaristan, the Arab form of Shaplu Tapuris (or Tepuris or Tapuris (Vend. xii. 27, XII. 22, xx. 27), is the land of the *Diandós or Dianos of Fercows (Ys. i. 346, ii. 9, xi. 346, ii. 9);* Diodorus, ii. 32; Athenaeus (442 B: Marquart, Erdvahrn., p. 137). F. W. Mannewitz's identification of *Mázandarán,* with *Media* (Zooster. Stud., Berlin, 1893, p. 229) was wrong.
view when he says that 'these demons were, no doubt, merely idolaters,' while M. N. Dhalbta (Zoroastrian Theology, New York, 1914, pp. 160) sees in it "the Savants and Gillân, 'who poured down in great numbers and pillaged the possession of the Iranians.' A number of the Avesta references to the Mazâïnaya daevâs give no information as to their nature or habitat (Yt. iii. 1, 3, 32; cf. Veld. i. 17). We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero Haöshyangar Parshâta on Mt. Hara to gain the "two-thousand" of the Mazâïnaya demons (Yt. v. 22, ix. 4, xv. 8. xix. 26), for Hara is, as it is called in the Avesta, Hara Berezaiti ('Softy Hara') is generally—and probably correctly—identified with Alberz, though construed in a mythological, rather than a geographical sense (e.g., Spiegel, Erân. Alterthumskunde, i. 191, 465, 482; Darmesteter, i. 101, n. 28; K. Geldner, GtP ii. 38, and especially Geiger, Outrân. Kultur, pp. 42-45, and the 'penk' (taeâna, Yt. xv. 7; cf. xii. 23; Bendl. v. 4; Ys. xii. 3) of Hara is probably Mt. Damavânt (Geiger, loc. cit.). The identification of Mazân (the noun from which Mazâïnaya is derived) with the demon by Nirto-sangh (c. a.d. 1200), who, in his Skr. paraphrase of the Pahlavi version of the Yasna, renders 'Mazâ-înaya' by 'Mâjзадaradaseya (Yasna xiii. 22, 49), is, I think, incorrect.

Closely associated with the Mazâïnaya daervâs are the Varency daevâs and dregvants, or 'adherents of the Lie demon' (Ys. xxvii. 1; Yt. vi. 22, xiii. 137, xv. 8, xix. 26; cf. Darmesteter, ii. 373, n. 23; Yt. x. 97, xiii. 71, and Vend. x. 14 are unimportant in this connexion.)

The land of Varena was the fourteenth best created by Ahura Mazda, but Angra Mainyu cursed it with the Mazâïnaya errunies and non-Aryan over-lords ('Vend. i. 17).

It was 'four-coured' (cesthu-sanirâs, i.e. four-square or quadrangular [?]; cf. Darmesteter, ii. 14, n. 38), and was the birthplace of the hero Thraetaona or Farûdîn, who overcame Ah Daâhâk (Vend. i. 17; Yt. x. 33)—a tale which was discussed at length in the lost Sûtrak Nask of the Avesta (Dinkart. ix. xxi. 17-24; cf. also Ys. xii. 9, xix. 4. 2).

The location of Varena is a matter of some dispute. It was certainly near Tabaristân (Spiegel, i. 545), but is hardly to be identified with the modern village of Verck, south of Sîrì, as argued by Spiegel (i. 529, 530; cf. Pavel von Fusti [Die Zend sprache, Leipzig, 1864, p. 270 [with earlier literature], GtP ii. 404). Equally uncertain is the view of C. de Hérêz (Avesta trad., Liège, 1875-77, i. 37, 38) that it was the modern Kirkma of A. V. W. Jackson (GtP ii. 663) and Dhalta (loc. cit.) identify it with Gillân, and Darmesteter (ii. 14, n. 38) with Tabaristân or Dâlam. Tabaristân was formerly preferred by Geiger (Outrâns. Kultur, pp. 127 ff., 184); his later view (GtP ii. 391), identifying Varena with the Caspian Gates, seems scarcely an improvement. Nirto-sangh was ignorant of the meaning of the term, for he renders Vareneya by viharmakarsa, 'confusing,' and kima, 'love' (on Yt. i. 19; Ys. xxvii. 1), confusing the epithet with the later Pahlavi Vareny, the demon of lust (Jackson, ii. 660, 663; Darmesteter, ii. 373, n. 23; C. de Hérêz, Philosophy of the Mazâïnaya Religion under the Sassanids, Bombay, 1889, pp. 91, 160). On the whole, Gillân appears to be the most probable identification.

It would seem that the legend of Haöshyangar refers to an early invasion of Mazândaran and Gillân by Iranians, and their conquest of it, at least in part. This is borne out by the local tradition of the early 13th cent., for Ibn Islâmâyî (p. 15) held that 'until the time of Dakhht it was in the possession of the demons. He conquered them, and made them level the mountains with the plains, fill up the valleys, and after the sea, open up the country, and distribute the rivers and streams.'

The Iranian religion found some place, at all events, in Mazândaran, for tradition sees in Spîti and Zerâkzâî, who were mentioned above (Yt. xii. 121, two pious men who came from Mazândaran to receive the grace from Frâshoashra, the father-in-law of Zarathushtra (Dinkart. ix. xxi. 17-24).

In the Pahlavi texts the most interesting passage in the present context is found in the Shâh-nâmeh Mazândaran is described with little geographical accuracy (Nâeldeke, ii. 178), and the Kârgâsra (Vulture-heads), who are frequently mentioned as inhabiting the country, like the Sâgârs ('Dog-heads), Buzgâsh ('Goat-ears'), and Narmpai, whose name is 'Strap-brake' and betrays the influence of pseudo-Caithnesses upon Firdâsî (Nâeldeke, ii. 146, n. 3). In its proper shape the king of Mazândaran had a boar's head (Warner, ii. 75). The land itself was 'mountain-tall, with shoulder, breast, and neck ten cords across' (ib. 66).

The magic exercised by the 'White Div' against Kâns was read like a description of a severe hail storm (ib. 40); the only other point worth noting is that his blood cured falling night (ib. 62).

Even in the Arab period Mazândaran remained imperfectly Islamized. As late as the 10th cent., many of the inhabitants of Dâlam and Gillân were 'plunged in ignorance' (i.e. heathenism), and some were Magians, this being particularly the case with those in the mountains, valleys, fortresses, and other inaccessible places (Masûdî, Priâries d'or, ed. and tr. C. Barbier de Meynard and Pâvet de Courteline, Paris, 1864-77, iv. 5). It was a

1 With these 'non-Aryan over-lords' Geiger (p. 185, n. 2) compare the Areopagites, a tribe dwelling along the Caspian (Stevens, pp. 172, 184); cf. Pavel von Fusti, in Peulit. Wissena, i. 1923, P. Andreas, i. 2195).

2 In a Turanian fragment Ah Dâhâk, who was imprisoned in Dâlam, says 'No one has yet explained why the legendary subject has thus far been found in two other passages, but in both cases the accompanying passage (p. 71) is lost' (S. T. Tomasek, in Peulit. Wissena, i. 1923, P. Andreas, i. 2195).

3 In the Parthian fragment Ah Dâhâk, who was imprisoned in Dâlam, says 'No one has yet explained why the legendary subject has thus far been found in two other passages, but in both cases the accompanying passage (p. 71) is lost' (S. T. Tomasek, in Peulit. Wissena, i. 1923, P. Andreas, i. 2195).

4 According to Darmesteter (i. 373, n. 22) and West (GtP ii. 110), the Pahlavi Vâsarpand-nâmêz asks the question: whether the Mazâïnaya demons were demons or men, and where their souls went after death. It is also said that all men, that some of them followed the religion of Ahura Mazda and others the religion of Agra Mainyu, and that most of them went to heaven; but the text, as edited and translated by J. J. Mct (Bombay, 1903), contains no statement whatever on this matter.
The centre of the Hurrnate and Zaidite sects of Muhammatanism (ib. vi. 188, vii. 117; cf. also Ibn Isfandiyar, pp. 138, 189–193).

The full for no special remark, but the Hurrnates may be briefly described, as being one of the many attempts at religious syncretism in W. Asia.

The correct meaning of the name is not absolutely certain. It is usually explained as from Pers. curnam, ‘cheerful’ (cf. Euphrates’; so T. Haarbricker, in his note to his tr. of al-Shahrastani’s ‘Al-ras动静, the women and men of that realm, Halle, 1850–51, ii. 449, and Flügel, ZDMG xxxii. 331, note), but it has also been derived from the name near Aradîb, which appears to have been an ancient centre of Mazdaite teaching (A. Müller, Islam, Berlin, 1885, i, 500, note). The present writer is inclined to trace the term to the name of Mazda’s wife, Harunmah, who, after her husband’s execution, fled to Ray, where she carried on a successful propaganda of Mazdaite heresy, calling her teachings ‘Hurrman’ (Ed. C. Schrêber, Christianitiae persanae, Paris, 1833–35, I. 170–175, where the relevant passage of Niżam-us-Salâh’s Kitâb al-Siyasât (ed. and tr. in full by Schrêber, Paris, 1883) is given in text and translation; for the Mazdaite heresy see art. Mazda).

The Hurrnates were divided into the Bâbâyikah and Mazûriyah (the latter also called Muhammâr, ‘red-haired’). While there is abundant material regarding the rôle played for more than twenty years (185–838) in Tâbriz by Bâbây (the Arabic spelling of the Iranian name Pâpây), as well as by Mazûrâ, for a knowledge of the spread of their creed and the only known starting-points are sources—the ‘Fihrist of Muhammad ibn Iâbâq al-’Adîn (written in A.D. 957–988, ed. G. Flügel, Leipzig, 1871–72, pp. 342, 30–344, 18, tr. Browne, Lâlî, Sûrî, and others; iii. 352, sect. iv., p. 352), from the Fihrist we learn that Bâbây was the natural son of an old-seller who migrated from Ctesiphon to the village of Fûléshahr, not far from Aradîb and Arraîan, and married, after an illicit amour with her, a one-eyed woman who later became the mother of Bâbây’s son. One day, while the woman was asleep, her mother a cow of blood under each hair on his breast and head, and from this she inferred that he was destined for some glorious mission in the faith. Bâbây later entered the service of Jâvîdîn, a Hurrnate leader, and, when the latter died, in consequence of a wound received from the rival Hurrnate chieftain, Iblîn-’Ali, Jâvîdîn’s wife, who had engaged in an intrigue with Bâbây, and who had concealed from the public the news of her husband’s death, told her lover that she would tell Jâvîdîn’s followers that he had decided to die and cause his spirit to pass into Bâbây, who was to slay the present rulers, restore the Mazda- kites, and enrich his adherents. The plan was completely successful, and Bâbây became the acknowledged leader of the sect, claiming to be God incarnate. After this, Bâbây’s followers ‘called for a cow, and commanded that it should be slain and its blood be poured over them, and on the skin she placed a bowl filled with wine, and into it she broke bread, which she placed round about the bowl. Then she called them, most of them were women, and made each of them wash the skin with her foot, and take a piece of bread, plunge it in the wine, and eat it, saying to each, O Spirit of God, I believe in thee, O Spirit of Jâvîdîn; and that each should then take the hand of Bâbây and kiss it’. She then ‘brought forth food and wine to them, and seated Bâbây on her bed, and sat beside him publicly before them. And when they had drunk three draughts each, she took a spout of oil and offered it to Bâbây, and he took it from her hand, and this was their marriage’ (Browne, p. 327).

It is thus clear that Bâbây held the doctrines of Hubal (the incarnation of God in human form), tânasq (passing of the soul from one body to another), and rîj (reincarnation), so that he became the arch-heretic and immoderate, so as described by al-Shahrastâni (tr. Haarbricker, i. 199 ff.; cf. Browne, p. 328). He appears to have been hostile to Islam, for Ibn Isfandîyâr (p. 153) that he ‘originally desired to bring Islam and Zoroastrism into conflict, and to destroy all traces of Islam to be removed’. It is doubtful whether he was of Persian origin, for, according to the Fihrist, his father sang songs ‘in the Nabatean tongue, and Bâbây’s own tongue was cramped out of Outlandish speech’ (see, further, Browne, loc. cit.).

To the information al-Shahrastani adds that the Mazdaity are opposed to the religion of the Muhammatans, and he says:

‘By night the Bâbâyikah to those mountains of Tâbriz agree upon even the soul of depravity will come, and playing, etc.; and therein (i.e. at night) the men and the women agree together. Then the lamps and fires are extinguished, and come the men of that realm, who who chance to sit with him. And these are the persons who in the ignorance they had a king named Shurâr, whom the people deem greater than the prophets; and when they protes for the dead, in his name they pay tears and laments, (even) their grief for him.’

It is clear that the Bâbâyikah were only a later phase of the sect founded by Mazdak, but in a degenerate form, marred by the cruelty which characterized the career of Bâbây, who is said to have slain at least 255,500 persons during his years of power.

LOUIS H. GRAY.

MAZDA.—See ORMAZD.

MAZDA.—History.—Mazdak, son of Bândâh, a Persian (probably a native of Susiana), was the leader of a communistic sect which towards the end of the 6th cent. A.D. became a formidable power in the Sassanian empire. According to some accounts, the original founder of the sect was a certain Zarâšâd, son of Khurânag, on whose behalf Mazdak is said to have carried on propaganda among the populace, but in any case was under Mazdak that the sect received importance. His temporary success was largely due to the state of anarchy then prevailing in Persia.

The emperor Kâwâd, who ascended the throne in A.D. 488, finding himself opposed by the nobility and the influential Zoroastrian priesthood, entered into a close alliance with the arch-heretic and embraced his revolutionary doctrines. The governing classes were strong enough to depose Kâwâd in favour of his brother Jâmâsp; but after his restoration, which took place a few years later, the power of the Mazdakites continued to increase, though Kâwâd did not seem to have been very active. In the concluding years of his reign a bitter struggle was waged over the succession, which the Mazdakites endeavoured to secure for one of Kâwâd’s sons who was devoted to their cause, while the Zoroastrian priests, in agreement with the emperor himself, regarded

1 See Justi, p. 390.
2 Perhaps we should compare the nocturnal orgies against which the Gathas polemize (Is. xvi. 33–34, viii. 10; cf. C. Bartholomae, Gathe's des Avesta, Strassburg, 1896, pp. 38 f.; J. H. Moulton, Early Zoroastrianism, London, 1913), and indeed, however, it was merely a current bit of scandalous gossip without much foundation.
3 The Mazdakites are called Zarâshûdikah in the Syrian Chronicle of Josua the Sylphite, ed. W. Wright, Cambridge, 1882, x, 50.
prince Khusrav as the presumptive heir to the throne. The course of the events which culminated in the massacre of Mazdakist together with many thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and assumed the name of Timotheus (Joannes Malalas, in PG xvii, 654; Thomas of Canterbury, in Historia sacra, 276, 150; = Noldeke, op. cit. p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic regulations which were made for the purpose of compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have developed considerably, and that the upper classes bore the brunt of it. Our authorities give great prominence to this aspect of Mazdakism, and they are justified in doing so. Mazdak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Noldeke has remarked that what distinguishes Mazdakism from the organized socialism of modern times is its religious character, a peculiarity in which it resembles all Oriental movements of the same kind (op. cit. p. 459; cf. his art. "Orientalischer Socialismus," in Deutsche Rundschau, Feb. 1879, p. 254 f.). This character is perhaps the most striking aspect of Mazdakism. Mazdak's asceticism—he is said to have forbidden the slaughter of cattle for food—gave offence to the orthodox, who saw in him the godly fasting Ashemooqtha (Pahlavi commentary on Vendidad Fargion, 45; cf. iv. 48). The passages from Tabari translated above, and still more the epic narrative of Firdausi (Shahnameh, ed. Turner Macan, Calcutta, 1829, p. 161 f.), which reflects the sentiments of the priesthood, bring out quite clearly the fact that Mazdak identified his doctrine of equality and fraternity with the religion of Zoroaster in its original uncorrupted form.

1. "...shall establish this communism in order that the pure religion may be made manifest and raised from obscurity. Whoever follows any religion except this, may the curse of God overtake that deceitful one!"

2. "...five things turn a man from righteousness: jealousy, anger, vengeance, need. And the fifth one that makes him covetousness. If thou prevail against these five demons, the way of the Almighty will be manifested to thee. Because of these five, we possess women and wealth, which have destroyed the good religion in the world. Women and wealth must be in commune among us. If thou desirest that the good religion should not be harmed. These two (women and wealth) produce jealousy and covetousness and need. Which secretly unite with anger and vengeance. The Demon (desire) always turneth the eye from the wise. Therefore these two things must be made common property."

"Zoroaster."

Without claiming that Mazdak was animatized by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communistic scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is to be explained by the force of his appeal to Persian idealism. He would not have gained extensive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main, he appears to have held fast to Zoroastranism, and no reliance can be placed on the statements of Shahrestani and later writers who credit him with cosmological speculations closely akin to those of Mani.
MEAN—MEAN (Chinese).—Outside of Greece, the theory of the mean received formal attention only in China, which produced the classic Chuang Yang, commonly known as The Doctrine of the Mean, though more exactly rendered 'Equilibrium and Harmony' (see above, p. 909), the authorship of which is attributed to the grandson of Confucius, Tung Sen, who flourished in the 5th b.c.

Heaven has conferred a spiritual nature upon man, and 'an accordance with this nature is called the path of duty,' which must never be abandoned (i. 2-3). The terms ch'ang (equilibrium) and yung (harmony) are respectively absent of stirrings of pleasure, anger, sorrow, or joy, and the state in which 'those feelings have been stirred, and they act in their due degree' (i. 4). Therefore, 'the states of equilibrium and harmony exist in perfection, and a happy order will prevail throughout heaven and earth, and all things will be nourished and flourish' (i. 5). According to Confucius himself, the superior man embodies this ideal state, and 'perfect is the virtue which is according to the Mean' (ii. 1); yet some err by exceeding it, and some by falling short of it (iv. 1) only the sage is in perfect harmony with it (xi. 3). As an example of the practical value of ch'ang yung, Confucius cites the course pursued by the emperor Shun (2255-2205 B.C., according to Chinese tradition), who questioned men, 'took a hold of their two extremes, [determined] the Mean, and employed it in [his government of] the people.' (vi.); but yet, in spite of all, 'the course of the Mean cannot be attained to' (ix.). In a word, the superior man acts 'in the middle,' not far from the applications of his Logic—his doctrine of thought being as dialectically progressive through the meeting of opposites—to the history of human thought and endeavour; it is this that gives to his expositions of history and thought a strength which, while not violating the excessively rigid formalism with which the principle is applied by him in certain cases, we can seldom find clearly marked and uniform (in pairs) from the opposition of which the higher truth can only find out conflicting streams, tendencies, movements of thought.

A movement involving truth mingled with error is found in another movement, involving different truths mingled with different errors. What is required is a point of view above both the conflicting principles, from which to criticize them. This is the true 'middle way,' found, not by taking what the two extreme views have in common, and disregarding all their differences, but by finding a principle which contains more truth than either of the extremes, not less truth. The value of the conflicts and oppositions of history is to suggest the need for these higher—or, to vary the metaphor, deeper—truths, and sometimes also to suggest the way to reach them.

S. H. H. MELLOTHE.
MECCA

menn, plenty and safety, are mentioned elsewhere in connexion with the Meccan sanctuary, the former as a result, it would seem, of visits from pilgrims, whereas the latter probably means safety for refugees; but the texts are not very clear. The sanctuary itself is called in the Qur'an either 'the house,' or 'the house of Allah, the Sanctuary,' or the Ka'bah (a word said to mean no more than 'house,' and perhaps in which he is, not himself,' and, if he falls in anything, he blames only himself (xiv. 1 f., 5). It advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature, that he may pursue the path of the mean (xxvii. 6). 'When occupying a high situation, he is not proud, and, in a low situation, he is not insubordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxviii. 1).

During the reign of the Caliph 'Abd al-Malik, special mention is made of the fact that he never swerved from the mean (xxxi. 1).

The remainder of the Chung Yang is devoted to local government, the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of cultivation (ch. xlvii. 1-6).

The meaning of some particular terms, it is proposed, is discussed in the following chapter (xlviii. 1-3).

LITERATURE.—The Chung Yang is most conveniently ed. and tr. by J. Legge, Chinese Classics, Hongkong and London, 1862, and there are a number of excellent trs. of the Chung Yang, pp. 35-45), and again tr. by him in SBE xxviii. (1909) 200-229.

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islam, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakka, occurs once in the Qur'an (lii. 80), and this is probably the earlier form, though the etymology is uncertain.

The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with this settlement; for the Makorabah of Ptolemy (iv. 22, 16) is the same name. From this is derived the title of Meccans, of which the earliest extant form is abzalj (245 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'an, but to some extent influenced by the later history also. It would appear that, when Islam arose, there were no chronicles in existence dealing with the affairs of Central Arabia, and for some generations the days of paganism were regarded with a sort of horror, which prevented the preservation of precise information concerning them.

The references to the city in the Qur'an throw little light on its early history. A sara incorporated near the end of the collection (cv.) reminds the Prophet of the Owners of the Elephant, who were destroyed by birds (ashdab), which flung at them stones. The story is interpreted as an expedition by Abyssinians against the Meccan sanctuary, unreasonably frustrated, but it is possible that this story is an invention of exegetes, who coupled sara cv. with evil, which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. In it the Quraish (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this universe, whom they food after hunger and safety after fear. These two pheno-

the principle of reciprocity' (xiii. 3); and yet 'were the superior man to speak of his way in all its greatness, nothing in the world would be found able to embark it; but let it be known of it in its minuteness, nothing in the world would be found able to split it' (xii. 2). 'The superior man does what is proper to the station in which he is; he does not desire to go beyond this. ... The superior man knows that in this, in which he is not himself,' and, if he fails in anything, he blames only himself (xiv. 1 f., 5). It advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature, that he may pursue the path of the mean (xxvii. 6). 'When occupying a high situation, he is not proud, and, in a low situation, he is not insubordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxviii. 1). Among the many virtues of Confucius, special mention is made of the fact that he never swerved from the mean (xxxi. 1).

The remainder of the Chung Yang is devoted to local government, the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of cultivation (ch. xlvii. 1-6).

The meaning of some particular terms, it is proposed, is discussed in the following chapter (xlviii. 1-3).

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islam, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakka, occurs once in the Qur'an (lii. 80), and this is probably the earlier form, though the etymology is uncertain.

The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with this settlement; for the Makorabah of Ptolemy (iv. 22, 16) is the same name. From this is derived the title of Meccans, of which the earliest extant form is abzalj (245 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'an, but to some extent influenced by the later history also. It would appear that, when Islam arose, there were no chronicles in existence dealing with the affairs of Central Arabia, and for some generations the days of paganism were regarded with a sort of horror, which prevented the preservation of precise information concerning them.

The references to the city in the Qur'an throw little light on its early history. A sara incorporated near the end of the collection (cv.) reminds the Prophet of the Owners of the Elephant, who were destroyed by birds (ashdab), which flung at them stones. The story is interpreted as an expedition by Abyssinians against the Meccan sanctuary, unreasonably frustrated, but it is possible that this story is an invention of exegetes, who coupled sara cv. with evil, which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. In it the Quraish (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this universe, whom they fed after hunger and safety after fear. These two phenomena, called Avhile, were for a time thought to exist, but on further investigation it was found that they were mere figments of the imagination, and that the texts are not very clear. The sanctuary itself is called in the Qur'an either 'the house,' or 'the house of Allah, the Sanctuary,' or the Ka'bah (a word said to mean no more than 'house,' and perhaps in which he is, not himself,' and, if he fails in anything, he blames only himself (xiv. 1 f., 5). It advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature, that he may pursue the path of the mean (xxvii. 6). 'When occupying a high situation, he is not proud, and, in a low situation, he is not insubordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxviii. 1). Among the many virtues of Confucius, special mention is made of the fact that he never swerved from the mean (xxxi. 1).

The remainder of the Chung Yang is devoted to local government, the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of cultivation (ch. xlvii. 1-6).

The meaning of some particular terms, it is proposed, is discussed in the following chapter (xlviii. 1-3).

LITERATURE.—The Chung Yang is most conveniently ed. and tr. by J. Legge, Chinese Classics, Hongkong and London, 1862, and there are a number of excellent trs. of the Chung Yang, pp. 35-45), and again tr. by him in SBE xxviii. (1909) 200-229.

LOUIS H. GRAY.
and Taif; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Muqaddim (A.D. 908-933), and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Snouck Hurgronje\(^1\) is probably right in thinking that the community first gathered round the source of the Qiblah stream, which furnishes a constant supply of brackish water. The tradition gives us the names of the tribes which formed the community, but scarcely hints at any sort of municipal organization. The most surprising is the absence of all mention of priests, such as we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in cattle, but other forms were probably known; visitors to the shrine have at all times had to pay more or less heavily for the privilege, and this source of wealth is, as we have seen, indicated in the Qur'an. We possess only casual notices of the amounts demanded in later times, but these indicate that the piety of pilgrims often afforded a considerable revenue. The Fatimid Khalfahs expected the governor of Mecca to make the pilgrims pay his chief source of revenue; besides this visitor's fee, they had to pay for admission to the sanctuary, and those who brought goods had to pay import duty. Attempts were made by priests subsequently, but they had due to their tendency to revive, and their analogues do not exist in the period before the rise of Islam.

Prior to the rise of Islam it would appear that some event connected with the sanctuary was recorded in the biographies of the Prophet professed to give us the names of persons who had either adopted that system or showed some leaning towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious diversity, and as long as the local beliefs and practices were not assailed; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising, and that his success would have increased his control of the community had it not been for the Ka'bah which fashioned the form. His rejection by the Jews of Medina (q.v.) caused him to contemplate a partial return to the system which he had abandoned, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But, when Mecca had become Islamic, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims at the festival was forbidden. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at some time making his native place the seat of government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps Abdallah b. Zubair, whose occupation of the khilafate lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has only made it the natural seat of government. Certain fanatic sects, such as the Carmathians and Wahhabis (q.v.), have at times done damage to its monuments, and

in the neighbourhood by the Egyptian Sultan Jâmaq (1458–53). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred without difficulty to the Sultan of Constantinople, who, in common with the authority of the Sharifs to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon it. The introduction of Turkish sovereignty also changed the character of the Ka‘bah, which had been devoted to the worship of a god of the Shī‘ites. The ka‘bah of this sect, who, as a class, were always involved in family quarrels, became somewhat less dependent on Constantimople, and could even at times defy the representative of the metropolis at Jeddah. Both the sacred cities were threatened by the rise of the Wahhâbî movement towards the end of the 18th century, and indeed in 1793 and 1798 appeals for help against this new power were addressed to the Ottoman Sultan. This was not forthcoming, owing to the European complications in which the Porte was involved, and in 1803 Mecca was evacuated by the Sharifs, and presently occupied by a Persian envoy, according to his ideas. The Sharifs was, however, after a short time re-installed on his professing to adopt the Wahhâbî tenets; and for some years Turkish troops had determined the Ka‘bah to pilgrimage. In 1813 an expedition sent by Muhammad ‘Ali, founder of the khedivial family in Egypt, succeeded in recovering the sacred cities, and a Turkish Pasha was installed in Mecca, whereas, however, the rule of the Sharifs was nominally continued. After a time the Ottoman power was again represented by the governor of Jeddah.

Both the meaning and the limits of the sanctuary (zārâ‘a) were extended by Islâm. The sense of this Arabic word is ‘to forbid,’ and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that this prohibition before Islamic times extended beyond the Ka‘bah itself. Azraqi is very likely right in asserting that at this time the dwellings of the citizens surrounded the Ka‘bah, leaving only a small area (sha‘b) ; the growth of the Muslim community rendered the destruction of these dwellings necessary; and operations of this kind were undertaken by the second and third Khalifs. The area was further enlarged by the pretender ‘Abdallah b. Zubair, who, in the 7th century, erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the ‘Abbasid Danishmend (750), who also built a minaret, and who, in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Mahdî, who at great cost had a torrent diverted with a view to bringing the site of the Ka‘bah into the centre of the mosque. Yet further extensions were effected by Mutawakkil (936), who also introduced luxurious ornamentation. In frequent the area occupied by the mosque was due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the Khalif Mu‘ammar considerable extensions and restorations were again carried out in the years 894–936, and the like are recorded for the year 918 under Mutasim. Under this Khalif serious mischief was wrought by the Dome of the Chain, and for a series of years practically put a stop to the institution; their atrocities culminated with the seizure in 311 A.H. of the Black Stone, which they conveyed to their headquarters in Hajar, whence it (or some substitute) was sent back twenty years later. This fetish had already been seriously injured in the time of ‘Abdallah b. Zubair, when the Ka‘bah was burned down, and, in spite of a series of precautions, it remained till the middle of the 18th century an object of an Egyptian Shī‘ite in the year 414, and not long afterwards was broken into three pieces by some Persian fanatics. The kissing of this object, which forms one of the pilgrimage rites, is not mentioned in the Qur‘ān, but probably is a survival from pagan times.

In 1599 a large part of the mosque was destroyed by fire, and orders were presently given by the Egyptian Sultan Paraj for its restoration with increased magnificence; this was finished by 1404. In 1551 the Ka‘bah itself was found to be in need of repair, but before this could be effected the question was raised whether this sacred building could lawfully be touched by the builders; and the fanatical populace were inclined to side with those holding the negative view. The precedent of Abraham and Ishmael (Qur‘ān, ii. 119) finally decided the question in favour of the restoration. In 1571 orders were given for the complete rebuilding of the mosque by the Ottoman Sultan Selim II., who, however, did not live to complete the work; when this fell to the share of his son, the colonnades the principle was followed that three marble columns should be succeeded by one of black stone from a local quarry. Details of the numbers and the location of the doors in the new mosques are given by Wustenfeld (iv. 318, 9), together with other statistics and dates. The existing mosque appears to be substantially that erected by Selim and his successor.

It appears, then, from this sketch of the history of the mosque that little remains in Mecca for which any considerable antiquity can be claimed. The archeological taste has rarely developed in eastern countries, and no trouble was taken either in Mecca or in Medina to preserve historic buildings or retain ancient sites. The theoretic sanctity of Mecca has never stood in the way of leaders who wished to effect their objects by violence; and the Umayyad Yazid, whose besieging forces were to some extent responsible for the burning of the Ka‘bah in 64 A.H., did no more than would have been done by any other Muslim ruler who was engaged in suppressing a rebellion. Various buildings which figure in the early history of Islâm were cleared away as the need for enlarging the temple area arose, and little regret was felt for them. On the other hand, buildings, particularly those which have no justification in the Qur‘ān; thus a stone which is called ‘the station of Abraham’ has acquired great sanctity, but in the Qur‘ān (ii. 119, iii. 91) this phrase seems to mean only ‘the dwelling-place of Abraham.’ The jurist Malik (1179 A.H.) asserts that this was restored by Omar to a place which it had occupied before the Days of Ignorance, on the faith of a chart preserved in the treasury of the Ka‘bah. As we have seen, the Black Stone, which is supposed to represent the ‘right hand of Allah,’ is of very doubtful authenticity.

Besides the prohibition against bloodshed which theoretically covered the area occupied by the city, there are other legal peculiarities belonging to it. Closely allied to this prohibition is that against the chase, which is even extended to the cutting of trees and the plucking of herbs. This ordinance is modified in a variety of ways; it seems clear that the slaughter of noxious beasts is generally permitted, and weeding to a certain extent is also lawful. The sowing or the reaping of crops, and for compensation, on a scale fixed by the Qur‘ān. There is some difference of opinion between jurists on the question whether rent may be taken for

\footnote{Mudawwarat, Cairo, 1823, ii. 212.}
houses in Mecca; according to modern travellers, this question is purely academic, since the inhabitants largely earn their living by letting their homes to pilgrims.

The place of Mecca in the Muslim religion is 01 wise not free from anomalies. On the one hand, it is clear that the standard of morality and piety is maintained by the likes of no other city; it has been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place itself. Such spiritual benefits accrue to those who go thither. These are not indeed free from danger; for, just as the value of good actions is higher in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the Sufis, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Fālīḥ al-Makkī († 386 A.H.) is right, pious men in every age who went thither on pilgrimage used to pitch two tents, one within and another outside the sacred area, devoting the former exclusively to religious exercises.1 The resulting danger was one of the reasons why continuous residence in Mecca was discouraged by two others urged by Ghazālī († 505 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be argued that the absence of a pilgrim is a return of place, i.e. one to be visited, not made a place of residence (I.I. 119).

The various sovereigns who have been protectors or ‘servants’ of the sanctuaries have ordinarily been lavish in marks of their favour and sometimes jealous of munificence exercised by rival potentates; among the public works executed by these benefactors the greatest amount of space appears to be devoted in the Chronicles to the aqueducts: one which conveys water from Mt. Arafat to Mecca, utilizing a channel originally constructed by order of Zabaida, wife of Harūn al-Rashīd, occupied fourteen years (855-972 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and alms-houses have been erected by Islamic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hurgronje,2 is the same: the houses that have any value of all time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name (of which see E.B.E. vii. 577 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of ‘sale’ and ‘purchase.’ An attempt was made by a Turkish resident in the middle of the 19th. cent. to declare all such transactions invalid, but his removal was procured before this could be carried out.

The erection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which are worked out elsewhere. A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the Sufis:

1 La confrérie nouvelle rendit à la Mecque le rôle de foyer du sahnisme musulman, que lui avait fait perdre la caste aṣyrīn (Les Confréries musulmanes du Hedjaz, Paris, 1887, p. 19).

The author of a dialogue on Islamic revival be-
and was settled east of the Zagros mountains, where it was known to the Assyrians as Mādā, or Mēle, a name also written Mānād, like Amardī for Mardī. From this time forward the names of the kings and chiefs of Media and the neighbouring district of Mēle, and the monarchical title, are Iranian, and in a list of Median princes conquered by Sargon in 714–713 B.C. we find the name of Mazālūk, proving that Zoroaster's god Māzāi, 'the good Sun,' was worshiped in that region (cf. also 2 Esdr. F. Hommel, PSZA, 1899, p. 132). The name of 'Mītra,' the sun-god, is also found in the tablets of Assār-hāni-pal's library at Nineveh. On the other hand, Istuway, or Astyages, the last king of Ecbatana, is termed in the inscriptions, not 'King of Media, but 'King of the Unman Manđa' or 'Hordes,' an archaic title given by the Babylonians in early times to the northern barbarians, but applied in the Assyrian age to the Cimmerians and Seychta (qq.v.). The similarity of the names Manđa and Mādā raises the question whether the Medes of the classical writers who were conquered by Cyrus were not really Seychta, whose religious beliefs and practices have been transferred to their Median subjects or neighbours.

Zoroaster was not the only one to whom the Medes also were Iranians.1 But here again the inscriptions make it doubtful whether Cyrus and Cambyses, the founders of the Persian empire, were of pure Iranian stock, and whether the religion of Cyrus' events, were not the peculiarities of Sāsi (cf. art. ACHEMENIANS, vol. i. p. 70). Both he and his son formed the ancient worship of Babylonia. Gaumāta (Gomates), 'the Magian,' is expressly stated by Darius 5A. [Pers. text] I, 69 f., to have destroyed the ąydnā, or 'prayer-chapels,' of Persia, a word which is translated 'temples of the gods' in the Babylonian version of the Behistūn inscription. These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the 'great god Aura-māzād,' the creator of the earth and heavens, who in this version of the Behistūn inscription (ll. 77, 79) is especially called 'the god of the Aryans.' In the eyes of Darius he occupied much the same position as that occupied by Jahvā in the OT: he was the national god of the Persians and Medes, and would be,览其：The existence of the latter, however, was admitted; at Behistūn Darius says that he was assisted not only by Aura-māzād but also by 'the other gods, and that there were, opposed to the righteous law of Aura-māzād was the 'Līn (drauga), the Achaemenian equivalent of the Zoroastrian Angra Mainyu (Ahriman [q.v.]). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia,2 and the bodies of the Persian kings seem to have been buried in the ordinary way instead of being thrown to dogs or birds of prey.3 This, Herodotus says (I. 140), was a Magian custom.4

The date of Zoroaster (Zarathushtra) is uncertain, but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson5 seems to be right in concluding that he arose in Media rather than in Bactria, the tradition which makes him a Bactrian being late. Zoroaster is unknown to both Herodotus and Ctesias, the earliest mention of him occurring in a fragment questionably ascribed to Xanthus of Lydia and in Plato (Alcib. I., 122). Herodotus and Diodorus make the date of the 10th cent. B.C. He also implies that they were a class of priests (I. 140), and he describes certain of them as interpreters of dreams (I. 107). He further ascribes to them the Zoroastrian practices of reverencing the dog and destroying noxious animals (I. 140). No sacrifice could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan Īštāh); and there was neither altar, fire, nor libation (I. 126). The Greek historian adds (I. 151) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' They sacrificed on the summits of mountains, as well as 'to the sun and moon, to the earth, to fire, to water, and to the winds.' The worship of the goddess Anāhitā, and presumably the cult of Mēthra,9 also referred to in two inscriptions of Artaxerxes Mennōn (Sinān a. 4 f., Harm. 5 f.) was borrowed at a later date from 'the Arabians and Assyrians' (Herod. i. 131).4 On the other hand, the scavenging of the Hellenists by Xerxes (Herod. viii. 58) is inconsistent with the belief that water was divine,4 and in Herodotus's account of Magian religion Avestan dualism is conspicuous by its absence. So, too, is any reference to the doctrine of a resurrection. The simplest way of explaining these anomalies is to suppose that the religious system described by Herodotus was that of the Medes, among whom the Magi were a sort of hereditary priests like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been momentarily checked by the overthrow of the Medes and the introduction of Zoroastrianism. The Achaemenian aristocracy as the Pharslees did to the Sadducees. Meanwhile the reformer Zarathushtra had appeared in Persia, he built upon pre-existing religious beliefs and practices and attracted the Magi to his side. The result in the course of centuries was the Mazdaism of the Avesta.

MEDITATION.—Meditation is a word of extreme vagueness, but is here used only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated to us somehow. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of

1 Zoroaster, pp. 219-226.
2 See Rawlinson, Media, p. 259, n. 9.
3 W. Geiger (Outkun. Kultur im Altertum, Erlangen, 1882, pp. 385-422) derives the Zoroastrian fire-priests (ahura) from media.
4 See, however, Moulton, p. 218f.
what we think of as intellectual, moral, and religious convictions. The greater part of what comes under these headings is not original achievement of our own, but inheritance or education: it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, of ideas which we have been herited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures at birth.

1. The NT use of the term 'Mediator.'—The technical use of the word is most easily grasped if we start from that application of it which is most definite and concrete, viz. its application to the work of Christ. There are four NT passages where this is found: 1 Ti 2, He 891 124. In all these passages Christ is represented as mediating between God and man. God and man have been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to restore it. In 1 Timothy this work is explicitly connected with the redemptive death of Christ; there is our mediator between God and men, Himself man, Christ Jesus, who gave Himself a ransom for all. The same connexion is implied in all the passages in Hebrews; there the covenant, mediator of a new or better covenant. The covenant is the religious constitution under which God and men form one society, or live a common life. The old and inferior constitution, under which the ideal of religion was not realized, was the Levitical one. This was annulled because of its ineffective character, and in place of it, through the mediation of Jesus—i.e., by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of men to God. In this the ends of religion are really attained. There is real forgiveness of sins, real purification of conscience, real and abiding access to God, and all due to the mediation of Christ. This use of the term 'mediation,' which may be called the specifically Christian one, is that which has been mainly developed in later theology. Christ's work as mediator is that in which He interposes between the holy God and sinful men who are estranged from each other, and makes peace. This specifically Christian use of the term, indeed, is in itself a significant and ordinary relations. In ancient as in modern times a State or a person could offer to 'mediate' between other States or persons at war. The substantive ουτεαδης is used side by side with such terms as δι'αναπτυξης, λογικης, and is defined by Suidas as ενεργοντος, 'pencemaker.' The verb μετηνσεως, which occurs once in the NT without an object (He 8, though some here would supply την θησυχιαν, 'His promise') is elsewhere usually transitive: μετετηνσει την ναον των οντων (Polyb. XI. xxxiv. 3) = 'to achieve the settlement by friendly mediation.' A state of hostility or estrangement, in which the making of peace is the work of a third party, and can therefore be called mediation, is the background of the primary Christian use of the term.

2. Extension of mediation in the NT from redemption to the mediation of the world. The NT it is not limited to this use. It is not only that peace with God, or the forgiveness of sins, or reconciliation, or eternal life for the spiritually dead is mediated through Christ and His redemption; Christ is presented also as the mediator of God and man in a way which trenchéd on Christ's prerogative as the one mediator; and it was an effective method of precluding this to show that all such powers, whatever they may be, were derived from Christ, and Christ could therefore in no sense become His rivals. The connexion of ideas in He 1 is similar. It speaks of a Son whom God has appointed heir of all things through whom He has made the worlds. The 'also' implies that the making of the worlds through the Son is what naturally corresponds to His being heir of all things. Probably no idea in the NT is so hard to enter into as this. When we think of Christ as mediating between God on the one hand and man alienated from God by sin on the other, we know where we are. We can think on the basis of experiences, and tell how Christ has come to us in our own estrangement, and made peace between us and God. We can speak of Him as mediator, because that is what He has been to ourselves. But creation is not a process, or an act of which experience teaches us anything; it is not apparent that it needs to be, or that it can be, 'mediated' at all. The OT simply says that in the beginning God created heavens and earth. How had Paul come to say (Col 1) in Him—that is, in Christ—were all things created? How did the thought originate in his mind? What exactly did it mean to him? We cannot accept it merely on his authority, as a piece of information about the beginning of things; the content of revelation—what a man knows by the inspiration of God—never has the character of information. Unless we can enter into the origin and process of the Apostle's thought, we can never really appropriate the idea in which it rests. The idea that not redemption only but creation as well is mediated through Christ, that to Him is due and by Him must be determined not only all that we can call reconciliation but all that we can call being, is so unexpected and so astounding that we cannot but ask how it took possession of his mind.

3. Rationale of this extension in Paul.—So far as can be seen, there are only two possible explanations of Paul's attitude. One is purely formal, and is based on the idea that it applies to all being, to a pure formality. It assumes that Paul had identified Christ with some supernatural being to whom this attribute or function of mediating creation already belonged, and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it simpliciter, without any justification or explanation: he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as can be known, there was no trace whatever in the Pharisaism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Paul has accounted the idea of Christ's function of creation as ascription of the idea of Christ's function of creation as subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not the Jewish eschatological Messiah with whom Jesus is identified by Paul, but a supernatural being of another sort—the Logos of popular Greek philosophy, of whom such things were said in Pss 1. 6, as one of Christ in connexion with creation—then the further question is raised, How did Paul come to
make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos doubtless signifies somewhere between God and the universe, was the philosophical solution of a difficulty which he had never felt; namely, how the transcendent God was involved in any connection with a material world. Paul was not troubled by this any more than the OT prophets or Jesus Himself, nor does he ever bring his doctrine of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real clue to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul’s experience as a Christian, Christ was everything. He had reconciled him to God and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world, that which could never be transcended and could never fail. When he lived in Christ, he lived in the eternal world, and he felt that to that world and to the believer’s interest in it everything else must be subservient. He could say, ‘All things are possible to them that believe’ (Io 14:14). And ‘all things’ here must be taken without restriction. It means not only all that hap pened in the days of Judaism, but the whole of the last resort be in alliance with the God and Father of our Lord Jesus Christ, and in league with His purposes. As J. Orr put it (The Christian View of God and the World, Edinburgh, 1889, p. 229), it must be built on redemption lines. That is the same as to say, it must be built on Christian lines; the world in which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God’s purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to His work of reconciliation, and to His supreme place at last as heir of all things. Now, is it not legitimate to say that a world which was created for Christ was created in Him and through Him? This is the primary meaning of what is meant by the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him. Paul assures us that we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences—things on earth and in heaven, things visible and invisible—must owe their being to the mediation of some supernatural power which is identified in his mind, we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea a point of application. He assumes that we have found the way of salvation. But the redemption thus mediated is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fail on everything in the world if we are to see it. It is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital presupposition of the doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral principles, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction of good and evil that man can prove his devotion to good for its own sake. But there is really no such world, though the lightning does not shun the good man’s path. What the doctrine of creation mediated by Christ implies is that in the very constitution of nature it is possible to discover the same principles as are revealed in the life and work of Christ. If it were not so, no one with roots in nature would understand Christ when He appeared. The ultimate task of Christ is to set up a new law in the world. This is what Paul felt; it is what every idealistic philosophy teaches; it is the inspiration of the highest poetry; Wordsworth found in nature not an adversary or a neutral, but the model of a new life.

4. Mediation in the Fourth Gospel.—Without using words like προέτοιμασθείς and προσεκάνας the Fourth Gospel makes perhaps a more conscious and continuous use of the idea of mediation than any other book of the NT. Leaving the Prologue out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14:10, ‘No one cometh unto the Father, but by me.’ It is to Jesus that men owe all the blessings which constitute salvation. They are variously described, most frequently as life, but they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but by the Father. He is both Father and Son. It is as though there were powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome Him, partly by defeat of the reasoning of the relations of eternity and time. If pre-existence is a legitimate way of expressing the absolute significance of Jesus—the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, ‘before the foundation of the world’—then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him. To the end that we have found the way of salvation. Both it is only when we receive the Son and believe in Him that we truly come to the Father. The earlier stages of religion are mediated to us through all the experiences of life; these provide for it a broad and indisputable basis here and now, and make it independent of any particular historical mediation—i.e., of any mediation through persons or facts which have their place in the past. But the immediate experience of religion—a religion, as some might call it, of pure inwardness and spirituality, which has its certainty in itself, and is not at the mercy of a historical criticism for which no fact is beyond question—does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prepares them to appreciate it. It is consummated through Him. Only he who has seen Jesus has seen the Father. And, para-
doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lives; he is Sin Himself, that is true, and he that believeth hath the witness in himself (1 Jn 5:10).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is yellowed in the sense that the words of one Verse are more speculative than anything in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the modern interpretation. The historical idea of mediation is more difficult to understand as a fact, and the idea that He is speaking of Him in the prologue is perhaps less than has been assumed. The traditional and somewhat grandiose interpretation of the prologue, according to which the Incarnation does not appear until v. 14—thus, that the Logos is identified in the light which Heitmiiller has put on to the objects, who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The Incarnation appears already in v. 4, and the idea of Christ being up to the time of the writer is summarized in v. 14. Revelation in its full and specifically Christian sense, the mediation of men to the knowledge of God which is eternal life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by His Son), whereas in John He mediates revelation through mediation (we are saved from sin and death through the mediation of Jesus the mediator of the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the specifically Christian sense of mediation that is vital: Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apostles seem to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus' consciousness of Himself.—The most important of questions to the Christian religion is whether this specific sense of mediation, which is not only recognized by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He makes it clear that he died to redeem not only the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any extent? Did He, in any sense owe to Him either the knowledge of God or reconciliation to God, or were these supreme spiritual blessings immediately open to them, in independence of Him? The questions have been put in both ways. Harnack's famous dictum (Das Wesen des Christentums, Berlin, 1900, p. 91), that in the gospel as preached by Jesus the Son has no place, but only the Father, is so qualified by other statements that its author can hardly be excepted for the negative. Much more uncomprehendingly represented is the view of Weis and W. Heitmiiller. The former, in Das Urchristentum (Gottingen, 1914, p. 384), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of mediation or of salvation. Christ was there, as a matter of fact, and therefore Paul had to give Him a place in his religion somehow; but Weiss, with a sense of his own daring, does declare that there is still a place for His mission and work in the nature of God, and that God's eternal love, though Paul knew it only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which-froceseases any such appeal. In Heitmiiller's Jesus (Tubingen, 1913) the denial is even vehement:

1 'It is quite beyond doubt that according to the preaching of Jesus we have to conceive the relation of man to God: between God and man nothing and no one has a place, not even the historical Jesus, except in the proper sense Jesus in any case does not claim' (p. 75).

But Heitmiiller feels a certain embarrassment when he deals explicitly with some words of Jesus. He admits that Jesus could speak only of Himself, but that even a superstitious consciousness—e.g., the well-known passage Mt 11:3. To be the bearer of a unique revelation, the Son simpliciter—it almost certainly is the same thought as the historical Jesus, is almost certainly not a divine self-consciousness, but it is almost more than human. It might impel us to ask whether it was compatible with soundness and clearness of mind. Yet this is the case at which the form of Jesus becomes mysterious to us, almost unceamiy (p. 71). Further, he speaks of the riddle as insoluble (p. 89), but apparently he thinks that he has reduced it to less disquieting proportions when he writes (p. 128) that Jesus seems to have claimed for Himself only that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and men, is in harmony with Jesus' consciousness of Himself, is argued in the present writer's Jesus and the Gospel (London, 1908, p. 159 ff).

What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ's mediation; there is one God, and one mediator between God and men. This is the idea of such passages as Ac 4:12 ('none other name'), Col 2:9 ('in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full'), and He 7:25 (the priesthood which does not pass to, or cannot be rendered upon by, another), as well as of Jn 14:3. What is in view in these passages is the idea that Christ in Himself can do anything or in order to do it, any of this or competitors, powers which in independence of Him prepared for His work, or supplement it, or enable men to dispense with it. This is unambiguously and exhaustively denied. The idea of mediation in the Christian sense has nothing to do with this. Spiritual beings, whatever their name or degree—principalities, powers, dominions—owe their own being to Him, and have their functions,
whatever they are, in a world which He has reconciled to God.

The exclusiveness of His mediation with regard to nature (being) as well as redemption is strongly asserted both in Col 1:19 and in John 1:14. Probably in both passages, as well as in 1 Ti 2:2, there is reference to forms of Gnosticism which it is difficult for us to define. For ancient thought generally, and therefore for ancient religion, the world was full of mysterious or quasi-personal sorts, and these easily asserted a place for themselves in the religious life. They came between God and the soul in ways that we cannot appreciate, and the interest of the apostles is to expel from the relations of God and the soul every power but that of Jesus. Their argument is that of experience against uncontrolled imagination. The controversies of later theologians, Catholic and Protestant, on the mediation (intercession) of saints are like this, but not identical. Those who admit that we can pray for one another have no ground for denying that the saints can pray for us. All that is to be said is that we do not know any thing about it; but whatever the saints may do for us they can do only in dependence on Jesus, not as mediators who might bring us to God apart from Him. Perhaps, therefore, the mention see Calvin's Instituto, iii. xx. 20-27; Westminster Confession, ch. xxi. 2; Thomas Aquinas, Summa Theol., iii. qu. xxvi. art. 1 f.; S. J. Hunter, Cyclopedia of Biblical, Theological, and Ecclesiastical Literature, 1885-86, v. 574, 607; K. von Hase, Handbuch der protestant. Polemik, Leipzig, 1906, p. 294.

7. Mediation in the OT.—If we look back from the NT to the OT, we find much more everywhere which can be described in terms of mediation, though μεσιτής occurs only once in LXX (Job 9:3), where, according to T. K. Cheyne (EBI, col. 3608), it answers to γενάκης, and means a person who could interpose with authority between Job and his imperfect or arbitrary God—an arbitrator who would see justice done. This is akin to the θυγατρικής, defined by Aristotle as δε θυγάτρια, and often found in Greek as a synonym of μεσιτής; but it is hardly the equivalent of the NT μεσιτής, whether we regard revelation or reconciliation as that which comes to men through Him. If we confine our attention to the OT which the term mediation is properly applied, both aspects of it pervade the OT. Revelation, or the knowledge of God, is mediated to men through the prophet. It is not necessary to ask here how it is mediated to the Jews and to the Gentiles; the question is how he obtains it immediately. He stands in God's council and hears His voice; it is the voice of God Himself, or such an echo of it as the prophet's voice can utter, that is heard when He speaks. There is no external criterion for distinguishing the true voice of God from a voice which speaks lies in His name. The secret of the Lord is with them that fear Him (Ps 51:16); they have, without knowing it, what the NT calls (1 Co 12:10) the gift of 'discernment of spirits.' As revelation is mediated through the prophet, so in the largest sense is reconciliation through the priest. The Levitical system may have been very imperfect—it was destined, indeed, to perish by its inadequacy; but the idea of it was to enable men to approach God, to give them peace with Him, to put it in their power, in spite of all that they had done, to have communion with God, living as members of a society of which He was the head. The Levitical system does not, of course, exhaust what the OT exhibits of the mediation of reconciliation through the priest: the hour of irremediable ruin is come—the final breach between God and His people—when Jeremiah hears that, though intercessors like Moses and Samuel stood before Jehovah, they could not turn His heart toward Israel (Jer 15:19). The ministry of intercession mediates for man to God, as well as the ministry of sacrifice—unless we reduce the latter to the former, and regard sacrifice as in essence 'embodied prayer.' It is another form, possibly a form inferior to well to inferior, spiritual, of showing the cost at which reconciliation is mediated to sinful men.

8. Later developments of mediation. Though the main content of all OT may be condensed under prophecy and priesthood, it is not quite exhausted there. Especially in post-Exilic literature, where the transcendence of God is emphasized till it depresses the soul, we find intermediate beings appear whose functions are wider and less defined. Sometimes they have to do with the creation of the world, sometimes with its government in nature or in history; sometimes they are specially concerned with Israel's fortunes, or with the giving of the law; sometimes they are interested in individual men, attaching themselves to pure souls and making them prophets or sages. Foreign influences as well as philosophical necessities determined the form of such thoughts, and they grew to a larger and larger space in many minds. In A. Berthelot's Bibl. Theol. des alten Test. Tübingen, 1899, § 223, there is a philosophical account of this faith in intermediate beings (Hypostaseenlehre), so far as it can be derived from the Greek Bible. The most important of them was Wisdom, though the name does not occur. The name, however, in spite of Mt 11:19, Lk 11:2, seems to have fallen out of favour in the NT, and is not once mentioned where we might most have expected it, in the Gospels. The name was, as was said, due, as J. Grill has suggested (Untersuchungen über die Entstehung des vierten Evangeliums, Tübingen, 1902, p. 199 f.), to the frequency with which in Gnosticism σοφία represented a lost soul which had to be redeemed (cf. EBE vi. 236 f.). Next in importance to Wisdom came the Word or Logos. On this see W. Bouset, Die Religion des Judentums, Berlin, 1906, p. 399, and cf. art. Logos, § 2. The doctrine of the Logos as 'mediating' is developed at great length and with infinite inconsistency in Philo. It can be best studied in E. Brücher, Les Idees philosophiques et religieuses de Philon d'Alexandrie, Paris, 1898, ch. ii. It is perhaps not unfair to say that in Philo there were two sets between God and the κόσμος; that it mediates, further, between God and man as made in the image of God and participant in reason, but that it is not a mediator of religious interest, i.e., a mediator of redemption between God and sinners. The verbal coincidences between Philo and the NT often, perhaps always, conceal a wide divergence of meaning. A full discussion of what Jewish belief in mediating powers eventually came to be found in F. Weber, Die Lehren des Talmud, Leipzig, 1886, ch. xiii. He enumerates five: (1) the angel Mešḥāţîôn, (2) the Word, or Μορφή (q.v.), of Jehovah, (3) the Sibêkînâh, (4) the Spirit of God, and (5) the Bath Qôl, or heavenly voice through which revelation is given. Where the mind starts with these generalities, whether in a more practical or in a more religious interest, it does not seem able or impelled to bring them to any convergence upon a single mediator; but the NT writers, starting from their experience of Christ as the only and the real revealer of God and reconciler of sinners to Him, are able to regard all these doctrines of mediating hypostases as hints or suggestions of what they possess in Jesus, reconciliation and are not afraid of attaching to them with all. Whatever they promised or were intended to secure has been finally made good and secured through Him. He is the Wisdom of God—the key to the world of nature, of history,
of all human life; He is the Word made flesh; Paul can even say (2 Co 3:17) that in His exaltation He is the Spirit. All mediation between God and sinful men is summed up and exhausted in Him. He is Himself our Peace. But all mediation, if the name is legitimately extended in this sense, between God and creation is also transacted through Him. The last, however, is not the starting-point; the saving ray in it is only incidentally through an overpowering impression of the importance and the significance of Jesus as the mediator of reconciliation; it is one way of expressing the conviction that He is the Beginning and the End, the First and the Last.

9. The subordinate sense of mediocris (mean of grace).—Mediation in a subordinate sense is the subject of the whole doctrine of the means (medio) of grace; that is, of the divinely appointed ordinances through which the salvation of Christ is brought home to man. Grace is mediated through these ordinances, especially according to Protestant theology, through the Word, sacraments, and prayer. The conditions under which the use of them becomes effectual for salvation—i.e., the terms on which grace really is mediated through them—are stated in all the confessions in more or less argumentative form.

Comparative religion offers examples of mediation more or less analogous to those here considered. Wherever there are religions institutions and customs, they are mediatorial. It is through them that God is the mediator to those who are brought up within its pale. Sometimes there are what A. M. Fairbairn used to call 'developmental coincidences' between other religions and Christianity where there is no real interdependence. Thus Mithra, was called μεσοτηρ in the first instance as dwelling in the air which is midway between heaven and hell. But the local meaning of Mithra, was a mediator between the inaccessible and unknowable God who reigns in the ethereal spheres and the human race which lives its restless life here below. He is said to be 'as great Mithra, messenger of the gods, mediator of the religion of the elect' (F. Cumont, Les Mystères de Mithra*, Brussels, 1913, pp. 125, 139, 146). Similar phenomena are abundant in the religions of India. But we now find a religion of which we can say, as has been said of Christianity, that it is what it is because of the presence in it of the mediator.

LITERATURE.—As the idea of mediation involves that of the mediator, comparative Christian writers have questioned whether Christ has a necessary place in the Christian religion, and, if so, what precisely that place is, and what it implies as to Christ Himself. The literature is co-extensive with that of Christian theology. Older discussions of main aspects of the subject are to be found in J. Butler, Anatomy of Religion, ed. J. H. Bernard, London, 1890, pt. ii. ch. v., and J. Martineau, Studies of Christianity, 1852, 1877. Besides the works mentioned in the article, all modern writings on Christianity are more or less relevant, but the formal treatment of it, even in the Jesus-Paul literature, is not frequent.

MEDICINE.—See DISEASE and MEDICINE.

MEDICINE-MEN.—See SHAMANISM.

MEDINA.—Medina, in Arabic with the article, means 'the Town', as opposed to the desert (Qur'an lx. 102, 121), and is the name usually given to the city, while Mecca, sometimes interpreted as 'the Prophet's City.' Its proper name was Yathrib (ib. xxxii. 19), evidently the 'Iathrib of Stephanus Byzantinus (c.e.) and Tertullian of Tmolus (c.e. vii. 31), apparently identical in origin with the Egyptian ḥrūba (indeed a form Atrib is mentioned). Another name which is sometimes cited is Tullib or Tulab, to be compared with the Hebrew Tob (Jg 11, etc.), and perhaps with the Greek Ὠφής, meaning 'fragrant' or 'good.' Many more names are collected by Sanhūdī (893 A.H.) in his monograph on Medina (Khulūsāt al-wafā, Cairo, 1285), but these are mostly honorific epithets; one of the few names which the OT is Salqah, which should rather be Salkah (Jos 12, etc.); but this identification is certainly erroneous.

As only Stephanus Byzantinus gives the relative adjective of Yathrib as 'Iathrib or 'Ithrib, it must have been the home of some persons known to the Graeco-Roman world not later than the 6th cent. A.D.; and to the end of the 7th cent. there probably belonged the 'flock of Yathrib' mentioned in a letter of James of Edessa 'to John Styliates'; this Yathrib is identified with Medina by some writers (ZDMG xxiv. 1870) 283), but it is difficult to suppose that there can have been a 'presbyter of Yathrib=Medina' at that time. For the early history of the place, then, as well as the later we have to rely exclusively on Muslim authorities, who naturally have much to say about a town which played so important a part in the history of their system. It is unfortunate that their notices of its pre-Islamic history are mainly fabulous, though they often contain a historical kernel.

The settlement, which is often called 'Between the two labors,' i.e., volcanoe formations, was, at the commencement of Islam a joint one of Arabs and Jews. The former were grouped in two tribes, the Ansār and the Khazraj, while the latter are divided into three tribal names are handed down—QaunAQaw, Qurash, and Nadir. The native Jewish tradition appears to know nothing of these colonies, whose names surprise us; for the last two are clearly Arabic, and the first apparently so. They are said to have had a dialect (or jargon?) of their own, some fragments of which are preserved in the Qur'an, but so little that it is not easy to see any connexion between them and Arabic. This fact would seem to mitigate against the supposition that they were Arabs who had adopted Judaism. If we are justified in attributing to them some of the Jewish matter that is found in the Qur'an, they must have been acquainted with portions of the Oral Tradition, to which there are occasional references; and it is practically certain that the early Islamic writers were indebted to presbyters from these communities for certain technicalities and even whole maxims. The personal names which are preserved are partly Hebrew, partly Arabic.

The Muslim tradition represents the Jews as further advanced in civilization than the Arabs of Medina, and engaged both in trade, including lending money on security, and in cultivation of the soil; the date was the most important product. Further, they are said to have had schools, and to have written Arabic in Hebrew script, as was done at a later time and is done even now. They were under the protection of their Arab neighbours, and were occasionally compelled to fight in the tribal wars, much against their inclination.

Between the Aus and the Khazar there was a long-standing feud, which led to the parties summoning the Prophet in the manner recorded in his biography. Hellenic antiquity, which furnishes many analogies to that of the Arabs, provides illustrations of this expedient for putting an end to civil and feudal feud from the earliest period. Thus we have in the Book of Ar şār, 'Helpers,' a name which, according to the Qur'an (iii. 45, lx. 14), originally belonged to the apostles, and doubtless is a popular etymology of Nazaram. Like many other statesmen, the Prophet found in external warfare the best remedy for civil strife; and, since at least for some years all new adherents were required to migrate to Medina, the
town grew vastly in magnitude and importance during his despotism. Neither he nor his immediate successors had any taste for architecture or other forms of art, and, though building must have gone on for the housing of the increasing population, it was, like the Prophet's mosque and domestic quarters, of a primitive kind. There are traditions, probably deserving credit, that the former had to a large extent of his companions were students or devotees of Ibn Julibar, somewhat as modern European writers use the passage. On the other hand, owing to the continued residence of the Prophet's widows and former attendants of the building of Ibn Julibar, which was, constantly in use, the place claimed that the governors should consult them about all cases which came before them for trial. As late as 200 A.H. its jurists or traditionalists were regarded as mere scrupulous than others (D. S. Margoliouth, *The Early Development of Mohammedanism*, London, 1914, p. 73). On the whole, the school of Medina, associated with the name of Malik ibn Anas (q.v.), was supposed to attach more importance to tradition and less to inference than the school of 'Iraq, which had been founded by Abū Ūmar. The differences which resulted were not of primary importance, though discussion at times raged fiercely (see Law [Muhammadan]).

For at least the Umayyad period Medina was supposed to be the seat of literary criticism as well. Though a question of jurisprudence at the court of one of these Khalifs concerning the source of a certain line of poetry and the relative merits of certain poets, the Khalif sent to the governor of Medina, ordering him to have the mosque referred to the judges, which is much to be desired to have (Aphāni, Cairo, 1285, viii. 180). It would seem that the beginning of Islamic libraries is to be sought in Medina; the poems of the Prophet's court-poet, Hassan b. Thabit, were kept there, and the copy was renewed when it showed signs of evanesence.

**LITERATURE.**—Of the work of Sahlūdī cited above the abridgment was published in 1855; the original, of about twice the bulk, exists in the Bodleian Library. The portion of it which deals with places of interest in the neighbourhood is summarized by F. Wustenfeld, *De Gebiet von Medina*, Göttingen, 1875. Accounts of the modern condition of the place are to be found in many of the records of pilgrimages, most recently in those of Hadji Khan and Wilfred Sparrway, *With the Pilgrims to Mecca*, 20th ed., 1885, and A. J. S. Wavell, *A Modern Pilgrim in Mecca*, 2nd ed., 1917.

**MEDITATION (Buddhist).**—See Bodhisattva, vol. ii. p. 782 f., Dhyāna.

**MEEKNESS.**—1. OT conception. —The Hebrew word for meekness (חָלִיל) is closely connected with the ideas of humility, poverty, and affliction. A great feature of OT literature is the attempt which it constantly reveals to reconcile with the facts of experience the principle that meekness brings prosperity, while wickedness is inevitably followed by disaster. In view of the apparent contradiction of this principle by the facts of life, some OT writers (Ps 37, Job) attempt to vindicate the ways of God to man, and to establish the ultimate reality of this principle by insisting that the meekness and the success of the wicked are only temporary. In the end divine justice will compensate the 'meek' (who are thus identified with the righteous), while the transient prosperity of evil-doers will end in calamity and downfall.

2. NT conception. —Christian teaching derives the conception of meekness from the OT, but enlarges and spiritualizes its meaning and application. The deep significance attached to this con-
ception in the NT lies in its identification of the loveliest ideal with the profoundest reality. The meek man is thus defined as one who not only "counts it better to suffer than to do wrong" (Plato), but as one who "resists not evil" (Mt 5:3). He is the one who surrenders the immediate interests of life, but in so doing he is not emptying his life but rather filling it with larger interests.

In ceasing to contend for his own rights against others, he is simply discovering the truth that all others are his own.

Accordingly, Jesus calls upon His disciples to surrender even the most obvious rights of property (Mt 5:3). But the ground of such surrender is not the protection of the other person, but the inheritance of the earth (Mt 5:5). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by means of the surrender of interests in opposition to His own.

3. Philosophical conception. — (1) Its place in the history of ethics. — While other ethical systems have been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as a measure in some form or other. Hedonism (q.v.) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a constant need that is not rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5:5). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by means of the surrender of interests in opposition to His own.

3. Philosophical conception. — (1) Its place in the history of ethics. — While other ethical systems have been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as a measure in some form or other. Hedonism (q.v.) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a constant need that is not rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5:5). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by means of the surrender of interests in opposition to His own.

(2) Its relation to the doctrine of evolution. — According to the principle of natural selection, it has been argued that in the evolutionary process the unworthy or 'unfit' must be set aside in order to make way for the survival of the fittest. There are many who are thereon, who by supporting such institutions as hospitals, alms-houses, and sanatoria are retarding the process of evolution. It is argued that we are thus breeding degenerate and criminals and doing a disservice to the world and mankind, and, of course, all healthy and law-abiding citizens for their support.

But this view fails to recognize all that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should blunt our finer feelings and should therefore sink in the moral scale. And the cost in time, money, and efficiency for others that is entailed in our care for the aged and diseased is negligible when compared with the moral gain. Thus we find that the preservation of the infant and consideration for the weak are strictly compatible with, and, indeed, an essential factor in, the law of evolution, inasmuch as they tend to develop a quality of human character which helps to make the highest surmise of the growth of the spiritual Kingdom and the dominance of the world by meekness and humility are thus progressively realized.

MEGARICS (MEGARIC).—Eueldides of Megara is generally regarded as the founder of the Megaric school, though it would be more correct to keep the name for his successors a generation or two later. Eueldides himself was an Elatic and also an "associate" (συμμαθήτης) of Socrates. The account of his philosophy given by E. Zeller (Philosophie der Griechen, ii. 1, Leipzig, 1889, p. 244 f.) is vitiated by his adoption of Schleiémacher's identification of the Megarics with the 'friends of the forms' (είκος φίλοι) of Plato's Sophist. It is quite impossible to reconcile the few facts we know about the teaching of Eueldides with the theory of plurality of forms, and Proclus, in his commentary on Plato's Parmenides (p. 149, ed. V. Cousin, Paris, 1829-37), states that the "friends of the forms" were the "wise men of Italy," that is to say, the Pythagoreans. On such a point Proclus's testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megaric doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), some extracts from whose History of Philosophy are preserved in the Preparatio Evangelica of Eusebius (xiv. 17). Its Elatic origin is at once apparent from these, and Aristotle expressly says that it was founded on the Parmenides, Zeno, and Melissus, and later of Stilpo and the Megarics. In the first place, they made it their business to 'throw' (επιτίθεσις, a metaphor from casting) all sensation and appearance, and to trust in reasoning alone. The method which they adopted was that elaborated by Zeno, a method which was known as 'dialectic' by his admirers, and as 'sterile' by its critics. It consisted in showing that two contradictory but equally cogent conclusions could be established with regard to everything without exception, and that there was therefore no truth at all in any of the appearances presented to our senses. That is
what Plato calls δεσκέλωσις, and we still possess a curious fragment of a work in the Dorian dialect, generally known as the Dialectes (the name is without authority), which applies the method to objects in general, without regard to the possibility. Plato regarded this work as a product of Megara, and we know that the Megarians clung with special tenacity to their native dialect.

The effect of this was to leave us with nothing but the One or the Whole (οὖ ἕν, ὁ ὅσος) and to deprive the Many and the Parts of all claim to reality. That was the doctrine of Parmenides, but there is evidence that Euclides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Socrates. The One of the Eleatics was a continuous, corporeal πλευρά, whether Οὐκενέατ (Parmenidean) or infinite (Melissus), but Euclides took the step of identifying it with the Good, which was called by many names, such as God, Wisdom (φήσινευσις), and Mind (νους). It was in this way that 'the Absolute' made its first appearance in the history of philosophy, and its claim to be the sole reality was based on the inherent contradictoriness of all appearance.

The philosophy of Euclides was a very great improvement on the one who had taken a vengeful and vindictive attitude with him at Megara after the death of Socrates, and it is to this influence that we may most probably ascribe the unique position assigned to the Good in the Republic. The actual realists of course, however, they were made by Plato to acquiesce permanently in an Absolute doctrine of any kind; for that excluded from Reality what he was most interested in, the Soul, and especially the best Soul of all, namely God.

The Parmenides and the Sophists are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute that led, of course, to a breach between the Academy and their fellow-Socratics of Megara, and from this time forward we may discern the beginnings of a distinctMegarian school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Euclides. When an abstract Absolute has been set up, there is not much more to be said about it. But the dialectical method is always available for the criticism of rival philosophies. Aristotle was naturally the chief object of the Megarian attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent moulded by this situation, and the title given to his famous work, the Sophistai, alludes to his connexion with the Eubulides. Elenchi, bears witness to it; for, since the time of Plato's Sophistai, the old term had been revived as a name for thinkers of the class known later as Megarians. The fallacies exposed by Aristotle are, in fact, for the most part, Megarian arguments, and that is the explanation of the sense in which the words 'sophism' and 'sophistry' have been used from that time to the present day. Many of these sophisms are well known, such as the Λίν (φενο-μενον), the Veiled Man (ἐγκαταλυμένον), the Heap (σωμεῖον), and the Bald Man (ψάλαςις). As an extreme example of sophism, we may take the argument of the Horses: 'What you have not yet, ye have not. You have not lost horns. Therefore you have horns.' Some of the arguments are more serious, however, and raise the problem of continuity. The influence of Zeno is still felt in the ratio mensis aerei (σωμεῖον κέρας), referred to by Horace (Epist. ii. 1. 45). The most important of all from a historical point of view, however, was the argument over the Ostrich (300 B.C.), which continued to be discussed in the schools for centuries. Aristotle's favourite doctrine of potentiality and actuality (δύναμις and ἐνέργεια) was specially objectionable to the Megarians, and Dio-
them, to give a new impetus to 'the study of the Law' (i.e. the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. Some restored was a man of mind and heart, he breathed into Judaism the breath of a new life. As to the Haḥākha (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed to make the compilation of the Mishna possible. He was a stringenter of the study of the ritual law; but he was even more strict with himself than with others:

'Never have I continued to set aside, in my own personal practice, the decisions of my colleagues when those decisions have been more stringent than mine' (Shaḥn. 184b).

His strength of character is further illustrated by his opposition to Simeon ben Gamaliel II., then presiding over the Sanhedrin at Usha. To Meir had been assigned the office of rabhām of that body (as to the duties of that functionary see J. E. art. 'Ḥakam'). Holding Simeon's knowledge of the Law inadequate, and reserving the President's excessive regard for his own dignity, he conspired with Rabbi Nathaniel, one of his associates, to secure the Patriarch's deposition. Simeon, however, defeated the plot, and it was the conspirators who were ejected. Later on Nathah was re-admitted, but Meir still refused to make the necessary submission, and he narrowly escaped excommunication in consequence.

His domestic life was at once happier and saddler. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananiah ben Teradion, who suffered under Hadrian, she was noted for both learning and moral worth. The touching story which records her wonderful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the academy one Sabbath eve, their two sons suddenly died. Beruria withheld the sad tidings from her husband until the day of peace was ended. Then she told him of it in a parable. "A friend," she said, "left me some jewels to keep for his years ago—so long ago that I had come to look upon them as my own. Now, of a sudden, he has claimed them; but I find it hard to part with them. Must I really give them up?" 'Why ask such a question?' answered Meir, 'you should have restored them already.' 'I have done so,' she replied, as she led him to the death-chamber (Midr. Mish. to Pr. 219).

This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion.

Annoyed by the pin-pricks of unsound neighbours, Meir angrily calls down imprecations upon them. His wife rebukes him. 'Rather,' she protests, 'let us pray that they may live to repent; for the Psalmist's supplication is not—'Let sinners be consumed out of the earth; let them be consumed' (Ps. 106:42), where the Hebrew is susceptible of Beruria's interpretation; for the story see Br. 10a).

The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. If sometimes he set his face like a flint towards other men's weaknesses, he was strong and brave when life's sorrows touched himself. He, too, could preach and practise the great duty of submission.

Echoing Ec 5:5, he says, "Let thy words before God be few; school thyself to say, 'Whatever God doeth He doeth well' (Ec 5:5). And, as it is written, 'As we should think of God for the world, so should we praise Him for evil' (Ec 11:7).

Exposing in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (Ec 7:1), he said that death, the common lot of man, is good for those who pass hence with a good name (Br. 17a).

Again, he said that what, according to Gn 15, God saw and proclaimed 'very good' at the Creation was death (Midr. Rab. to the vers). The section of the Mishna, known as Abbaḥ...
MELANCHOLY 625

(The Ethics of the Fathers) assigns a typical maxim to each of the great Talmudic Rabbis. The maxims associated with Meir reads as follows:

1. Light the world with good deeds and thyself to the Torah; but be of a spirit of kindness towards all men (Aboth, lv. 10).

Meir is clearly no 'harics' of the Sages; he was not a sage in all respects, but, like the wise and noble of the day, he was not too lowly to aspire to the noble life. Thus in another utterance of the sage he pictures God as saying:

"Devote thyself with all thy heart and soul to know my ways and to watch at the gates of my Law. Keep my Law in thy heart and thy fear before thine eyes; guard thy mouth from sin, and purify thyself from all transgression. Then will I be with thee always" ( Jerus. 17:8).

Equally notable are his teachings concerning social duty. Men are not to be judged by outward appearances. Look not at the face, but at what it contains; there is many a new face that contains old wine, many an old face which is filled with new wine. 

Nor are men to be judged by the honey of their words. If we have two friends, one of whom adorns us and the other flatters, we should love the former, for he is leading us heavenward ( Aboth 3:29). He expresses sincerity even in the small things of social intercourse; he warns us against inviting a friend to dinner when we know that he will not accept the invitation, and when we know that we have presented him a present which we believe he will not take ( Bərəshith Ḳālān, 94a; Tōs. Bəbāṭhā Ḳālān, vi. 14). It is a man's duty to adapt himself to the ideas and customs of the community in which he lives; in Rome he should do as Rome does. The same is the case with the sage point, when they came down to earth and appeared to Abraham, ate like mortals; when Moses went up to heaven, he neither ate nor drank ( Meir, Rab. to Gn 18'). 

Many of the maxims which are pictured in the sage point, just as in the case of the sage himself, when he turned many away from injustice, Meir thus characterized the great high priest:

"If Aaron chanced to meet a bad man, he was careful to salute him; as that, when the latter next time mediated an evil deed, he said to himself: 'Woe is me! how shall I then look Aaron in the face?" It is like manner, if two men quarrelled, Aaron would go to one of them and say: 'See, my son, what thy friend is doing: he is beating his breast, rending his clothes, and crying: 'Woe is me! how can I look my friend in the face, seeing that I have sinned against him?" Then he would go and say the same to the other; so that at length they embraced and were reconciled ( Abqoth Ḹ. R. Naṭnāh, 12).

Meir has left many maxims on the self-regarding duties also. He exhorts us to contentment with our lot, to what he asks, and he answers, 'He that hath peace of mind with his riches' (Shab. 25b). "He that feels shame," he says elsewhere, "will not quickly be led into sin" (Pilp. 55a).

The sin of Samuel's sons (1 S 8'-9'), he declared, lay in their demanding what was due to them (Shab. 56a). The Law ( Ex 22') ordains that the man who steals an ox must make fivefold restitution; but, if he steals a sheep, the restitution is only fourfold. The difference is to be explained by the fact that, unlike sheep, the ox is a toiling animal. 'Here,' cries Meir, 'is a proof of the worth of labour in the sight of God!' ( H. J. 2).

In the days of the Tannaim, and with the early Christians (see E. Gibbon, Hist. of the Decline and Fall of the Roman Empire, London, 1901-06, ii. 17), he composed the Tannaitic. The one is 'the seat of the scorching' ( Ps 19), the other a place of execution (a reference to the cruelties of the gladiatorial contests) ( Abqoth Ḹ. R. Naṭnāh, 57; Abqoth Ḹ. R. Naṭnāh, 3:38). He emphasizes the futility of human ambitions by an apotropaic: man, he says, is born with hands clenched as though he would grasp the whole world; he dies with his hands wide open, for he takes nothing with him (Midr. Rab. to Ec 5:4). 

Unbending to the ignorant ('am ha-areẓ [q.v.]) and the schismatics among his own people, Meir shows himself tolerant and liberal toward men of alien creed.

The Gentile who gives himself to the study of the Law is as worthy as the Jewish High Priest; for Holy Writ (Lv 19:27), speaking of God's holy city, says that if a man should bring a gift to live by—the man, not a priest or a Levite (Bēbāṭhā Qammat, 30a; Sanh. 50a).

He had many conversations with Gentiles, chiefly polemical.

One of these opponents designates Israel a people contemned of God, driven by the Master from His house, and put in subjection to other nations (Abqoth Ḹ. R. Naṭnāh, 9). He argues the controversy, 'Has not God made you exiles in my midst; why, then, do you not assimilate with us?' Meir protests against the theory. 'Rather,' he affirms, 'are we to be likened to a son whom his father has disdained because of his evil life, but whom the paternal heart is ready to take back, if he return penitent?' (A. Jellinek, Beth ha-Midrash, Leipzig, 1892-78, i. 21). 'It' also to another disputant, 'Your God loves the poor, why does He not sustain them? 'In order, 'Meir replies, 'to give an opportunity of proving themselves by the practice of loving-kindness' (Bēbāṭhā Qammat, 106).

Like Aqiba, his master, Meir is pictured by the Talmud ( Qiddushin, 31a) as undergoing the temptation of Sota. Anthony, so runs the legend, appears to the sage in the form of a beautiful young woman, who would entice him with her wiles. But he escapes them. The legend puts in concrete shape the traditions concerning the Rabbi's unyielding rectitude, which gathered around him in the present. Another story tells of a journey which he once made to Rome in order to rescue from a house of ill-fame his wife's sister, who had been taken captive after her father's martyrdom. It is said that his mission was successful ( Abqoth Ḹ. R. Naṭnāh, 180).

Born, it is believed, in Asia Minor, Meir died in that country. He enjoined his disciples to bury him on the seashore, so that the waters which laved the land of his fathers might wash his bones (Jerus. Kilayyim, 32c). 'He had no equal in his generation is one Talmudic appreciation of him ( Ezḥaḥ 159); and, in a public eulogy pronounced on him at Sepharyah, Rabbi Jathne declared him to be 'a great man and a saint, but humble withal' (Jerus. B'r. ii. 7).

Of all the Tannaim, Meir's name is most widely known among the people. In the house of every pious Jew there is a money-box hung on the wall, in which the inmates deposit their sums for the poor of Palestine. This box bears the inscription 'Meir, Baal ha-Nes' ('Meir, the wonder-worker'), an allusion to the miraculous support extended to him in Talmudic and popular lore (see J.E. viii. 453).

MORRIS JOSEPH.

MELANCHOLY.—In Greek physiology the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic temperament. Melancholy ( Ḹ. 'mē'lu-rov) was thus the mental disposition of the melancholic temperament.

The terms passed into literary and popular use, although the doctrine of the four humours, on which the division was based, was forgotten or discarded. The names seemed, in fact, to correspond to certain broad differences, bodily and mental, among men, and writers on insanity are still careful, in their description of cases, to indicate the temperaments of which they are composed. These divisions are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-
pulses, etc.—or in its circulation; if the nervous system, in the strength or rate of reaction, or both. Henle made use of the conception of nerve-tone, which has since been retained and developed (An anthropologische Vortrage). No part of the nervous system, he showed, is ever wholly at rest during life; every stimulus finds a certain degree of excitation already present in the nerve-endings and nerve-fibres on which it acts; what we call rest, is the relative absence of activity, which may rise or fall, and which is maintained by internal stimuli, acting through the blood. This is the 'tonus' of the nerves, their preparedness for action; the higher the tonus, the stronger the reaction. On the nerve-tone will, therefore, depend the sensitiveness of the individual, his prevailing emotional attitude, and his quickness and firmness of response. A low tone shows itself in the dull, heavy, expressiveness of the face; in the relaxed muscles, the deliberate movements, the tendency to 'run to fat'; a high tone in the vivid complexion, alert expression, and quick more or, of cases, sensuality, affectation, and melancholy. The melancholy, according to Henle, has also a high nerve-tone, but reacts through the emotional or affective system, rather than the voluntary; whereas the melancholy relieves feeling by prompt and strenuous action, the melancholy is denied this advantage; his melancholy is the brooding upon and nourishing of emotions, a halit from which genius, or, it may be said, brooding and hysterical spring. Wundt's simple formula has been widely accepted: that temperament is primarily a question of emotion, that emotion undergoes two forms of change, one in intensity, or strength, the other in rate; hence the fourfold division: strong and quick—choleric; strong and slow—melancholic; weak and quick—sanguine; weak and slow—phlegmatic. Strong emotions under modern conditions mean a predominance of pain; slowness of change means that the mind takes time to follow out its own thoughts, is not wholly absorbed by the present but looks to the evil ahead. These tendencies characterize the melancholy (Grundzüge der psychologic, iii. 637). The scheme is too simple to fit the complexities and subtleties of human character, however, and there is no general agreement, even to the tonus of certain temperaments, as many as nine having been suggested.

1. Melancholy and pain. Melancholy differs from the other dispositions in being a well-recognized temporary emotion or mood, as well as a prolonged or permanent state of mind. It is an inexplicable form of the most prominent symptom of a definite form of insanity—melancholia or mental depression. It has formed the theme of one of the most wonderful books in our language—The Anatomy of Melancholy, by Robert Burton, first published in 1621.

The melancholy with which he dealt, and of which the "causes, symptoms, prognosis, and cure" are set forth with much felicity of illustration, is "an habit, a chronic or continue disease, a settled humour," but it is built up, as he recognizes, out of "melancholy in the dispositions," which is that temporary Melancholy which comes and goes upon the slightest occasion of trouble, grief, fear, or pain, be these natural or artificial, reason, joy, delight, causing forwardness in us, or a dislike. In which equivocal and improper sense, we call him melancholy that is dull, and, sour, lumpish, ill-disposed, solitary, any way moved, or displeased. "...Melancholy in this sense is the character of Mortality." (p. 184 (ed. London, 1839).

It might be said that this temporary melancholy is merely mental pain, however caused, and that the permanent disposition or habit is a state of mental pain. The expression of melancholy is that of pain, the pale face, the drawn look, lips and eyebrows turned slightly downwards at the corners: the respiration slow and sighing; the pulse beat slow, the temperature lowered, the nutrition-processes, including the appetite, impaired, so that the body seems insufficiently fed. One of the immediate consequences is also a loss of sensitiveness to outer impressions: they lose in clearness and distinctness; the judgment follows suit, and the whole mental character is, even though only for the moment, changed for the worse. In particular, egoism develops: 'the patient is only of himself any more; alterio passions, family affection yield to an egoism of the most exacting and extreme type.' (H. Beaunis, Les Sentiments ternes, Paris, 1900, p. 196 f.)

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the organism. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain—discomfort, loss of nervous tone—is a constant accompaniment of mental pain. The commonest cause of the former is physical pain, the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in ideation, emotion, memory, and love and over-study were two of Burton's causes of melancholy. So melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or affective side, especially when the strain has not been rewarded with success.

The extraordinary persistence of melancholy, the difficulty of distracting the mind, the great effort of the soul's will, the necessity of a strong will, are, in the first instance, merely to the fact that its causes—the desire, the memories—are persistent, but also to the 'sentiment of the irreparable, which is as the root of almost all mental pain, the idea that all is lost and without hope. The mother who knows that she will never see again her child that has died, the prisoner who sees that he will never be able to realise the ideal of his dreams, the invalid who has lost his health, the poet who sees that he will never be able to write the poem whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the founding of his belief and of his faith, all have this sentiment of the irreparable, of the lost beyond return, which leaves behind only nothingness and despair' (ib. p. 324).

2. Melancholy and the sense of values. Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate: death, even self-inflicted death, is known to have followed such misfortunes. So a child may be 'melancholy' after the loss of a mother or a playmate. But in the strict sense melancholy is an adult and a human inordinacy. Probably the time of its greatest frequency is the period of adolescence; an external and transient cause intends to disappear, to be replaced in sensibility, occasionally, by a state outwardly similar, but inwardly different. Byron's lameness and Heine's and Leopardi's delicate constitutions have suggested that physical disease may be the predisposing cause to melancholy; but, as Metchnikoff, points out, Schopenhauer preserved his melancholy and pessimism to a vigorous old age, while there are innumerable cases of patients suffering from serious and even deadly diseases, yet retaining their native lightness of heart. If anything, melancholy is more common among the young, healthy, and vigorous. It does not react against the health at all, but upon the sense or 'sentiment' of life. The typical case is Goethe, who in his own youth passed through the torment which he describes in The Sorrows ofWerther, and had thoughts of suicide, but in his old age is described as casting off the sickly and morbid side of his character, replacing it by a serene and even joyous love of life (H. Spemann, August Hake, p. viii). The intensity of feeling is greater in the young than in the old, both for pleasure and for pain; hence they are more impressionable; but this is not due to the greater vitality or sensitive-
ness of his nervous system, but rather to the fact that the older man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, with the result that the impression, when taken in isolation, is weighed only in its relation to the immediate needs or desires of the self. Hence the vivid colouring of their life, the higher intellectual and the deeper emotional life. In exactly the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilization is a more recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the Fin de Siècle—came. Suicide are said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton’s disquisition on suicide [1, 493], and Metchnikoff, p. 306). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society’s judgment upon oneself. The deeper one values, or, rather, the greater the appreciation of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Bourget, in writing of Bandelaira, finds the key to the profound melancholy of this rather repulsive figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith in it, and of love, is irreparable. The individual may no longer have the intellectual need to believe, but he still has the need to feel as when he believed. The desires remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to an environment, in which the faith and belief. The stronger the resistance of facts to the realization of the thinker’s dream, the deeper his melancholy. To the mystic soul faith is not the mere acceptance of a formula or of a dogma; God is not for it a word, a symbol, an abstraction, but a real being in whose company the soul walks as a child in its father’s, who loves it, knows it, understands it.

The illusio so strong and so sweet has gone, says Bourget, no substitute of less intensity will suffice; after the intoxication of opium, that of wine seems mean and paltry. Distance away from the touch of the world, the leaves in such a state of tension as their leaves are in some soul as a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction the redeemable but consoling figure of that which frees from all slavery, and delivers from all death. (Paul Bourget, Essai de psychologie contemporaine, Paris, 1892, p. 21.)

Still deeper is the melancholy of unsatisfied desire, when the failure of satisfaction lies, not in the resistance of external circumstance, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indulged its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable.

* Le malheur du désir qui nous fait souffrir entre la brutalité mécanique des circonstances et les illusions plus contrôlables encore de notre sensibilité* (Cf. p. 142).

It is the melancholy of nature after the storm, of the closing pines, the sunset, of the brown tints of autumn trees—exhaustion or decay after stress and life.

Less tragic is the melancholy that is associated with pensiveness, deliberation, thought, as in Milton’s Il Penseroso, the melancholy of the poet and of the philosopher. Beausire connects this also with pain, however. When man reflects, he is forced to recognize, according to Beausire, that he is born to pain, and that pleasure is only an accessory in life.

*There is no physical pleasure which can compensate for an hour of angior passion, no mental enjoyment which does not disappear before the pain caused by the death of one we love, no intellectual pleasure which is not nullified when we think of how much is included in a mere state of personal pessimism, is it at the root of every reasoning, of every meditation* (p. 225).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have to solve, to the work which he can think, or attend to what he hears or reads.

*It appears to us that the true explanation is due to mental operations being restricted to a level so feeble a venturesome effort in lieu of the usual unconscious operations, or lapsed states of consciousness which accompany all intellectual processes. The restless movements of the intellectual eye (in the artist, poet, etc.), as well as those of the state of musical excitement, bespeak a more than the usual muscular element of thought, and in the latter a highly reflex excitability of the melancholy these muscles of relational life are fixed, half heavy, sluggish in its movements and painful in effect, the eyelids are drooped, the limbs motionless. The only muscles in a state of tension are those which preserve emotional life, viz. the small muscles of expression* (Pluquet and Amerat Distant, loc. cit.). Failure in the muscular element of thought has as its results on the subject side, entangled ideation and the sense of objective resistance* (ib. p. 125).

The eye sees clearly, the mind interprets less accurately; the will acts less vigorously, and less effectually; it may be that the motor ideas, which are the cues, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence apathy and inaction. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we move freely and act pleasantly, but one which is new and strange, which resists our efforts and counters our desires. The result is a rise in the subject-consciousness; the mind is the observer of our own self, that broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet’s interpretation, melancholy represents a stage on the way to misère psychologique, or psychic misery, with its accompanying disgregation of the personality, and subjugation of the conscious by the subconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning we have similar instances of interference that correspond to ideas or thoughts in the mind of the subject, yet the acts are neither voluntary nor conscious on his part; he is aware of nothing, or at least acts against his best interests. In spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter, in his normal state, is wholly unaware of—enjoying—we have a more systematized form of the same thing.
Finally, in hypomania, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thought, though formed by the individual, may yet be the diametrical opposites of his own mind, entirely foreign to him; he is their slave, they take possession of him, he is carried away by them. Passions, of the source of which the patient is wholly unaware, dating back perhaps to a forgotten childhood, may yet present the need for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his real self. He is aware even that he has a physical, a psychic, an emotional agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immortality, or crime. He becomes estranged from himself—and this doubleness is itself an added source of depression; it is the same in effect whether the two personalities succeed each other in time, as alternating personae, or exist simultaneously, although acting separately; the disgregation means an impairment of the self often revealed by an actual loss of intellectual point of view, and a retardation of will and attention. The subject becomes morbidly envious of his own feelings, his strength of will, his health, his prospects in life, etc. This subjectivity is the vice-regency of melancholy disposition. It remains to ask what is the cause of the disgregation of consciousness, the psychological misery, of which melancholy is so prominent a symptom. According to Janet, the cause may be either physical or mental; physical, as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, or in heavy physical strain, or as that of excessive grief, prolonged mental worry, or strange emotional excitement (e.g., religions). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disgregation and depression. The theory is not widely different in effect from that of Bryan Lewis; in both it is the co-ordinating power that fails, through nervous exhaustion; the elementary impressions and impulses fall apart, as it were, into their primitive independence; the subject is himself bathed in the objective environment, is unable to face the tasks of his social or occupational life. According to the degree of disgregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (P. Janet, L'Autoalimentation psychologique, pt. II, chs. iii. and iv.).

4. Melancholy and personality. The sense of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations are less clear, their threshold is higher, the perceptions based upon them are blurred, partly dulled, partly the relays of attention, partly from the absorption of the mind by the pain, real or imaginary. The individual never sees nor hears so clearly as before; the commonest objects become strange to his new outlook; the familiar voices sound different; but these things are interpreted not as a change in the experiencing subject, but as a change in the objects experienced. One's friends, one's friends' one's world changes; strange, and the subject is unable to face the great activity required to adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences, when they can no longer be clearly and definitely recalled, tend to lose the warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in mental exhaustion and depression the memory of occurrence becomes a foreign tone; they seem to belong to another than myself. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue when normal life has returned.

Amel is also a reversion to the past, to what, when it is turned upon the self, is punished like the curiosity of Psyche, by the flight of her beloved object; the outward-looking look makes for health; too prolonged a looking back brings to nothingness. By analysis I am annihilated. And again, 'All personal history is a stupid, and all special experiences are for me pretexts to meditation. Such is the life of the thinker. He depersonalizes himself every day; if he consents to experiment and to test, it is the better to understand; if he wills, it is to know what will be. Although it is sweet to him to loved, and he knows nothing sweeter, there again he seems to himself to be the occasion of the phenomenon rather than its end. He contemplates the spectacle of love, and love remains for him but a spectacle. He is nothing but a thinking subject, he retains nothing but the form of things' (see L. Dugas and F. Moutier, La Dés-organisation, Paris, 1911, p. 185 ff.).

This is an exact description of the frame of mind in the milder forms of melancholy, as that of the poet or artist, like Byron, Edgar Allan Poe, Heine, the young Goethe, etc. Shakespeare's Hamlet is a classical instance of extreme melancholy; the play-actors, real agents, or lovers, but mere play-actors so far as emotion is concerned. Probably, however, their descriptions are the more accurate in that they are not blinded by passion, as is the cheerful ordinary mortal.

A somewhat different way of putting the case of melancholy might be drawn from the writings of S. Freud and the school of Vienna. Here it is believed that depression springs from the influence of a morbid complex on the personality. The complex may be any strong emotional experience, shock, terror, social embarrassment, or less closely connected with the shock-complex, are repressed, at first consciously, while suggestive ideas and associations, which arise from the same root, are expelled from the mind when they enter it. But a train of thought, when expelled, and a wish, when repressed, do not on that account cease to exist. They continue to live in the subconscious or in the unconscious, and may, so long as they are incomplete or unrealized, influence the conscious life indirectly. They may do this in two ways: (a) the complex draws off to itself, for its repression, a considerable degree of the available psychic energy, and a part of the environment, is weakened. As we have seen above, the greater effort required for the simplest, most habitual acts is felt as strain, as exhaustion, as pain; the self, with its distresses and difficulties, becomes more and more the centre of attention. (b) But, further, the complex, though itself driven below the level of consciousness, and shut off from direct connexion by the 'sensor' of consciousness, is still enabled during moments of relaxation, half-sleep, reverie, distracted attention, etc., to send disguised messengers through. These take the form of dreams, phobias or terrors, obsessions, sudden impulses, etc. For the most part these are merely devices which are protective; they are a means of realizing, in however imperfect a way, the wish inspired by the complex; but the subject himself may be wholly unaware of this important life of the thing. They seem like an invasion of his personality by a foreign one. Painful experiences and memories have a far greater tenacity of life than pleasant; they have a much higher degree of 'permanence,' as it has been called, i.e. the tendency to force their way into consciousness, of their own accord, and without any apparent stimulus or associative link. And, again, even the slightest of associations is enough to drag up the painful complex or its substitutes. In the
other hand, such memories are not "social"; they do not bring up old things in their train; especially they lack 'determination' value, the tendency to direct the mind systematically from one thought to a train of others; they tend to clog thought. The element of consciousness of inefficiency in his profession or in his social life; and the consciousness of failure has the usual consequence of making the actual failure all the greater.

5. Melancholy and pessimism.—Melancholy and pessimism are two sides of the same state of mind, the one expressing the subjective attitude and disposition, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifference, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholic, according to a well-recognized law (see Stёрring, Mental Pathology, p. 222 ff.), tend to be of the same emotional tone as that of the disposition in which they are carried up, i.e. painful, depressing; the melancholic sees only the sad, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that are committed, not the pleasures, the kindness, the love that is there. Melancholy, melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most terrifying type, but also that the consciousness of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and nearest interpretation: and, finally, that religion offers the only adequate relief and hope of escape. Religious melancholy is the subject of one of Burton's most curious dissertations (pt. iii. sect. iv. "Melancholy"), and James, Varieties of Religious Experience, lects. vi. and vii. "The sick soul", gives a modern presentation. It is there shown how, as in Tolstoy's case, melancholy may be accompanied by a total change in the estimate of the value of things; things that seemed of the utmost value before now seem worthless; they excite no emotion or interest whatever; and a consequence of this is the world, and people, look different and are accused of all the strange and unreal. It is also shown that in a rational being the strangeness and change of feeling incite to a search for a reason, for an explanation, either directly in oneself or in the position of other beings upon oneself. Either of these ways may lead to religious conversion and reform.

6. Moroseness.—The pathologist Pinel, in his treatise on Mental Alienation, depicted melancholy as of two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by bursts of anger and chimerical suspicions; the other is the type to which the Emperor Tiberius and Louis XVI. of France belonged—men who are gloomy and taciturn, and who display, in a face of solitude. Suspicion of others is the dominant mark, with cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, becomes heretofore and less restrained as age increases (P. Pinel, L'Aliénation mentale, Paris, 1809, p. 161). This represents with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property, or plans, or possessions, or person; and, in consequence, it involves extreme self-centring and misanthropy. Melancholy is a disease of the imaginative, moroseness of the unimaginative mind—the man who does not aspire beyond that which he has already failed to obtain, and is, for a range of ideals, unable to appreciate the values that others place upon things, especially the ideal values. Probably the pivot of the morose character is, like that of melancholy, and more conscious of failure in his profession or in his social life; and the consciousness of failure has the usual consequence of making the actual failure all the greater.

J. L. MINTCREE

MELANESIANS.—I. Extent and limits of the subject.—The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samoa, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which, in Polynesia, as are the small islands of Micronesia on the north from the Melanesian Solomon group, but to the west the islands of Melanesia overlap New Guinea. These islands are Melanesian, at any rate in language; but, though Melanesians have been called Papuans, there can be no doubt that Papua, or New Guinea, cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks' Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendana, in 1567. In 1606 the same voyager discovered Santa Cruz; and in 1606 Quirós and Torres discovered the New Hebrides and Banks' Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as succeeding voyagers have done, according to their own conceptions of savage beliefs. The truth is that until the middle of the 19th cent., began to live in closer intercourse with the native people and to learn their languages that any certain knowledge...
of Melanesian religion could be gained. The following account represents in the main the knowledge which has been gained by the Melanesian Mission of the Church of England. The religion of the Fijians is considered in another article (see FijI). The account here given has been drawn from the Solomon Islands, the Southern Cross group, the Banks' Islands, and the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been given to me, while the natives have written in a native language. Very little, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious beliefs and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. Basis of Melanesian religion.—From whatsoever source they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, and exercised by persons, i.e., either by men, alive or dead, or by spirits who never were men. This ‘sense of the Infinite,’ as Max Müller ('Burmese Originals of Religion,' [HL], London, 1878, lect. i.) calls it, was the foundation of the religious beliefs of the Melanesians; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not physical in itself, although it is always put in motion by a person; and all remarkable effects in nature were thought to be produced by it. It is fixed in place, but can abide and be conveyed in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is mana (q.v.). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in charms or incantations. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have the form or the power. In this way they are efficacious because they derive it from the beings which have mana; a common object, such as a stone, becomes efficacious for certain purposes because such a being is said to possess mana. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this mana; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. Objects of worship.—The objects of religious worship, therefore, were always persons to whom prayer or sacrifice was offered, or in whose names charms were recited, with the view of gaining such objects as favour, or temporal, or spiritual, or worldly, or religious ends. All personal objects of worship are either spirits or ghosts. By spirits are meant personal beings in the form of spirits, the spiritual power already mentioned naturally abides, and who never were men; by ghosts are meant the disembodied spirits or souls of dead men. To keep these distinct is essential to the understanding of Melanesian religion. Natives themselves are found to use loosely the term mana, while Europeans are usually content to call all alike deities, gods, or devils. (1) Spirits.—A native of the Banks' Islands, where spirits are called witi, wrote the following definition:—

What is a witi? It lives, thinks, has more intelligence than a man; knows things which are out of sight without seeing; is powerful with some objects, but has no form to be seen, because it is itself like a soul!' (see Codrington, Melanesians, p. 123.)

The witi of the Northern New Hebrides is of the same nature. Yet such spirits are seen, in a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat them as if they were men with supernatural and quasi-magical powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands beings were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether those beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides which showed them to be like men of more than human power and intelligence, should not be called gods. Such were Qat in the Banks' Islands, Tagaro, Supeq, in the New Hebrides, and Lata in Santa Cruz. To such as these it would certainly not be improper to apply the word 'god.' But the native word by which they are known, such as witi, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings of limited influence whose nature is still spiritual, so to speak, not corporeal. To describe all those who can abide and be conveyed in almost anything, spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is mana (q.v.). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in charms or incantations. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have the form or the power. In this way they are efficacious because they derive it from the beings which have mana; a common object, such as a stone, becomes efficacious for certain purposes because such a being is said to possess mana. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this mana; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit. (2) Ghosts.—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word used is merely 'dead man,' such as tindalo or natmas. In the Solomon Islands a very common word in various forms is tindalo. The question again occurs whether these beings are not rather to be called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems more correct, and serves better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed to be born in any other kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as tindalo, is in use, this objection to the use of the word 'god' does not apply. Yet the natives emphatically declare that every tindalo was once a man, that the tindalo is the spirit (taruma) which once was the seat and source of life, intelligence, and power in a man who was turned into a spirit at death. All those who worship the tindalo regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead.
man's superhuman power. They believe that some of the qualities of this power, derived by them from the dead. They believe that, when they are dead, they will also, it may be, receive a great access of this power. The difference which they recognize between themselves and the tindalo is that they are alive and important, and show no remarkable powers in their lifetime; alive they are nobodies, and such they remain when dead. But there are always some living men who show qualities which give them success and influence. Such success and influence are not ascribed by the natives to natural qualities, but to the possession of that spiritual power which they have obtained from the tindalo with whom they live in communication. When a great man dies, it is expected that he should prove to be a tindalo, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Gaunilo, a chief, a famous fighting man of Florida, his name was invoked and a sign of his power sought from him. On proof of this power a shrine was built for him, and his bones were preserved in it, and sacrifices with invocation were offered to him there. Such a one might, indeed, appear to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, it was his ghost, in the common English sense of the term, who was among them.

Again, the idea that may arise whether this is not too much of an ancestor. The ghost of a dead man, however, who was well known in the flesh, and who was often, no doubt, younger in years than some of his worshippers, is not an ancestor. The natural tendency is, as new objects of worship of this character arise, and as one great man after another dies, to neglect and desert the ghosts and their shrines of the past generation, while the newer wonders and powers attract faith and veneration to new ghosts and shrines. As the object of worship thus became more of an ancestor, he was less an object of worship in Melanesia, whose time and place of life the natives profess themselves to be ignorant, but whose names, such as Daula and Hauri in Florida, are known to all, and who are now universally believed to be very powerful tindalo, though in ancient times they lived in human form on the island. These may be called ancestors, and they are worshipped, but not as ancestors.

The personal beings towards whom the religion of the Melanesians turns, with the view of obtaining their mana for aid in the pursuits, dangers, and difficulties of life, are thus spirits and ghosts; and it is remarkable that the Melanesians are thus divided by their religious practices into two groups. In the Western group, as in the Solomon Islands, there is a belief in spirits who never lived men, but worship is directed to the ghosts of the dead; in the Eastern group, as in the Northern New Hebrides, the ghosts of the dead have indeed an important place, but worship is in the main addressed to spirits who have never been men. And in the arts of life and in the advance from savagery towards civilization, the Solomon Islander who worships ghosts certainly ranks before the New Hebrides man who worships spirits.

4. Prayers.—The Melanesian native, believing himself surrounded with unseen persons who can help him, naturally calls upon them in distress, just as he called upon his father as a child. Such appeals are met frequently in the termings of the various native words which would be translated 'prayer' in English. Prayers in the native sense are forms of words; and, strictly speaking, they are formulas which are known only to some, and which have in themselves a certain efficacy and even compelling force. It may be said that exclamatory appeals in case of danger at sea and in the extremity of sickness are prayers in a true sense, but, yet, native prayers are not strictly prayers, because they have public utterance and an elastic form. A man in danger by the sea may call on his father, grandfather, or some ancestor to still the storm, lighten the canoe, and bring it to the shore; when fishing he may beg for success, and when successful may thank his helper. But in such cases a formula, if one were known, would always be preferred, and that would be a prayer in the native sense of the word. Charms, muttered or sung under the breath for magical purposes and in the treatment of sickness, are easily distinguished; but it must be said that in Florida, an important centre of Christian teaching in the Solomon Islands, the word used for Christian prayer is taken from these charms. It is remarkable that in the Banks' Islands and in the Northern New Hebrides, the northwesterners have a more important place in native religion than ghosts, all prayer must be addressed to the ghost of a dead person. Indeed, every proper form begins with the word tataro, which is, no doubt, a word meaning 'ghost.' It is true that in danger at sea a man will call on dead friends to help him, but this is not a true prayer (tataro) because no formular is employed. It is also true that no one in danger call on spirits, either with or without a formula; but neither is a true tataro, since it is not addressed to ghosts. Many forms of words, moreover, which are true tataro prayers, are formulas for cursing as well as for petition. Such are used when a man throws a bit of his food aside before eating, and pours a libation before drinking kava, or when he pours water into an oven, since in them he asks for benefits to himself and mischief to his enemies. A tataro prayer is a spell; a call for help in danger is a cry.

5. Sacrifices.—There can be little doubt that sacrifices properly concern native religion. One simple form is probably universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of kava poured as a libation are offered at a common meal as the share of departed friends, who are often called by name, or as a memorial of them with which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as at Santa Cruz, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not apply to these offerings the words which connote sacrifices in the strict sense of the term. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as an offering, but in the Eastern groups they are made to spirits, and there is no sacrificial fire or meal. In the former nothing is offered but food; in the latter native money has a conspicuous place.

1) In the Solomon Islands.—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native of the place: 'In my country they think ghosts are many, very many indeed, some very powerful, some not. One is principal in war; this one is truly mighty and strong. When many people wish to eat together with any other people, the chief man of the village and the sacrificers, and the old men, and the men elderly and younger, assemble in the place sacred to this ghost;
and his name is Harumae. When they are thus assembled to sacrifice, the chief sacrificer goes and takes the pig... The pig is killed (strangled), not by the chief sacrificer, but by those who choose to assist him near the sacred place. Then they cut it up; they take great care of the blood lest it should fall upon the ground; they bring a bowl and set the pig in it, and while they are speaking, the blood runs up into this. When the cutting is finished, the chief sacrificer takes a bit of flesh from the pig and gives it to the offerings, and dips up some of the blood. Then he takes the blood and the bit of flesh and eats them, and calls that 'pig, says, 'Harumae! Chief in war! we sacrifice to you with this pig, that you may help us to unite that place; and whatsoever we shall carry away and shall have shall be for you.' Then he burns the bit of flesh in a fire upon a stone, and pours down the blood upon the fire. Then the fire takes up greatly to the roof, and the house is full of the smell of pig, a sign that the ghost has heard. But when the sacrificer went in he did not go boldly, but with awe; and this is the sign of it: as he goes into the holy house he puts away his bag, and washes his hands thoroughly, that he shall not reject him with disgust.' (Cordinong, p. 129.)

The pig thus sacrificed was eaten by the worshippers. When this account was written, the older people well remembered Harumae as a living chief.

In the neighbouring island of Malo, a native names the seven kinds of sacrifice. (1) A man returning from a voyage puts food before the chapel where rests the relics of his father. (2) In sickness, or where failure of a crop shows that some ghost has been offended, a pig is offered as a substitute for the man whom the offended ghost is said to strangle and burned whole on the stones of a sacred place, together with meal. The sacrificer calls aloud on the offended ghost and upon many others, and sets a bit of food which he has left unburned before the relic of his own person to whose benefit the pig was offered. (3) To 'clear the soul,' a pig or dog is killed and cooked; the sacrificer calls upon the ghost by name to clear away the mischief, and throws the sacred food into the fire in which the pig or dog is cooked. (4) This is performed in the house of the sick person who is to benefit by it. A pig or dog is cooked and cut up; the names of the dead members of the family to which the ghost is to be propitiated belonged are called out, with a petition to each on behalf of the sick man; the sacrificed animal is eaten by the males who are present. (5) (7) are sacrifices of fruit—yams, flying-fish, and canarium nuts—which are presented as food to the ghost concerned, with the invocation of his name, and set in a sacred place. In Florida and Ysabel, both belonging to the Solomon Islands, as here, the sacrifice is of the living character. There are those who know, having been taught by their fathers or mother's brothers, how to approach the powerful ghosts of the dead, some of whom were the objects of a more public and some of a more particular worship. Such a ghost of worship, called a tindalo, had his shrine in which his relics were preserved. The officiating sacrificer is said to 'throw the sacrifice.' A certain tindalo, whose worship and influence are not local, is called Manoga. A native writes:

"He who throws the sacrifice when he invokes this tindalo has the offering round about, and calls him, first to the east where rises the sun, saying, 'If thou dwellest in the East, where riseth the sun, Manoga! come hither and eat thy smash'd food.' Then turning he fits it towards where sets the sun, and says, 'If thou dwellest in the West, where setteth the sun, Manoga! come hither and eat thy food, and this is the way towards which he does not lift it up. And when he has finished lifting it he says, 'If thou dwellest in heaven above, Manoga! come hither and eat thy food. If thou dwellest in the Pleades or in the Milky Way, or in the skies, or in the air, or in the heavens, if thou dwellest in the midst of the sacred place, if on high in the sun or in the moon, if thou art in the air of the shore, Manoga! come hither and eat thy food' " (Cordinong, p. 131.)

Whether, as in this case, the offering be vegetable food or whether it be a pig, a piece is consumed in the fire within the shrine, and the people who partake of the offerings, and some at least of the pigs which were killed. In this way the sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or

Human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not eaten by the assistants as when a pig was offered; but a piece of flesh was burned for the ghost's portion, and bits were eaten by young men to get lighting powers, and by the sacrificer who had made the offering.

In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents the ghost, and some of the blood is thrown to sea. These are distinctly offered for the ghost to eat or use, but they are often taken up and disposed of by the offerers as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not there have the name of sacrifices; but the full sacrifices of the Solomon Islands, as has been shown, have the sacrificial characteristics of intercession, propitiation, substitution, and a common meal.

(2) In Banks' Islands and New Hebrides.—To offerings here, no doubt, the name of sacrifice is far less properly applied, and yet it is almost necessary to employ it. The offerings are made in almost all cases to spirits, or for the benefit of the ghosts of dead men. The offering is generally native money; nothing is killed or burned, nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred spot being chosen because of its connexion with the spirit who is to be conciliated or from whom benefits are sought. Access to the spirit is to be obtained through some common worshipper or suppliant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the 'owner,' as he is called, of the sacred object, who then gives a little money to the spirit, and perhaps pours the juice of a young coco-nut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a propitiation, an offering of what the suppliant values and the spirit has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In the New Hebrides, besides similar sacrifices to spirits, offerings are made to the ghosts of powerful men lately deceased, either at their graves or in the places where they haunt. Men who know these and have access to them take mats, food, and pigs (living or cooked) to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or elder relatives, but many have found it by happy accident, or from the suppliant values and their connexion with the spirit by the success of their ministrations.

6. Sacred places and objects.—The sanctity which belongs to such stones, and the objects which have been mentioned in connection with sacrifice has, of course, a religious character. Native life in Melanesia is, for the most part, in continual contact with the prohibitions and restrictions which belong to objects of the kind. In this case the sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or

Banks' Islands and New Hebrides.
it may be conferred by men who have the mana, the spiritual power, to confer it. It may be said, generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that certain stones are held in all quarters to represent the dead, being set up as memorials at funeral feasts, in burial-places, in canoes houses, and in places of general assembly. The stones are usually of such a size as to be too heavy for one man to lift, and other valuable things are occasionally laid before them; but the images are memorials of men deceased, likenesses to some extent, and representations; they are not worshipped, and are sacred only because of what they symbolize.

(1) Stones.—Sacred places almost always have stones in them. The presence of certain stones gives sanctity to the place in which they naturally lie; and when a place has further reasons become sacred, stones which have that character are brought and placed there. Here again recurs the important distinction between spirits and ghosts. The stones of the burial-place of a powerful man receive mana from him, or a man who had mana is buried near sacred stones, thus connecting the ghost and the stone. In other cases, the stone is believed to be a spirit, such as to forbid the touch of it. Many sacred stones then are sepulchral, and this is usually the case in the Solomon Islands. The sacrifices already described are offered upon stones. A stone is also frequently sacred in the Eastern Islands because of a spirit (mana) believed to be there. The group stones may be divided into those that naturally lie where they are reverence and those which have mana derived for various reasons from a spirit, and which are carried about and used for some purpose, and as amulets. The natives emphatically deny that the connexion between stones and spirits is like that which exists between the soul and body of man. Certain stones are kept in houses to protect them from thieves, and, if the shadow of a man falls on one of these, the ghost belonging to it is said to draw out his life and eat it. It has been supposed that the ghost which consumes the man's life must correspond in the stone to the soul in a living man; but the natives do not believe that the ghost dwells in the stone, but by it or, as they say, at it; they regard the stone as the instrument used by the spirit, which is held to lay hold on the man by the medium of his shadow.

(2) Trees, streams, and living creatures.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, e.g., a ghost haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul or animus of man. Streams, or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflection of a man's face upon such water gives the ghost or spirit of a pool a certain power which the natives believe can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or colour haunts a shore or rock in the Solomon Islands, it is taken to be some one's ghost, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself was, before it was thus occupied, a common shark; but, now that he is in it, the place where the man lived is visited by the fish, and the neighbours and relatives of the deceased respect and feed it. A spirit, known to some one who sacrifices for it, can, in like manner, be introduced in the Banks' Islands into a shark, which thus becomes familiar. In the Solomon Islands a crocodile may be a tainalo, since the ghost of a recent ancestor may possibly have entered it, or may be known to have entered it. Almost any living creature that haunts a house, garden, or village may resemble the ghost of a spirit, or be the residuum of a dead or sleeping man. Among birds the frigate-bird is conspicuous for its sacred character in the Solomon Islands; the ghosts of deceased men of importance and their abodes in them, and are, indeed, ancient and widely venerated tainalos dwelling in them. In all the groups there is something sacred about kingsharks. Snakes receive a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to all snakes as her representatives. In the Banks' Islands, and still more in the New Hebrides, snakes with which certain vui associate themselves, and which therefore have much mana, are worshipped and receive offerings of money in sacred places. These snakes are believed to be able to appear in human form to tempt young man or woman.

Thus, the religion of the Melanesians altogether an animistic, religious practice and thought appear to be a belief in a spirit which animates any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man, as they conceive it, is to his body; or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, abides near and with the object, which in association receives supernatural power, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. Magic and charms. The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melanesians it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence of a power greater than that of man; and in great part the practice of religion comes to be the method by which this power can be turned by men to their own purposes. The magic is known to the whole, a regular course of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the exercise of men by the power which they derive from either ghosts or spirits. By means of this power, men who know the proper formula and rite can make rain or sunshine, wind or calm, cause sickness or remove it, know what is beyond the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal being, the ghost of a man deceased, or a spirit of a nature which he has contacted by certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived; this power becomes associated with the objects through which the power is to pass. These things are personal relics, such as hair or teeth, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, war-shouters, prophets, diviners, and dreamers do their work. There is no distinct order of magicians or medicine-men, just as there is no separate order of priests; the knowledge of one or more branches of the craft is handed down from father to son, from
uncle to sister's son, or, it may be, is bought and sold. Many men may be said to make a profession of magic, and to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses this supernatural power. There is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of doubt. A great part of this is sympathetic magic, and seems to the people to have reason in it. The failure of some charm or of some magician does not discredit charms or magic, since the failure shows itself in the destruction of another and stronger charm; and one doctor who has failed has been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to go into this subject in any detail. With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the case of such troubles as fever and ague; but any sickness which is supposed by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to some ghost or spirit whom he has offended, or to the witchcraft of some enemy. This is common to the sick in those groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be in some cases appeased; for there is a certain malignity belonging to the dead, who dislike to see men well and living; a man who was powerful and malevolent when alive is more dangerous than ever, and causes all human sufferers who are not merely bodily are believed to be enhanced by death. So, whether to cause sickness or to remove it, the doctor by his charms brings in the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wisest of the wise uses more powerful— who has on his side the more or the stronger ghosts—will prevail, and the sick man will live or die accordingly. Two parties of such hostile ghosts are believed in Solomon Islands, where the natives are well acquainted with ghosts, to be partial in war and by spells. All success and prosperity in life, as well as health and strength, are held to depend on the spiritual power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

3. Tabu.—This word, commonly tapu or tambu in the islands of Melanesia now under consideration, and established as an English term, was taken from the islands of Polynesia. In Melanesia the belief prevails, clearly marked by the use of distinct words, that an awful and, so to speak, religious character can be imposed on places, things, and actions by men who have the mana to do it. A place, e.g., in which a powerful man has been buried, where a ghost has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the mana power can take a taboo place as he chooses, and can forbid approach to it and common use of it. Behind the man who exercises this power is the ghost of the dead or the spirit whose power the man has. Tabu implies a curse. A chief will forbid something under a penalty. To all appearances it is as a chief that he forbids, and as of a chief that his prohibition is respected; but in fact the sanction comes from the ghost or spirit behind him. If a common man assumes the power to tabu, as he may and sometimes does, he runs a serious risk; but if, on the other hand, he forbids the gathering of certain fruit, and sets his mark upon it, and then, as often naturally happens, some one who has disregarded his prohibition and plucks a fruit falls ill or dies, this is at once a clear proof that the taboo is real, and any future prohibition made by him will be respected. Thus to a considerable degree, in the Banks' Islands at least, men of no great consequence, as well as the societies which are there so numerous, set marks of prohibition which meet with respect. Every such prohibition rests upon an unseen power; there is in it no moral sanction, but there is the consciousness of the presence of the unseen which certainly works much for morality. What is wrong in itself is by no means always tabu; but what is taboo is very often what the natives recognize as wrong in itself. For it must not be supposed that Melanesians know no moral distinction of right and wrong. Disobedience to parents, murder, and theft, are all taboo; but doubt common, but there is a general feeling, both strong and marked, that it is right to respect and love parents, and wrong to be unkind. Neighbours will only forbear to injure other people who respect them, and very plainly express their blame. Those who lie freely upon occasion respect truthfulness, and say that it is bad to tell lies.

9. Totemism.—If totems, properly so called, exist among Melanesians, it must be considered in treating their religion. A totem is defined by J. G. Frazer (Totemism and Exogamy, London, 1810, i. 34, 8) as being 'a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation.' The relation between a man and his totem has partly a religious and partly a social character. It is held that 'the members of a totem clan call themselves by the name of their totem, and commonly believe that they are actually descended from it.' Each one, moreover, 'believing himself to be descended from, and therefore akin to, his totem, the savage naturally treats it with respect. If it is an animal he will not, as a rule, kill or eat it.' (1) Florida and the Solomon Islands, where the native system as it is understood by themselves has been carefully explained by natives of some education, affords probably the best field for consideration of the subject. The people are divided into six exogamous kindreds, called kema, each with its distinguishing name, descent following the mother. Two of these kindreds are named from living creatures, a sea-eagle and a crab. Each of the six has some object which its members must avoid, and which they must abstain from eating, touching, approaching, or beholding. This is the mabuto of the kema. In one case, and in only one case, this mabuto is the living creature from which the kin takes its name. The Kikau kin may not eat the kikau crab, and that crab might accordingly be regarded as the totem of that Crab kindred. But the other kin which takes its name from a living creature, the Eagle kindred, is quite at liberty to kill or eat that bird; it, therefore, cannot be the totem of that kin. Again, in some cases the prohibition does not apply to the common pigeon, which is the mabuto, and would say that the pigeon was his ancestor. Here, then, the pigeon appears as the totem of the Eagle kindred, because its image of his ancestor. But was a pigeon their ancestor
in the sense that they are descended from it? Decidedly not. It was a human ancestor who ascribed himself with the pigoon; the pigeon represents the dead man, the pigeon is a tindalo, a dead man of power. A native writes:

"We believe these tindalo to have been once living men; and wherever they have lived they have become a thing forbidden, tabu, and a thing abominable, solitude, to those to whom the tindalo (once a living man) belongs." (Codrington, p. 311.)

That is to say, the pigeon represents the human ancestor; the man begat the generations of his kindred before he died and entered into a pigeon. The pigeon is not truly an ancestor, nor is it truly a totem. The native writer goes on to give the example of another kindred which avoids the giant clam, the traditional ancestor of which had died in a certain beach. That ghostly ancestor is represented by the clam on that beach, and a native will say that the clam is his ancestor, but without meaning more than he means when he says that an ancient weapon in a shrine is a dead chief, a tindalo, that is, belongs to him.

(2) In another of the Solomon Islands, Ulawa, not long ago the people would not eat the fruit of the banana and had ceased to plant the tree. The elder natives would give to the fruit the name of a powerful man whom they remembered living, and say that they could not eat him, thus accounting for the tabu. The fruit became a banana, and that was not to eat it. Soon he would have been an ancestor, the banana would be an ancestor, while clearly there was no descent from a banana in the belief of the people. This, then, is no totem, though it may illustrate the origin of totems.

(3) In the New Hebrides, in Aurora Island, there is a family named after the octopus. They do not call the octopus their ancestor, and they freely eat it, but their connexion with it, and the fact that a member of the family would go to the reef with a fisherman, call out his own name, and say that he wanted octopus, and then plenty would be taken. This again seems to approach totemism.

(4) In the Banks' Islands and New Hebrides, however, there is what comes very near to the 'individual totem.' Some men, not all, in Mota conceeded that they had a peculiar connexion with a particular gigantic octopus, or giant squid, which had been found, either after search or unexpectedly, in some singular manner. If this was a living thing, the life of the man was bound up with its life; if an inanimate object, the man's health depended on its being unbroken and secure. A man would say that he had its origin in something that had presented itself to him. In Aurora also, in the New Hebrides, a woman dreams or fancies that there is something—e.g., a coco-nut—which has a particular relation to her unborn child, and this the child hereafter must never eat.

Societies, mysteries, and dances.—(1) Societies. A very conspicuous feature of native life in the Torres Islands, Banks' Islands, and New Hebrides is the universal presence in those groups of a society, called by some form of the name supwe, an institution which is entirely social, and has no religious character. To gain advance and distinction in rank, the pigoon or supwe, is under the sanction of the power of mana, as does every other form of success, and sacrifice, prayers, and charms are used; and doubtless the supwe is under the sanction of talu. It is always true that a man's position after death is believed to depend in some measure on his rank and his liberality in this society. But the account of it cannot come under the head of religion.

(2) Mysteries. A religious character attaches much more truly to the mysteries, the mysterious secret societies which hold an important place in native life in the Solomon Islands and in the Eastern groups. The function of these societies appeared to visitors to be temples and seats of religious worship; the images within them seem to be idols. The mysteries are closely fenced by a strict initiation, and a rigid taboo guards them; to those outside the secret and unapproachable retreats the mysterious sounds and the appearance of the members in strange disguise convey a truly religious awe. In fact, the mysteries are professedly methods of communion with the dead, the ghosts which are everywhere, more or less, objects of religious worship. In the Banks' Islands the name of the mysteries was simply 'the Ghosts,' and the only means by which the ambiguity of the term is avoided was this: Before the initiation within the mysteries prevails the ordinary form of sacrifices and prayers were carried on to gain the assistance of the dead and communion with them, there was no esoteric article of belief made known and no secret form of worship practised. There were no forms of worship peculiar to the society, no objects of worship of a kind unknown to those without. There was no 'making of young men,' no initiation without which the native could not take his place among his people. The women and the children, perhaps, really believed that what they saw and heard was ghostly, but many an accidental bystander would imagine that the society and the neophyte, when introduced into the sacred place, found himself in the company of his fellows of daily life. Still, since the presence of the dead was professed and believed, and since so much of the religion of the Melanesians, particularly in the Solomon Islands, was concerned with the ghosts of the dead, it is true that these secret societies and mysteries belong to the religion of the people.
may almost be said that relation to a creator has no religious influence at all, though reference to Qat as the maker of men is made in correcting children in the Banks' Island. The existence of the world, as the natives conceived of it, and the course of all the great movements of nature, are quite independent of that creative power which way the world was created which can be found in the manner of its working. In the Solomon Islands the belief in Kahanisware is characteristic. She was a female spirit in the shape of a snake; she made men, pigs, trees, rocks, and was she who taught the natives the art of fishing. The Banks' Islands Qat held the highest place. He was born the eldest of twelve brothers, who dwelt in a village in Vava'u. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land where there were houses and canoes, weapons and ornaments. He taught the Banks' Islands Qat the invisible, which can be found in the manner of its working. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of the spirit. They are beings who in the Solomon Islands have power in storms, rain, drought, colds, and especially in the growth of food—the vigona, hi'ona, and others—seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such as they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melanesians was populous with living beings, visible and invisible, with men, with the ghosts of the dead, with spirits great and small; and pervading and surrounding all was a power which belonged to all spirits, to the dead as such, and to men; all these could direct it and employ it, and it was everywhere at hand. The world so inhabited was bounded to the Melanesians by the circle of the sea which surrounded the islands. The Banks' Islands Qat held the highest place. He was born the eldest of twelve brothers, who dwelt in a village in Vava'u. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land where there were houses and canoes, weapons and ornaments. He taught the Banks' Islands Qat the invisible, which can be found in the manner of its working. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of the spirit. They are beings who in the Solomon Islands have power in storms, rain, drought, colds, and especially in the growth of food—the vigona, hi'ona, and others—seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such as they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melanesians was populous with living beings, visible and invisible, with men, with the ghosts of the dead, with spirits great and small; and pervading and surrounding all was a power which belonged to all spirits, to the dead as such, and to men; all these could direct it and employ it, and it was everywhere at hand. The world so inhabited was bounded to the Melanesians by the circle of the sea which surrounded the islands. The Banks' Islands Qat held the highest place. He was born the eldest of twelve brothers, who dwelt in a village in Vava'u. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land where there were houses and canoes, weapons and ornaments. He taught the Banks' Islands Qat the invisible, which can be found in the manner of its working. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of the spirit. They are beings who in the Solomon Islands have power in storms, rain, drought, colds, and especially in the growth of food—the vigona, hi'ona, and others—seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such as they are acknowledged to be, though the natives speak of them as ghosts.
of men that they should die. In stories the first men are represented as changing their skins, as snakes cast their slough, and returning to youth and strength, until by some accident or folly life could no longer be renewed, and death came in.

When it came, the way to the abode of the dead was opened and men departed to their own place, Hades. The funeral rites do not require description. The dead were generally willing to depart far from the body which it has left or in the place in which it has lived; but, the body being buried, or otherwise disposed of, the ghost returns to his appointed place.

(3) Hades.—There is a great difference between the conception of the Solomon Islanders and that of the Banks' Islanders and New Hebrides people with regard to the place where the dead take up their abode. In the Eastern Islands Hades is in the under world; in the Solomon Islands the dead, though there is an under world, depart to islands and parts of islands belonging to their own group, and from Florida they were conveyed in a konnte canoe, a 'slip of the dead.' In all parts of Melanesia alike the condition of the dead in these abodes is an empty continuation of the worldly life. It is a belief generally held or believed to be eternal, except in so far as the native imagination has failed to follow their existence with any measure of time. But, though the dead continue wherever they are, and the homes of their lifetime, are active among the living, and, as has been shown, in the Solomon Islands the religion of the living is mainly concerned with the worship of the dead. In these islands the weapons, ornaments, and money of a man of consequence are buried with him or placed on his grave. Whether these decorate the dead or serve his use in Hades is uncertain. It is as when a dead man's fruit-trees are cut down, as they say, as a mark of respect; he ate of them, it is said, while he was alive, he will never eat again, and no one else shall have them.

The notion is general that the ghost does not at first realize its position, or move with strength in its new abode; and this condition depends to some extent on the period of the decay of the body; when that is gone, the ghost is set free. It is to expedite this activity that in some parts the corpse is burned.

While in a general way the ghosts of the dead pass to their Hades above ground, there are some who remain below. In the Banks' Islands the community of Hades has many entrances; in this they have villages in which they dwell as on earth, but in an empty life. The ghosts hang about their graves for a time, and it is not desired that they should remain, though at the death-feasts they have a portion thrown for them. The great man goes down to Panoli with his ornaments, that is, with a body of social appearance of men. In the Northern New Hebrides there are passages to Hades at the ends of the islands, the northern or southern points, by which ghosts go down, and also return. In Lepers' Island the descent is by a lave which leads to an ancient crater. Living persons in all these islands have gone down to see their dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(3) Rewards and punishments.—There remains the important question whether the condition of the dead is affected by the character of the living man; whether the soul is judged by the world to be better or worse, in better or worse condition, according as they have been, in native estimation, good men or bad on earth.

(a) Solomon Islands.—It cannot be said that in these islands the moral quality of men's lives affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the neighbouring island of Guadalcanar, they found a ghost of worship, a tindalo, with a rod which he thrust into the cartilage of their noses to prove whether they were duly pierced. Those who passed this test had a good path which they could follow to the abode of the dead; those who failed had to make their way as best they could with pain and difficulty. In Ysabel they present themselves to the master of their Hades at a pool, across which lies the trunk of a great tree. They show their hands; those who have the mark of the frigate-bird cut in them are allowed to pass; those who have not the mark are thrown from the trunk into the gulph beneath in judgment.

(b) Banks' Islands and New Hebrides.—In these islands there is something which approximates to a judgment of a moral kind. It is true that, as a man's rank in the world has depended very much upon the number of the pigs he has slain for feasts, so the ghost fares badly who has not so done his duty by society. So in Pentecost Island, when the ghosts leap into the sea to go below, there is a shark waiting which will bite off the nose of a man who has not killed pigs; and in Aurora a fierce pig is ready to devour the ghost of a man who has not planted the tree that supplies material for the mats which are so highly valued. But there is a kind of judgment, a discrimination between good and bad, which has a moral character, and is, perhaps, well worthy of remark. Thus in the Banks' Islands it was believed that the woman good Hades and a bad. If one man had killed another by treachery or witchcraft, he would find himself opposed at the place of descent by the ghost of the man whom he had wronged; he dreaded the path which led to the sea and the sad life that was waiting for him on the earth. If a man had been slain in fair battle, his ghost would not withstand the ghost of the man who slew him. The bad, they said, were not admitted to the true Panoli, the Hades where there were flowers, though but shadows, and the empty semblance of social life. But who was the evil man? It was answered, 'One who killed another without cause or by charms, a thief, a liar, an adulterer.' Such in their Hades quarrel and are miserable; they haunt the living and do them what harm they can. The others, who lived as they ought to live, abide at least in harmony in Panoli after death.

It is very likely that these notions of something like retribution in the under world have not entered very deeply into the native mind, and are not generally entertained. But that such beliefs should have been received at all is enough to show that their sense of right and wrong has been carried by Melanesians into their prospect of a future state, a view which can hardly fail to be tinged by something of a religious tendency, even if it cannot be said to prove in itself the existence of a religion which these islanders undoubtedly possess.

Literature.—J. Lubbock, The Origin of Civilization, London, 1879; E. B. Tyler, PC, PS, do. 1886; A. W. Murray,
MELETIANISM.—There were two Meletian schisms, each having considerable influence on the formation of the Athanasian Creed. The earlier one took its name from Meletius who was bishop of Lycopei in Egypt; the later from the Meletians who were consecrated bishop of Antioch in A.D. 360.

1. The Meletian schism in Egypt.—Μελητιανισμός (Epiphanius) or Melianos (Athanasius) was bishop of Lycopei in Egypt, and his dispute with Peter, bishop of Alexandria, led to a schism which received the attention of Meletius and Isidore, owing to Athanasius (Apol. c. Arianos, 59), Meletius was condemned about A.D. 303 or 306, so that the quarrel was already of long standing when the Council of Chalcedon was held (A.D. 451). The origin of it is extremely obscure. As Hefele points out (Councils, Eng. tr., i. 343 ff.), there are three separate accounts: (1) in documents discovered by Maioli and published in Maioli, Rapport sur les Necrophiles, Paris, 1884–1885, iv.; (2) in the writings of Athanasius; (3) in Epiphanius. All these differ in their details as to the origin of the schism. The first of the three documents preserved in these, the letter of certain Christians in prison who were afterwards martyred by Dioscorus (Eus. HE vii. 10). It is supposed that the actual writer of the letter was Phileas, bishop of Caria, Meletus, however, addressed as fellow-minister (communis), the document being preserved in Latin, so that the schism has evidently not yet begun, and he is blamed for ordaining clergy in strange dioceses, without the consent of his fellow-bishops or even of Peter of Alexandria. The second document is a note, added by an anonymous hand, to say that after the martyrdom of the bishop Meletus had gone to Alexandria and found two hundred men of Arius and Isidore, and proceeded to excommuniate the visitors (reposita) appointed by Peter, who thereupon wrote the letter which makes the third of our documents, to the people of Alexandria, bidding them to avoid all communion with Meletus. From this very early and contemporary evidence we learn that Meletus’s offence was that of trespassing on the rights of others and of ordering his clergy by conference and orders out of his own diocese. It is to be noticed that these irregularities took place before the deposition of Meletus. Athanasius says nothing about the irregular ordinations. In his Apology of Against the Arians (ch. 59) he gives as the cause of the deposition of Meletus that he had been guilty of many offences, particularly of having sacrificed to idols and of having calumniated the bishops of Alexandria, Peter, Achillas, and Alexander (ch. 11). In his Letter to the Bishops of Egypt and Libya he asserts (ch. 22) that the Meletian schism was declared within thirty or forty years before, and that the Arians thirty-six years ago were convoluted of heresy. Socrates (HE i. 6) gives practically the same account as Athanasius, and, as he tells the story, he has copied from him. This is the earliest version of the origin of the schism, but ever, differs materially from those which we have hitherto considered. It is given by Epiphanius (Hier. lviii.), and printed in Routh (v. 165). Meletus, says this writer, was a perfectly orthodox bishop. Indeed, he credits him with having accused Arius to Alexander, with whom Meletus, though a schismatical bishop, was on good terms. The real cause of the dispute was, according to Epiphanius, the question of the training of the Isidors. But Epiphanius’s account, as Hefele shows, is full of inaccuracies, and contradicts the earliest evidence, as when, e.g., he makes Meletus a fellow-priest with Peter. But he may have been correct as to the underlying cause of the schism, Meletus being, like Novatian at Rome and the Donatists in Africa, the representative of the severe disciplinarians. Epiphanius had, moreover, special knowledge of the Meletians from their schism having spread to the islands of the Western part of the Eastern Church. Perhaps because of his doctrinal orthodoxy, Meletus and his party were treated very leniently by the Council of Nicea. It may be that the schism in Alexandria, was directed against them; but in the synodal letter (Soc. HE i. 9) Meletus was not permitted to ordain or appoint clerics any more, and those whom he had ordained were to be admitted to the Church (συνστηθησαίς εἰς τὸν ἔρημον) and to rank below the clergy ordained by Peter and his successors. Athanasius was much troubled by those schismatics who joined his opponents; and from their ranks came his bitter enemies, the priest Ischyros, Arsenius, and many others. Athanasius bitterly regretted the decision of Nicea in this matter (Apol. c. Arianos, 71), where he lists the names of Meletus is given). The schism lasted down to the middle of the 5th century (Soc. HE i. 8).

2. The Meletian schism at Antioch.—The importance of the schism which arose at Antioch is due to the fact that it hindered the good understanding between the Roman and Alexandrian Churches and those Asiatic Christians who, though at heart orthodox, were later uncom- promisingly Nicean than many of the Athenasian party. The dispute, which lasted for more than forty years, ranged the great saints and Fathers of the later years of the 4th cent. in opposite camps. Against St. Basil, St. Gregory of Nazianzus, St. Flavian of Antioch, and St. John Chrysostom were opposed St. Damascus of Rome, St. Ambrose of Milan, St. Peter of Alexandria, and, much against himself, the emperor Constantine. The merits of the controversy are perhaps as evenly distributed as the names on either side. To understand it aright it is necessary to trace the divisions of the Church by conferring letters from the days of the Nicene Council. Eustathius, the bishop, who had been one of the foremost champions of the accepted creed, was the first to suffer in its cause, being deprived of his see in A.D. 350, though not without a serious tumult in the city, owing to the machinations of Eusebius of Caesarea and the ‘conservative’ faction. The see of Antioch was next filled by prelates who were hostile to the Nicene formula—Eulalius, Euphrinus, Flacillus, Stephen, and Leontius, the last of whom, by prudently concealing his real opinions on vexed questions, preserved peace till his death in 357. He was succeeded by Eudocius, ‘the worst of all the Arians,’ who was installed as bishop of Constantinople in A.D. 360. It now became necessary to provide a successor at Antioch, and Meletius was chosen, being installed in accord with the party in power (F. Cavallera, Le Schisme d’Antioche, p. 72, note). In his sermon, however, on Ps 82 he declared himself on the side of the schismatics (Epistle of the fourth cent.) and was at once deposed and exiled, and Eudocius put in his place. Thus Meletius, once the Arian nominee, had become a Catholic confessor. Since the deposition of Eustathius, the faithful Nicene remnant had remained apart under the care of the
priest Paulinus, and did not enjoy the prospect of communicating with the followers of Meletius, who, unlike them, had not borne the burden of the controversy. The party of Paulinus, however, was not considerable, and perhaps it was insignificant in comparison with that of Eunouius, who is said to have had a regard for its leader, to allow it the use of a small church. Meletius's party, on the other hand, was numerous and threatening owing to the apparent support of the bishop, and it seemed probable that under him the Catholics would ultimately be united. In 362 Athanasius held the small but important Council of Alexandria (Ep. 780). A synodal letter, the 

'To Theosocius, was sent to Antioch by the hands of the bishop Eusebius of Vercelli, who had attended the Council; but on his arrival he found that his companion in exile, Lucifer, who, according to Caesarius of Tarsus, had taken upon himself to consecrate Paulinus bishop of the old Nicene party at Antioch. As far as Antioch was concerned, the schism was important. Meletius was universally beloved, and his moderation in regard to the points at issue in the controversy was more in consonance with Asiatic and Syrian Christianity than the uncompromising attitude of Alexander, who was ready to divide the church into two secession of. The schism became in a short time so difficult to a settlement, which let bygones be bygones, and allowed the good work done by Hilary of Poitiers in reconciling the bishops of Asia Minor to the Nicene Creed. The effect, however, was that the schism was not healed. But, when, in the following year, the bishop of Alexandria recognized Paulinus, as did also the Roman see. The dispute had now reached a stage at which principles were involved not unlike those which made the unhappy Donatist schism so incurable in Africa—the difference being that the Donatists (qu.) rejected bishops who had been unfaithful in regard to heathenism, and the Eustathians who had been infected with heresy. The Roman see under Damascus declared unhesitatingly for Paulinus; but throughout the East Meletius was regarded as the champion of orthodoxy, and he was an adherent under Valens for his adherence to the Nicene Creed. The Capadocian fathers, Basil and the two Gregorys, were devoted to Meletius, and John Chrysostom belonged to the church and was first ordained reader and afterwards deacon by him. The schism at Antioch embittered the life of St. Basil, who in vain appealed to Athanasius to recognize Meletius, and was seriously troubled by the schism in the Roman church. For Paulinus. Things were further complicated by Apollinarius, the famous bishop of Laodicea, who, though condemned for his erroneous opinions, is recognized not only as a saint of Nicene theology, but also as one of the profoundest thinkers of his time (see APOПИNARIUSM). Among his friends was the presbyter Vitalus, who had been made priest by Meletius, but was ultimately consecrated by Apollinarius as rival bishop to Paulinus (c. 375). Thus, including the Arians, the Church of Antioch was now divided into four parties, the three Nicene bishops being Meletius, Paulinus, and Vitalus. Stricken with the shadow of suspicion rested on any one of these three rivals in regard to character. Meletius and Paulinus were both recognized as saints, while, despite the suspicious orthodoxy of his consecrator, Vitalus was highly respected by the most honoured churchmen of the day. Some hope of ending the schism was given when the six leading presbyters of the Church agreed with the edict of Meletius and Paulinus, if one survived the other. In 381 Meletius was at Constantiople, taking a leading part in the Second General Council. This Council was destined to affirm the creed of Nicea and reunite the Church, though it proved unable to bring peace to the distracted community at Antioch. Meletius died during the Council; and, for some unexplained reason, Flavian, one of the six presbyters who had agreed to recognize Paulinus if he survived, consented to be consecrated successor to Meletius. His action appears on the face of it indefensible; but, as he proved a remarkably saintly bishop, there may be some extenuating circumstances for his conduct of which we are not aware. The appointment of Flavian was one of the reasons for the Roman see's regarding the Council of Constantinople with disfavour. Paulinus was supported by the churches of Egypt, Cyprus, and Arabia, whilst Palestine, Syria, and Phoenicia adhered to Flavian. Theodosius recognized Flavian, and, when the serious affair of the statues was causing anxiety in the city, it was he as his bishop who pleaded the cause of the people of the city to the Constantinople (A.D. 387). Flavian died in 388; and before his death he consecrated Evagrius in his place—a most uncannonical proceeding. The Westerners seem to have supported the claims of Evagrius, and Ambrose urged Theodosius to compel Flavian to come to Italy and submit his claims to the decision of the Church there; Taeopolus of Alexandria was sent as an ambassador. Theosius and Jerome. When, however, Evagrius died, no rival bishop was consecrated. On Chrysostom's appointment to Constantinople (398) he managed to heal the schism in the East, for as far as Alexandria and Rome were concerned, and Flavian placed the names of his two rivals—Paulinus and Evagrius—on the diptychs of the Church. The Eastern bishops held separate meetings till the time of Alexander (414-415), who healed the schism by an act of Christian courtesy, visiting the Eustathian church on Easter day and being accorded a hearty welcome by the congregation. The schism was finally ended, when the션 patriarch of Antioch (481-482), brought back the relics of Eustathius. The schism of Antioch would be no more than a somewhat dull chapter in ecclesiastical history were it not for its underlying causes, indispensable for the right understanding of the intricate questions which make the religious divisions of the East so complicated. As has been indicated, there was a singular absence of bad feeling and we may add, of bad motives. We have nothing of the disorder and even crimes which mark the course of the Donatist schism. But throughout we can see how incompatible were the ideals of the great Cappadocian patriarchs with those of the East. Meletius, Flavian, John Chrysostom, and Nestorius, the great Antiochines, all felt the encroachments of the bishop of Alexandria supported—except in the case of Chrysostom—by Rome. What has been called the Meletian schism was a foreshadowing of troubles to come which rent the Church asunder, and it is a phase in the long struggle between the rival theologies of Alexandria and Antioch, which dates from the days of Origen.

MEMORY. — I. Use of the term. — II. The term 'memory' can be used in a wide biological sense to signify retention of the effects of stimulation. In this sense it is regarded by some writers as a fundamental attribute of living matter—a view
which was put forward by Ewald Hering in 1870, in a paper read before the Imperial Academy of Science at Vienna, 'On Memory as the Universal Function of Organized Matter.' Wherever there is life and development, there memory must be predicated, since each new process is the outcome of the old and implies its retention.

Memory is a faculty not only of our conscious state, but also, and perhaps more pervasively, of our unconscious.one. Our ideas do not exist continuously as ideas; what is continuous is the special dissoziation of sensation which this substratum gives to day by day, the memory of the past serves as base for the solving of their task and of giving to the motor reaction the direction suggested by the lesson of experience. 

But, as the other hand, the sensori-motor apparatus furnishes to indirect, that is unconscious, memories, the means of taking on a body, of materializing the abstracto-sense-perception. Thus it may be that a recollection should reappear in consciousness, it is necessary that it should descend from the heights of pure memory down to the precise point where action is taking place.

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless as interpreted in terms of the psychological.

'Nay, the bare term "retention" itself, and all cognate terms such as "trace" or "residuum," are meaningless unless some present circumstance can be related to the past; thus they presuppose memory. The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in Locke, for example. Such an analogy is about on a par with that between the eye and a telescope—the one is a natural, the other an artificial, organ or instrument of vision; but neither will explain seeing as a psychological fact. '2 Records or memoranda alone are not memory, for they presuppose it. They may convey physical traces; but the unconscious area which called "unconscious," suggests mind; ... the mnemonic theory then, if it is to be combined with anything, seems to be not merely physical records or "engrams," but living experience or tradition.

(c) "Memory" may be used to denote the retention of past experience without reference to the explicit reproduction of such experience. The essential difference of this use of the term from the biological is its limitation to the phenomena of mind, with its implication of mental processes. Writers on psychiatry, such as Morton Prince, S. Freud, and C. G. Jung, use the term "memory" for the influence of past experience on current experience, whether the subject is conscious of such influence or not.

When we conceive of memory as a process we have in mind the whole mechanism through the working of which this past experience is registered, conserved and reproduced, whether such reproduction be in consciousness or below the surface of consciousness.

In this sense all perception and all behaviour involve memory. Not only so, but these writers would include in their reference past experience of which the individual took no conscious note. Sensations received, and actions performed, with no consciousness of their occurrence, are said to be remembered and to be of great importance in determining later experience.

(d) As usually interpreted, memory belongs to cognition, but, inasmuch as all experience cannot be reduced to processes of cognition, so, it may be urged, neither can the retention and reproduction of experience. Such a theory requires that the emotional aspect of experience, feeling-tone, and conation be reproduced in memory as emotion, as feeling-tone, and as conation. Just as these aspects of consciousness are never experienced alone 'in abstracto' but always in a concrete whole of experience, so they will never be reproduced 'in abstracto,' but in a concrete whole with an idea or with an object of some perception in this whole experience.

In this article memory will be treated as implying the retention of past experience and the explicit reproduction of such experience in the form of ideas.

2. Reproduction of ideas. It is a disputed point whether ideas of past experience ever arise spontaneously in consciousness or are always suggested by the datum of present consciousness. The whole controversy has in favour of the former view is found in the experimental work of G. E. Müller and F. Schumann, A. Binet, and other experimental psychologists.

1 Bergson, Matter and Memory, p. 187.
3 Ward, Heredity and Memory, p. 551.
4 Morton Prince, The Unconscious, p. 2.
The latter view certainly represents the commoner form of memory. The attempt to classify the relations in which the suggested idea stood to the present consciousness gave rise to the 'laws of association.' The types of relationship, contiguity in time and place, similarity and contrast, were all elaborated into principles of explanation. The present datum was said to suggest the past experience because previously $x$ and $y$ had been contiguous in time and place, because they were similar, or contrasted, or again, because they contrasted—three very different lines of explanation (see art., Association). Modern writers seek to find an explanation for this association of past and present in the direct and indirect connexions of experience brought about through our purposeful activities. Association is but a special form of the bonds existing between different moments of experience in virtue of the organization of experience into systems. Direct or indirect participation in some common system or whole constitutes the bond of union which enables a present datum to suggest past experience. The laws for the organization of experience, for the formation of spatial wholes, temporal wholes, trains of perception, trains of ideas, systems of conduct, are the ultimate principles of association. The connexions for which line of association followed on any given occasion are of two kinds—those which relate to the whole in which the present datum and a particular past experience are brought together in some part of the total memory of the individual, and those which relate to the special circumstances of the present moment of suggestion.

A whole which is closely organized will form a strong basis for association that one which is loosely organized or which lacks a definite principle. A whole which has occurred repeatedly or recently is more influential than one which is of rare or long past occurrence. Experimental investigations have served to demonstrate the efficacy of close organization, intrinsic interest, repetition, and recency in determining suggestion. As illustrative of the influence of close organization one may cite H. Ebbinghaus's work with nonsense syllables. The only principle for organization was the spatial arrangement and the sequence of a string of syllables—e.g., duk, ill, lap, pom, etc.—memorized by reading aloud. The temporal and spatial organization of the series rendered re-memorizing of the same syllables slower, and the difficulty of remembering the syllables was in proportion to the degree to which the original spatial and temporal order was disturbed. A passage compared with a whole which has meaning—e.g., a passage of prose or verse—these strings of nonsense syllables are more difficult to memorize, a fact which illustrates the influence of an intrinsic interest as a basis of organization. The work of L. Steffens and P. Ephrussi has emphasized the importance of attention with respect to the basis of organization. It has proved more economical to memorize material by repeating it as a whole than to memorize it piecemeal, provided the material is such as can be attended to without undue difficulty. Continuity of interest is preserved by this so-called 'gut-wit' method, whereas it is destroyed by the artificial sections of the 'partial' or piecemeal learning. The value of rhythm in organizing a sequence of experiences has been shown by Müller and Schumann, and is a commonplace of school practice. The influence of repetition in rendering suggestive certain and swift is illustrated by Müller and Schumann's researches. Experimental work tends to show that even after some short lapse of time the effect of recency in determining which of two possible lines of association suggestion should follow.

Of the conditions relating to the moment of suggestion, two seem to be predominant—the emotional attitude of the individual, and the trend of his ideas. The influence of the first on the line of association is demonstrated by the emotional concomitance of the attitude of the present and the position of the experiences recalled; in a more or less pleasurable mood we forget failures and recall only ambitions and achievements. The importance of the trend of present consciousness has been shown in much recent work. An investigation by H. J. Watt brought out the control over association exercised by the Aufgabe, or task, before the mind at the moment. On the relevance or irrelevance of the reproduced idea depends very largely the serviceableness of our memory in any given difficulty. Appetitiveness for the purpose of the present moment, for what W. James termed 'the topic' of the stream of thought, will give one line of association the advantage over another.

A question which has become important for psychology is dissociation. Some writers hold that, just as experience becomes organized into wholes and these wholes are interrelated one with another in still larger organizations, so also there takes place the opposite process, viz., dissociation. Through dissociation certain episodes of past experience or certain aspects of a train of thought may become isolated from the given organization; such episodes cannot then be reproduced; no suggestion of normal consciousness can connect itself with the dissociated contents of past experience. Whether the dissociation is of great importance to psychopathology in its bearing on the amnesia of hypnosis and hysteria and on multiple personality. The process whereby the insulation of non-suggestible memories is brought about is described differently by different writers. The line of dissociation is the line of description followed by Morton Prince; the term dissociation (without the implication of dissociation) in virtue of some pain value is the line of description followed by the Freudian school.

3. Obliviscence and reminiscence.—The failure of reproduction, whatever may be the view taken as to disintegration, is by no means the same as failure of association. The man who has been reading an ingenious book on the nature of the world may be able to reproduce the middle paragraph of the first chapter; yet the latest sentence of the first chapter cannot be reproduced, and the middle sentence of the last chapter has never been remembered. Ebbinghaus's experiments with nonsense syllables, already referred to, furnished a typical curve of the rate of forgetting such items. The principle of organization was mere spatial and temporal contiguity; no interest gave value to the series of syllables or rendered one syllable of greater worth than another. Ebbinghaus's curve shows that after an interval of twenty minutes 41.8 per cent of any series learnt was forgotten, after an interval of an hour 55.8 per cent was forgotten, after twenty-four hours 66.3 per cent, after six days 74.6 per cent, after thirty-one days 79.9 per cent. The fading away of the process is rapid at first and then very gradual afterwards. Experimental work, however, would also seem to indicate that experience does not necessarily begin to fade from the moment when it ceases to be 'present' experience. On the contrary, there is a certain amount of evidence that processes ripen or mature, the reproduction of past experience being clearer or fuller after a somewhat longer interval than immediately after the original occurrence. Some of the experimental work of A. Jost suggested this, and recent work with school-children has brought out the same feature. Thus, if the amount of ballad poetry
which children aged 12 can reproduce correctly immediately after learning being represented by 100, the amount which they can reproduce forty-eight hours later without any further learning will be 110. A similar increase in content reproduced is found in other material. In the case of nonsense syllables, although forty-eight hours later some syllables can be reproduced which have not been remembered immediately after learning, the total amount correctly reproduced is less. This tendency for 'reminiscence,' as it has been termed, is more marked in children than in adults. The greater organization of adult consciousness would enable any experimental subject to retain small items which have always been recorded, and association would be otherwise. The meaning and association of an experience would develop more slowly, and might be incomplete when the demand for reproduction followed at once upon its first reception.

4. Function of imagery.—Past experience reproduced as ideas depends very largely upon imagery. Imagery is of the same character as sense experience—visual, auditory, tactile, motor, etc. From the birth of a newborn individual to that of an adult, people have been exposed to stimuli which have been either consciously or unconsciously recognized. The schematic and symbolic character of imagery with respect to the idea for which it stands has received more attention in recent research. The function of imagery provided seems to be to provide a focus for attention, and thereby to give clearness and definiteness to ideas. It has been noticed that, where the process of reproduction takes place with difficulty or where a trace of ideas develops slowly, there the presence of imagery is marked, and the imagery seems indispensable to the realization of the ideas in question. Where, on the other hand, ideas are reproduced with facility or a memory is preserved, imagery is sketchy and in some cases scarcely recognizable. The question has been raised whether reproduction is possible without imagery, without even the symbolic imagery of words standing for the ideas reproduced. Here, as in so many other psychological problems, no dogmatic answer is possible in the present state of knowledge. There is much patient research in connexion with the question, and if from there should arise a clearer conception of the problem and its solution.

On the development of memory and memory traces (Mental Development (Mental)),

BEATRICE EDDOLL

MEMRA.—The tendency of Hebrew imagery to personify abstract powers, such as sin, speech, wisdom, is evident also in the manner in which the divine word or speech is represented in poetry and elevated language. God's fiat by which creation came into being and continues to exist is spoken of as emanating from Him to execute His will. By the word of Jahweh 'were the heavens made' (Ps 33:6, 'and He hemmed in His word') (107:28). In Is 55 the word proceeding from God's mouth assumes form and accomplishes His will as His plenipotentiary. In the Apocalypse also we meet with a few instances where the word stands for God in His capacity of cause.

But, while these instances are of rare occurrence in the Targumim—though nowhere else in Jewish post-Biblical literature—the word is already hypostatized now. The form of Memra. The Aram., memar, emph. state memar, from emar, 'to speak,' signifies, like מִשְׁפָּר, from מָשָׁר, 'a word,' without the additional meaning of 'reason' connoted by מַשָּר. It occurs about 180 times in the Onkelos Targum, 100 times in the so-called Jerusalem Targum, and 390 times in the pseudo-Jonathan (in the last two also as מֵדֶר for מֵדֶר).

It stands, e.g., Gn 15:6: 'He believed in Jahweh' (Gn, renders 'in the Memra of Jahweh'); Ex 13:19: 'Moses brought forth the people before the Memra of Jahweh (now Jonathas, the Levite)'; Jer 21:26: 'I speak of Jahweh their God is their support, and the Bakshishin of their king is therein, with songs and with stringed instruments between my Memra and you.' Ex 31:19: 'This Memra is a con- stant fire' (perhaps 'a species'); and 2 Sam 7:16: 'I spoke by the Memra of Jahweh' (Is 33:9). It was employed by the Targumists in the place of God wherever anthropomorphisms, anthropopathisms, or any direct inconsistent with the transcendental nature of the transcendent God, are predicated. Thus, 'By my Memra have I founded the earth and established it' (Ps 107:24); 'for my sake is rendered 'for the sake of my Memra' (Is 14:18). The Memra gave the Law (Ex 23:30). 'These are the statutes which the Memra made between Me and the children of Israel' (Le 26:9). The Memra accomplished the exodus from Egypt (Ex 35, etc.). 'Jahweh by his Memra, the word' (Ps 103:19). For the exiles has been elevated in memory (Is 43:1). Jahweh said 'the glory of the Bakshishin of the king of the worlds Jahweh Shaddai' (Is 66), and then heard 'the voice of the Memra' (69).

The above are only a few typical passages of the use of the Memra (for an exhaustive list see F. Weber, Judische Theologie, Leipzig, 1897, p. 180; A. Eilersheim, Life and Times of Jesus, London, 1887, ii. 659, etc.; he was followed by W. Fairweather in Memra, 1924, p. 284). What then, do the Targumists understand by the Memra? A cursory glance at the Aramaic version will be necessary before we answer this question. The demand for a version in the Aramaic vernacular by the returned exiles must have been supplied very early; it is difficult to say how far back we are to place the institution of the office of the Memra (Memra, 'Interpreter'), who rendered into the vernacular each verse of the Law and each three verses of the Prophets, as they were read publicly in the synagogue (cf. the office of the ἐρμηνεύτης in the early Christian communities). The frequent repetition must have produced a stereotyped version. The exclamation of Christ on the Cross in the Aramaic of Ps 22 indicates that the Bible was familiar to Him in that language; and St. Paul's quotation of Ps 119 in Eph 4 is more in accordance with the Targum than with our Mas. Text or the LXX. A written Targum on Job existed at the time of Gamaliel (Shab. 115b). Although neither Origen nor Jerome mentions the existence of a Targum, that of Onkelos had already at that time the position of a kind of authorized version.

'K. Johandeh says, we never transcribed (of the Bible) it in a diacritical way, and whomever adds to it is a blasphemer.' Let him read it in accordance with our Targum.' (Gal. 4:14).
Jewish scholars agree that this refers to Onokloes (e.g., Maimonides, in Yad, Ishuth viii. 4; see also L. Zunz, Goedecandische Vorträge, Frankfort, 1892, ch. v.). The aim of the version was to give a clear and correct rendering of the differences from the original he does so in favour of the Hālakāh and popular usages:

Ex 23:20-24. Dt 15:16 are rendered: 'Ye shall not eat flesh with blood, "the fruit of the goodly tree" (Lot 24:9) is already called thory, 'The Passover shall be eaten in one assembly' (Ieb, tadd). The older maintain > he rigid it (D. the abominations; D. the ence Jn art. lljara revealed Adonai it its and Philo's distinct avoid before (Ex 25:18), and there was no evident deviation there when the Targums before the Peshitta reads, Peshitta explains. The former maintained that the Memra, therefore, is the deity revealed in its majesty and glory. The term is based on Gn 1, emphasizing the fact that the world came into being by divine command.

Onokloes used Memra when speaking of human authority: 'The Memar of Pharaoh (Ieb, the mouth of Pharaoh) (Gn 45:22), he does not receive our Memar (Ieb, he will not obey our voice) (Jn 10:33-34).'

MEN, THE.—In the Gaelic-speaking portion of Scotland the 'Men' were for about two centuries the recognized leaders of religious thought, and the popular representatives of spiritual and evangelical worship. They were called 'the Men' because they were laymen, and not ministers. The circumstances in which they arose varied in different districts; the causes to which they owed their origin admitted of the differences from the original he does so in favour of the Hālakāh and popular usages:

Ex 23:20-24. Dt 15:16 are rendered: 'Ye shall not eat flesh with blood, "the fruit of the goodly tree" (Lot 24:9) is already called thory, 'The Passover shall be eaten in one assembly' (Ieb, tadd). The older maintain > he rigid it (D. the abominations; D. the ence Jn art. lljara revealed Adonai it its and Philo's distinct avoid before (Ex 25:18), and there was no evident deviation there when the Targums before the Peshitta reads, Peshitta explains. The former maintained that the Memra, therefore, is the deity revealed in its majesty and glory. The term is based on Gn 1, emphasizing the fact that the world came into being by divine command.

Onokloes used Memra when speaking of human authority: 'The Memar of Pharaoh (Ieb, the mouth of Pharaoh) (Gn 45:22), he does not receive our Memar (Ieb, he will not obey our voice) (Jn 10:33-34).

ment gives as one of the rules of the society: 'Thirdly, as the Word of God requireth, that we should consider one another, to provoke unto love and good works; therefore, if one or more of us see or hear anything unbecoming in the walk, conduct, and expressions of one another, that we be free with one another according to the Scripture rule: “Go tell thy brother his fault,” etc. (Mt 18:15); “Thou shalt not hate thy brother in thine heart, but shalt make thyself known to sin, and not suffer sin upon him” (Lv 19:17). It adds: 'We are aware that this our meeting together, out of different parishes, will be misconstrued; but, so far as we know ourselves, we have no divisive views in it; nor do we make a faction, and we desire to give none offence.' Soundness of judgment characterized their utterances and their conduct. Their activity was far removed from that fanatical enthusiasm into which religious zeal frequently degenerates. One exception, still referred to with bated breath, when referred to at all, indicates the general abhorrence of fanatical excess. They organized meetings for prayer and the reading of Scripture among the people. The first Sabbath school in Ross-shire was opened by one of them—Findlater, known as the 'Barnes' minister.' Be translated into Gaelic, many of them were experts in making a running translation from the English version into the language of the people. The more gifted among them considered the Word, and not a few became eloquent and powerful preachers, though lacking the training of the schools. The deep respect of the people for an ordained ministry was expressed in the fact that these spiritual guides, even when their influence was most powerful, were called not ministers or preachers, but 'the Men' ("na Deirme").

The evangelical spirit was kept alive in large districts, and the comforts of religion were administered in many a stricken home and in many a remote hamlet. They generally set apart one night of each week for prayer, and another for fellowship or conference. On the latter a portion of Scripture was selected to be the subject of discussion. This passage was referred to as the Bonn Ceist, or the 'Question.' The Men, each in turn, gave an exposition of the self-explaining or experimental religion, and thus their gifts of speech and of scriptural interpretation were developed. Fitness to expound Scripture in public assemblies, compelled the influenza blinded with intellect, secured recognition as one of the Men. This exercise became so popular that, whenever the Sacrament of the Lord’s Supper was administered, a day was set apart for the Men. Generally it was the Friday between the Fast-day and the day of Preparation. It was known as là na Ceist ("the day of the Question"). Great gatherings were expected when popular Men came to the Communion. Worshippers often travelled long distances, and from far and near; multitudes, who never became church members, attended faithfully on the Men's day.

The presiding minister opened the service with prayers and an exposition, the latter bearing on experimental religion, and the latter, in the case of the question which was to become the ‘Question.’ One of the more highly honoured of the Men announced a passage, indicating its bearing on Christian experience, and requesting speakers to deal with some such topic as "marks by which God’s children are distinguished from the world," "marks of true conversion," "marks of saving faith," etc. Then the presiding minister called upon the most aged and experienced Christians present to give the "marks" to their fellow-Christians. This service was generally held on the open air. Its popularity was such that the largest church could seldom contain the congregation gathered that day. 'To rise to the question.' On a Communion Friday stamped the speaker with the hallmark of public recognition. Henceforward his position was assured. He was one of the Men.

The popularity of the Men was a menace to the Church wherever its services were not characterized by evangelical faithfulness. Many of them would not take part of the Sacraments at the hands of ministers whom they did not revere as true, and approved ministers were prevented by ecclesiastical discipline from receiving those who held aloof from the worship of their own parishes. Resolutions against the Men were passed in Presbyteries and Synods, but all efforts to crush them only increased their popularity. The people believed in them, honouring them for the strictness of their lives, and frequently asserting that they were possessed of the gift of prophecy.

In earlier times, wherever the doctrines of grace were faithfully proclaimed, the Men were faithful to the Church, and they undoubtedly created a taste for the more spiritual and evangelical preaching which began early in the 19th century. With the revival of evangelicalism the special circumstances in which they proved a religious force passed away. Their aims were to return to the Bible and to keep that which they acquired are not readily abandoned. In many districts the Men heartily welcomed and warmly supported an evangelical ministry; in others they were only temporarily pacified with concessions. The estrangement continued too long. In parts of Sutherland, Inverness, and Ross-shire they continued to stand aloof, and in the more northern districts they formed a distinct and intolerant. Utterly disregarding all outward culture, they attempted to force upon the people a religion of loveless gloom. From one extreme it was easy to pass to others. Antinomianism was openly professed in some districts, and exorcism was practised in others. These fateful three were the spurious imitations of a life that had gone. In later times opposition to instrumental music and church choirs, a severe observance of the Sabbath, a blind devotion to the recognized translation of Scripture, a general condemnation of scholarship, and a zeal for the doctrine of election which merged into the quasi-heresy of the "Separatists." The more they diverged from the Church the more they developed contempt for all learning except a literal knowledge of the Authorizing Version of the Scripture. TheMen of Character were often called 'Separatists.' The more they diverged from the Church the more they developed contempt for all learning except a literal knowledge of the Authorizing Version of the Scripture. TheMen of Character were often called 'Separatists.'

But the old spirit has not altogether disappeared. A different type is occasionally met with. 'Men,' tender-hearted and spiritually-minded, still preserve the best traditions of a past age. In the absence of the minister one of these may be found here and there to conduct the Sunday service in church or meeting house. Standing at the precentor's desk, equally ready to give an extemporaneous address or to read a portion of some 18th cent. divine, he follows devoutly the usual order of service, except that he is open to suggestions of the benediction. These Men live saintly lives, they are honoured by the people, and they help to preserve the simplicity and spirituality of religion.

MEN OF GOD.—Ipyndi bozhi, or 'Men of God,' is the self-assumed name of a Russian sect who regard themselves as the only true worshippers of God; they believe that God is to be found only among themselves, ordinary Christians being, in their view, worldlings. By the outside
world they are usually known as 'Khlysti,' i.e. 'Flagellants,' though they themselves repudiate this title. As a matter of fact, they are essentially not flagellants but dancers, flagellation being a mere accompaniment of their dance, and not even a universal practice. The name is probably a corrup-
tion from 'Christis,' the oldest traceable title by which they designate themselves as those who lay hands in the name of Christ. In his encycl. rite, the

Although the Men of God have many 'Christis,' they are not a Christological sect in the proper
sense of the word, for their Christology is only one side of their doctrine; that is, to say, they are a secret sect who practise asceticism and fall into trances. Their principal means for drawing down the Spirit is dancing (radenije); other devices are the singing of songs, of which they have a great number, couched in highly poetical language, and fasts. A member of this sect who succeeds in receiving the Spirit in full measure becomes a Christ or even a God Zebooth (a Christ of the highest rank) or a Mother of God; those who receive the Spirit in a less degree are invested with the title of one of the apostles, or of the ecclesiastical saints, and honoured as prophets or confessors. In their belief, even Jesus of Nazareth first became a Christ only through receiving the Spirit at His baptism. While these persons have received the Spirit as a permanent possession, the ascetic community may obtain Him temporarily through the same means.

Besides severe and often protracted fasts, complete sexual abstinence is a feature of their asceticism. Those who enter the sect as married people must henceforth live as brothers and sisters. Others are, as a rule, not permitted to marry at all, but may take a young woman into their house as 'spiritual sister' in 'spiritual marriage,' exclusive of sexual intercourse. The latter constituted the trespass of Adam and Eve, and is condemned as the sin εφέσω; in accordance with this view, childbirth is regarded as extremely sinful, while women are described as 'little sin.' Generally speaking, the Men of God aim at a monastic style of living, their houses being arranged as convents and the women wearing a kind of nun's dress. Like all Russian sectaries, they enforce complete asceticism from intoxicating
liquors; even coffee, and in many communities tea also, is forbidden. On the whole the Khlystic system of morals lays so much stress on the mortification of the flesh (the renunciation of which they deny) that it has not been able to set up a practical ideal of life. Altruism appears among them essentially as sympathy, which has to display itself in the bestowal of alms. Besides practicing asceticism, they lay great stress on the voluntary endurance of persecution from the State and from the Church, and the sect is persecuted even to the present day as 'extremely pernicious.' In earlier centuries the persecution was extremely brutal; attempts were made to crush them by the rack and the scaffold, but in vain, and they furnished many martyrs. Since the beginning of the 19th century, the persecution became less cruel; condign punishment and transportation to the Caucasus and Siberia. The Men of God, however, seek to show the courage of their opinions not by open confession of their faith, but by concealment of it, and it is precisely their obstinacy in this matter that has often brought upon them increased severity of punish-
ment. The concealment of their belief is due to their view of the Holy Spirit, within them they regard as a power which shuns observation, revealing Himself in secret and averse from publicity. If a man talks about the Spirit, he loses Him. Consequently they are their ecstatic religious services secret, but they generally conceal the fact of their adherence to the sect. They outwardly conform to the State Church, and attend Confes-
sion and Holy Communion, although they spit out the wine after receiving, and never even put the wine into their mouths. At certain times of the year they celebrate a ceremony with kvev (a sour drink from a meal and muluk) or with water.

Any one who desires admission into the sect must, at an elaborate ceremony, conducted with an
extremely elaborate ceremonial, swear a solemn oath that under no circumstances whatever, not even under the severest persecution, will he disclose his beliefs or practices or to the ecclesiastical confessor. In reality this sect thoroughly despise the State Church as 'the world,' the kingdom of Satan, and regard the 'popes' (clergy) as Jewish priests and Pharisees. In opposition to the Orthodox Church, they are sure that they are the only true Church, the Kingdom of God on earth, because they alone possess the Spirit of God.

The services of the Orthodox Church are useless, since they dispense with dancing, the proper means for bringing down the Spirit from heaven.

The Men of God have also services in which there is no dancing; these are the 'usual confer-
ces,' and are conducted as part of the ascetic exercises. For these purposes they have an exposition of Holy Scripture; but they are only assemblies for attracting adherents, and they hint darkly at the 'better services.' In reality the source of religious knowledge of the community may be obtained from the reading of Scripture, but the Spirit which descends on them during the dance. Any one who feels the desire for the 'better services' must undergo long prepara-

The 'Christis,' 'Mothers of God,' prophets and prophetesses especially, but sometimes also the ordinary members of the community, when in the ecstatic state, break into impromptu doggerel, and prophesy the 'common fate' of their sect and the 'private fate' of individual members. This secret service closes with a common meal—'the love-feast,' 'the regathering of which they deny.' The ritual varies in the different congregations and even in the same congregation, according to cir-
stances. The Men of God do not believe, with the Orthodox Church, that a sacrament must have the prescribed form in order to be efficacious; in their view, the Spirit operates unfettered and creates for Himself whatever form He chooses. They seem to have special rites of their own, such as dancing round a fire by insulated individuals, or summer solstice. Here, doubtless, we have to do with a relic of Slavic heathenism, and vestiges of heathen ideas are also found in their songs and liturgical formulae. This rite, however, has received a Christian colouring in the vision of the 'golden Christ,' who appears out of the steam above the vessel.

The axtubin of sexual excesses and sacrificial rites to the Men of God appears, according to the Russian official reports themselves, to be utterly slanderous and merely a device of the State Church to combat the sect, and brand as hypocritical an asceticism which is more strenuous than her own.
Our earliest sources of information regarding the sect, which they call 'Christovostchchina,' are Yevrosin (who wrote in 1691), Dimitri, bishop of Kostov (who wrote between 1702 and 1709), and Theophylact Lopatinski (1745), and further information is found in the reports of two trials of Khlysti held at Moscow between 1733-39 and 1745-57. The first shows the sect reckoning its adherents for the most part in the Moscow monasteries, among monks and nuns and peasants connected with the monasteries; it also comprised some tradespeople. In the monasteries it seems to have marked a reaction against deeply-rooted immoralitry. It also spread beyond Moscow, to the district of Moscow itself, to Yaroslav and Uglich, and to the town of Yenov, south of Moscow. In the first trial Prokofi Lapunin, a soldier of the bodyguard (stridade), appears as 'Christ,' his wife, Akulina Ivanovna, and the nuns Natalya and Marfa (who were both finally beheaded in Petrograd) as 'Mothers of God.' Altogether more than 300 persons were condemned.

According to the reports of the second trial, the sect had considerably diminished in the Moscow monasteries, but, on the other hand, had spread much more widely among the population as far as Petrograd and in the government districts of Vladimir and Nijni-Novgorod, while, at the same time, Moscow maintained its central position as the headquarters of the sect.

Moscow was the scene of operations of the 'Christ's' Sergei Osipov, Vasilii Stepanov, and, more famous than these, Andreyan Petrov, who, known as the 'Happy Idiot,' had the entrée to the heart of the most of the modern pagans, and the paganda was there for the sect not entirely without success. The communities of Khlysti in other places also possessed 'Christ's' and 'Mothers of God.'

Lapunin and Petrov belong to the seven 'Christ's' named by the legend which describes the origin of the Men of God (as the seventh they reckon Selivanov, the founder of the Skopyt sekt, which split off from the Khlystovstchina in 1772). Since the reports of the trials prove the correctness of the assertions of their tradition regarding the sect's 'Christ's' and the 'Mothers of God' Akulina and Natalya, the tradition may be trusted as to what it relates concerning the earlier 'Christ's' Danila Philipov and Ivan Suslov. Of these the first is said to have also ranked as 'God Zebaoth' and 'Mother of God,' and founded the district of the 17th cent. in the government district of Kostroma, while the second, as his disciple, spread it in the Oka and Volga districts and introduced it into Moscow. The evidence of Dimitri and Theophylact as to the founder of the Khlystovstchina applies to Suslov; but ancient songs of the Khlysti speak of one 'Christ,' Averyan, who lived in the 14th cent., and of another, Yemelya, who laboured in Moscow in the time of Ivan the Terrible. The majority of Russian scholars consider the sect much older than historical information reaches. Although the attempt to derive it from the Chaldean or the Egyptian is pronounced unfortunate, owing to the decidedly Christian character of the sect, the suggestion which derives it from the Bogomils (g.v.) seems extremely unlikely; but, on the other hand, the Khlysti are entirely devoid of a trace of the Bogomilian cosmology, and they suggest rather the Messalians or Euchites (g.v.).

In 1744, Kostroma and Moscow maintained their central importance in an ideal sense as places hallowed by tradition, especially in consequence of the intense activity of the 'Mother of God' Ulyana Kudryavcova. The actual centre, however, was shifted in the middle of the century south-eastward into the government districts of Nijni-Novgorod, Samara, and Tambov, through the activity of Radayev and the 'Christ's' Vasili Shtsheglov and Avvakum Kopylov. The former, with his peculiar mystical teaching, and like some later 'Christ's,' takes a special place among the Khlystovstchina inasmuch as, by appealing to the trance-producing spirit, he caused asceticism to fall into absurdity and shrewdly showed the devotion of his female followers. On the other hand, Vasili Shtsheglov and the 'Christ's' resembling him have no immoral rites ascribed to them, but merely unchastity.

In the further course of the century the centre of the sect was pushed still further southward into the Caucasus territory, especially through the conspicuous energy of Kopylov's pupil, Perphil Katzansov. He and his followers again took the title 'God Zebaoth,' and ruled not only all the communities of the Caucasus, where the Khlysti, under their new name 'Shalupaty' ('secentaries'), lead a considerably harassed existence, but also those of Southern Russia upwards to Smolensk, each of which has its own 'Christ.' Many Khlysti communities honour as a 'Christ the orthodox Father John' or 'Jiaziy-Konstant,' famous through Russia for his faith-healing.

The Khlysti communities are not large, since they depend for their increase, as they must, on account of their sexual abstinence, almost wholly on proselytizing. Although they are generally to be found everywhere in the Russian Empire where there are Russian peasant folk, their total number, which can be only approximately reckoned, cannot exceed 10,000. Their significance for the national life, however, is, on account of their sober, industrious mode of life, far greater than this number would lead one to suppose. This article, the attitude of which is very different from that of Russian scholars, is based upon the writer's book, Die russischen Sekten, i. (Leipzig, 1907), which, besides the Khlysti, deals with such sects as the Skakuny, Malyovanny, and Panhistic kovyty, all of which are dependent of the different bodies of the Khlystovstchina. The latter have assumed special forms as they passed from the sphere of influence of the Greek Orthodox Church to that of the Lutherans, the Stundists, and the Molokani ('Milk-drinkers'). Among the Lutheran Finns of Ingermannland the sectaries are called Skakuny ('Jumpers'). Konidzati Malyovanny founded a sect at the middle of the 17th cent., and the sect of the Khlystovstchina and Stundism in Tarashchta in the government district of Kieff about 1890, and his teaching caused an epidemic of trance-phenomena. The Molokani-Khlysti are called Pyrguny ('Jumpers'). There were, and still are, numerous other bodies which, on account of some peculiarity, split off from the sect. Although the 'Worshippers of Napoleon,' who used to revere him as a 'Christ,' seem to have died out, the Adamites, who seek to get rid of modesty as a relic of the Fall, and, therefore, go naked at divine service and in their houses, still exist to-day. The sect of the Paniyashka regards their fanaticism directly possessed by the devil, and intensifies their asceticism accordingly.

LITERATURE.—The most important Russian works on the sect are: I. Dobrovolski, Lyubi bochki: Russia i slavnykh tak nazvyamikh khudozhnykh christian ('The Men of God: the Russian Sect of the so-called spiritual Christians'), Kazan, 1869; fragments of this have been translated into English in STB. A 4, xxvi (1883); DWA A 4, xxxiv, (1884) and xxxv (1885); N. Rentzov, Lyubi bochki it Slavnykh ("The Men of God and Skopytsi"), Moscow, 1857; K. Rentzov, Sekty Khlystov i Skopytsi ("The Sects of the Khlysti and Skopytsi"), Kazan, 1896; Skashorov, "Zlaty Khlystovstchina," A. Rochebestewski, "Sektas i Skopytskosti v Rossii ("Khlystovstchina and Skopytsim in Russia"), Moscow, 1853. There are also numerous articles to newspapers. K. Grabs.
MENCIIUS. I. Life.—Mencius, or Meng-tee (371-288 B.C.), second only to Confucius in the annals of orthodox Chinese philosophy, was born in Ts'un of a family whose ancestral home was in Lu, the native State of Confucius. While still very young, he was not from lack of ability, but simply from want of environment, educated by his mother, who is famous among the women of China for the care with which she brought up her son. Nothing is known of his other preceptors. He is said to have been the pupil of the school of Confucius, whom Mencius regarded as supreme among men, and proposed to himself as example (Mencius, ii. 1. 2; iv. ii. 22). When we get certain knowledge of him, he is a person already well known and respected by disciples, and from one State to another according as the reception of himself and his doctrines was favourable to otherwise, accepting such gifts as he deemed consistent with his self-respect, and devoting himself to the exposition of his views on ethics and politics. This he did with acumen and considerable liveliness, frequently using illustrations, some of which are famous.

From the man of Sun, who assisted his corn to grow long by piping it up, we are to learn the need of patience in the desire to bring the state of a child under the rule of affectionate morality (iv. ii. 2). The constantness of infancy is not putting an immediate end to unrighteous practices is illustrated by the case of the pig (iv. ii. 3), who replied to one who reproposed with him, ‘I will diminish my appropriations, taking only one fowl a month till this year. And then I will make an end of the practice’ (iii. ii. 8). The Niu mountain, whose natural vegetation is destroyed by man and cultivated hills and the breed of cattle, is a figure of human nature, which, through the occurrences of daily life, loses its native goodness and cannot regain it during the brief reprieve of the night or the calm of sleep (iv. ii. 8).

In addressing himself to the princes and governors of his time, Mencius may sometimes have been guilty of undue compliance with the faulty dispositions of those with whom he dealt (i. ii. 5); if so, it was from no unworthy motive, but only to save his mission from the want of his teaching. For the most part he spoke his mind with an admirable freedom, not overawed by ‘the pomp and display’ of the great (VII. ii. 34), and acting according to his own teaching that respect is best shown by giving righteous counsel (ii. ii. 2). Mencius is quite conscious of his own worth. He alone in his age could bring tranquillity and good order to the empire (ii. ii. 13). His words will never be surpassed by any future sage (iii. ii. 9). He has, accordingly, a keen sense of the respect due to him (ii. ii. 11, iv. i. 24), though he occasionally employs unworthy shifts to maintain his dignity (ii. ii. 12). Loyalty to the tradition of the Confucian teaching (VII. ii. 33), he regarded it as an urgent duty to oppose the teachings of Yang and Mo (iii. ii. 9). He did with vigour and acuteness, while always willing to receive repentant heretics without reproaches, not tying up the leg of a pig which had already been got back into the pen (VII. ii. 26). The last twenty years of his life Mencius spent in Lu, where, with the assistance of his disciples, he prepared that sole record of his teaching which is called by his name and now forms one of those standard writings known as The Four Books.

2. Ethics.—Mencius’s view of human nature is fundamental. Man’s nature is good in the sense that ‘from the feelings proper to it it is constituted for the practice of what is good’ (vi. i. 6). The four cardinal virtues—benevolence, righteousness, propriety, knowledge—are not infused into man from without, but have their rise from the feelings of commiseration, of shame and dislike, of modesty and compliance (reverence and respect [VII. iv. 3]) of approving and disapproving (II. i. 6). These four principles are accepted as psychological facts not reducible, e.g., to any form of self-interest (II. i. 6). All that is needed for perfect virtue, in which a man becomes possessed of himself (III. i. 4), is that these innate principles be developed (I. i. 6, VII. i. 15; cf. also ‘All things are already complete in us’ [VII. i. 4]; and for this human nature is self-sufficient; failure arises not from lack of ability, but simply from making the necessary effort (I. i. 7, IV. i. 10).

From another point of view Mencius analyses human nature into chieh (‘mind,’ ‘will,’ ‘roi’) and ch‘i (‘passion—nature,’ ‘will’) of the two. The latter, the passion—nature with rightness is to be accomplished only by persistent practice of rightness; but, given a mind set on rightness, this result necessarily follows (ii. i. 2). The violent suppression of the passion—nature, by which the integrity of a man’s being is impaired, must be distinguished from the abscission of desires in an ethical interest (VII. ii. 35). Mencius in basing his ethics on human nature, appears to have been not unaware of the ambiguity of the term ‘nature.’ Such seems to be the drift of a Socratic argument in which he maintains that ‘the nature is not to be confounded with phenomena of life’ (VI. i. 3 [Legge’s tr.]). Elsewhere he points out that there are desires which are natural, but in connexion with them there is the appointment of heaven, and the superior man does not say of them, ‘It is my nature.’ There are also moral propensities which are the appointment of heaven, but which the superior man recognizes rather as natural (VII. ii. 12). In things equally natural there is a gradation of worth, which can be recognized by thinking (VI. i. 14 fl.). Moreover, the sense of shame, which a man may not lack (VII. i. 6), is the quality of being a moral constitution, which alone is properly human. In the possession of this nature, good in its composition, all men are alike, evidence of this being found in the fact that, as in matters of physical taste, music, and beauty there are common standards, so also is it in morals (VII. i. 7). This originally good nature is the child heart (IV. ii. 12), which differentiates itself from the human heart of the sages into the man of the lower grades (IV. ii. 11). Possessing it the ordinary man is of one kind with the sages (II. ii. 2, III. i. 1), who simply have apprehended before me what my mind also approves (VI. i. 7). The sages, however, are unimpeachably what other men attain to by effort (IV. ii. 19, VII. ii. 33), though they, too, ‘learned from other men (II. ii. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the grand aim of education is its recovery (VI. i. 11). Morality is the supreme task laid on each man (IV. i. 19), which requires unremitting diligence (VI. i. 9, VII. ii. 21). Nothing can be done with self-satisfied conformists to current standards, those ‘thieves of virtue’ (VII. ii. 37); for it is necessary that morality should criticize itself (VII. i. 5). The way to sage—like virtue begins in the proper duties (VI. ii. 2), and the carrying out of principles already possessed by all (VII. ii. 31). Vigorous action according to the law of ‘reciprocity’ is the closest approximation to perfect virtue (VII. i. 4). It is also perhaps hinted that virtue is the mean between extremes (II. i. 9, IV. ii. 6 f.; 10). For self-direction it is the greatest importance to estimate the mind, i.e., to become acquainted with the real mind, and to find out the main second thoughts are often best (IV. ii. 23). Life presents a series of alternatives of which the higher is, by reflexion, to be chosen in spite of...
the seductions and obscurations of sense (VI. i. 15). Righteousness is to be preferred to life itself (VI. i. 10). The righteous is beyond the reach of calamity (IV. ii. 28, VII. i. 21). The only inevitable calamity is self-incurred (IV. i. 16). True greatness is to practise virtue for the sake of oneself and of others, superior to the seductions or threats of riches, honours, poverty, and force (III. ii. 2). To rejoice in virtue breeds neglect of public welfare which is the perfection of music (IV. i. 27; cf. vii. ii. 21).

Benevolence, righteousness, self-consecration, fidelity, with unwavering joy in these virtues—these constitute the nobility of Heaven' (VI. i. 16). Realized virtue is sure of a transforming influence on others (IV. i. 12); failure to evoke a response should lead to self-examination (IV. i. 4). Virtue cannot be selfish; to find purity by withdrawing from all contact with evil one must become an earthworm (III. ii. 10). Each man is responsible to the extent of his moral attainment for the instruction of others (V. i. 7), and to instruct others is the greatest duty (II. i. 5, III. i. 4), while neglect of this duty degrades the virtuous to the level of those whom they should teach (IV. ii. 7). Of the special virtues, filial piety is the most important. Men show piety to their parents, as Mencius quotes the definition of it as serving one's parents with propriety, burying them with propriety, and sacrificing to them with propriety (III. ii. 26). Piety is the greatest of all duties, for it is the root of all others; it has regard not only to physical sustenance, but to the wishes of the parents (IV. i. 19); and it takes unquestioned precedence of duties to wife or children (IV. ii. 30). Filial piety completely itself in the funeral rites (IV. ii. 13); and, in view of the importance of sacrifice to ancestors, lack of posterior sacrifices is the gravest instance of unfaithful conduct (IV. i. 35).

3. Politics.—Mencius has no scheme of social reconstruction. Existing social usages (e.g., conubinage) and the existing political arrangement—an empire consisting of small States, each with its own king, but owning the supremacy of one State whose ruler is emperor—all this Mencius simply accepts. What he concerned with is the rectification and improvement of the existing social framework. He follows the current analysis into the five relations of father and son, sovereign and minister, husband and wife, old and young, friend and faithful servant. He tries to harmonize the corresponding virtues, affection, righteousness, harmony in difference, order, fidelity (III. i. 4). Of these relations that male and female should dwell together is the greatest (V. i. 2) and within the family we have in service of parents and obedience to elder brothers the fundamental exemplifications of benevolence and righteousness (IV. i. 27, VII. ii. 15). Mencius opposes any such obliteration of natural relations as he finds in Mo's doctrine of universal love. Men have 'a root,' i.e., they have a special relation to their parents and therefore a special duty corresponding thereto (III. i. 5). So, too, Mencius opposes all pantheistic schemes, and teaches that society implies a differentiation of function in which those who labour with the mind govern, and those who labour with their strength are governed (III. i. 4). Without this the teacher of righteousness has his due place (III. ii. 4). In Mencius's doctrine of the State two points are to be noted especially: the emphasis on morality and good government, and the insistence on the force, but on willing submission accorded to virtue (II. i. 3, IV. ii. 16). If the ruler be virtuous, his influence will extend to all his subjects (IV. i. 29, ii. 5). There is no secret of statescraft—it needs only that the ruler give scope to the innate goodness of his nature (I. i. 7, II. i. 6). Let him dismiss all talk of 'profit,' and think only of benevolence and righteousness (I. i. 1). In the disordered times of Mencius such a benevolent government, having regard for the people's welfare (IV. i. 3, 9), would be immediately successful (II. i. 1). The truly benevolent ruler has no enemy within the empire (VII. ii. 4). Rulers are the shepherds and parents of their people (I. i. 4, 6), and must make it their first aim to treat them (the people) with kindness (VII. i. 7). They have a certain livelihood, for without that they will abandon themselves to crime (I. i. 7). Mencius is very emphatic on the necessary precedence of a sound economic conditioner by the voice of the people (I. i. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the panegyrist is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. i. 10), and in accordance with it a prince may rebel even against the emperor (I. i. 3). For a sovereign must exist in society and becomes a 'mere follow' (II. i. 5), and, if not removed by the members of the royal house (V. ii. 9) or other ministers (VII. i. 31), he may be removed by the public. For the main qualification for being a minister, since those who have good thoughts will gladly lay them before him (VI. ii. 13). Let the ruler be guided in the appointment and dismissal of ministers by the voice of the people (I. i. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the panegyrist is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. i. 10), and in accordance with it a prince may rebel even against the emperor (I. i. 3).

All wars of ambition are condemned (IV. i. 14, VII. ii. 2), and ministers who encourage the ambitions of their prince are 'robbers of the people' (VI. ii. 9). If right government prevails in the empire, the princes of the feudal States will be submissive one to another in proportion to their virtue, and not in proportion to their strength (IV. i. 7). As for the details of a truly benevolent government, 'never has any one fallen into error who followed the laws of the ancient kings' (IV. i. 1), whence sovereigns should imitate Yao, and ministers Shun (IV. i. 2, vii. ii. 10).

4. Religious. Mencius' belief in the divinity of the writings of Mencius to religious worship is merely incidental, and show that he accepted without criticism such worship of spirits and of ancestors as was then current. Of more interest are his references to heaven. He quotes, with approval, from the Shu King, or Book
of History, the saying that heaven, having produced the inferior people, appointed for them rulers and teachers to be assisting to God (i. ii. 3). As heaven protects all, so, in glad imitation, should the ruler of a great State protect a small State, while the ruler of a small State should recognize the deere of heaven and be willing to serve the superior State (vi. ii. 1). Such obedience to heaven ensures preservation, while disobedience entails destruction (iv. i. 7). So, generally, 'calamity and happiness are men's own seeking' (ii. i. 4), although heaven's deere and man's casuality are both recognized:

'That which happens without a man's causing it is from the ordainance of heaven' (c. i. 6).

There is a decree for everything, and a man should receive submissively what can be correctly ascribed thereto; but he who understands what is meant will not stand under a precipiious wall, nor can he under feters be lustily ascribed to heaven's decree, though death in the discharge of duty may be so attributed (vii. i. 2). Man's duty, therefore, is to do the right and leave the issues to heaven (vii. ii. 1), which in its painful discipline of individuals has moral ends in view (vi. ii. 15, vili. i. 18). From man's nature we can know heaven; and to preserve one's mental consti-
tution he should not read and much one's nature is to obey a man (vii. i. 2). To have no shame before heaven is one of the things in which the superior man delights (vii. i. 20). Heaven is the realized ideal after which man aspires (iv. i. 12). Specially suggestive is this saying:

'Though a man may be wicked, yet if he adjust his thoughts, feel and behave like a man, be not that called Shih-kung' (tr. ii. 36; for the full composition of Shang-ti see art. Go [Chinese]).

§. In conclusion a few miscellaneous points may be noted. Monusus indicates the correct method for understanding Nature by obedience and not by violence in the investigation of her pheno-
mena (vii. ii. 26). He gives us a good canon of interpretation:

'Those who explain the Odes [i.e., the classical Shi King] may not insist on one term so as to do violence to a sentence, nor on a sentence so as to do violence to the general scope' (c. i. 4).

To this may be added his comment on the Book of History, which may perhaps be generalized:

'It would be better to be no book of History than to give entire credit in it' (vii. ii. 3).

P. J. MACLAGAN.

MENDELSOHN.—Moses Mendelssohn, otherwise Rabbi Moses of Dessau, philosopher, writer, and Bible translator, was born 8th Sept., 1729 at Dessau, where his father, Mendel, was a poor scribe and teacher in a family descended from Rabbi Moses Isserles, a distinguished Talmudist and philosopher of the 16th cent., known as 'Rena.' Moses Mendelssohn was taught Rab-
binics by the local Rabbi, David Fränkel, who published a commentary on the Palestinian Talmud in 1742. Fränkel was called to the Rabbinate of Berlin in that year, and the young student followed him there in 1745.

At Berlin Mendelssohn was taught French and English by A. S. Gumpertz, and taught himself Latin and Greek. His German philosophy was inspired by the study of Maimonides' Guide of the Perplexed.' He earned a precarious livelihood as tutor in the home of a well-to-do Jewish silk merchant, Isaac Bernholt, whose warehouse he afterwards, and throughout his life, was employed as book-keeper. His evenings and all his leisure he devoted to philosophy. He was a follower of Wolf and Leibnitz, but was much influenced by the English sceptics and by Locke and Shaftesbury. His acquaintance with Lessing, who was also born in 1729, began in 1754, when he defended Lessing's drama Die Juden against ad-
verse criticism. Lessing became his lifelong friend, and aided his publication, should the next year Mendelssohn translated Rousseau's Discours sur l'origine ..., de l'inégalité parmi les hommes, though he ridiculed the author's partiality for man in the forests. Though M. Steinemachers (Cat. libr. Hbr. in Bibl. Bodleiana, Berlin, 1852–60) enumerates 39 separate Hebrew works of his, and though he wrote Hebrew poetry when a child of ten, it is as a writer of classical German that Mendelssohn became famous. His essay on aesthetics, Von Erhabenen (1757), was studied by Schiller and Herder. In admiration, rather than in Lessing's pity and terror, he found the moral object of Tragedy. The stories about his friendship with Frederick the Great are legendary. On the contrary, he criticized the king's Polonia diversa in 1766, and found fault with him for writing in French. The royal dialecius Metra so great that he was threatened with expulsion from Berlin, but the Marquis d'Argens intervened, and as a 'philosophu maurus catholique' pleaded for his Majesty as a 'philosophu maurus protestant' to grant to the 'philosophues maurus just' the privilege of residence.

In 1768 Mendelssohn was awarded by the Berlin Academy a prize of 50 ducats for his essay Über die Erschein der metaphysischen Wissenschaften. In 1771 the Academy elected him a member, but Frederick the Great refused to confirm the appoint-
ment, and no protest, not even that of Queen Ulrica of Sweden, was of any avail to get the king to alter his decision with regard to the 'berühmter Jude.' Among his own brethren, and especially in Berlin, Mendelssohn enjoyed the highest esteem. In 1764 he was chosen from Jews, and in 1772 further honour was shown to him by his co-religionists.

His Socratic Dialogue called Phaenon, oder über die Unsterblichkeit der Seele was published in 1767, and created an immense sensation. It was translated into nearly all European languages. A Hebrew translation by I. B. Bing, with a preface by N. H. Wessely, appeared in 1757, and an English translation by Cullen in 1771. The work showed a notable reaction against the free thought of Voltaire, and was welcomed by the learned as well as by those in high places, from Winckelmann to Prince Carol of Brunswick. It was the first book of philosophy read and discussed by Goethe and later by Schiller, and dissuaded from suicide many disappointed or degenerates. Mendelssohn rapidly acquired a unique position among the intellectuals of Berlin. His chief friends, besides Lessing, were Hamann, Gleim, Wieland, and Herder, and the Swiss writers Zimmermann, Iselin, Gessner, and Lavater.

The last was the famous physiognomy, immortal-
ized by Darwin; but it was in his capacity as a very zealous pastor that he caused the Jewish philosopher much trouble and annoyance. He publicly dedicated his translation of C. Bouyon's Policingisi philosophique (1769) to Mendelssohn, and urged him to abandon Judaism and become a Christian. The Jew, having obtained the sanction of the 'Cour de Cassation,' wrote Schreiben an den Herrn Diakonus Lozzer zu Zirich (1770), manfully defending his position. It was not only yesterday that he had examined the evidences of his own religion. What but conviction would induce this self-styled pietist, converted Jew? He would never change his religion.
This reply produced a storm of protest. J. B. Kolbele in his Antiphonade (1770) was among those who leaped invective upon him in various pamphlets, of which his best biographer, M. Kayserling, gives a full list. Next year an anonymous Pro memoria appeared in his defence.

The attack, though it injured his health, turned his thoughts to Judaism, and as early as 1761 he had prepared a Hebrew Commentary on the Logia of Maimonides, and had presented the MS to one Samson Kalin, who published it as his own. The book was attacked, and so far as his influence on his co-religionists was concerned, was his translation of the Pentateuch into classical German with a biir, or commentary, in Hebrew. His first assistant was Solomon Dubno († 1819), who quarrelled with Mendelssohn 1780. Mendelssohn’s brother Saul took Dubno’s place in the translation of Exodus, but Hartwig Wessely, a scholar born rich, but afterwards impoverished, later became his chief collaborator. This translation of the Pentateuch met with much opposition from the orthodox Rabbis Landan, Jacob Lissa, Eljah Wulfs, and Hirschel Levin (formerly chief Rabbi of London and then of Berlin) because of what they thought a heretical mistransliteration in Lv 19, where ‘thou shalt rebuke thy neighbour’ was toned down to ‘casts’; but the storm of opposition was chiefly through the spirit of the Italian Rabbis, who, through orthodoxy, were also enlightened.

Mendelssohn’s translation of the Psalms, which had been begun before 1770, was not completed for five years after the quarrel that took up the work only spasmodically and just when some particular Psalm suited the mood of the moment. It was intended for Christian rather than for Jewish readers, and it was first printed in German characters, not Hebrew. The publisher Maurer bought the MS for 500 thalers and published it in 1783, but lost money by the publication; next year it was published in the Brockhauch with a biir by one Joel Löwe. The Song of Deborah and the Song of Songs were the other Bible translations completed by Mendelssohn.

His commentary on Ecclesiastes he had published anonymously in 1769. It was clear and sympathetic, but, though greatly admired by Herder, is notable chiefly for a novel division into sections, differing from the traditional chapters. Mendelssohn’s opponents were critical of these, and Bishop DSL Michaelis, the editor of these, and Bishop DLS Michaelis, the editor of the Jewish Liturgy, was also translated by him, viz. the Haggada, a Passover service—a fact which seems to have escaped the notice of bibliographers.

In 1770 Mendelssohn collected money—and students—for the unsectarian college ‘Philanthropin’ of Dessau. In 1781 he and his rich disciple, Isaac Daniel Izaic, founded the Jewish Free school in Berlin, the first institution of the kind, where not only Bible and Talmud, but also German, French, and sciences were taught by Jewish and Christian teachers. Similar institutions were afterwards founded on the same plan in Breslau and other cities.

After his wife’s death, Lessing had to battle for tolerance in his Anti-Goeze, and conceived the idea of meeting the theologians with a comedy, which was the origin of his famous drama Nathan der Weise, which appeared in 1778, and which was in some respects a development of his youthful production. Lessing’s idea of the play on the story of the Jew Melchizaek in Boccaccio’s Decameron. About no German work except Goethe’s Faust has so much been written.

Mendelssohn, Recha his daughter Dorothea, the templar Lessing, the Swiss widow Deja is intended for Lavater, the dervish is Mendelssohn’s mathematical friend Abraham Wolf Rechenburg, and so on. The play itself is not a plea for Jews and Judaism, but for toleration and his thought of Judaism as a religion of all kinds. In Vienna it was consecrated. The controversy engendered by Nathan der Weise led to a plea for the civil emancipation of the Jews by C. W. von Bunsen († 1871), who also decried the prejudice against Jews.

In 1878 Mendelssohn published a translation of Manasseh ben Israel’s Esquonose de Israel (Amsterdam, 1693), with an introduction pleading for emancipation. Mendelssohn was opposed to a Jew or for being a ‘wobbler’ between Judaism and Christianity, and this induced him to write his Jerusalem (1783), a work on religious power and Judaism. In a book, translated into English in 1788, he vindicated his Judaism and explained why he was not a Christian. It is a plea for the separation of State and Church, and urges that ‘Kirk, Synagogue, and Church are not one religion. Judaism, he urged, has no dogmas or chains upon belief; Joseph Albo († 1445), who had reduced the thirteen creeds formulated by Maimonides to three (cf. EIZE IV 2480), was no heretic. Judaism requires not a legal but a moral law, but tolerated complete liberty of opinion.

In a Reader for his children, Mendelssohn substitutes in the creeds the words ‘I recognize as true and certain’ for the words ‘I believe.’ Ceremonial laws he regarded as a sort of living scripture and the great bond between Jew and Jew, urging that, even if their utility were no longer clear, they were still binding. Actions are our duty, but creeds, symbols, and formulas are the fetters of reason. In this way he reconciled the denials of Leibniz and the English deists with revealed law. His Jerusalem and his unfinished Betrachtungen über Bonnets Palingenese are both pleas for toleration, but not for uniformity of belief. In both he warns his disciples against prejudice, superstition, and even enthusiasm. Jerusalem expressed his firm conviction that it was incontrovertible, and wrote a highly appreciative letter about it; Mirabeau said that it ought to be translated into every European language; Michaelis found fault with its condemnation of Anglican bishops for consenting to sign the Thirty-nine Articles, and Mendelssohn had to explain his position in the Berliner Monatschrift, of which he was one of the founders in 1773. By some contemporaries he was attacked as an atheist and by others as a ‘Talmud Rabbi,’ but he saw no inconsistency between his philosophical belief and his faith. His Hebrew works are written entirely from the Rabbinical standpoint, and he was a good Talmudist, as is proved by his correspondence with Jacob Emden.

Mendelssohn’s Morgenstunden, like his Bible translation, was in the first instance intended to lead his son Joseph to a true belief in God. Its publication, in 1755, was designed as a refutation of Spinoza itself as well as of the charge that Lessing was a Spinozist. In 1838 Alexander von Humboldt, in a letter to M. Mortara, described him, in his youth, he and Mendelssohn’s sons had heard these very Morgenstunden given forth by the philosopher. Lessing founded the play on the story of the Jew Melchizaek in Boccaccio’s Decameron. About no German work except Goethe’s Faust has so much been written. In
were to be treated in the second part. Its philo-
sophy is an attempt to advance upon the sensualism
of Wolf by the help of English empiricism. He
claimed that human common sense, when working
hand in hand with reason, was infallible.
Though self-taught, Mendelssohn was neither a
dilettante nor a popular philosopher. Hegel de-
precates him as a philosopher, but, as a writer of
German prose after Goethe and perhaps Lessing,
his characteristic was its Socratic irony. A
predecessor of Kant, his writings are far easier
to understand and himself was proud that the
Jewish scholar had attended one of his lectures,
and was always polite to him, though he expressed
disappointment that Mendelssohn had not reviewed
his 'Kritik der reinen Vernunft,' when it appeared
in 1784. Simultaneously with the publication of
the Morgontiunden appeared F. H. Jacob's treatise
Uber die Lehre des Spinoza an den Herrn Moses
Mendelssohn. Lavater had rebuked him for not
being a Christian; Jacob now charged him with
atheism. He was profoundly disturbed by what
he considered a cruel attack, and retaliated with
his Address an die Freundes Lesungen. He brought
the whole matter before the court on 31st Decem-
ber 1755, and died two days later of a paralytic stroke.
There is little doubt that Jacob's attack, in which
Lavater, Herder, and Goethe had all sided against
the Jewish philosopher, brought about his end.
He left three sons and three daughters. His
Joseph and Abraham founded the famous
banking house of Mendelssohn and Co., which
still exists. The former in 1840 reviewed Kossetti's
Daniel. The latter, Mendelssohn was
Abraham's son; another grandson, G. B.
Mendelssohn, edited the philosopher's complete
works in 1843-45.
Mendelssohn's first biographer, his pupil I. A.
Euchel, described him as short and broad-
shouldered, but feeble and pigeon-breasted, with
thick black hair, dark complexion, bright eyes,
and high forehead, a voice soft and gentle, and in
conversation crisp and persuasive, but never long-
winded (Tödlich Rambam, Berlin, 1756).
There is much difference of opinion among Jews
as to whether his influence has been beneficial to
them. The general sentiment is that it has proved
better for Jews than for Judaism. His
chief opponents were the 19th cent. Russian
intellectuals known as the Maskilim, especially
Peter Parnin, who deplored the rise of denying
Jewish nationalism, belittled his knowledge of
the wisdom of Israel, and characterized him as a
merchant rather than a Rabbi. Yet without doubt
he was the first and most typical of modern Jews,
the first to identify himself with another nation
and yet remain a Jew.

Mendelssohn's work is relatively important. His
study of the Jewish Bible and of Jewish history
proved of inestimable value to their history and
was of great importance to the science of histori-
graphy. His "Religion of Judaism," which he
published in 1783, is still the best and only
work on the subject.

MENNONITES.—Mennonites is the name
applied to three bodies of groups, namely,
(1) the Mennonites of Canada; (2) the Amish,
known as "Plain People" in Germany; and
(3) the Brethren from the United States.

Mennonites (1) are a distinct branch of the
Church of the Brethren. They are descendants
of the Brethren who migrated with others to
Canada in 1817 and 1818. The origin of the
Church of the Brethren is traced by some
writers to the Peace Church of the Swedes
in Sweden, but others attribute it to a
meeting of Brethren at the beginning of
the 17th cent. in the Netherlands.

The Mennonites (2) are a sect of German
origin. The word "Mennonite" is derived
from the name of the leader of the sect,
Menno Simons (1536-1609). He was
a member of the Catholic Church who
became a Protestant and joined the
Swiss Brethren. He refused to take
the oath of allegiance, and fled from
Switzerland to the Netherlands. There he
founded the Church of the Brethren, which
proved to be the forerunner of the
Mennonite Church. The Mennonites
are distinguished by their simple
dress and their refusal to bear arms.

The Mennonites (3) are a sect of Swiss
origin. They are the descendants of
Menno Simons and his followers. They
are distinguished by their simple
dress and their refusal to bear arms.

Mennonite MSS..—The Mennonites
have a large number of MSS. in their con-
gregations. These MSS. are used by the
members of the congregation in their
devotions and in their religious
instruction. They are also used as
texts in the Sunday School and in
the Sunday School classes.

Mennonite MSS. are divided into three
categories: (1) the Old Testament
MSS.; (2) the New Testament MSS.; and
(3) the Apocryphal MSS.

The Old Testament MSS. are used by
the members of the congregation in
their devotions and in their religious
instruction. They are also used as
texts in the Sunday School and in
the Sunday School classes.

The New Testament MSS. are used by
the members of the congregation in
their devotions and in their religious
instruction. They are also used as
texts in the Sunday School and in
the Sunday School classes.

The Apocryphal MSS. are used by
the members of the congregation in
their devotions and in their religious
instruction. They are also used as
texts in the Sunday School and in
the Sunday School classes.

LITERATURE.—M. Kayserling, Moses Mendelssohn, Leipzig,
1862, "1868, is the standard biography; H. G. R. Mann, Die
Mendelssohns, auf der Reformpolitik des Juifs; J. Boelke,
Dichter der Judenzeit, 1788-1819, Berlin, 1879; M. Mendelssohn,
Moses Mendelssohn, das Leben und das Werk, 3 vols., Berlin,
1879; M. Mendelssohn, Moses Mendelssohn, d'alt et de son
temps, Paris, 1880; M. Kayserling, Moses Mendelssohn und
die Verleumdung des Juden, Bonn, 1884; J. Schreiber, Moses
Mendelssohn und seine Verdienste um das Judenthum, Bonn,
1885; A. von Ritter, "Moses Mendelssohn, das Gottheits-
Manuskript, Hebrew Manuscript (18 Adler no. 153); A. S. Isaac,

E. N. ADLER
and Mrs. A. Bros; and, in 1884, in order to prevent the decline of their little number, the Mennonites founded the Vereinigung der Mennoniten-gemeinden im deutschen Reiche (the Union of the Congregations of Mennonites in the German Empire). Their periodical, Mennonitische Blätter, has been issued since 1854.

They have congregations in Alsace, the Bavarian Palatinate, Baden, Wurtemburg, Hesse, Nassau, and the lower part of the Rhine, in Westphalia, East Prussia, and, in West and East Prussia.

In 1874, and, after the church. In 1878, they emigrated to France. freedom was promised them in the document the magistrats. In a manly and Christianlike spirit they declared: 'Freedom of conscience reigns here, which is right and rational, and personal freedom ought to reign here for every one, criminals of course excepted. In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, 'Pennsylvania Dutch.'

(c) France. — In France the Mennonites held their first conference at Toul in 1901; their paper, Christ, appeared in 1908.

(d) Russia. — An emigration of Mennonites to Russia took place when the celebrated empress Catherine had promised them great territories in her empire, where they would be permitted to live according to their own religion and customs. About 3500 left Prussia in 1785; and many others followed them until 1824. At first they suffered many trials, not the least of which were due to discord among themselves. As they persisted in their belief in apostolic succession, their congregation was needed among others, so was imposition of hands. They prospered, however, in their new fatherland, which gave a shelter also to the fugitive Mennonites from Hungary. At present their position is that of Jekatierinoslaw and Tauria, Warsaw, the Crimea, Samara, Caucasus, and Chiva. In their colonies the school management is excellently ordered, the church affairs are managed by the elders of the congregation, the preacher selected from among the brethren, fulfilling not only the duties of their ministry, but also those of their civil calling.

In 1874 a great danger threatened the Mennonites: excommunication from military service was abrogated, and thus the privilege conceded to them by the empress Catherine and the emperor Paul was annihilated. Large numbers of Mennonites prepared to quit Russia; in the years 1874–80 more than 15,000 left for America. This made an impression upon the Russian government; the emperor sent the minister, F. E. I. von Todt-Beben, to them; after mutual deliberation the resolution was made that the Mennonites could perform their military duties in the forestry of the State. This favourable arrangement has been maintained ever since; the Mennonites, however, according to their oldstyle idea, have always sought to relieve the sufferers of war.

(e) America. — The Mennonites are far more numerous in America than in any other country. The first colonists were Dutchmen who, about 1650, settled in New Amsterdam (now New York). Under the pressure of the heavy persecutions in the Rhine-land, thirteen families at Crefeld resolved to emigrate to the New World. They landed on 6th October 1653, three pioneers having already bought 8000 acres of land in Pennsylvania from William Penn, and they founded Germantown (now part of Philadelphia). Seven other families followed in 1658; and from that time the emigration continued during the whole of the 18th cent. and still more during the 19th. In 1820 Swiss Mennonites came to America, followed in 1839 by many South Germans, and afterwards, as we have said, by whole congregations from Russia, besides one from Galicia and one from West Prussia. The estate immigrants formed many friendly connections with the Quakers and other sects, but they preserved their independence. They came with the hope of remaining free from all hindrances in following their own traditions and institutions; some of them even entertained the desire to establish in the New World the true Kingdom of God according to His Ordonnance. It was only after long deliberation that they dared to entrust the ministry of baptism and of the Lord's Supper to an elder who had not received the imposition of hands in Europe; and even now the most rigid of them will not permit their fellow-members to enter a 'church.'

The Mennonites have a great regard for their past history — and not unjustly. Their forefathers were the first to protest against slavery; they committed their scruples to writing on 16th April 1685, and delivered the document to the magistrates. In a manly and Christianlike spirit they declared: 'Freedom of conscience reigns here, which is right and rational, and personal freedom ought to reign here for every one, criminals of course excepted.'

In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, 'Pennsylvania Dutch.'

The Mennonites in America are divided into: (1) Old Mennonites, the great majority; their periodicals are the Mennonitische Rundschau and The Herald of Truth (the Germ. ed., Herald der Wahrheit, has ceased to appear since 1901—an evidence of the influence of the杂志 among them); (2) Anab'h Mennonites; and (3) the 'General Conference.' Since 1860 the last-mentioned party has endeavoured to form an organization between all the Mennonites of America, respecting the autonomy and the peculiarities of each congregation. The foundation of Bethel College at Newton, Kansa, was favoured by them. 1

2. Characteristic. — Wherever Mennonites are found — in Switzerland or in Germany, in Russia or in France, in the United States or in Canada — they are known as excellent husbandmen, simple in their manners, blameless in their behaviour, honest, conscientious, and diligent, so that most of them are in easy circumstances. In consequence of their seclusion the civilization of later times has had little influence on them; they are very conservative and often suspicions of opinions which differ from their own. (An exception must be made in the case of the German Mennonites who live close to the frontiers of the Netherlands—East Prussia, Westphalia, and on the Rhine; they have been influenced by the Dutch and the French, below.] They have remained where their forefathers stood three centuries ago; in order to understand their opinions, it is, therefore, necessary to understand the writings composed by their fellow-believers in the 16th and 17th centuries.

3. Religious beliefs. — The oldest defenders of baptism after confession of faith entertained a strong aversion to the papal hierarchy. They would not reform the Roman Catholic Church; they would destroy it by the foundation of separate and wholly autonomous congregations. The preachers were elected by the majority; there was no tie between the congregations except that of community of faith and of love. According to the example of the separation of Israel, the people of the Lord, the Gentiles, the congregation of Christ ought to be separated from the world; this was done by the external bond of laws and commandments that formed a sort of fence round the true believers. As the congregation of the Lord consists only of believing and regenerate persons, the children of the Lord, only those who are sufficiently advanced in years and experience, and, therefore,

1 One of the most renowned professors of this college was C. H. Wezel, author of the Aktion der Geschichte der Mennoniten, Newton, 1900–04, who died in 1910.
able to believe, can be admitted into the congregation by baptism. Hence they highly valued baptism as a token of the confession of faith, but they did not acknowledge the baptism of children as a baptism, and the infants were not baptized at all. The name of Anabaptists (q.v.), therefore, was an undeserved nickname, given them by their enemies.

They sought to maintain the purity of the congregation by baptism, and taught that true believers must avoid all intercourse with an excommunicated member. The charge has often been brought against them that, since they regard themselves as the perfect or holy congregation of the Lord, they do not admit that they are poor lost sinners. Their lives and their writings, however, contradict this accusation most positively. It is true that they separated themselves from all those who were of a different opinion, but it was from fear of seduction. By the simplicity of their manners and their dress they showed their rejection of the world. A wedding outside of the congregation was a 'worldly', as I may say, wedding. They were strangers on the earth; therefore no interference with the powers of the world, no using of the sword, was permitted. The oath is forbidden, as a token of the faith which with God in His word has not clearly connected salvation or condemnation. They even took an interest in the things of this world; e.g., they supported with their money the great William of Orange in his efforts to liberate the Netherlands from the Spanish yoke. Afterwards many of them held magistracies, but the influence of the State Church has put an end to that.

The Mennonites exercised a remarkably attractive influence upon the Brownists who, from 1593, had settled in Amsterdam to evade the persecution in England (see art. BROWNISM). One of them, John Smyth, came to Holland in 1606; with his friend, Thomas Helwys, he forsook Brownism in 1608, administered baptism on confession of faith, and founded a separate congregation. A year afterwards he tried to amalgamate it with the Mennonites; in this his followers were successful (1615). Helwys, on the contrary, though he entertained friendly relations with the Mennonites, maintained his independence; he returned to England in 1611. His followers, influenced by Edward Barber (1644), came to the conclusion that only baptism by immersion was legal. Henceforth they called themselves Baptists, and broke off community of faith with the Mennonites.

In the 17th cent. Socinianism exercised such a great influence on the Mennonites that the Reformed theologian, J. Hoornbeek, could write: 'Anabaptista indolent Socinians, Socinians autem doctus Anabaptista.' The more conservative tendency was to defend themselves against the intrusion of this dreaded heresy by maintaining the old confessions of faith—a dangerous measure, for these confessions had never had any binding authority. At last a great schism took place in 1664 between the liberal and the orthodox members ('Lamisten' and 'Zonisten'). With regard to the practice of Christian charity, however, the unity was not severed; the two parties worked together to relieve their suffering brethren in the Palatinate and elsewhere.

In the golden age of the Dutch Republic many of its poets and painters—among them probably the celebrated Rembrandt—were Mennonites. They formed more than one-tenth of the whole population, but as a rule neither the nobility nor the lower classes joined their ranks. In the 18th cent. their number declined for many reasons. The lay-preachers, elected from among the brethren, no longer satisfied the congregations; consequently, a great number of
families passed into the State Church. The foundation of a theological seminary in Amsterdam (1735) did not produce any lasting improvement. At many places, fortunately, the pietistic spirit of the forefathers continued, and the spiritual well-being of the people and the spreading of a higher civilization were objects of great care. The Teylers' Genootschap ('Society of Teylers') and the Montschap (Montanus's 'Society for the Promotion of the General Good')—two institutions that to this day do a large amount of useful work—were founded in 1738 and 1784 by Mennonites. They fully agreed with the Revolution of 1789, for their old ideals appeared to them to be realized by it; they gladly supported it by many sacrifices, but their prosperity greatly declined in the hard times of Napoleon. To improve this state of things the Algemeene Doopsgezinde Sociëteit ('General Society of Mennonites') was founded at Amsterdam in 1811 by some wealthy congregations, and at present all the Mennonite congregations are members of it. This Society took upon itself the care of the theological seminary and the support of the indigent congregations. By its influence the desirable end was obtained that all the congregations, in the time of need, possessed of ministers who had received a university education. From that time their secession from the other Protestants ceased. In the theological sciences the Mennonites are of a conservative tendency, e.g., J. G. de Hoop Scheffer, A. W. Wybrands, C. Sepp, S. Cramer). Often their ministers preach to congregations of another confession—in other words, they exchange pulpits. The professors of their seminary also profess theology at the university of Amsterdam.

Still the Mennonites have remained congregationalists; they are zealous for the entire independence of each congregation. Consequently, in the various congregations there is some difference in the form of public worship—e.g., in the use of psalters and hymn-books—and there is also a difference in the manuals used for religious teaching. Nevertheless, they are strongly attached to each other and to their community, and promote their common interests in fraternal unanimity. Their ministers are elected by the majority of the brethren (and often also of the sisters) or, in many congregations, by the church-committee. They are ordained and wear no official dress, for they found no necessity of having a clergy.

In regard to baptism and oath-taking the opinions of the Mennonites are unchanged. Self-reliance, evident in the voluntary act of becoming a member of the congregation, is still the condition of membership, so that they would rather abolish the whole rite of baptism than permit the baptism of infants. They have no confessions of faith and would not tolerate them. They dislike dogmatic speculations, and hold that the characteristic of a true believer is not his creed but his life. Hence, their toleration allows persons of very different opinions to live peacefully together in the same congregation. The majority of the Mennonites are liberal, the more conservative profess a Biblical orthodoxy.

Their original tenets concerning ecclesiastical discipline, bearing of arms, and civil office are at present unaltered. Contemplating that the Mennonites form little more than one-hundredth part of the population, it is a significant fact that an important number of ministers, representatives of the nation, burgomasters, etc., have for many years been charged with service. The same applies also to the Mennonites of other countries is maintained chiefly by the means of the missionary society, which propagates the gospel in Java and Sumatra. The missions and the correspondences come principally from their foreign brethren.

LITERATURE.—The literature concerning the Mennonites is very extensive, but there is no good history of them, based on the advanced knowledge of our days. There are several works on the subject; the following:

MENTAL RESERVATION.—The great Mennonite leaders have been universally admitted that there are cases in which we should do a grave wrong by supplying a questioner with the information which he demands, and that we must either answer, as far as possible, in such a way as not to give him his wish, or, if we can avoid it, we must simply refuse to answer. Yet, there is considerable difficulty as to the ethical grounds on which such deception can be defended. Does it not necessarily involve either a false impression on the part of the questioner or a wrong to him? The question is an old one, and moralists have answered it in different ways. The doctrine of mental reservation is the solution offered by many theologians both medieval and modern. This doctrine is, in a sense, based upon the Roman Catholic teaching as to the intrinsic maliciousness of lying in that in order to explain it it will be necessary first to state briefly what that teaching is. Roman Catholic theologians are unanimous in holding that a lie is always and necessarily sinful; there can be no such thing as a permissible lie. This is the teaching of St. Augustine ('de Mentacio, contra Mundacum, ad Consensum, Enchiridion, xvii. 5'); and every Roman Catholic theologian of weight is in agreement with him. The utterances of Scripture on the subject are, they believe, quite decisive, and leave no room for dispute. Moreover, the Scholastics of the 12th and 13th centuries reached the same conclusion on rational grounds. A lie, they teach, does not necessarily presuppose the wish to deceive; it consists in the intentional assertion of what is contrary to the truth, with or without the man's own knowledge, or even without his own belief. The liar may know that his lie will not deceive; yet, so long as he intends to assert what is false and is not manifestly joking, his words are a lie. Nature has provided us with the power to express our thoughts by external signs. He who employs this faculty to convey to others the very opposite of his thought is withholding, moral or physical, the use of his power for an illegitimate purpose; and his act contains an intrinsic turpitude. The wish to deceive is an aggravation of the offence; but it is not requisite to make the words a lie (Thomas Aquinas, Summa, iii, 73). It is enough if Falsehood is, further, an offence against justice; we owe the truth to our fellow-men. But, even apart from this aspect of it, the act is intrinsically evil.

It is plain that, where so strict a view is taken as to the obligation of truth, the cases which we are considering constitute a grave difficulty. Whatever be the circumstances, a lie can never be justified. Augustine seems to have thought that...
the only choice lay between silence and a frank declaration of the truth irrespective of consequences (de Mend. xii.). But it is clear that this does not solve the problem; for in many cases silence is equivalent to an admission; and it may well be that to answer the question proposed, whether by words or by silent asent, would constitute a flagrant breach of justice. A violation of the elementary principle that speech is not a whit less wrong than a sin against veracity.

Here, then, arises the question as to the permissibility of 'mental reservations.' A speaker is said to do this if he states a fact, or makes a statement true only if qualified by a restrictive clause, and when he does not openly express this clause 'reserves' it within his own mind. Thus, e.g., should a member of the Government reply to some impertinent inquiry regarding matters of State, 'I do not know,' his answer is in all likelihood qualified by such a reservation, and is to be understood as signifying: 'I do not know in my capacity of a private citizen.'

The general verdict of theologians is that a man may lawfully use mental reservations under certain given conditions, viz. if there be a real need of preserving a special circuit. There are such as to indicate that the words may have to be understood in a restricted sense. Where these conditions are present, he may use reservation. But what are these conditions? for one reason or another, his question will not advert to the restriction. Thus, to take a classical example, if murderers inquire of a man whether their intended victim is lying concealed in his house, it is allowable for the man to say in reply, 'It may be true; for the circumstances are such that even the murderers themselves should be aware that the words may have to be understood with a restrictive clause; 'No one is concealed there, of whom I can justly speak to men like yourselves.' Mental reservations of this kind are termed restrictions late mentales. It is only in a loose sense (late) that they can be called 'mental'; for their presence is externally recognizable through the circumstances of the case.

It is contended that these statements are not in any sense falsehoods. For it is a principle universally admitted that, in judging of the meaning of words, we must take into consideration the circumstances in which they are used. No one regards the prisoner's plea of 'Not guilty' as a lie. The concrete surroundings show that his words signify only in the eye of the law. A priest is not looked on as guilty of falsehood when he professes never yet to have heard of some matter which was long since revealed to him in confession; all are aware that what is spoken in confession is to him as if it were unknown. In each case the circumstances indicate that the words may be employed in a restricted sense. Taken in that sense, they are true; they correspond with the speaker's real judgment. The same holds good in the cases where we are justified in using mental reservation; the circumstances show that there may be a qualifying clause.

It may be brought in a mental reservation that we use language with the deliberate purpose of deceiving another, and that this is, to all intents, falsehood. But the objection is not, in fact, justified. In the first place, our true purpose is not to deceive but to protect our secret—a thing that we have every right to do. We may not, indeed, in order to do so, tell a lie; but we are not bound to supply the questioner with all the information which the unjustly seeks to extort. And, secondly, in such cases it is more correct to say that the questioner deceives himself than that we deceive him. He is well aware that to such a question we may be unable to give a full answer without the betrayal of a secret, and he must expect an evasion. If he chooses to take it as an unqualified statement of the whole truth, let him attribute the error to his own folly. We may be the occasion of his mistake; we are not, properly speaking, the cause of it.

It stands to reason that mental reservation may be employed only where there is real necessity of preserving a secret, and where there is no other way of doing so. To employ it for any cause, is the possibility of a restricted reply. This, however, is not the case if the restriction is such as to be manifest to all except the extremely unobservant. Under such circumstances a comparatively slight cause—e.g., to set aside an inconvenient question—will be justification enough. Again, if the person who asks has a right to demand the information from us, then, unawake as the question may be, we must answer fully. It would not, e.g., be justifiable to practise mental reservation to the income-tax commissioner.

In the 16th cent. a prolonged controversy arose as to the permissibility of the restriction pur mentalis, viz. a mental reservation the presence of which is not indicated by a general circuit. There was, however, the first to put forward this opinion appears to have been the famous canonist Martin de Aspilcuetas ('Doctor Navarrus'; 1491–1586). His authority was so great that he was followed by not a few authors, e.g., noted London, Diana, etc. On the other hand, theologians no less eminent maintained what is clearly the case, that such reservations differ in no way from falsehoods. This was the view emphatically taught by P. Laymann, J. Azor, G. de Coninck, and many others. In 1769 Innocent xi. condemned three propositions drawn from the works of those who defended the use of the restrictio pura mentalis (H. Denzinger and C. Bannwist, Enchiridion Symbolorum, Freiburg, 111, nos. 1176–1178). Since that time the opinion has been acknowledged to be theoretically indefensible.

Protestant moralists reject the doctrine of mental reservation, and those of them who deal with the cases at issue solve the problem by adopting a less rigorous view as to falsehood than is taken by the Roman Catholic theologians. They hold that the malice of lying consists in its being an offence against justice, truth being a debt which we owe our fellow-men; and that, where that debt ceases, falsehood is legitimate—thus, e.g., Grotius (de Jure Belli et Pacis, III. i. 11), J. Milton (Treatise of Christian Doctrine, in Prose Works, London, 1848–53, v. 115–119), Jeremy Taylor (Doctor Debitantium, in Works, London, 1823 xi. 351), W. Paley (Principles of Moral and Political Philosophy, bk. iii. ch. 15, in Works, London, 1821, i. 138). For reasons given for this view is regarded as erroneous by the Roman Catholic theologians.

Literature.—P. Laymann, Theologia Moralis, Munich, 1859, iv. 325; T. Raynal, Pensees de Religion et de Restrictions, in Opera, Lyons, 1655, xiv. 71; V. G. Diets, Thesaurus d'Alex. VII., Alex. VIII., Padua, 1788; G. J. Walfelsbergh, Dissertation sur la nature des mensonges, Bruges, 1781; J. H. Newman, Apologia pro Vitae Sane, London, 1861, Appendix 9, T. Slater, Art. 'Lying,' 'Mental Reservations,' in CE; A. Ballerini, Opus Theologico Morale, Prato, 1850, vi. 41; and other Catholic theologians.

Mercy.—Mercy, as an ethical quality predictable in both God and man, may be usefully dis-
tonguished from love or kindness as connoting in its object a certain inferiority, whether natural or spiritual. It excludes the idea of equality, in this or that relation, as between giver and receiver. In the Bible the divine mercy signifies active pity for the guilty or the miserable; it is manifested in countless ways, but pre-eminently in the bestowal of salvation in Christ, and may therefore be looked upon as the expression of divine love in the presence of the sinful or the frail. Either moral failure or creaturely weakness is sufficient to evoke it, and both things are always found in all men. Hence mercy in God is rather a permanent disposition than merely an intermittent source of specific acts. As exhibited at its noblest in Jesus' personal demeanour, mercy has in it nothing of condescension, which is an attitude bordering on scorn; it was because He sought to establish with them such communion of spirit as might produce inward renewal that Jesus showed compassion to the needy, and under these circumstances mercy became the instrument of His trust in the divine capacities of man. Ere long Jesus was able to call the recipients of His mercy by the closer name of 'friends.'

Justice; instead of mercy to God implies a positive estimate of religious cognition, or at least the rejection of some negative estimates which have figured prominently in 19th century philosophy. To say of mercy that 'it is an attribute to God Himself,' is the equivalent of holding that anthropomorphic judgments do not necessarily or substantially falsify our apprehension of the divine reality, and that moral qualities which faith sees in God are not essentially different from qualities in men called by the same names.

Apart from special tenets of the schools, Christian minds have usually held that the divine mercy is characterized, or even constituted, by two qualities. (1) It is free; it is not forced by any outward constraint, nor does it come to manifestation as the automatic response of reason to the facts of the world. God is love, love which has its measure in the Cross; and His mercy, as everlasting as Himself, is greater than we could either ask or think. It is misleading to speak of Him as constrained to mercy, if we mean simple that His action is the free expression of a perfectly loving Will; His pity is evoked, not by merit, or by tears of repentance, but by the need or ruin of His creatures. (2) It is absolute, and covers the whole remnant of man's life; it is a limit from human prejudice, but puts all men in debt for every good gift. For St. Paul the mercy of God has the aspect of miracle or paradox as being vouchsafed to the unworthy and even to the actively hostile, whose worth it creates but does not presuppose. Our part is not to measure or explain it, but rather to enjoy it with wonder and adoration.

Yet the best religious thought has never held the divine mercy to be incompatible with hostility to sin. Ethically pure compassion is a real capacity for holy anger; there is no mercy in allowing a bad man to go on badness. Doubtless to an evil conscience mercy and judgment appear to be in conflict, but for Jesus both were living expressions of the Father's heart. Mercy in God asks for mercifulness in man. In the parable of the Unmerciful Servant (Mt 18:28-30) Jesus made this plain for good and all. Mercy for Him is an element in the righteousness of the King, and He has been stated to be so much at variance with evil that it needed much to be inculcated in Christ's time when sympathy was killed by the theory that all suffering was penalty of special sin, a theory which formed a part of the very justice of righteousness' (A. H. Bruce, in Expositor's Greek Testament, i. [1897] 99).

To seek at God's hands a pity which we refuse to others is insincere; not only so, but in the absence of a merciful spirit we are morally incapable of appreciating the free, unobtained mercy of God. Hence the promise to the merciful that they shall receive mercy (Mt 5) expresses one aspect of the moral nature of things.

Human mercy must take the mercy of God as its model and limit. It is not to be accurately doled out in proportion to the receiver's deserts; in its perfectness it will rather exhibit a certain abandonment and overflowing munificence, and will ask no questions about the offender save as to his penitence. But feeble and complaisant mercy is as demoralizing as indiscriminate charity. 'Be ye merciful, even as your Father is merciful' (Lk 6:32) is a call for discipline no less than lenity.

The supreme motive of mercifulness, whether to the guilty or to the necessitous, is not the natural desire to be treated mercifully in our own time of need; it is the thankful memory of pity bestowed on us by God. And the living sense that from the mercy of God all our hopes begin, the sight of its glorious freedom and absoluteness in Christ, is far more than a matter of immediate need; it is charged with moral inspiration enabling Christian men to do and bear all things for the sake of the unmeasured divine love that for them has made all things new.

MERCY (Indian).—Adequately to discuss the significance and operation of the quality of mercy within the range of the Indian peoples would demand a book or treatise of no incon siderable length. All that is practicable within the limits of an article is to attempt to exhibit the natural qualities and general tendencies that have been at work, to estimate the utility and worth of the influences that have been brought to bear, and to indicate the broad results in the character and disposition of the inhabitants of the country, as they are found in evidence at the present day. It is manifest that environment and ethnological origin and development, no less than religious prejudice and ethical culture, have contributed to a resultant quality or characteristic which can be distinctly described.

It is clear, moreover, that, from early historical times at least, the expression of this quality in the races of India has been obstructed and almost stifled in two directions, the one more or less, a consequence of the other. The barriers raised by caste, which became only more formidable with the lapse of time, while permitting or even joining the exhibition of kindliness, generosity, and pity within the narrow caste limits, formed insuperable obstacles to the exercise of these qualities without, and therefore tended inevitably to isolation and degradation. And religious pride and prejudices, alloying themselves with caste distinctions, promoted the growth of a narrow parthianship and class organization, within which the development of a spirit of sympathy in human kindliness was as little practicable as that of community of interest. The earlier periods of Indian history and social life also show clearly the presence of those feelings of mutual hostility and antagonism which in general mainly allying among groups of primitive peoples dwelling in a wide land, among whom isolation and the difficulties of communication are an effective ground of the mercifulness' (A. H. Trench, in Expositor's Greek Testament, i. [1897] 99).
acrer and intentions. Thus the suspicion en-
gendered by mere strangeness leads not seldom to
acts of cruelty, which ultimately obtain the
sanction of custom and are fortified by religious
precept and rule. An unreasoning dread of that
which is exceptional, rather than any other
natural impulse, is probably at the basis of all
such ruthless practices. The angry and hostile
feelings thus aroused are the growth of this
spirit of sympathy and mercifulness; and the
latter must wait for the rise of a wider and more
intelligent and generous outlook upon life and
human relations.

The claims, moreover, of a religious ritual which
not only sanctioned, but enjoined, animal sacri-
fices were hostile to the development of the
kindlier qualities of pity and regard for the
weaker or less fortunate members of the tribe
or community. Familiarity with the taking of
life has always tended, not only in India, but
elsewhere, to deaden sensibility and to bring into
play the harsher and more cruel passions. When
the sacrificial act claims the sanction of religion,
and is transformed into a sacred rite and duty,
the performance of which in all its rigid details
is obligatory, the decision-biasing effect of custom
and habit is reinforced by an appeal to the strongest
human motives and prejudices. That which in many
Instances it would be felt to be unnatural, it is
probable that the one will well be determined
and with a clear conscience under
what he conceives to be divine authority. The
elaborate Vedic sacrificial, with their large
demands and imposing ritual, could have had in
this respect only one consequence—to familiarize
men’s minds with thoughts of savagery, and to
close their hearts and cars to the cry for com-
passion. With facilities for mutual intercourse
and the advance of civilization, and with a higher
estimate of the value of life in all its forms,
these practices changed their character, or tended
altogether to disappear. Offerings of fruit or
flowers, or more in past of animal, took the
place of the living sacrifice at the altar, and
bear witness to an alteration of feeling on the
part of the worshipper, and a desire to free his
ritual from acts and observances which had be-
come repugnant to a more cultivated and sensitive
nature.

It is probable also that a distinction should be
made—a distinction due to racial characteristic
as well as to time—between the primitive people of India and the later Aryan
tribes, who entered the country in successive
waves of invasion from the north-west and north.
The latter were swayed by the gentler, more
peaceable, and kindly temperament incident
always to the pastoral habit of life. Eventually
this tendency, though with many a set-back and
cross-current of savagery, and gave its general
tone to the character and disposition of the entire
Indian people. The primitive tribes, for the most
part isolated from one another in gloomy
and treacherous forest homes, received a training which
developed the suspicious and harsher elements of
human nature, brought into prominence the rugged
aspects of nature as a whole, and was calculated
to present few attractive features of generosity
or humanity. Thus they were taught lessons of
sterile pitylessness and disregard of the life or well-
being of others, and more or less unconsciously
cultivated a disposition akin to that of the wild
beasts of prey, and had to watch over their
resources. These two currents of thought and
feeling may be traced all through the course
of Indian history, and are observable at the present
time among the racial and caste divisions of the
country, as is the credit of the innate
courtesy and sympathetic kindliness of the native Indian that a merciful and generous spirit lies, on the
whole, maintained itself against religions
and social prejudices, and, in the face of influences
from within and from without, to a large
extent prevailed against isolating class-feeling and
sectarian pride.

In the Indian sacred books the duty of pitiful-
ness and compassion is a constantly recur-
ring theme. Mercy (dāya) and abstinence
from injury to life (ahimsā) are primary obliga-
tions. Especially in the Bhagavād-Gītā (q.v.),
in the type of religious thought and experi-
ence which it represents, the emphasis at this
duty occupies a prominent place. The true Brāh-
man may be known by his friendliness to all;
and not only the Brāhmaṇ, but other castes also,
are bound by the same rule. The best proof
is that which refrains from doing hurt to any
creature; respect should be shown for the life
and happiness of even the lowliest of creatures,
and no animosity being should ever be subjected
to injury or wrong. In a similar manner the
religious teaching of the schools that are in sym-
pathy with the Bhagavād-Gītā repeats and en-
forces the same idea. The observances
upon these injunctions are perhaps natural and
inevitable. They seem, in the first place, to show
more regard for animal than for human life; it
is probable that this originally was, but has to large
extent been, read into the latter, or regarded as inclusively stated in the
larger precept. And, further, the interpretation
placed upon the rule has been, at least to the
Western mind, in practice so one-sided and
agitated as to destroy in large part its operative
worth. The general tendency, however, it can
hardly be doubted, has been in the direction of the
cultivation of the qualities of mercy and mutual
consideration. These qualities we usually
find little or no statement or emphasis in the
books on law or ritual, or among the regulations
for the detailed observance of the sacrifices. The
Vedic hymns, while they extol the forbearance
and mercy together with the justice of the gods,
leave it a matter of inference rather than of com-
mand that men should follow in their steps.
In general it may be said that the decisive influ-
ence upon Indian character and belief has largely
been exercised not by the ritual precepts, but by the
humanitarian teaching of the Bhagavād-Gītā, by
the popular epic poetry, and by the tradition of
the lives of the heroes.

The first organized protest against the sacrificial
rule in the interests of a kindlier and more humane
spirit was made by Buddhism. The character of
Gautama Buddha, as depicted in the extant litera-
ture and stereotyped in painting and sculpture,
is singularly gentle and attractive. In practice as
well as by precept he would seem to have urged
the duty of forbearance and brotherliness to all;
to do no harm to any living thing was a rule en-
joined upon all who desired to unite themselves to
his company and be enrolled among his disciples;
and the purpose of the law which forbade the
slaughter of any insect during Vassa, was at least
as much to avoid the otherwise inevitable
destruction of animal and insect life which would
ensue, at a time when the multiplicity and activity
of all such life are most apparent, as in
recognition of the difficulties of travel incident
to the season. Hindu monks and ascetics appear
also to have observed similarly to be
universal or to the same extent. The merciful
spirit, of which the rule of ahimsā was the out-
come and logical conclusion, pervaded Indian Bud-
dhism as long as it remained in its native land,
found expression in the acts and edicts of its
greatest emperor, Aśoka, and emphasized and extolled a generous tolerance towards the feelings and opinions of others, which, with rare exceptions, has characterized its attitude and life in all countries to which it has been carried. In India the influence which it exerted in this respect was strong, and remained as a permanent force in the life of the people after the Buddhist faith itself had been weakened and had perished from the land. In the wider aspect also, and as illustrating this spirit, Buddhism alone of the great religions of the world has never been guilty of persecution.

 Jainism, the ancient sect contemporary with Buddhism and possessed of similar views and doctrines, inherited also from Hinduism the principles of mercifulness and regard for life in all its manifestations, but carried these principles to an extravagant and abnormal length. Even noxious creatures, however irritating or insignificant, may not be destroyed; and the literal interpretation of the injunction to do no hurt to living beings has led with them to practical inconveniences of a serious nature, which are not counterbalanced by an equivalent development of a religious duty or a soteriological merit. Moreover, in the days of its strength in India, made provision for sick, infirm, or worn-out animals in special hospitals; and similar institutions have been maintained by adherents of the Hindū and Jain faiths, for many centuries past and even at the present time, bear witness to a compassionate spirit worthy of all commendation. To Western thought, however, or these institutions do not seldom defeat their own object, and to be accompanied by contradictions in feeling and practice which it is difficult to reconcile with the spirit of the implied religious teaching. The form has been preserved and the letter of the law obeyed; but the meaning and motive of the whole have, in many instances at least, lost their force and been disregarded in the external fulfilment of an obligation which satisfied the conscience, but did little to effect a change in the character or disposition of the individual.

With the coming of the Muhammadans a new spirit invaded India, antagonistic to the old, the consequences of which were great and permanent. Born of religious fanaticism, and nurtured in the camp and on the field of battle, the warlike spirit of Islam, like the faith of Jainism, was able to refuse to accept the symbol and confession of faith of the vanquished creed. From the minds of the conquerors religious fanaticism, in alliance with a temper naturally stern and self-contained, had banished all feelings of compassion towards aliens or foes. Thus a spirit of inhumanity, based ultimately upon religious precept and belief, not only inculcated indifference to life where the honour or extension of the faith was concerned, but urged the entire elimination of the infidel by force of arms. In a further respect also, and that wholly new to India, the example set has been followed with results calamitous for the whole peninsula, the untoward effects of which have only begun to be repaired within comparatively recent years. There is no evidence that before Islam the various religious prejudice or rivalry ever found expression to any considerable extent in overt acts of persecution. The warfare between the sects was waged by word and argument; in no way was the sword invoked, nor was there any attempt at violent force. The followers of Muhammad taught men to throw the sword into the scale; and the spirit of division and hatred has never since that time been other than latent on both sides, ready to spring to arms and perpetrate cruelties upon any violation of religious comity or outrage upon religious conviction.

Two further external influences deserve consideration, but are of very unequal weight and importance. Of non-Christian provenance, one is that of the Parsees: the Parsees are an offshoot of the brahminical class of Aryan race, and are professed adherents of the Zoroastrian faith, with its two great oracles, or masters, called Parsees, like the Bards of the Celts. The Parsees have always been a wealthy and influential sect, and have been at times very poweful, and have produced many emperors, especially in Persia, and have been instrumental in introducing the fire worship and the Zend-Avesta into India. The Parsees have always been by the Parsees, and, except by way of example, it cannot be said that their principles or practice have made any deep impression upon the nation as a whole. Their numbers, moreover, are too few, and their social sevance from Hindu and Muhammadan alike too complete, to enable them to exercise a wide-spread influence for good in this respect. They are and remain strangers in the land, whose character and life have been for the most part for themselves alone, neither shared in nor sought as a pattern by those among whom their lot was cast.

With Christianity it has been entirely otherwise. From the very beginning it threw itself into the national and social life of the country, and, as far as the religious sentiment and pride of its opponents would permit, endeavoured to permeate society with its own mental and spiritual life as a whole to the level of its own ethical ideal. The influence of its temper and teaching has always been wider than the limits of its acknowledged churches or professed disciples. Its example has been pervasive and powerful, and mainly through its preaching and its schools it has exercised a far-reaching ethical influence on the doctrines and practice of the Indian peoples. Whether or how far early Buddhism was indebted to Christianity for moral precept and belief remains an open question, to which it is improbable that any definite or certain answer can ever be given. The later centuries, however, afford abundant evidence of the extent of Christian influence and the attractiveness of Christian ideals in modifying the hold of cruel rites upon the popular mind and in securing, although not always permanently, the acceptance of higher standards of right and mutual regard.

The influence described was never stronger than during the old and present centuries, and it was especially marked in the reform movements of the 19th cent., whose leaders never hesitated to acknowledge their indebtedness to Christian teaching and to the Christian Scriptures. Ram Mohun Roy, Keshab Chandra Sen, and others, to a large extent accepted the principles of the Christian faith, while repudiating its more distinctive doctrines (see art. Brahmagram). Moreover, it was on the ethical side that most would seem to have been learnt and adopted. The broad and kindly tolerance of all sects, which is a marked feature of the religious life of the Reformed churches, the gentle habit of mind and speech, and the regard for the rights and consideration for the needs and sufferings of others, if not altogether due to the leaders' knowledge and appreciation of Christian principles, were thereby greatly strengthened. With the exception of the Arya Samaj (q.v.), however, which exercises a growing ascendency in many directions, the contributions of these sects to the ethical life of India have not been so effective or lasting as at one time was anticipated. The leaven of their influence has been restricted in its range, although within these limits a genuine effect has been produced.

At the basis of Indian religious and moral
thought, therefore, at least in its earlier stages and as regards the conception of the nature of the gods, lay a belief in the generally beneficent and merciful character of the divinity. They revered God by what is commonly called his haram and curtailed towards mankind. It is reasonable to suppose that in those remote ages also the quality of mercy found a place among the attributes of the god, because if we recognize any one as superintending and protecting by their worshippers. On the other hand, the awesome and threatening character which a nature-religion often and quite naturally assumes must not be overlooked. The two elementary characteristics or tendencies met, and, being incapable of complete reconciliation, existed side by side throughout the entire development of Indian spiritual and ethical history. Like Orientalism the Indian is by nature gentle and disposed to kindliness and generosity; and this aspect of his disposition found expression in the Bhagavat-Gita and kindred works, and was put into practice by those sects which more or less sincerely acknowledged its authority and were permeated by its spirit. Lower and darker forms of religious faith maintained a cruel and blood-stained ritual, the effects of which, however, do not fail to promote hardness and insensibility to suffering or need. And the more influential systems of philosophy, if not actively hostile to the idea of mercy, did little to uphold it. The Indian, at least, stood aside, and found their interest and life in a region where the kindly mutual relations upon which mercy is dependent have no part.

It may be said, therefore, that the Indian faith that heaven is merciful has, on the whole, found expression in the Indian creed, and been translated into Indian practice. To generalize, however, with regard to races so diverse in origin, history, and character, on any but the broadest and most general basis, is impracticable. The cross-currents in the case of India are exceptionally numerous owing to the many elements that have entered into the life of the inhabitants of the country. An appreciation can take account of little more than the general characteristics of the majority, their habit of mind, and mode of action, in order to be justified to the fullest extent the description of the native peoples of India as by nature indulgent and merciful.

LITERATURE.—The subject is discussed more or less incidentally in all works on the religions and philosophy of India. See artil. Budhism, Jainism, Parsis, Hindu, Modern. For general history, see EDWARD SELL.

MERCY (Muslim).—To despair of God's mercy is one of the great sins, for mercy is one of the attributes of God, and to doubt whether He will show it implies disbelief in this divine attribute.

'the servants who have transgressed to your own hurt despair not of God's mercy, for all sins doth God forgive; (Qur'an, xxxi. 54). 'Who despares of the mercy of his Lord, but they who err?' (xxv. 50).

The words 'In the name of God, the Merciful One,' form the heading of all chapters of the Qur'an except the ninth. Al-Ábrahám, the Merciful One, is one of the names of God; it is used in some sūras for Allāh. The Qur'an refers in various ways to the mercy of God. The angels who celebrate His praise cry out: 'Our Lord! thou dost embrace all things in mercy and knowledge' (xi. 7). Satan is said to have claimed mercy on the ground that he was a thing and, therefore, part of the 'all things.' The reply is that the mercy of God is 'wholly above the reach to avert the ruin of the wicked' (xvi. 84). The 'treasures of the mercies of the Lord' is a Qur'ānic expression, and the word 'mercy' is used as a description of divine books. The book of Moses is spoken of as a guide and a 'mercy' (xi. 29). The Qur'an is frequently called a 'mercy.'

'Oh! how hath a warning come to you from your Lord, and a medicine for what is in your breasts, and a guidance and a mercy to believers' (v. 55). 'And we send down of the Qur'an that which is a mercy, and comprehending, but, it shall add to the ruin of the wicked' (xvi. 84). It is said of those who follow Jesus that God put into their hearts 'mercy and compassion' (vii. 27); but this is not consistent with the denunciation of them (ix. 29–33) and the prohibition of friendship with them (v. 56). The words probably apply to Christians who become Muslims, for the message goes on to address those who believe:

'Fear God and believe in His apostle; two portions of His mercy will He give to you; He will bestow upon you a light to walk in' (xxv. 55).

The two portions are: one for believing in Muhammad, and one for belief in the former prophets (Būlūd). The light is either the Qur'an to enable the convert to walk in the right path, or, if the walking refers to the bridge (al-Sirāt) finer than a hair, over which all must pass at the Last Day, then the 'light' is true faith which will preserve his possessor in his perils walk over that bridge. One chapter of the Qur'an (iv.) is called Sirāt-al-Rahmān, the 'chapter of the Merciful One,' and begins with the words: 'And, O ye of weak faith, hath created man, hath taught him articulate speech.' The phrase 'God is merciful' is in constant use, and in practical daily life has most often been associated with the idea of His righteousness and justice. It too often leads to complacency and self-satisfaction. A man commits sin and says, 'God is merciful'; so, instead of leading to repentance and amendment of life, his idea of the mercy of God too often tends to make disobedience easy and safe.

LITERATURE.—There is no special literature on the subject; see LITERATURE UNDER SALVATION (Muslim).

MERIT (Introductory and non-Christian).—In the earlier stages of religious development, as is attested by abundant examples in artt. LEST, ABOVE OF THE (Primitive and Savage), ESCHRATOGY, and STATE AFTER DEATH, the moral character of life in this world is not a factor either for securing immortality at all or for determining rank and status in the future world, whether immortality be attained by an individual or be vouchsafed to all. In these early stages earthly positions, notably chieftainship, or a particular manner of death—e.g., in battle—is a requisite qualification for life in the future world; character, whether good, bad, or indifferent, has nothing to do with the question. When, however, religion advances, when immortality is not conferred automatically (if the religion in question believes it to be conferred at all), but is a boon which must be achieved by long and toilsome endeavour, then three conditions—sometimes separated, but usually combined in greater or less degree—are imposed: works, faith, and love.

The ideal combination of these three requisites is found in but one religion—Christianity; and within Christianity only Roman Catholicism gives full recognition in its official statements to all three. The doctrine of the Merit One, is one of the names of God; it is used in some sūras for Allāh. The Qur'an refers in various ways to the mercy of God. The angels who celebrate His praise cry out: 'Our Lord! thou dost embrace all things in mercy and knowledge' (xi. 7). Satan is said to have claimed mercy on the ground that he was a thing and, therefore, part of the 'all things.' The reply is that the mercy of God is 'wholly above the reach to avert the ruin of the wicked' (xvi. 84). The 'treasures of the mercies of the Lord' is a Qur'ānic expression, and the word 'mercy' is used as a description of divine books. The book of Moses is spoken of as a guide and a 'mercy' (xi. 29). The Qur'an is frequently called a 'mercy,'
with firmness what one loves with fervour. Faith and work are the essential bases of Mankind (W. Brandt, *Mandänische Religion*, Leipzig, 1889, pp. 171-174). Mere intellectual faith, without love or works, has never been held, so far as the writer knows, to avail for salvation, except possibly in extreme Lutheranism.

The stress laid by St. Paul on justification by faith apart from the law (Ro 3:28; cf. 5; Gal 2:9) must not be wrested from its context in the Apostle's teaching, for he himself tells us that love is greater than even faith (1 Co 13), and that faith worketh by love (Gal 5:6; cf. 1 Th 1:1; 1 Ti 1:5 etc.). There was reason for him to speak disparagingly of works—it was necessary for him to combat the excessive nomism of Judaism. But St. Paul was a man of balanced judgment, and to say that he condemned all works because he deprecated reliance on them alone would be a misrepresentation of his true attitude. He recognized the value and the merit of good works (2 Co 5:8), enjoining the church at Philippi, as 'work out your own salvation with fear and trembling' (Ph 2:12), and at Thessalonica to establish their hearts 'in every good work and word' (2 Th 2:17). There is no doubt that this would have pleased heartily to the famous passage of St. James (Ja 2:23; cf. v. 26) that 'faith, if it have not works, is dead in itself.'

The doctrine of the merit accruing from good works has been regarded by some—the council of Trent— from the side of man and from the side of the deity. From the human side, the more a good man does, or even tries to do, the greater is the merit which he deserves; from the divine side, it is recognized, practically by Christianity alone, that no man can be so rich in good works as to merit salvation; 'all have sinned, and fall short of the glory of God' (Ro 3:23); all human righteousness is, as Isaiah said (Is 64:6), but as 'pamus mensuratus.'

Only a shallow thinker would stress the apparent antimony here set forth; the two partial truths blend harmoniously in the perfect truth of the Christian faith. Indeed, the Christian is saved solely by merit, though not by his own. Our Lord Himself could say, as His earthly life drew to its close, that He had accomplished the work which His Father gave Him to do (Jn 17), and He emphasized the necessity of work (5:17). Only through the work consummated on Calvary did salvation come to man; only through the merit of the Atonement can we hope at last to attain to heaven (cf. Council of Trent, sess. v. ch. 3, sess. v. chs. 3, 16, can. 10).

In the primitive stages of religion its essence must be regarded as works. Beliefs are fluid; ritual is stable; every rite must be performed with minute scrupulosity. If the proper rites are thus exactly observed, the result is certain (provided, of course, that no stronger counter-force opposes); and, if a happy hereafter is the object of such rites, that blessedness is thereby assured (cf. POC ii. 90 f.). Not all, however, are content with the discharge of minimum requirements and, consequently, with minimum results. If one wishes for more, he must do more; perhaps, also, it will be well for him to provide a store against unforeseen contingencies. In that case also he must be more numerous, if he is to do as much works as will effect such a result; it is even possible that merits may be deliberately amassed for the purpose of achieving results unattainable for those who are content with the requirements imposed on every one; and in some cases rewards thus stored up are available for others as well as for him who originally accumulates them. The doctrine of the merits of our Lord's Passion and, in Roman Catholic theology, of the intercessory work of the Virgin, is based on the latter connexion; and the Roman Catholic dogma of the merit of works of supererogation also falls within this general category.

The doctrine of merit is, on the whole, a characteristic of the higher types of religion. We find it, it is true, in such religions as that of the ancient Greeks and Romans. The Brazilian Ipanna says that the souls of the brave will become beautiful birds feeding on pleasant fruits, but cowsards will be turned into reptiles (PFC ii. 7). But the popular belief is recorded of the African Maravi and of the Satall of India (ib. pp. 8, 10). Elsewhere, as among the Nicaraguans and the Negroes of Guinea, the good alone enjoy immortality, the wicked being annihilated (ib. p. 22 f.). Among the Greenlanders the condition of happy immortality is to have been a hard worker in this life (ib. p. 86; the manner of death—e.g., by drowning or in childbirth—is also a factor). In all these cases, which might be much multiplied—e.g., from African and American Indian tribes (ib. p. 94 f.),—the distinction between 'good' and 'bad' must invariably be interpreted by the standards of the particular society concerned. If this is done, there is undoubtedly a very real ethical basis and a true morality—even though quite rudimentary,—as the foundation of the belief in the future destiny of the soul.

The doctrine of merit is much developed in the higher religions, as in Egyptian (cf. art. ETHICS AND MORALITY [Egyptian], § 7 f.), and Veide (cf. Mair, v. [171]). In the end, the characteristic culmination in the Zoroastrian triad of 'good thoughts, good words, and good deeds' as antithetic to 'bad thoughts, bad words, and bad deeds.' The course of the evolution is well summarized by E. B. Tylor (PFC ii. 84 f.).

'The idea of the next life being similar to this seems to have developed into the idea that what gives prosperity or misfortune here will give it there also, so that earthly conditions carry on their contrasts into the changed world after death. Thus a man's condition will be a result of, rather than a compensation or retribution for, his condition during life. ... Through such an intermediate stage the doctrines of simple future existence was actually developed into the doctrine of future reward and punishment.'

Turning to the higher religions, we observe, first, that the teaching of Muhammadanism on the subject of merit is practically to the effect that good works are requisite, but that the true believer, being predestined (Allah) to perform them, is, in reality, saved only by divine grace, while the wicked are punished eternally for the sins which they have committed, and for their refusal to submit to divine law. If we add to this problem is complicated here by the fatality of Muhammadanism (see art. FATE [Muslim]).

At the Last Day 'every soul shall be recompensed as it hath deserved; no injustice on that day' (Qur'An ii. 17). It was said that 'whosoever of the 'People of the Book' believed in God and the Last day, and doth that which is right, shall have their reward with their Lord' (ib. 59; cf. ii. 76, 106, 215, iii. 194, iv. 60, 121-123, 172, v. 73, vii. 40, xi. 14, xxv. 64-76; the idea is closely paralleled by Ac 10:9); and elsewhere faith is enjoined with observance of almsgiving and the appointed times of prayer (ib. ii. 2-4), while throughout faith and works go together (e.g., iii. 190-199). The whole attitude of Islam on this matter may thus be summarized from the earliest åzara (xxvii. 22-55) which deals extensively with it:

*Gather together those who have acted unjustly, ... and guide them to the road for hell, ... But on this day they shall submit themselves to God, ... *Just, therefore, is the doom which our Lord hath passed upon us...* 

It shall surely taste the painful punishment, and ye shall not be rewarded but as ye have wrought, ... Save the servants of God.*

But for the favour of my Lord, I had surely been of those who have been brought unto damnation.*

In a word, hence to uploads to the Latter connexion (vii. 41): 'Praise be to God who hath guided us hither! We had
not been guided had not God guided us!' (cf. also E. M. Wherry, Comprehensive Commentary on the Quran, London, 1822-86, ii. 12, note 31, and index, s.v. 'Salvation').

The most complete development of the theory of merit among the ethnic religions is undoubtedly found in India. The main aspects have already been considered in length in the art. KARMA, where it will be seen that the Indian concept of merit is closely connected with several other religious systems—with belief in transmigration (q.v.) and in asceticism (q.v.). One aspect, however, calls for mention here—the accumulation of merit for the attainment of supernatural results in this life.

On the theory of sacrifice as set forth by the Brahmanas—i.e., that it is a rite which ipso facto escapes the result at which it aims—it follows that the accumulation of merit not only by sacrifice but also in other ways will constrain the gods themselves to bow before the might of the ascetic. This power may be used for good or for evil, according to the purpose of him who possesses the merit in question. The records of India are full of stories of sages who have won enormous powers by the accumulation of merit, almost wholly by asceticism alone.

Thus, Bāll conquered India and all the other gods except Viṣṇu, and ruled the world until Viṣṇu overthrew him; Chaya-vāna was constrained by its own law to do his will (Mahābhārata, ii. 51.38); the particularly ill-tempered Durvāsas by his curse brought thousands of magic demons that destined him to be the only famous curing of the Ocean of Milk, which produced the amrita ('ambrosia'), restored the divine away (Viṣṇu Purāṇa, viii. 29.3). Mārkaṇḍeya, the demon that destroyed the only meritorious character of the earth, was eventually raised to heaven, though he unhappily boasted of his merit and fell, because, according to the law, the product of evil acts is evil; still remains, in its aerial central hall-way between heaven and earth (Mārkaṇḍeya Purāṇa, i. 7.23). Kaṭparī's austerities, like those of many other sages, were said to be so great that to do them one had to send him (Viṣṇu Purāṇa, i. 15); Kartariva thus obtained power over the earth, which he used wisely (G. vi. 31); the demon Rāvaṇa, the evil figure of the Ramayana, won supernatural power by the merit of his austerities; Vivantaka, whose conflicts with the almost equally meritorious Vasūtiya form an important theme in the earlier Sanskrit literature, rose to be a Brahman instead of being merely a Kṣatriya (Jāt. 17 [1903] 317 ff.). Indeed, the idea recurs constantly throughout Sanskrit literature, the implication being always that the sage owes his power solely to the merit which he has accumulated; and in modern folk-belief the same supernatural might is accessible to the Yogi and Pāṇi.

In later Zoroastrianism merit conditions very strictly one's position in the future world. Through full remuneration of sin and complete confession of it of the duty and good works which were, before probation, due to be done (see IV, viii. 5-9). Those whose good and evil exactly balance go neither to heaven nor to hell, but to Hāmēstagan, the 'Ever-stationary' (cf. H. H. Harward, New rev. iii. [1802] 2), which in one text (Dāstān-i-Dinbik, xxvi. 6, xxxii. 2) is divided into two parts, one for those whose goodness slightly preponderates, and the other for those whose evil minutely overbalances the scale. Not only is punishment in keeping with one's sin (cf. M. N. Dhalā, Zoroastrian Theology, New York, 1914, pp. 541, 273-275, 280 f.), but in the future world justice is so strictly observed that even the good deeds of a wicked man receive reward.

For instance, a man whose whole body was either cooked in the flesh of another man or undergoing some other torture that had one of his legs stretched out unnaturally, because he had either shoved a whip of wool before a hungry animal that was thus, and could not reach it or his mouth, when it died he had not done any other good deed his whole life long!' (Dhalā, pp. 272, 274). Also L. C. Casarenzi, 'A History of Maharshān Religion under the Sasanidhs, Bombay, 1899, p. 167 ff.).

Merits availed, as the doctrine of the merits of the sages teaches, not only for one's self, but also for others. This has been recognized by other religions as well as by the older form of Christianity. In the Buddhist Upanisad, rama-karmādakā, or ritual for admission to the Buddhist priesthood, the candidate prays: 'Let the merit that I have gained be shared by my lord. It is fitting to give me to share in the merit gained by my lord' (J. F. Dallmayr, Mediaeval Technology, London, 1888, p. 273). The Lord, however, stands almost alone in thus transferring merit during this life. The transfer of merit from the living to the dead is less common, although the Marcionite practice of 'baptizing for the dead' may possibly be the origin of several other systems, with belief in transmigration (q.v.) and in asceticism (q.v.). One aspect, however, calls for mention here—the accumulation of merit for the attainment of supernatural results in this life.

On the theory of sacrifice as set forth by the Brahmanas—i.e., that it is a rite which ipso facto escapes the result at which it aims—it follows that the accumulation of merit not only by sacrifice but also in other ways will constrain the gods themselves to bow before the might of the ascetic. This power may be used for good or for evil, according to the purpose of him who possesses the merit in question. The records of India are full of stories of sages who have won enormous powers by the accumulation of merit, almost wholly by asceticism alone.

Thus, Bāll conquered India and all the other gods except Viṣṇu, and ruled the world until Viṣṇu overthrew him; Chaya-vāna was constrained by its own law to do his will (Mahābhārata, ii. 51.38); the particularly ill-tempered Durvāsas by his curse brought thousands of magic demons that destined him to be the only famous curing of the Ocean of Milk, which produced the amrita ('ambrosia'), restored the divine away (Viṣṇu Purāṇa, viii. 29.3). Mārkaṇḍeya, the demon that destroyed the only meritorious character of the earth, was eventually raised to heaven, though he unhappily boasted of his merit and fell, because, according to the law, the product of evil acts is evil; still remains, in its aerial central hall-way between heaven and earth (Mārkaṇḍeya Purāṇa, i. 7.23). Kaṭparī's austerities, like those of many other sages, were said to be so great that to do them one had to send him (Viṣṇu Purāṇa, i. 15); Kartariva thus obtained power over the earth, which he used wisely (G. vi. 31); the demon Rāvaṇa, the evil figure of the Ramayana, won supernatural power by the merit of his austerities; Vivantaka, whose conflicts with the almost equally meritorious Vasūtiya form an important theme in the earlier Sanskrit literature, rose to be a Brahman instead of being merely a Kṣatriya (Jāt. 17 [1903] 317 ff.). Indeed, the idea recurs constantly throughout Sanskrit literature, the implication being always that the sage owes his power solely to the merit which he has accumulated; and in modern folk-belief the same supernatural might is accessible to the Yogi and Pāṇi.

In later Zoroastrianism merit conditions very strictly one's position in the future world. Merits availed, as the doctrine of the merits of the sages teaches, not only for one's self, but also for others. This has been recognized by other religions as well as by the older form of Christianity. In the Buddhist Upanisad, rama-karmādakā, or ritual
A brief glance at Hellenistic Judaism of the same period will conclude this part of our survey. The morality of the book of Wisdom and of Philo combines with the Jewish idea of obedience to the Law Plato's philosophy of the subject of moral retribution. Judaism remains practically one with the earlier Ecclesiastics. Philo, however, further distinguishes himself both from the Wisdom literature and from the teaching of the scribes by avoiding the principle of 'atomism' and carrying back all virtues to one root, love or faith. The punishment of sin, moreover, he regards as a living death, the reward of virtue as communion with God (see J. Drummond, ad. 'Philo', in HDB v. 207).

As regards the views of educated paganism, when Christianity came into being, the doctrine of Plato was a formative influence. Plato 'in several dialogues expresses the thought that a judgment upon all souls takes place at death, at which they receive, according to their deeds (Phaedo, 112 E), both the reward for their good and the punishment for their evil deeds (Rep. x. 611 E, Corp. 252 E, Phaedo, 112 F). Here, however, the more conception of merit is overlaid by the other, that he escapes after righteousness and virtue seeks δικαιοσύνη, and therefore will not be overlooked by God (Rep. x. 613 A D) (J. Ruetschi, in FREQ xx. 501).

The last thoughts carry us beyond the sphere of the doctrine of merit. Nevertheless, there can be no doubt that paganism, as well as Judaism, emphasized the view that regards God above all things as a rewarder of good and evil, and tends to review His relation to man under legal analogies, was the dominant and most usual religious tendency. The total position of things is well summed up by Schultze in S. LXXvi. 9:

1When Christianity entered the world and found its first expression in the different Jewish circles and the teachings of the prophets, a question arose as to what their actions were. We find, for instance, that in the Jewish literature the idea of merit was the dominant one. The liturgical books of the early Christians, and especially the Gospels, contain many references to the merit and demerit of man.

2. The doctrine of the NT.—The teaching of Jesus links itself on to that of the OT prophets, and also to that better side of the later Judaism which Montefiore and Dalman insist. It is, in the first place, essentially ethical-religious; religion and morality are completely blended in it. Jesus demands of His disciples an absolute conformity with the will of God (Mt 5:17). Righteousness better than that of the scribes (5:19). Without this none can enter into the kingdom of heaven (7:22). This better righteousness is, however, not to be attained by a closer conformity to the Law. Jesus further teaches that the only true righteousness is heart righteousness; that, apart from a right motive, outward conformity to the Law is worthless. Again, the idea of God as the Father, so central in His teaching, is the very antithesis of and makes impossible a legal conception of the relation of man to God. The righteousness which Jesus demands is, therefore, in the end just the spirit of sonship, energizing in the imitation of the Father (5:19).

While thus rejecting the legalism of the scribes, Jesus employs in His ethical teaching the current ideas of reward and punishment. That righteousness shall be rewarded and wrong-doing punished He reiterates again and again (Mt 5:6-18, etc.). He speaks once (unless it be the Evangelist) of 'good works' (διακήναι ἀγαθά, Mk 10:42); he did not approve the doctrine of 'What shall I do that I may inherit eternal life?' (Mt 10:5); in His answer, moreover, He points the sinner to the keeping of the commandments. Cf., further, the teaching of the parables of the faithful and unfaithful servants.
(Mt 24:42), and of the talents (22:13), and observe again the principle expressed in Mk 4:24.

The principle of merit, therefore, occupies a somewhat ambiguous position in the teaching of Jesus. On the one hand, there are fundamental doctrines which appear to leave no room for it; on the other, we find in places a general recognition of it. The position of things in the NT as a whole may be illustrated.

The rest of the NT corresponds exactly in its ethical demands with the teaching of Jesus Himself. The necessity of righteousness is absolute, alike for the Jewish Christians of the Epistle of James and the anti-Jewish Christianity of Paul, as well as for the other NT writers (cf. Ja 1:18, Gal 5:21, Eph 5:1, 1 Jn 3:12 esp. v. 9). Throughout the NT also the doctrine of the Fatherhood of God is fundamental, though not so dominant as it is in the teaching of Jesus. The idea of retribution according to works is also generally prevalent. Paul, indeed, in the most important cycle of his teaching—that upon justification—appears to exclude the principle of merit altogether. Justification is by faith alone: by the works of the Law no man can be justified (Ro 3:19-29, Gal 2:16; 3:10-15); observe especially the direct exclusion, in so many words, of the principle of merit in 1 Cor 15:19-28. Yet the Apostle teaches also that reward and punishment are according to men's works; and here regards this doctrine as axiomatic, feeling himself here on common ground not only with the Jews, but also with the Graeco-Roman world (Ro 2:8-11, cf., further, 2 Co 5:9-10, Gal 6:7, 2 Th 1:1, and also Col 3:24, Eph 6:1, 1 Th 4:1, 2 Th 1:1).

Even more prominent is the doctrine of retribution according to works in the Apocalypse, and the Epistles of James, 1 Peter, and to the Hebrews (cf. Rev 2:10-11, 13-21 etc., Ja 4:14, 1 P 1:17 etc., He 10:28, 11:25-29). The current idea of retribution is therefore almost universal in the NT, though, as Schultz says (op. cit. p. 13), 'without systematic development.' Only in the Gospel and Epistles of John is it almost wanting. The reason for this is assigned by Schultz as follows:

'At bottom there is no room for it. The true life work, which the community elect of God performs, is belief in the Son of God, and to this belief eternal life is already given, as possession and as hope' (p. 13).

Here, then, enters a problem which the NT writers do not themselves seem to have felt much. We have little retribution. But the NT writers which the NT has in common with the current thought of its age, to the specifically Christian ideas, such as those of the Divine Fatherhood, or of the Father's reward to His Children whom He has full significance was later to be brought to light. We may, however, refer here to the passages in the NT which suggest the limitations with which the doctrine of retribution is to be taken.

To begin with Jesus Himself, when He describes, as He often does, the relation of God to men by comparing it to that of a master and his household servants (cf. Mt 20:22-25, 25:14, Lk 17), He thereby does away with the idea of merit and reward in the strict sense.

'The servant in the sense of antiquity can acquire no merit. He is given a disgrace, even when he has done all he should (Lk 17). His master owes him reward, but He is his master by an act of good pleasure' (Schultz, p. 13).

In the one instance where Jesus actually does speak of paid laborers, and so leaves the way open for the strict idea of reward according to merit, He emphasizes by contrast the truth that God will not be bound by this rule, but reserves to Himself the right of graciously transcending it (Mt 20:16).

Finally, Jesus opens out the view of a reward which belongs rather to the personality revealed in the work than to the performance as such.

'MERIT (Christian')

Only where the tree is good, can the fruit be good (Mt 7:23)'. It is the conduct of life, the work, which is recognized and rewarded in the individual deeds (Schultz, p. 10). Paul, again, suggests a recognition between the idea of justification by faith and judgment according to works in the conception of good works as the fruit of the Spirit (Gal 5:22-23).

Where justification is by grace, there is also thought of the Spirit, and therefore also good works. Thus the verdict of present justification and of the future judgment recorded in the Epistles by St. Paul and St. Peter (cf. Franks, Men, Sin, and Salvation, London and Edinburgh, 1966, p. 125 f.). Again, in Eph 2:8-10 good works appear not as a condition, but as a result, of salvation. 'Sometimes, however, the ethical interest so predominates that Paul even comes to represent future salvation as conditional on perseverance in faith and obedience' (ib. p. 129).

Of Ro 8:1, 1 Co 9:25, Ph 3:18 with exposition given by Franks (ib.).

Finally, we may take into account the recession of the idea of retribution in the Johannine writings, which has already been noticed. The tendency in the NT, at any rate in the most important parts of it, is in general to limit the principle of merit and retribution in favour of the doctrines of grace.

At first it may be admitted that such limitation is by no means universal or absolute (it is least observable in the minor NT writers); and there remains, therefore, a fundamental antinomy in the Christian religion as originally conceived; the theology is called upon to solve. How difficult the task is, the history of doctrine reveals.

2. The doctrine of merit in the Christian Church.

We begin with primitive Gentile Christianity, and note that the whole cycle of Christian ideas by no means passed over equally to the Gentile Christians — what they received was naturally conditioned by their previous preparation. As to the necessity of good works, we find an intense moral earnestness in primitive Gentile Christianity. But, further, the idea of the twofold retribution according to works (reward or punishment) was familiar to the whole Graeco-Roman world; hence this element of NT doctrine was easily assimilated, and, indeed, emphasized in more than its proper proportion, so much so that we have to recognize in the early Christian Church a return to a great extent to the Jewish doctrine of works. The doctrines, on the other hand, which should have prevented this return, such as, above all, the Pauline doctrine of justification by faith, found their limit in the fact that the idea of retribution by means of future rewards on the whole, even in the NT, was not in the way of developing in such a way as to make it a part of Christian doctrine. The whole cycle of good works in the Apostolic Fathers is very similar to that of the Jewish Rabbis. Christianity appears as a new law, and eternal life as the reward of keeping it. Just as in later Judaism, stress is especially laid on the merit of fasting and almsgiving. Cf. 2 Clem. vi. 4 (almsgiving becomes a mitigation of sin); Barn. xix. 2 Clem. iii. 3f., viii. 4-44, 9; Hermas, Sim. ix. xxviii. 3, x. ii. 4. We actually find already the idea of a work of supererogation (Hermas, Sim. v. iii. 3: 'If thou doest a good work beyond the commandment of God, thou shalt win for thyself more abundant glory').

In the Greek Fathers this line of thought continues, side by side, indeed, with the idea of grace, with which, however, it is never properly correlated. A more important and characteristic development belongs to Western theology, and begins with Tertullian. Himself a jurist, he gave to the doctrine of good works an essentially juridical stamp, which it has never lost in Latin Catholicism. A typical sentence is:

'A good deed has God as its debtor, just as also an evil one, because a judge is a mere steward of every cause' (Tertullian, in fact, looks upon the whole life of the Christian after baptism as strictly a life under the Law, its motives hope of reward and fear of punishment, and the result deter-
So far as proceeds from the free will is ‘de congruo’; so far as it proceeds from grace, it is ‘de condigno’ (ib. p. 545 f.). Thomas Aquinas, more cautious. He denied the possibility of merit before baptism. All merit, however, so far as it proceeds from the free will is ‘de congruo’; so far as it proceeds from grace, it is ‘de condigno’ (ib. p. 545 f.). Duns Scotus taught that ‘meritum de congruo’ was possible to a man in puris naturalibus according to God’s ‘potentia absoluta,’ not, however, according to his ‘potentia ordinata’ (ib. p. 596 f.). Finally, the Nominalist, like the Galilean of William of Occam, is taught without hesitation that he who does what is in him can merit ‘de congruo’ the grace which enables him ‘de condigno’ to merit salvation (ib. p. 596 f.). Thus is the Reformation antithesis to the Roman Catholic doctrine of good works takes its start. Luther, returning to Paul’s principle of justification by faith, declares that the doctrine that salvation can be merited by good works, however modified by a reference to the cooperation of divine grace, is absolutely opposed to the pure gospel.

We ought to notice that Luther’s point of view is not altogether without parallel in the Middle Ages. Above all others Bernard of Clairvaux presents similar thoughts.

"His foolish and mad, whoever he be that trusts in any merits of his life, who trusts in any religion or wisdom but only humility." (De Diversis, sermon xxvi, 1; other passages are given in A. Ritschl, Rechtfertigung und Verkündigung, 1., Eng. tr., p. 90.)

Luther, however, elevated what was thus occasionally expressed in the Middle Ages as a devotional point of view into the central doctrine of the faith. This teaching, in its ultimate form—there were many stages of development—is that salvation—as far as one is concerned with the condition of righteousness, but righteousness received as a divine gift by faith is the condition of good works. Faith works by love, and its natural fruits are good works.

In opposition to Luther’s view the Roman Catho-
conception of salvation by merit, and views good works, in essential agreement with the prophets, with Christ, and with Luther, as the expression of the filial attitude towards God.

There is, however, a powerful tendency not simply to deny the applicability of the category of merit to the matter of justification, but to regard it as a complete intruder in the domain of Christian theology. It is the very origin of the name Myrddin, as a variant of the Welsh word for Merlin, that Ritschl not as an alternative to justification by works, coming in view of the failure of the latter, but as from the first the only method of salvation. The Ritschian doctrine of twofold retribution is regarded simply as a remainder of Pelagianism or as a dialectical concession to his Jewish opponents (cf. Ritschl, Rechtfertigung und Verwöhnung, ii. 319; also W. Beyschlag, NT Theol., Eng. tr., Edinburgh, 1895, ii. 179; J. Holtzmann, Lehrbuch der neutestamentl. Theor., Freiburg i. B., 1896–97, i. 129). Our Lord’s use of the category of reward is regarded as merely popular and not fitted to be the basis of a theological statement such as that of (Ed.) Holtzmann.

The question is really that of the rights of ‘natural theology’ within the Christian religion. There is some tendency to place the foundation of the doctrine of twofold retribution as due to the Hellenization of Christianity, and so being unproven by the proper path of Christian theology (cf. Rechtfertigung und Verwöhnung, iii. 24 f., Eng. tr., p. 250 f., also ii. 318 f.), maintaining that the doctrine of twofold retribution, in a word, is Jewish or Greek but not Christian. The Ritschian doctrine on this point has been by no means generally accepted.

Many would still agree with C. Gore when commenting on Ro 2 9, he speaks of natural religion as the necessary and essential basis of all evangelical teaching (The Epistle to the Romans, London, 1899, i. 108 f.). It must, however, be admitted that the co-existence in the NT of the doctrine of justification by faith and of reward according to works remains one of the antinomies of the Christian religion, of which, if the Ritschian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritschl is surely right in considering the whole question as unsuitable as a comprehensive designation of the ethical side of Christianity (iii. 627, Eng. tr., p. 663). The phrase ‘good works’ suggests just that Pharisian atomism which is very opposite to the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connection with which there is a perpetual danger of a return to a lower stage of religion.

**LITERATURE.**—The usual Biblical Theological and Histories of Dogma; also the great systematical theological works, among works remaining one of the antinomies of the Christian religion, of which, if the Ritschian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritschl is surely right in considering the whole question as unsuitable as a comprehensive designation of the ethical side of Christianity (iii. 627, Eng. tr., p. 663). The phrase ‘good works’ suggests just that Pharisian atomism which is very opposite to the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connection with which there is a perpetual danger of a return to a lower stage of religion.

**MERLIN.**—The name Merlin is a modification, first forming its Latinized form Merlins, of the Welsh Myrddin, and for that latter form in Welsh is not a mere orthographical variant of the former is shown by a line of the poet Dafydd ab Gwilym (middle 14th cent.), which attests the pronunciation with e in the first syllable. In medieval romance Merlin played a prominent part, in close conjunction with the Arthurian legend, as a prophet and as a magician. In the earliest references which we have to him in Welsh literature he appears as a bard, while, later, he is represented in Welsh and other poetical literature as a seer, until finally, in the Merlin romances, his character as a magician predominates. The origin of the name Merlin (in Latin Merulinus) is the rather phonetic equivalent of the Celtic Morid-dünon (‘the fortress near the sea’). The reason for the substitution of l for dl (= soft th) in the Latin and other forms of the name is uncertain. Probably it was due to the absence of the soft sound of th from these languages, and the consequent necessity for substituting for it some other sound, but it is not clear why that sound should have been l. As for the derivation of the name, it may be stated that there is one obstacle, and that a doubtful one, to its derivation from the Latin Martinus. This should give Merlyn (with B., l. th.), but that is in turn a late form; in an earlier form might change to Merdín, in accordance with a Welsh sound-change of th to dd which operated in certain words, but which was arrested by a form of true th in certain words. It is probably an instance of this sound-change in the place-name Gogerddan, in Cardiganshire, which doubtless stands for ‘Gogerth,’ another form of ‘Gogarth,’ a diminutive of ‘Gogarth’ (‘an eminence’). This derivation of Merlyn is one of a possibility; but, if it is sound, it is just conceivable that some of the early legends of Merlin contain distorted accounts of St. Martin, to whom St. Ninian is said to have dedicated the church called Candida Casa or Whitborn. A magician called Melinus is mentioned in the Vita Patricii of Jocelyn (x. 79, ed. AS, ii Mar. [1865] 556), written in the 12th cent., but whether or not the name stands for Merlins is uncertain; in the Vita Patricii which is ascribed to Bede, though more probably by Melianus Probus (ed. J. Colgan, Acta Sanctorum... Hiberniae, Louvain, 1645–47, ii. 51–60), he is called Locrus. It is interesting to note that Adamnan in his Life of St. Columba makes no mention of Merlin.

1. Merlin in Welsh legend.—So far as the earliest allusions to the good works of Merlin are concerned, it is clear that his name belonged to the same legendary zone as the majority of the heroes and saints commemorated in early Welsh literature and included in early Welsh genealogies, namely to that of the ‘Men of the North,’ who are represented as having come into Wales from Northern Britain, more especially from the region of the Clyde and the Forth. This is the zone, e.g., of Cunedda Wledig, Urien Rheged and his son Owain, of St. Kentigern (the patron saint of Glasgow and of St. Asaph), Caw, Rhuddderch Hasi, Gwenllibon, Cynon ab Clydno Eidinn, and of Arthur and Llên. It is interesting to note that the well-known British legendary cycle is to be found in Nennius, as well as in poems of the Black Book of Carmarthen, the Book of Aneirin, the Book of Taliesin, and the Red Book of Hergest, while fragments of the same cycle may be detected in the Mabinogion, the Triads, and the Brus. It is in the Book of Aneirin, a MS of the 13th cent., but containing much earlier material, that the Merlin of Welsh literature and included in early Welsh literature and included in early Welsh
Since it is clear that the legend of Myrddin (Merlin), in its earlier developments, must have arisen on British soil and have been circulated in the ancient British tongue, it will be of interest before considering its later evolution in Latin and other non-Welsh sources, to review the forms in which we find it in the literature of Wales. Unfortunately, the Welsh form of the Merlin legend do not go further back than the 12th cent., but they doubtless embody more primitive features, though it is no longer easy to determine these elements with certainty. The Merlin legend owed its popularity in Wales, in the 12th cent. and later, to its convenience as a vehicle for the enunciation of prophecies as to the ultimate success of the Welsh in their struggle against the English. In this form of the legend Myrddin is represented as having, in the battle of Arderydd (often wrongly written Arderydd), caused the death of the son of his sister Gwendolen, who apparently was the wife of Rhysderch Hael, a prince of Strathclyde, who, in the battle in question, was the opponent of another Northern prince, Gwendolen, with whose court Myrddin as a poet essayed to be in connexion. According to this Welsh legend, smitten with remorse, he flees in his frenzy, under the pursuit of Rhydnderch Hael and his hounds, to the Forest of Caledonia (Coed Celyddon), to which, in Welsh medieval literature, he and his associates sometimes was as the home of spirits and departed spirits. In his flight the bard's sole companion is a little pig, and with his companion he reaches the shelter of an apple-tree in the woods of Caeretlaw (near Carlisle), which he is represented as uttering prophecies concerning future events in the history of Wales. It would appear from some of Myrddin's utterances that, in the bard's condition of communication, he was sometimes made to him by a female friend, who bears in Welsh the name Chwimbian or Chwipl, who is probably the original of the Viviane of the later Merlin romance. It is possible that, in earlier forms of the legend than those known to us from Welsh literature, this nymph or Egeria may have originally played a less shadowy part than that which comes to view in Welsh 12th cent. legend, when the chief use of the Myrddin story was as a vehicle for encouraging vaticinations. It is notable that in no part of early Welsh literature, not even in the Black Book of Carmarthen, which was written in the Principality of Carmarthen, in the latter half of the 12th cent., is there any attempt to connect Myrddin with Carmarthen (in Welsh, Caer Fyrdin), as was done by Geoffrey of Monmouth. Hence we may conclude that the story of the connexion of Merlin with the North and with the battle of Arderydd—ought, according to the Annales Cambriae (ed. Monumenta hist. Brittanicae, 4, London, 1848, pp. 580–840), in A.D. 573—was traditional and well-established. The Northern associations of the story are further confirmed by the fact that Nennius mentions a Riderch Hen (Hist. Brit. ed annot. 397, ed. Mon. hist. Brit. i. 275), who is probably to be identified with Rhysderch Hael, while the life of St. Kentigern (xv., ed. and tr. A. P. Forbes, Historians of Scotland, v., Edinburgh, 1874) names a Rederech, who is doubtless also to be identified with the same person, and a Lalocian, or Lalocian, whose name is clearly the same as that of Llallawc, identified with Myrddin in a poem purporting to be a letter written to the Welsh minister of Merlin, found in the Red Book of Hergest and generally known as the Kywossi Myrddin ("The Conversation of Myrddin"), H. L. D. Ward (in Romanic, xxii. [1889], 573) has added conclusive evidence to show that Llallawc (Laloic) is a proper name, found, e.g., in a Breton document called the Rodon Cartulary as Laloic and Laloan (see Romanic, xxii. 594). The simpler form of Llallawc, Lallaw (=Lallog), is probably a purely Welsh variant. It may be stated that the precise site of Arderydd (given in an older form in the Annales Cambriae) is as yet unknown, and with certainty, the usual identification with Arthur. But it is probable that the name Gwendolen survives the place of Carnallog (near Carlisle), in the fragments given above, Laloic is said to have been driven mad by the events of the great battle "in campo inter Lidel et Carwansow situato."

The attribution of prophecies in Welsh literature to a bard Myrddin is not an isolated phenomenon, but is also found in the case of the Welsh poet Taliesin, in whose case, as in that of Myrddin, a legendary nucleus has survived, the chief feature of which is an account of his transformations. It is probable that the connexion of the name Taliesin with prophecy was earlier than that of Myrddin, as is suggested by a statement put into the mouth of the latter in the first poem of the Black Book of Carmarthen, in a dialogue between him and Taliesin about the battle of Arderydd, to the effect that Myrddin's prophecy of the battle is only known after that of Taliesin. The conception of a poet that is implied in the utterance of such vaticinations resembles the medieval idea of Vergil, who was then viewed more as a prophet and magician than as a poet (C. D. Yonge, Vergil in the Middle Ages, Eng. tr., E. F. M. Benecke, London, 1895). As for the genesis of such prophecies as those of Myrddin, the original models were probably the so-called Rhuddninae Oracles, and such imitations of them as bridged over the time between the period of their composition and the Middle Ages. In the Middle Ages and even later there was a congenial mental atmosphere for the composition of prophecies and the practice of magic, but there was an interest in vaticinations confined to Wales, as may be seen, e.g., in the popularity of such writers of prophecies as Dafydd ap Gwilym, Llwyd, John of Bridlington, Thomas of Ercildowne, and others in England, not to speak of Merlin himself.

In the Black Book of Carmarthen (12th cent.) the two chief forms of prophecy that are associated with the Myrddin legend are those known as the Afallenau ("The Apple-trees") and the Hoiana ("The Hills"). Both poems contain prophetic allusions, mainly to events of the 12th cent. in Wales. The former poem mentions Coed Celyddon ("the forest of Caledonia"), which was represented as the scene of the Myrddin legend, as well as Brydyn (Pielhain) in the North, Mon (Anglesey), Arudwy (N.W. Merioneth), Dinwidyw (near Carmarvon) in N. Wales, Cors Fochno and Pum-lunom (Pynllunom) in Cardiganshire, and the rivers Tawe, Tal, Teidi, Towy, Machafwy, and Edrywy in S. Wales. The Hoiana poem refers to the disagreement between Henry II and Henry III, and also to the Welsh prince, Llwelyn ab Iorwerth, lord of Gwynedd or N.W. Wales. There are allusions in this poem to Gwernwyd (N.W. Wales), and to Tir Ethin, the Land of the Heir-Apparent, which was the district situated in N. Wales between the rivers Conway and Clwyd. The student of the prophetic allusions of these poems would do well to consult the Introduction and notes of J. Gwenogryn Evans’s edition of the Black Book of Carmarthen. Here, again, most of the topography or version of the Laloic story, in S. Wales, such as Dyfed (S.W. Wales), St. Davids, Milford Haven, Mynyw (Monymouth), y Sarrfen
and Castell Collwn in Radnorshire, together with the river Taradyn, Mynyw (the Monnow), Mochafwy, and Teifi, while there are also allusions to certain famous battles of early Welsh history, which are probably taken from some current bardic list of such battles.

In the Book of Taliesin (14th cent.) there is a similar prophetic poem (but without any account of the Merlin Myrddin) and the three poems, published in the Monmouthshire Archierary and the National Library of Wales, are said to be the works of Myrddin under the title Argeg Prydrein Fawr ("The Prophecy of Great Britain"). The events which are foretold are similar in character to those of the Afallenau and Holaioan. There are other poems in the MS which, without expressly mentioning Myrddin, are clearly cognate with the Myrddin poems already mentioned.

In the Red Book of Hergest (14th cent.) there are two poems which have clear links of affinity with the Afallenau and Holaioan, but which may have been composed later. They undoubtedly belong, like the latter, to the Welsh Myrddin tradition. These two poems are (1) Kyvossi Myrddin a Gwennyd y chwfr, 'The Conversation of Myrddin with his sister Gwendydd,' and (2) Gwasgargyr Yrdrin yr y bod, 'The Diffused Song of Myrddin.' In both the poems which make it clear that their writers were familiar with the legend of the Northern Myrddin. Myrddin in these poems is little else than the instrument through which the poet speaks. It is noted that a common feature of the Myrddin and other prophecies of the Middle Ages was an expectation of the return of the princes Cynan and Cadwaladr of Dyfed in order to head jointly the Welsh forces to victory over the English.

It is in the Kyvossi poem that the term Lliallogan, already mentioned, occurs. Though this word is doubtless in origin a proper name, yet W. O. Pughe ('Not. Dial. of the Welsh Lamps,' Denbigh, 1882, s. v.) interpreted both it and llallaweg as meaning 'twin brother.' It is not improbable that the term was misunderstood in this sense, even by the author of the Kyvossi, since he makes Gwendydd speak of 'my llallaweg Myrddin,' while the term llallaweg, as a synonym for lliallogan, is doubtless invented from it by analogy. In the original narrative on which the Kyvossi poem was based, Lliallogan was doubtless a proper name, as it is in the Life of St. Kentigern, in the passage 'in curiosis (Iodar) eras homo fatuus vocatum Llaiologan,' and it is this Llaiologan that is identified in the Scottish sources with the Welsh name, Llaiologan ("Llallaweg," 1750), as in the Kyvossi poem, with Merlin. Poems xix., xx., and xxi. of the Red Book of Hergest (in Skene, Four Ancient Books of Wales) clearly belong to the same cycle as the preceding prophecies.

Occasional references to Myrddin are found in the Welsh poets of the Gododdin period (A.D. 1190-1300), as, e.g., in Cynuddel's Elegy to Owain Gwynedd (Myrddin Archierary of Wales; Denbigh, 1870, p. 152), where the poet says that Owain 'faireth rather than Myrddin.' Gwynfardd Brychiniog, too (ib. p. 193), speaks of the Lord Rhyd of Deheubarth (S. Wales) as having been prophesied by Myrddin Edrydyd. Edrydyd (ib. pp. 234, 244) refers to Myrddin's brilliancy in song, and likewise Gwilym Ddu o Arfon (ib. p. 277) speaks of the 'excellent Myrddin of the stock of Meirchion.' The poet Sefnyn, also, in an elegy on Iorwerth Gryrrog, compares the dead bard to Myrddin (ib. p. 334). Further, a cynical and sarcastic poet, Madog Dwygraig, satirizes the Afallenau in one of his poems Gwaelod Satire on a Woman.

In Dafydd ab Gwilym (poem xxvii.), there is an echo of the fame of Myrddin as a poetical lover, while in poem xlvii. he is said 'to have made with the craftsmanship of love a house of glass about a mistress.' The few other allusions to Myrddin in Dafydd ab Gwilym are unimportant. Later legend (see MS 162 in the Penrith Collection, now in the National Library of Wales, Aberystwyth, written about the 13th or 14th century, and discovered near the island of Bardsey, off the coast of Carnarvonshire, and located his grave there (cf. R. Higden, in Polychronicon [ed. T. Gale, Oxford, 1691, i. 187]), and Giraldus Cambrensis may have had this legend in mind when he spoke of the famous Cledonius' grave (see below) as being shown near Nefyn in Carnarvonshire.

That Wales was not without an interest in the prophecies of the Sibyl of Seville and the other prototypes of the Merlin and similar variations, is shown by the fact that MS 5 of the Penrith Collection, belonging to the second quarter of the 14th cent., contains a Welsh translation of the Sibylline prophecies, called Llyma Prophecydol y Sibil doeth ('Here is the prophecy of the wise Sibyl'), based on the De Sidillis of Isidore of Seville. This translation is also found in the Red Book of Hergest (cols. 571-577), and in Penrith MS 14, pp. 45-57. The latter bears the title 'The Sibyl's Dream,' and belongs to the middle of the 13th century. It differs both from the versions of Penrith 5 and MS 20 in that there are allusions which make it clear that their writers were familiar with the legend of the Northern Myrddin. Myrddin in these poems is little else than the instrument through which the poet speaks. It is noteworthy that the inclusion of such prophecies in this and the subsequent century in Wales is further shown by the inclusion in Penrith MS 3, written about 1300, of the Kyvossi poem, which is interesting to note that a common feature of the Myrddin and other prophecies of the Middle Ages was an expectation of the return of the princes Cynan and Cadwaladr of Dyfed in order to head jointly the Welsh forces to victory over the English.
its dedication, to be the work of Geoffrey of Monmouth, but the legend which it embodies is so entirely different from that given in Geoffrey's Historia that it is in the highest degree improbable that he is its author. The legend which it incorporates and expands is essentially that of the Welsh Afallencau and Hogenau and of the 'Laloicem' tradition that goes back to St. Kentigern.

Ferdinand Lot has published an analysis of the Vita Merlini (Annales de Bretagne, x.,) and has shown to be later; than the Laloisian fragments already mentioned; it could be readily assumed that Geoffrey was its author, and goes too far in seeking to trace the influence of the Vita Merlini on the Welsh Myrddin poems of the Black Book of Carmarthorn and of the Red Book of Hergest, with the exception of the first poem of the former, which purports to be a dialogue between Myrddin and Taliesin. The Latinized proper names of the Vita Merlini show quite clearly that they were formed by some one who was familiar with the Welsh names of the Myrddin legend, such as Ganieda for Gwenddyddu, Telgesinus for Taliesin, and the like. At the same time, there are irregularities of form and of the legend, as, for instance, the opposition of Guennolus to Merlin; but in the Vita Merlini, as in the Afallencau, there are prominent allusions to apples, and the whole setting of the Merlinium and Myrddin poems, in spirit of certain discrepancies, is for the most part the same. The Vita Merlini, however, contains one name, Mel- dinus, which, as Lot has pointed out, is probably derived from the model of Hogenau. How it happened that Geoffrey did not take the proper name of the model, it is not for us to say.

Though the Vita Merlini appeared to be the work of some one other than Geoffrey, it is not certain that he is the author. The poet is of great interest as showing the popularity of the Northern and Welsh type of the Merlin legend in cultured circles in Britain in the 12th cent., but familiarity with Geoffrey's Historia is already shown by the reference to Vortigen (I. 681).

3. Merlin in Geoffrey and in the Chronicles.—The introduction of the figure of Merlin into the medieval Chronicles is due to Geoffrey of Monmouth, as is shown by theAmbrosius of one of his sources, Nennius, into Merlinus. This is clear from the fact that, in the Prophecy and in the last part of the preceding book, Geoffrey calls Merlin Ambrosius Merlinus. The innovation in question was first made by Geoffrey, when he published 'The Prophecy of Merlin' as a separate work, before the appearance of his Historia Regum Britanniae. This Prophecy must have been published early enough for Ordeicus Vitalis to quote from it, as he does in bk. xili of his History, written about 1136 or 1137. Later it was incorporated in Geoffrey's Historia, and forms bk. vii. of that work. The Ambrosius with whom Geoffrey identified Merlin first comes to view in Gildas (de Excidio Britanniae, xxi., ed. Mon. hist. Brit. i. 15), as Ambrosius Aurelianus, but the first to make it into a legendary person was Nennius, who describes him (xli.-xlv.) as a child without a father, for whom Vortigern searched, by the advice of his sorcerers, in order to render stable the foundations of the tower that had been built. He was found, according to Nennius, in the field or plain of Ellett, in the region of Gleguissing (=Glywyssing in Monmouthshire), and in Nennius's narrative he is also associated with it that he is the brother of Dinas Emrys (Eurys being the Welsh derivative of Ambrosius), near Beddgelert, and is represented as a sorcerer (magus), who prophecies the final overthrow of the English by the Welsh. Ambrosius in Geoffrey appears as a separate character (Hist. Brit. vii. 1), but the role which he plays in that author was filled in Nennius by Guorthemir (Vortimer). It is Geoffrey, too, that first connects Merlin with Carmarthen (Hist. Brit. vi. 17).

Another new element introduced into the story, and which became a notable feature of the Merlin romance, was the suggestion that the boy's father was a supernatural being of the type known by the name of Merlinaus, a Roman man made by Nennius, that the boy was the son of a Roman consul, is omitted by Geoffrey. The idea of introducing an incubus into the story probably came from a reminiscence of the pseudo-Bede (de Elem. Phil. P. 1. [PL xc. 1131]), which doubles reflects a view put forward by St. Augustine. The germ of the conception of Merlin as a sorcerer was already in Nennius, and the idea of putting prophecies into his mouth was ready to Geoffrey's hand, and even then a practice of the times, as is seen by Geoffrey's own references (ii. 9, xii. 18) to the prophecies of the eagle at Shaftesbury. Giraldus Cambrensis, too, makes Merlin prophecy from the Book of Silvestris (or Celidoniensis), and attributes to the former only prophecies taken from Geoffrey, and he likewise states (Brit. ii. 6, 8) that he discovered, in an out-of-the-way locality, a copy of the prophecies of Merlin in the possession of a historian of longue.

Geoffrey gives prominence to Merlin's powers, not only as a prophet, but as a magician, and represents him as one whose magic power conveyed Stonehenge from Ireland to Salisbury Plain and changed the forms of Uther and his companions. In Geoffrey, however, Merlin is not mentioned later than Uther's reign, but subsequent legend and romance could not resist the temptation to associate him with Uther's son, Arthur. In romance, Merlin, as a magician, tended to come more and more into prominence, until at last he became a figure second only to that of Arthur himself. In the case of subsequent chronicles the following points may be noted. The Welsh Brut Tysilio, an adaptation of Geoffrey's History, shows a development on the lines of the later Romances, and probably under the influence of the Ambrosius of one of his sources, Nennius, into Merlinus. In Geoffrey's History, Merlin is represented as owing his birth to the machinations of Lucifer and other evil spirits, and the increased prominence of the magical conception of his character is seen by the statement that he, by his magic art alone, is able to draw the stones that are to be carried from Ireland to Salisbury Plain as far as the ships, after the complete failure of the warriors. The same tendencies may be noted in Wace, who omits Merlin's prophecies, with the exception of those about Vortigern, on the ground that they are unintelligible to him, while he invests Merlin throughout with superhuman powers, and does not even mention any mechanical assistance in the transmission of the blocks of Stonehenge. Traces of romantic influence come to view also in the Chronicle called Draco Norvannicus (c. 1170) ed. R. Howlett, Chron. of the Reigns of Stephen, etc., London, 1884-89, ii. 389-757), which, it may be stated, contains many affusions to the section of Merlin's prophecies that relate to the first half of the 12th century. In Layamon's Brut there are a few additional touches to the story of Merlin, such as Merlin's explanation that the immediate cause of the fall of the tower which Bermuda fort or the tower of the Dinam Emrys (Eurys being the Welsh derivative of Ambrosius), near Beddgelert, and is represented as
marked emphasis on the supernatural conception of Merlin, which shows itself on the side both of supernatural knowledge and of supernatural power. The closest connection of Merlin with the Vita Merlini, as in the account of the discovery of Merlin in a forest, at Uther’s instance, when he wished for his aid to obtain Igraine as his mistress, is in the Latin hexameter poem called Gesta Regum Britanniae (ed. F. Michel, London, 1862), Merlin is entirely supernatural, as, e.g., where he transmits the stones to Stonehenge by means of magical songs, or where he magically changes Uther’s form. Merlin, too, gives Arthur new strength in his contest with Frollo. Here, again, there is a link with the Vita Merlini, where it is said that Arthur was conveyed to an ever-to-be-remembered island, on which a royal maiden dwelt. In the case of other chronicles, some omit the prophecies or certain of them, as, for instance, Alfred of Beverley (c. 1150); ed. T. Hearne, Oxford, 1710), who omits most of them, and Richardus Glumiacensis (in 1162), who omitted the prophecies in the first edition of his Universal Chronicile (ed. L. A. Muratori, Antiq\itunes. Hicton medii evi, Milan, 1788-42, iv. 1679-1118), and E. J. G. de Heer, published from the Latin text in his second and third editions. Again, it is clear that all Chronicles did not share equally in the tendency to exaggerate the powers of Merlin; e.g., Richardus Glumiacensis (ed. London, 1851) has a mere allusion to Merlin’s transportation of the stones of Stonehenge.

There are, as already stated, traces in Giraldus Cambrensis of an attempt at the fusion and reconciliation of the Caledonian tradition and that of Geoffrey, in his theory of the existence of two Merlins. He follows Geoffrey in his connexion of Merlinus Anbrosius with Carmarthen, while he knows of the madness of Merlinus Caledonius, but attributes it not to remorse at having killed his sister’s son, but to fright at the sight of an apparition in the air. Giraldus, like many of the chronicles who succeeded Geoffrey, succumbed to the temptation of bringing Merlin down to the time of King Arthur. One story, which Giraldus records (Itin. Camb. i. 6), to the effect that Merlinus Anbrosius had been found near Nevrn in Carnarvonshire, is probably conformed with the legend that associated him with the island of Bardsey. Merlin’s burial appears to have been located in some traditions at Carmarthen, where a ‘Merlin’s Grave’ was marked. It was also located at Drumwelier, ancient Dunmeller, in Tweed-dale.

The wide-spread popularity of the prophecies of Merlin may be gauged by the fact that two Latin poems appear to be extant embodying a number of them from the pen of a Scandinavian monk called Gunlungs Leif of Thingeyra, while a similar MS in the Copenhagen Library was translated into English, with the History of Hulfdan Einar, and published in London in 1718 (see San-Marte, Die Sagen von Merlin, Halle, 1853, p. 18).

In 1185-89 there appeared a commentary on the History of Geoffrey, which was published under the pen-name of the poet. In 1493 it was published at Frankfurt. In this commentary Alamus testifies to the existence, in the Britanny of his day, of a strong belief in the prophecies in question. Further, John of Cornwall, a disciple of Peter Lombard, commented on these prophecies publicly in the University of Paris (see Prophetia Merlini cum expositione Johannis Cornubensis, op. K. J. Grubh, Spieclig. Vatican, 1867, p. 183), and in 1596-1603 the prophecies continued, in Britain and in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the prophecies on the Index. A similar attitude of mind to that of the Council of Trent is reflected in the work called Vincentii Bellowanus, Speculum Historie (xx, 209), and the story of the Life and Prophecies of Merlin, see Literature.

4. Merlin in romance.—Merlin first comes to view as a character of romance proper in a poem of which only a fragment has come down to us, probably dating from about the 12th cent., and is usually attributed to Robert de Boron (ed. Paris and Ulrich, in their ed. of the Huth Merlin; see Lit.). This poem was the basis of a French prose work which forms the monograph of Merlin, and is again, is thought to be partly the work of the same author. It has come down to us in two forms, the first being generally called the ‘ordinary’ or ‘vulgate’ Merlin, while the second is known as the Suite de Merlin. Of the latter work Malory’s first four books are an abridgment, and from it is derived one of the minor Arthurian stories, namely that of Balin and Balan. In the Merlin romances, as in the later developments of the Arthurian story (see Arthur, Arthuriann Cycle), there is an ecclesiastical or theological development, the leading motive which led to the birth of Merlin, being the conspiracy of the world of darkness to produce an Antichrist, who would be the means of rendering the work of the Incarnation ineffective. Thus the birth of Merlin is represented as a kind of re-enactment of the fusion of the elements of the demons, he is brought into the world as the child of a woman whose family has been ruined by the evil spirits, and who is herself seduced by a demon. Providence, however, Blaise, the confessor of Merlin’s mother, baptizes the child as soon as it is born, and thence brings it into the Christian fold. The child, nevertheless, retains, though a Christian, the demonic gifts of magic and prophecy, and these powers he puts to beneficial use even in his infancy, by saving his mother’s life and startling her accusers by revealing their family secrets. The narrative then proceeds on the lines of Geoffrey’s History in the account of his relations with Vortigern, Ambrosius, and Uther. After this, Arthur is represented as having been committed as an infant to Merlin’s care, and Merlin hands him over to Antor, who brings him up as his own son. It is Merlin who reveals to Arthur the fact that he is the son of Uther Pendragon and Igrine, and it is to Merlin that Arthur looks for guidance and counsel during the earlier period of his rule. At the time of the battle of Camlan, it was Merlin who vanishes from Arthur’s court. The stories accounting for his disappearance vary in different forms of the romance. One story states that he was betrayed by a maiden called Nimiane or Viviane, probably the Chhwimian of Welsh legend; but in some versions of this narrative she is represented as a water-fairy, in others as a king’s daughter. With this lady Merlin is in love, and she, in the spirit of Delilah, obtains from him the secret of his magic power, and uses this knowledge to cast him into a profound sleep and to imprison him alive in a rocky grave. According to this account, Merlin in prison under Ulrich, a disciple of Peter Lombard, commented on these prophecies publicly in the University of Paris (see Prophetia Merlini cum expositione Johannis Cornubensis, op. K. J. Grubh, Spieclig. Vatican, 1867, p. 183), and in 1596-1603 the prophecies continued, in Britain and in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the
introduction to the prose Lancelot and to the Arthurian cycle generally.

The Romance of Merlin, as already indicated, is to be found first in the fragmentary poem, attributed to Robert de Boron, giving, however, only an introductory part of the story, in a single MS of the Bibliothèque Nationale, and, secondly, in the prose version based on this poem in combination with other, independent sources, the so-called name of Joseph of Arimathea. In two cases the Merlin story forms a small Arthurian cycle through the addition of a Perceval and a Mort Artus. Of the 'ordinary' or 'vulgar' Merlin, which is a long and elaborate romance, several copies are extant. This story is continued in two forms, each of which has survived in a single MS. One of these is called the Huc Quin, after the distinguished patron of learning, Alfred Huth, who bore the expense of its publication. It is a version of which Malory made use in his rendering of the story, and the Spanish and Portuguese translators also; in the Spanish it is in MS 337, also in the Bibliothèque Nationale, and is called by Panis Paris the Livre Artus.

In English the earliest form of the Merlin Romance is a transcribed version called Arthur and Merlin, which was made from French at the beginning of the 14th cent.; and a later translation, generally known as the great prose Merlin, was made at the middle of the 15th century by the Spenser (Faery Queen, can. iii.) and by the French, and there is no reference to his work by the Lady of the Lake in Ariosto (Orlando furioso, can. iii. st. 379). The combination of the Merlins is double, mainly due to the desire of the French trouvères to bring the legend of Merlin, like those of Arthur and Tristan, into harmony with the general civilization and culture of their time. In the 19th cent. Tennyson utilized the Merlin legend in his Idylls of the King, and gave a version of his own of the character of Viviane.

5. Merlin in satire.—Like the other Arthurian romances, that of Merlin tended in the eyes of a more critical age, to provoke satire, and so it is not strange that Cervantes ridicules and parodies it in his Don Quixote, while Rabelais also parodies the propheties in his Pantagruelic prognostication certaine, véritable et insaisible, composed about 1533, while in his Gargantua he exposes the life and prophecies of Merlin to further ridicule. The epic poetry of the sprayed Cervantes or Rabelais, and that which delighted in the prophecies and romance of Merlin illustrates the change from the characteristic mental attitude of the Middle Ages to that of later times.

MESMERISM.—See Hypnotism.

MESSALIANS.—See Euchites.

MESSEIAH.—I. SCOPE OF THE ARTICLE. — Much confusion is caused by the fact that the term 'Messianic' should be confined to passages which imply the coming of an extraordinary person, normally regarded as a king, who is to be in a special sense sent and endowed by God, and whose advent is to mark the end of a world-age. It would, indeed, be an advantage if the looser use of 'Messianic' could be dropped; it suggests that, in the hope of a Golden Age, the principal and origin of hopes was the expectation of a Saviour-King, which might here and there be ignored, or which might be assumed to be implied even where it was not actually mentioned. In fact, however, the reverse is the case; the oldest and the most general expectation is that of the era of happiness, and with this the hope of the Messiah was sometimes combined in later times. For it is quite clear that a majority of the OT passages which deal with the hopes of a glorious future do not speak of the King of the future at all; Jahweh Himself is the agent of deliverance and of judgment; He alone is Saviour and Redeemer in the OT; the nation, as a whole, or the dynasty of its kings, is the object of His favour. In such cases the Christian interpreter may have good ground for maintaining that, from the OT, this wider range of hopes were realized in the coming of Christ, but historically they are not the same as the expectation of a Messiah, and can be called Messianic only in the lax sense of our ordinary language, with reference to the subject of eschatology (q.v.), and this article will, therefore, be confined to the consideration of the Messiah in the strict sense, and the term 'Messianic' will be used only in connexion with him. It may be added that, while this view does not always imply a Messiah, neither does the
MESSIAH 671

Messiah himself always appear in a strictly eschatological setting.

II. MEANING OF THE WORD.—The term 'Messiah' represents the Heb. Mashiāh, the Anointed, and is to be interpreted generally in the OT as an epithet, both of priests (Lev 4:4-6 etc., and perhaps Dn 9:9) and of kings, esp. of Saul (1 S 15:12 etc.), while in Is 43:1 it is applied to Cyrus. Northerner in the OT does it occur in its later technical sense, which is first found in Enoch and Psalms of Solomon (see below, IV. 1). In the OT language any Jewish king is 'Messiah's Anointed,' and the phrase is in no way confined to a single pre-eminent king. In Is 10:5, 1 and 1 Ch 16:14 'Anointed ones' occurs in the plural, of the patriarchs. Dalman suggests that Messiah in its later sense is a shortened form of Yāhve's 'Anointed,' and that no single passage of the OT was responsible for its adoption.

'Christ' is, of course, Χριστός, the Gr. equivalent, which translates the Heb. Mashiāh in the Septuagint. In view of discussions connected with its use in the NT, it is well to note that it is sometimes used without the article even when it is as an epithet standing in apposition to a proper name—\( \text{\textup{Messiah}} \).

The general significance of anointing is discussed in the art. under that heading. In view of the fact that 'Messiah' did not become a technical term till late, the primitive meaning of anointing is naturally the more closely associated with the figure; e.g., even if it be true that anointing was originally transferred from the image of the god to the king, we cannot argue that the Messiah was regarded as a divine being. Anointing had come to denote the two ideas of consecration and endowment.

III. TEACHING OF THE OT.—In order to discover the general trend of the OT teaching it is essential first to discuss, however briefly, the exegesis of the separate passages which speak, or may be reasonably thought to speak, of the coming of a Messiah; in no other way is it possible to realize the precise extent and nature of the hope. The examination is complicated not merely by difficulties of interpretation, but also by questions as to authenticity and date. Here it should be noted that, if critics reject as late certain passages which refer to the Messiah, it is by no means always from any a priori unwillingness to allow the Messianic hope to be of early date or to have been realized in actual prophecy, but because on external evidence such passages seem to be inconsistent with the context. In many cases they presuppose the Exile in a way which seems to be impossible in a pre-Exilic writer; in others the note of hope and promise seems to nullify the message of judgment and punishment which occupies the central place. Here the criterion to be applied is a very delicate one. How far did threats and promises actually exist side by side in the message of the same prophet? At what point do the promises become so contradictory of the threats that they can be regarded only as later insertions? How far may those questions be answered in any particular case, it may not be superfluous to point out that, when a passage is regarded as 'unauthentic' and late, it does not lose its value, either historical or religious; and it still remains evidence of the Messianic hope, only in a different age and circle from that to which it is commonly assigned. The principle being admitted that the prophetic books are composite works, the interpretation of such periods, each case must be judged solely on its merits.

1. The data.—It will be well to begin with 2 S 7 as the passage which is most clearly typical of the OT belief, at any rate on one side. It seems to be Deuteronomistic in tone, and can hardly be earlier than the reign of Josiah. Its main purport is to insist on the spiritual Messiah of the dynasty (vv. 11, 16). In its context this is contrasted with the fall of Saul's house (v. 1), but we may also assume an implied contrast with the various short-lived dynasties of the Northern Kings (cf. Hos 8). The passage itself does not speak of any single pre-eminent or final successor of David and is in no way eschatological, but precisely in its proportion as the actual occupants of the throne proved themselves unworthy, it would be natural to look for some one king who could realize the ideal. And, if at the same time there were other expectations of a wonderful Saviour, the two lines of hope would easily coalesce. At any rate, the personal Messiah in the OT is nearly always associated with the Davidic dynasty, and the references in the early prophets which have any claim to be regarded as Messianic are all connected with it. They may, indeed, be older than 2 S 7, and in any case this passage will hardly be the origin of the hope; it rather embodies and gives literary form to something which is natural.

In Am 9:11-15 there is a promise of the restoration of the Davidic dynasty, with no reference to a personal Messiah, but the passage is almost certainly an Exilic addition (so J. Wellhausen, K. MARTI, G. A. SMITH, etc., though R. DRIVER * defends it with some hesitation*).

In Hosea it may not be necessary, with MARTI and VOLZ, to reject all passages which speak of future happiness, but the only verse which is in any way Messianic in the strict sense is 3, 'Afterward shall the children of Israel return, and seek the Lord their God, and David their king.' Here, again, the stress is laid on the Davidic dynasty, but either the whole verse or at least the words 'David their king' are of doubtful authenticity. The crux of the question with regard to early Messianic prophecy is reached when we come to Isaiah.

(a) In 7:14. Until a new factor was introduced by considerations derived from comparative religion, it was becoming generally agreed that the passage had no reference to the birth, circumcision, or otherwise, of a Saviour-child or king at all. As Gray points out, the promised sign is not necessarily a marvel or miracle (cf. Ex 3:5, 1 S 9:15), but is to be looked for as unpreventable. 'By the time a child is to be born reaches a certain age the promised deliverance will have come. His name Immanuel does not imply the divinity of the child, or even that he will play a role as God's agent in the deliverance (as a matter of fact, there is not the least hint that he does anything of the sort), but, after the common Hebrew usage, expresses the point of view of the parents; it is the reverse of Lehboh (1 S 4:2).' H. Gressmann, however, and others argue that the passage is intelligible only if we suppose an already existing belief in the advent of a divine Saviour-child who is to be born mysteriously. On this view the virgin is 'the virgin of prophecy,' the mother spoken of in the tradition; 'butter and honey' are the food of the gods, as in Iranian and Greek myth; and the whole passage *Cambridge Bible, 'Joel and Amos,' Cambridge, 1881, p. 699."

REFERENCES should be made to the very full and excellent discussion of this and the other Isaiah passages by F. D. Gray, ICC, 'Isaiah,' Edinburgh, 1912.

MESSIAH

has a mythological background. The theory has an undeclineable fascination, but its main hypothesis cannot yet be regarded as proved (see below, 2 (d)). In this case it rests on the probably false assumption that the sign must be of a miraculous nature. Further, notice the article, no (the noun 'almah requires the meaning put upon it. If we reject the reference to the wife of Isaiah or Alzaz or to some other particular mother, the difficulty may be great. But as in Am 9:n, while at the same time it is now generally agreed that 'almah does not necessarily denote virginity, and is certainly not the word which would have been chosen if the supernatural character of the birth without a human father had been the point to be emphasized.

'Butter and honey' may be merely a symbol of plenty, a variant of the common 'milk and honey.' But perhaps the chief objection to the mythological view is to be found in the fact, to which attention has already been called, that Immanuel does not play any part in the deliverance, nor does he afterwards appear as a factor in this or any other of the future. The apparent reference to Immanuel in 8:24 is quite meaningless; there has been nothing to suggest that the child is the king to whom the hand belonging to the LXX 'for God is with us' (cf. v. 26). 2

(b) Is 9:n is a passage of a very different character. We have here a true Davidic Messiah, but Is 9:1-3 is a mere hint to that restoration is the work of Jahweh Himself; the child is not himself a conqueror, but is born to be Prince of Peace. The fourth name is remarkable, and, as Gray points out, 'Jahweh God' must not be toned down to 'mighty hero'; it is unique in the OT. Clemens admits that all four titles are 'perhaps mythological,' and the passage suggests the influence of the Hosea (see below). The child apparently anceses the throne at once—a suggestion that it is empty at the time of his birth; this may perhaps imply an Exilic date, though there is nothing else in the passage itself which necessitates its being placed later than Isaiah. 4 It is, in fact, the closest and best passage to establish an early expectation of a Messiah. It is, however, very remarkable that the passage seems to have had no influence on later, being, in later referred to in the OT or in the Apocalypse or the NT. 5

(c) Is 11:n had, on the contrary, a great influence on later thought, and lies behind the picture of the Messiah's sway in many other passages; in particular, the term 'Branch' became technical. Here, again, the Messiah is Davidic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davidic Messiah in a clearly eschatological setting; 6 itself seems to imply a date after 539 B.C.; the metaphor is that of a tree cut down to the stumm and sending forth shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem.

Is 5:25 is peculiarly difficult. 7 Omitting minor questions of reading and exegesis, the main points are as follows: (a) The passage does, though it may not be originally connected with, an eschatological passage in ch. 4 (cf. Is 2) where there is no mention of a Messiah. (b) It speaks of a Messianic king born in David's line, as in Am 9:n, while as in Is 9:1-3, it may now generally agreed that 'almah does not necessarily denote virginity, and is certainly not the word which would have been chosen if the supernatural character of the birth without a human father had been the point to be emphasized.

And what is the meaning of 'she which travaileth'? 8 Greemann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a Messianic interpretation of Is 7:14; the change of person from both v. 25 and verse is very awkward, and so is the contradiction between Jahweh's abandonment of His people and the previous verse. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verse, it is far better to follow some of the older commentators (Calvin, Orelli, etc.) and see in the phrase a reference to the birth-pangs of the Messianic age, and the same word is used for 'travaileth,' while in both passages the return of the remnant is referred to (cf. Hos 13:4, Is 52:13, where the same figure of travail is used). 9 WHICH TRAVALLETH IS, THEREFORE, ZION PERSONIFIED. (c) Verse 6c certainly implies that there is no reigning king and, therefore, suggests an Exilic date. (d) Verse 6d seems to belong to a different prophecy (or this part of this prophecy) to that on which the Messianic hopes are based. The Messianic speaks out, and the confidence of the passage rests on a different basis. 10

In Jeremiah the main stress is laid on the continuation of the Davidic line, and this figure prominently in the book as we have it—a feature which is significant in view of the Deuteronomic origin of the fundamental passage Is 7:14. In 23:24-25 we have the right Branch being set us as a king (as in Is 11), with the name Jahweh Sidqenu, 'The Lord our Righteousness,' perhaps with an ironic reference to Zedekiah, the reigning king. But the apocalyptic passages in 40-41 are parallel to this, and in the parallel passage (33:9) shows that the main stress is on the dynasty rather than on any single or final representative, and this feature appears clearly in 7:14-25 'kings sitting upon the throne of David' 11 while in 33:24 'a very special emphasis is laid on the covenant with David, interpreted as meaning that he should never want a successor. In 30' (they shall serve the Lord their God, and David their king, whom I will raise up unto them') the reference seems to be to each successive representative rather than to any single descendant, or to a belief in the actual return of David himself. Finally, we have the characteristic here, of the kingdom arising sate of the agent of deliverance, the Davidic king and its appearing only after the salvation is completed. The general presentation in Ezekiel agrees with that of Jeremiah, and is referred to 'David my servant, as the ruler of the future (34:28-37) with pictures of the Golden Age and a strong

stress on the presence of Jahveh Himself. In 17:28 the cedar twig planted on the mountain of the height of Israel may be a reference to the prince (cf. 2 K 11) from the Messiahian age. While ‘unto him come whose right it is’ (217) suggests the Shiloh prophecy of Gn 49:10,4. On the other hand, in the ideal State of chs. 40 f., the ‘Prince’ is only one of a series of kings as the prevailing subordinate part in the reformed Jerusalem. The general impression given by Ezekiel is that he was acquainted with popular hopes of an individual Messiah and, in particular, with the promises ascribed to the Davidic dynasty; these were too strong to be entirely ignored, but the priest-prophet himself had little real interest in them.

In Hagg 2, Zerubbabel is to be the ruler in the Messianic Age. So in Zec 9:9±12 he is the ‘Branch’ and the servant of Jahveh. The importance of the passages is twofold: (a) we have the first undoubted example of the identification of a historical person with the Messiah; (b) the reference to the Branch shows, even more decisively than in Ezekiel, that earlier prophecies were being studied and interpreted in accordance with contemporary conditions.

Zec 9:9 belongs to another and a later prophecy. Though the ass may originally have been the symbol of royalty (cf. Gn 49:2), it here stands for humility. The king is victorious over his enemies (‘saved’ rather than ‘having salvation’), but the stress is on the peaceful character of his rule. He is not explicitly Davidic.

In the Psalms we are concerned with a group of royal Psalms, especially 2, 45, 72, 89, 110, 132. Here are we met with almost insoluble problems as to date, since there is not even the a priori presumption which we have in the case of passages which stand in the writings of a particular prophet. Further, we must allow the possibility of glosses in the course of the many editings through which the various Psalters passed; such glosses may have emphasized a supposed Messianic reference — e.g., Ps 2:4±5. In all these Psalms we find startling language used of kings, the extent of their dominion, and their power, usually with stress on the Davidic covenant. It is common ground that such language was never strictly true of any Israelite king in either kingdom. Are these Psalms, then, addressed to the expected Deliverer of the future, i.e., to the Messiah? The objection to this view is the strong impression made in most cases that the divine living king is presupposed; e.g., Ps 45 is clearly an actual marriage song and is accepted as such, e.g., by Kirkpatrick and Briggs. And, if some of these Psalms are to be understood historically, the general similarity of language suggests that the same principle is to be applied to all. A. F. Kirkpatrick, in fact, argues that all have a primary historical reference, of course without prejudice to their spiritual application. In interpreting the language we are helped by the existence of the Hoshaf, or ‘Court style,’ to which Gressmann 3 and others call attention. Exaggerated language of this kind was a regular feature of the court addresses and poems in honour of Oriental monarchs; cf. the language of Ps 21±8, which is certainly addressed to an actual king. It is possible that this Hoshaf is Israeli, and perhaps elsewhere (see below, 2 (di)), included elements derived from the Messianic. If it be believed that some member of the Davidic dynasty should be the greatest of all, it was natural for the admirers of any king to suggest on his accession that he and no other was the long-desired. In this case the Psalms may be called quasi-Messianic, and at least illustrate the nature of the Messianic hope.

A warning against too strict an interpretation of this Hoshaf is to be found in the phenomena presented by the Babylonian hymns. We find Nahum addressed as ‘begetter of gods and men,’ ‘King of kings who has no judge superior to him;’ but then precisely the same flattery is offered to Assur, Ishtar, or Nebu.

As F. Hamilton points out (The People of God, London, 1915, p. 58), the ascription of universal dominion to so many of them (cf. the gods) was merely a piece of inexpensive flattery which one might mistake for serious truth. . . . It was a sound policy to avoid too much particularity.

In the same way we must beware of laying too much stress on the uniqueness, majesty, or finality ascribed to the king addressed in any particular Psalm. Its language, taken literally, cannot be applicable only to a unique Messiah, but in the month of an Oriental its application is less strict or exclusive.

The following points are further to be noted.

(i.) As in the Prophets, the stress is on the Davidean covenant; 2S 7 seems to be continually before the poets’ eyes. This is especially marked in Ps 89, which refers to the nation and the dynasty, the nation itself being personified in v. 6 (cf. Ps 89:26). So ‘firstborn’ in v. 30 seems to refer to the description of Israel in Ex 4, while ‘servant’ in v. 29 suggests a parallel with 2 Isaiah. The Psalms speak a whole is a prayer for the dynasty and the nation, rather than for the coming of any particular king who is to mark a new epoch.

The same applies to Ps 132, though ‘horn of David to bud’ (v. 3) may refer to ‘the Branch.’ Ps 45, however, is not Davideic (Briggs and Sellin ascribe it to N. Israel), nor is Ps 110 except in the title.

(ii.) The language of the Psalms had great influence on later Messianic ideas, terms being used which afterwards became titles of the Messiah. As they occur in the Psalms they are, however, hardly technical; they are not used of one definite figure or king to the exclusion of all others. We have ‘anointed’ (Ps 2. 32) 49:8, &c., in a general sense (see above, § II.), ‘son’ (Ps 2, probably not in 23) , ‘firstborn’ (89f), while ‘thy throne, O God’ (45), may imply delimitation.

(iii.) Ps 110 stands alone in speaking of a priest-king, who is not, however, Levitical; it is very generally regarded as Maccabean, referring to Simon (see, however, Briggs, ad loc.).

There remain a few other O.T. passages, mainly fragments of poetry embedded in the historical books, which require brief notice.

Gn 49:4—It may be taken for granted that Shiloh is not a personal title of the Messiah. The first hint of such a view is found in the Talmud (Sanh. 98b), and it was not so used till the version of the 10th century (Driver). The reading and interpretation are both doubtful, but it is possible that the passage is Messianic—until he come whose right it is (Ezr 21:17). See above.

2. As showing that earlier prophecies were by this time definitely studied, see 337, where there is a re-editing of Jer 5, 6, 7.

3. The text is in disorder; Zerubbabel must have been originally an acrostic of Ps 110, with ‘crowns’ in the first and ‘throned’ in v. 4. Possibly when the power was the central in the midst the priest the text was deliberately altered, giving us perhaps the first of the Psalms (cf. Cambridge Bible, ad loc.).

5. As showing that earlier prophecies were by this time definitely studied, see 337, where there is a re-editing of Jer 5, 6, 7. 

verse is a late addition on the basis of the Isianic prophecies (Deuteronomy, or whether, with Gunkel, Gressmann, and Sellin, we are to regard it as a fragment of pre-prophetic eschatology, not specifically Davideic. But it is a strange eulogy to say that Judah shall rule only till the great one from elsewhere comes. Skinner holds that the reference is simply to the Davideic dynasty; Judah is to be independent till it is merged in the kingdom of its heavenly King.

Of Gn 31* the most that can be urged in the way of Messianic interpretation is that the passage is a prediction of the ultimate victory of man, the seed of the woman, in the conflict with evil, typified by the serpent. It is, therefore, referring to any definite descendant of Adam in the singular. The same applies to the other predictions in Genesis with regard to the seed of Abraham, where the thought is of the nation; the exegesis of St. Paul in Gal 3** is admittedly untenable.

Nu 24* is usually understood as referring to David’s conquest of Moab. But, on the ground that ‘star’ suggests a semi-mythological figure, Sellin* and others find in the passage a trace of a primitive Messianic hope; others regard it as Messianic but late. Note that the passage is certainly not to be viewed as a prophecy. Dt 33? may refer only to the dominion of Ephraim (the Song belongs to the N. Kingdom), but Sellin† again urges that the hyperbole is too strong and that we have an echo of an early Messianic hope, transmitted through the Coheren. In Dt 34 this is the passage influenced the idea of the Messiah ben Joseph.‡

Dt 18* (applied Messianically in Ac 3** 7)† is clearly a promise of a succession of prophets, not of a Messianic and final prophet.

A word must be said with regard to the Servant passages of 2 Is. Very few critics now consider these to be Messianic in the strict sense, the reference being either to the Babylonian exiled nation or to the ideal Israel. This is so clear in the early songs that it must also hold good of Is 53; this is best understood of the sufferings of the Exile, which we see (p. 242) have a referential value not only for the nation, but for the world as a whole. Gressmann,‖ however, on the ground of the obscure and oracular character of the language, argues that the writer is using already existing material which was to be united with his own, and to which his own mystery hymn, addressed to a dying and rising God; he is treated as an eschatological figure, parallel to that of the Messiah, who is here neither a prophecy nor specifically a king. It cannot be said that there is any real evidence for this view (for a criticism see Clemen, p. 149). Nor, again, is it possible to find a suffering God or Messiah in Zec 12*, which clearly refers to some historical martyr.

In Dn 7** there can be little doubt that the figure of ‘a son of [a] man’ appearing ‘on’ or ‘with the clouds of heaven’ is, in the context, a symbol of Israel itself, a human being contrasted to the ‘beasts,’ hostile world empires. But it is equally clear that the expression came to be understood of a personal Messiah (see below, IV. 2 (d) (2)), and it is urged with some reason that it did not originate with Daniel but that a later Hellen period had a. Koran behind it. The figure is introduced as familiar, and no explanation is given in the ch. of the coming with clouds, which may, therefore, be assumed to be a recognized element in the conception. Gressmann‡ believes that we have a figure of foreign origin, parallel with the Messiah and afterwords identified with him. To Sellin§ he is the Messiah transformed, the Urnesesch, or ‘primal man,’ of Paradise, who is to return once more; Clemen‖ is inclined to agree with this explanation of the origin.

In §26 the references in the AV to the Messiah are certainly misleading. In v. 8, ‘the anointed one, the patriarch’ is either Cyrus or Joshua; in v. 28 he is Onias the high priest.

2. Survey of OT teaching:—(a) From our review of the OT passages it becomes clear that the expectation of the Messiah in the strict sense occupied a comparatively subordinate place. The fact that in a large number of books and passages which deal with the future he is not mentioned at all is of the greatest significance as showing that his coming was not an essential or invariable element in the national hopes: e.g., he is never mentioned in Zephaniah, which is entirely eschatological, nor in Joel. It cannot be assumed, as the Christian interpreter often unconsciously assumes, that the Messiah is in such cases taken for granted. There is, in fact, no hint of him, and often no room for him. Further, even in books or groups of writing where we would have found possible the inclusion of Messiah there are many passages where he is completely ignored (e.g., in Isaiah). The idea is introduced suddenly and sporadically and as suddenly dropped.

Jahweh Himself is always the Redeemer and Saviour, and it is the partial and temporary element in the OT teaching; the stress is on His coming and manifestation and not on that of any representative.

(b) There are constant references to hopes connected with the dynasty of David, and these sometimes take the form of the expectation of another David, a specially endowed ruler. During the Exilic period particularly, which was an earlier period than the Messianic, the idea of the great king was taken up, and the idea of the Messiah was identified with the king. In this way the Messianic hope was both preserved and partly transformed.

(c) The way in which the references to the Messiah are introduced and the fact that they are so frequently enigmatic in form suggest that the Messianic belief did not originate in the entire period, but had its germ in the prophecies and religion. It is wanting in the Priestly writings, and, as we saw, Ezekiel seems to have been somewhat suspicious of it; the prophets do not use it consistently, and it appears and disappears in an extraordinary way. Its connexion with the kingdom would commend it to the mind of the people, while religious teachers could avow themselves of it only with caution and reserve, though it could not always be entirely ignored. It is obvious that these were, in fact, the features which determined Christ’s attitude to the hope in later times.

(d) In recent years the whole subject has been reconsidered in the light of comparative religion. Gunkel and, especially for our present subject, Gressmann have urged that Jewish eschatology, including the Messianic hope, is not a new development in the j.p. period, but an entirely new hope that it goes back to a far earlier age and is really not specifically Jewish at all. They argue that the hope of a semi-divine Deliverer, or Heilbringer,
was a common possession of the ancient world, especially in Egypt and Babylonia, and that the OT language is intelligible only when understood as one expression of that hope. Sellin essentially agrees as to the antiquity of the belief, which he regards as not merely pre-prophetic but as pre-Davidic, while he rejects the hypothesis of its foreign origin, being ready to admit foreign influences only in detail.

We have already had examples of the principles of this school as applied to such passages as Is 7, Mic 5, etc. It is further suggested that the Messiah is the Anrnenach, or primal man, the hero-king of Paradise, who is to return with the Golden Age at the end. Gressmann rightly points out that the Messiah is the prince of peace rather than a conqueror; i.e., he is the king of the Golden Age restored by Jahweh. Sellin’s development of this idea. Job 15 suggests a tradition of the first man as pre-existent with God and sharing His wisdom; he finds a trace of this in Gn 5, “to make one wise,” while the same word is used in Jer 23, Is 52; cf. the stress on wisdom in Is 11. He is, further, the “son of man” of Ps 8 and of Daniel, while his pre-existence is hinted at in Is 40:11-14. Gressmann further arranges world dominion cannot be Hebrew in origin; cf. Ps 72, where the river Euphrates is the centre of empire (it cannot be a boundary parallel to the “ends of the earth”). A parallel is suggested in the prophet of Yahweh ascending the throne and becoming king must have originally referred to a divine Messiah; the latter, Gunkel and Zimmermann believe, is Babylonian in origin, while the same may be the case with the Hoftel in general.

The point of view is fascinating and has been argued with great ingenuity, but it has been generally felt that it lacks definite proof when we come to the details, whether of the OT passages or of the supposed parallels. As we have seen, the interpretation of the crucial passages is very doubtful. The Immanuel passage does not seem to refer to the Messiah at all, while, if it which travelled in Micah is understood of Zion, the idea of a mysterious origin disappears; the Shiloh passage is open to so many interpretations that it is very unsafe to build on it. It is quite true that with regard to eschatology in general (and it must be remembered that the view which we are considering starts from eschatology and not from the Messianic hope in particular) the prophets from Abraham onwards are dealing with ideas already to some extent familiar, and it is equally true that the same is sometimes the case with the Messianic passages, but this does not justify us in finding the solution of every obscure passage in hypothetical popular traditions. We have already argued that the way in which the allusions to the Messiah are introduced does suggest that the idea was general and popular, used only occasionally and with some reserve by the prophets, so that it cannot be regarded as the discovery of any one of them. But of its great antiquity there is no real evidence. The passages in which it is found are scattered and do not stand on quite definite grounds, and we could hardly prove that it existed before the Exile except in the form of expectations connected with the permanence and glory of the house of David. We must, in fact, admit that data are wanting whereby we might fix with any certainty the period in which the hope arose. We can only say that the way in which the allusions are found is the most natural, and the origin being placed in the Exilic period, in spite of the lack of definite evidence to the contrary, though they do not in any way carry it back to a dim antiquity.

A similar verdict of ‘not proven’ must be passed on the hypothesis of a foreign origin (with regard to foreign influence in detail, such as in the Hoftel and partial parallels, especially at a later period, the case is somewhat different). The preceding discussions have already dealt with many of the points. Sellin’s discussion of the supposed parallels in some detail, and concludes that there is no real parallel to the expectation of a divine deliverer to come at the end of history or to usher in a new era. The most that we can find is a yearning for the return of the Golden Age of Paradise, together with the courtier’s flattery applied to some particular king that he will be the one to bring this about— e.g., the famous letter to Assurbanipal. A. H. Gressmann has shown that the Leyden Papyrus has been misinterpreted and contains no reference to a ‘Messiah,’ while the Golenischeff Papyrus refers to a contemporary king Amen-em-het I. In all these cases we have examples of the Hoftel, with the natural hope that each new king will bring in an era of peace and happiness, but no real evidence of a genuine expectation of a Messiah, which, Sellin further suggests, includes, is peculiar to Israel: “The ancient East knows no eschatological king.”

To return to the OT, the hypothesis of the wide-spread expectation of a Redeemer-King is not necessary to explain the Messianic passages: even the earliest Messianic passages expect connected with the revival and increased glory of the dynasty of David. There are also the eschatological hopes of the return of the Golden Age, which probably go back to a comparatively early period; this is to be brought about by Jahweh Himself; but, since all critical periods of progress are in actual experience connected with the appearance of some specially great individual (Israel was familiar with the work of an Abraham, a Moses, a David, or an Elijah), it was natural to believe that this salvation of Jahweh might be mediated by His earthly representative, who would then be looked for among the descendants of David; in this way the national and the eschatological hopes would easily be combined as we find them combined in the late passage Is 11. So far from the Davidic Messiah being the precipitation of widely diffused ideas of a wide Saviour, the latter seems to have developed later as the offspring of the union of national and eschatological hopes.

IV. DEVELOPMENT SUBSEQUENT TO THE OT.

1. The data.—In passing to the period covered by the Apocrypha and the apocalyptic literature, it will be well again to begin by some examination of the actual data.

(a) Books where the Messianic hope is ignored.— In the eschatology of the Apocrypha, with the exception of 2 Esdras, the Messianic hope is practically ignored. It is just possible that there may be a hint of it in the reference to the coming of the “faithful prophet” in 1 Mac 14:2 (cf. 4:6), but, if so, the hope appears in a very attenuated form. In 2
domination of an Egyptian Sage, Leipzig, 1909.
2 Admonitions of an Egyptian Sage, Leipzig, 1909.
3 P. 231 ff.; see also Wiegand, Geschichte des jüdisch-aegyptischen Buches der Propheten, 1892.
4 The references are generally to the Apocrypha and Pseudepigrapha of the Old Testament, ed. H. C. G. M. C. ed., Oxford, 1913, as well as to critical editions of the books. The dates given are generally those adopted by him; see also his Ezechielstudien.

This content is from a book and has been translated by P. 170 ff. for Oxford. Heb. Lexicon, however, translate πόποπος, ‘to look at.’
A similar silence is found in some of the apocryphal literature, and here this silence is all the more significant since the writers are dealing directly with the hopes for the future. The Messiah does not figure in *Enoch* i.-xxxvii., xxxviii. -xlvii., except in cp., where 'my Son' is suddenly introduced; Charles regards the chapter as an independent fragment. In the pictures of the Golden Age in *Jud. i.* xxix., xxxii. there is no mention of the Messiah, though not prominently, as the descendant of David had ascended to the white throne in the temporary Messianic kingdom; Charles, however, considers the clause to be an interpolation. In the *Assumption of Moses*, which comes from the 'Apostles' Quinaries,' there is no reference; Taxo (ix. 1) cannot be the Messiah; 1 Jahweh Himself is the avenger, and Moses the only mediator. The Messiah is in the same way ignored in *2 and 4 Macc., the Secrets of Enoch, the Letter of Aristaeus*, and the later parts of the *Apocalypse of Baruch*.

(5) Books where the Messiah is mentioned.—In *Ezech. lix.-lxxiii.*, (166-191 B.C.) the Messiah appears after the judgment as the 'white bull,' a human figure, with no very active or definite rôle. In the 'parables,' however (xxxvii.-lxxiii.), 64-66 B.C., we have rich material. Especially in xlviii., he is the central figure in the prediction of a race of men, judge, ruler, champion, and revealer. Besides Son of man, he is called 'the Elect One' and 'the Righteous,' titles which appear in the NT. His 'viii.' and 71-72, 73-75, are rich passages. In *Daniel* v., lii., 9, 14, and Charles regards these as the first example of the use of the word as a technical title, though Dahan 2 strikes out the passages as interpolations.

In the *Testaments of the Twelve Patriarchs* the salient point is that the Messiah is descended from Levi, and is a priest (cf. Ps 110); see *Test. Ramb. v.* 7-11. In *Ass. Levi* iv., viii. is repeated in *Ass. Judah* xiv., xvi., xxiv. 1, etc. In *Test. Jud. xviii.,* however, we find the usual Messiah ben Judah; so perhaps *Test. Naph.* iv. 5. According to Charles, the form of Apoc. in *Secrets of Enoch*, the book of dates from 109-106 B.C., the palmy days of *Hyrcanus*, the Maccabean dynasty, which came of a priestly family, being then regarded as Messianic. But, after the breach between it and the Pharisees, and the destruction of the Messiah's kingdom, the interpolations were made to the book, reverting to the ordinary view. The conception of the Messiah is that he is a priest and a warrior, sinless, with power over evil spirits, and bringing sin to an end; the ethical note is strongly marked.

In the *Psalms of Solomon* (70-40 B.C.) there is no reference to the Messiah in L-xvi., though the future deliverance is dealt with. In xvii., and xxviii., however, there is a very important description. He is Davidic in contrast to the non-Davidic dynasty of the Hasmoncees; though himself human, he comes with the power and special endowments of God; he is to conquer the nations and purge Jerusalem of sin. The whole picture is full of enthusiastic and vigorous touches, but there are no transcendent traits in the conception. The end and the destruction of the Messiah's kingdom is not very clear, but 'throughout his days' in xviii. 42 suggests that he is regarded as mortal. He is called 'His' or 'the Lord's anointed,' the title being here certainly a technical one, its first occurrence, if the passages in Enoch are rejected.

In the *Sibylline Oracles*, iii. 40 (168-51 B.C.), we read of 'a holy prince' who is to reign over the whole earth for all ages, though, somewhat inconsistently, judgment follows; ii. 652 (c. 140 B.C.) speaks of a king from the sunrise sent by God who is to bring peace to every land. In the later fifth book (before A.D. 130) we have (in 108) again a king sent from God, who destroys the nations, destroys Nero retalians (Antichrist), while 414 ff. speak of a 'blessed man' from the plains of heaven, who destroys evil-doers and sets up the new temple.

The Fragment of a *Zadokite Work,* first published by W. Lightfoot in 1857, is preserved by Charles in 18-8 B.C. and by most scholars before A.D. 70, and seems to have come from a reforming party among the priests. 'A Teacher of righteousness' has already been mentioned (c. 7), and a Messiah is expected (i. 10, viii. 2 (13, ix. 10, xxv. 4, xviii. 8) who is to arise 'from Aaron and Israel,' Charles interprets this phrase as pointing to the sons of Marianne and Herod. This is not quite certain, but the Messiah is clearly Leviticus, as in the *Testaments*, the book being marked by hostility towards Judah. The 'Teacher of righteousness' or the 'Lawgiver' (viii. 6) is a forerunner of the Messiah, though at a considerable interval, and is identified with the 'star' of Nu 24, the 'sceptre' of the same passage being applied to the Messiah.

In the *composite (Syriac) Apocalypse of Baruch* the Messiah is suffering, dying at the age of 70, and being resurrected, A', A', A', written before A.D. 70. In xxvi. f. (A') he is revealed mysteriously, apparently from heaven, whether he returns in glory; his rôle is a minor one and occurs in xvi., where he is non-Davidic. In xxxxi. f. (A') he is the warrior slaying enemies and ruling over the Gentiles; the influence of Is 11 is marked. In xx., instead of 'my servant Messiah,' occurs, but the whole verse is regarded as an interpolation. In the three later Fragments, B', B', B', there is the so-called Messiahian Kingdom without a Messiah. In the *Book of Enoch* (260 B.C.) *Apocalypse* (Antiquitas) we have the remarkable conception of 'My Son the Messiah' revealed with his companions and dying after a reign of 400 years (cf. 14). In 129 (the 'Eagle Vision') he is the Lion of the seed of David who destroys sinners; the text has been interpolated to represent him as pre-existent and dying at the end, in order to agree with 72. Of chief importance is the 'Son of man' vision, 81, where the Messiah is 'the man,' as in Daniel, 'My Son,' pre-existent, destroying the ungodly by the fire of his mouth and the breath of his lips, and restoring the ten tribes to the heavenly Zion.

While makes only very slight references to the Messiah, who is really foreign to his system. That he is mentioned at all must be regarded as a concession to the popular standpoint. *De Excezat.* 81 speaks of the restoration of Israel on one day; the dispersed are to return led 'by a divine superhuman appearance, which, though unseen by all others, is visible only to the delivered. So in *de Prom. et Pen.* 18-20 the Messiah is a man of war, reference being made to Nu 24.

In the same way the Messiah is recognized by Josephus only very occasionally, and that in a way which shows that he did not take the subject very seriously. In BJ v. 4 he practically treats Vespasian as the Messiah in the sense that he is to be the destined 'governor of the habitable earth'; cf. the account of his interview with the same emperor in iii. viii. 9, and see *Suet. Vesp.,* ch. 4, and *Tac. Hist.* v., 13, 2 passages which are good evidence that the existence of the Messianic hope was a

3 Besides the works already quoted see also a survey of recent literature on the subject by J. W. Lightfoot in the *London Quarterly Review*, Jan. 1915, p. 15.

2 See *Z. von der Wiesche, 'Messiah,'* for similar ideas connected with Alexander, on the basis of the interview recorded in Jos. Ant. xi. vii. 5.
recognized feature of Judaism. In Ant. x. x. 4 he exhorts to explain the 'stone' of Dan 2:46 on the ground that his history is not concerned with the future. A evidence of popular views, though not of the belief of Josephus himself, we have the various quasi-Messianic risings which he records: Thudas (Ant. xx. v. 1), the Egyptian (Ant. xx. viii. 6, R. xii. 10), and the unnamed impostor (Ant. xx. xii. 10).

A Samaritan Hyman for the Day of Atonement, dated A.D. 1576, but certainly embodying earlier material, suggests the Messiah under the title Taeb, which probably means 'the Restorer,' though A. Merx explains it as rediens, i.e. probably Moses, whose return was expected. This Taeb is not supernatural, but restores the lost dominion of the people, and is a prophet, the conception being based on the figure of Moses in opposition to the beliefs of the Jerusalem Jews. He dies after 110 years, and his death is followed by the Judgment and the end.

In Ant. xiv. 1 shows the antiquity of some Messianic belief among the Samaritans (cf. Jos. Ant. xvii. iv. 1).

2. Survey of the teaching.—(a) We note the special place of the Messiah in the religious colouring, though as in the OT. Certainly the Messiah is mentioned somewhat more frequently, and when he appears, we have in some cases a few more details, but it is still by far the least important figure. He is not an essential element in Jewish religious thought or even in its eschatology. If we exclude the NT, we may say that there was no period when the expectation of his coming could be taken for granted as accepted in almost all circles and as the centre of the hope for the future. This aspect is sometimes discussed (e.g., W. Baldensperger, *Die messianisch-apokalyptischen Hoffnungen der Juden* [Strassburg, 1905, p. 92 ff.], as though the problem were the disappearance of the messianic hope during the Maccabean period. If our interpretation of the evidence is correct, this misrepresentation of facts, since there is nothing to show that the hope was at any previous period either universal or essential. It may be true that the figure of the Davidic king came to seem too small for the larger stage on which Israel now found itself, and that the rule of the Maccabees left the people Jew for a time well content, but it is best to recognize that the data are insufficient for anything like a chart of the rise and fall of the Messianic hope. We can say is that in the 1st cent. A.D. the messianic hope had become much more universal than ever before. We recognize that even then it is absent in the *Ass. of Moses*, and is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the dislike of the rule of the Hrodos and the Romans.

(b) There is some evidence which suggests that, as before, the hope was mainly an element in the popular religion. The Apocalyptic in which it figures were largely popular products, and the NT proves that its chief strength lay among the people. 1

1 See A. Cowley, *Samaritan Doctrine of the Messiah* (in Exp. viii. 1899, p. 101 ff.).

2 It is possible that the place of the Messiah was sometimes taken by Michael, as a parallel figure; in Dan 12:13, and not the Messiah from the Angel of the North, but as the angel who avenges Israel; note his prominence in Rev 12:7. Bouquet, *Rev. and Pseudo-Oracles of the Jews* (in 1900, ad loc.), suggests that the Christology of Hermes can be understood only by seeing that Christ takes the place formerly filled by the Jewish God in the Gospel, but Rev 11:14, where the Son of man on the cloud seems to be an angel; note the language of v. 2.

4 Ibid., p. 257.

5 Vol. vii.-VIII.
in its directly Messianic, rested hopes for the future as a preparation for the apocalyptic Messiah. This transcendent Messiah plays a natural role as champion of the righteous in *Enoch* xii. 2, and still more decidedly in 4 Es 13:9-12. Thus there is a twelve, however, is his appearance as judge, not only of men and the nations, but of evil spirits (*Enoch* 4:4, etc.).

4 This passage is not address to the human king. Except in 4 Es 12:2, a Christian interpolation, the transcendent Messiah is regarded as a descendant of David—a fact which may throw light on our Lord's question (Mk 12:35); he may have been a recognized line of thought which found the apocalyptic descent too narrow for the great conception. As is well known, He never speaks of Himself as 'Son of David.' We may note that, though the Apocalypse apparently rejects the Davidean descent, they yet use Davidean passages, such as Is 11, Ps 72, 89, in their picture of the Messiah.

(c) Pre-existence and mysterious origin. — The Son of Man is clearly in some sense pre-existent in *Enoch* (e.g., xlvi. 5, 6, xlv. 11; and in 4 Es 13:9, perhaps in 71:12, though the former passage is doubtful, and G. H. Box regards the latter as interpolated). The question arises how far a personal pre-existence is really implied. In Jewish thought the pre-existing wandering of the progeny of the pre-existing man was regarded as pre-existent in the mind of God, perhaps to some extent under the influence of the Platonic doctrine of ideas. This applied to such things as the Law and the Temple, while even Moses is pre-existent in *Ass. Moses*, i. 14, iii. 12; it is this sort of pre-existence that is ascribed to the Messiah or his 'Name' in the Targums. But it must be allowed that in *Enoch* and *Esdras* the Messiah is regarded as pre-existent in a personal sense and revealed from heaven, and this was certainly the view of St. Paul. It should, however, be noted that in 7:17 the 'Son of the Messiah' who is thus revealed dies after 400 years; i.e., he is not a divine being.

This point of view should be distinguished from the doubts which we have of the mysterious origin and birth of the human Messiah, since the Son of man of *Enoch* and *Esdras* is, of course, not born as a man at all. We have doubt the existence of such ideas in Isaiah and Micah, but they are clearly found in later Jewish thought and literature in *Test. Levi*, xvi. and in the king av * celibos* of *Sib. Or*. iii. 625 (cf. Bar 29:8). We have definite evidence of the belief in Jn 1:2 or *John* (xvii. 20) and the *Talmud* that the general idea was that the Messiah was to be born in secret (at Bethlehem) and hidden on earth, or even in Paradise, until the time of his revelation. Some such tradition seems to underlie Rev 12; on the question of foreign influence see below, (g).

At the same time the passages cited as evidence of a belief in his birth of a virgin or divine mother are unreliable. *Test. Jos.* xix., which seems to speak of a virgin-birth, is with good reason regarded by Charles as corrupt; so in *Enoch* xiii. 5, xix. 29 he reads for 'Son of a woman' 'Son of man,' while the *Midrash Ekkab* on *La* 5:10 is obscure and of very doubtful date. Nor, again, can 'the travail pains of the Messiah' imply anything of the kind; the expression is figurative, and applies to the Messiah, not to his mother. According to

1. *Messianic* is interpreted Messianically by Agis (c. A.D. 180), and gave rise to the later name for the Messiah, *Antist*, 'Cloud Man' (Dalman, p. 245).

2. *Messianic* is interpreted Messianically by Agis (c. A.D. 180), and gave rise to the later name for the Messiah, *Antist*, 'Cloud Man' (Dalman, p. 245).

3. This is interpreted Messianically by Agis (c. A.D. 180), and gave rise to the later name for the Messiah, *Antist*, 'Cloud Man' (Dalman, p. 245).

5. *Messianic* is interpreted Messianically by Agis (c. A.D. 180), and gave rise to the later name for the Messiah, *Antist*, 'Cloud Man' (Dalman, p. 245).

Joscin, *Diat. 49*, the Jewish belief is that the Messiah is born *dormant et in invisibile*.

To the circle of ideas connected with pre-existence belongs the identification of the Messiah with the first or the spiritual man. Something has been said of the *Eleazarite* teacher, who is regarded as the Son of man (see above, III. 2 (d)). Philo (Leg. *Allig.* i. 31, p. 49, *De Op. Mundi*, 134, p. 32) knows of an earthly and a spiritual man, the latter, whose creation is recorded in Gn 1, coming first, while the former is the man of Gn 2 and 3. Ps 1 (1 Co 15:42) represents the spiritual man as coming after the psychic or earthly, evidently opposing the other view, and identifies him with the Messiah. So in *Test. Levi* the Messiah brings back Paradise, while the Samaritan title *Tesh* seems to mean 'Restorer' (cf. ἄνωθεν ἀναστάσεως in Ac 3:21). The general idea in St. Paul, however, is the identification of Christ with the ideal archetypal man, as opposed to the historical Adam, and not with any first king of Paradise.

(f) Forerunners of the Messiah. — The starting-point is Mal 3:1, where Elijah is to return, before the Day of Jehovah (cf. Sir 48:3); the Messiah is not mentioned, and possibly Elijah is a kind of substitute for him. In the Gospels, however, he has become a forerunner of the Messiah (Mk 1:6; Luke 3:2; 1 *Co* 11:15). Elijah represented the belief in the return of Moses, based on Dt 18:15, and the two are combined in the Transfiguration; these are probably the 'two witnesses' of Rev 11. In the later Antichrist legend the two witnesses are Enoch and Elijah, who were translated without death. There are also hints of other 'companions' of the Messiah in 4 Es 6:2, 7:2, 13:2; Ezra appears as such in 14:3. Baruch in Bar 7:13, Jeremiah in 2 Mac 12:15; cf. Mt 16:13. We may compare the two predecessors of Sanashyant (see below, (g)).

(g) Foreign influence. — We were double of theories which traced the origin of the Messianic ideas to foreign sources, but this does not exclude the possibility of foreign influences at a later time on the details of the conception. Such influence is undoubtedly found in the development of Jewish Apocalyptic. We cannot discuss the wider question of the syncretistic character of its eschatology in general, but must confine ourselves to points which directly affect the conception of the Messiah. Naturally it is in this sphere that foreign and mythological traits appear most clearly, Hagne, following Gressmann, argues that such ideas lie behind 4 Es 13, and even goes further in holding that the 'travailing in travail of the man from the sea.' He also traces the whole idea of a mysterious revelation of the Messiah to Is 43:5, ‘Verily thou art a God that hidest thyself, O God of Israel, the Saviour,’ which, he agrees with Gressmann, cannot be of Jewish origin. He traces it to language such as that used by Assurbanipal: ‘I was born in the midst of mountains which no man knoweth . . . thou (Ishtar) . . . hast brought me forth from the mountains, hast called me to shepherd thy people.’ Many critics argue in the same way regard to the conception of a miraculous birth, comparing the language of the foreigner (to whom I was poor, my father I knew not’), the beliefs connected with Sanashyant, and the legends of the birth of Cyrus, Alexander, and others; there is, in fact, a general tendency to regard extraordinary men as

wonderfully born, and this was particularly marked with regard to Egyptian and Babylonian kings. Without pronouncing on the question of direct influence, we may admit that we find the same general tendency at work with regard to beliefs as to the origin, though, in the present instance, the antecedent proviso that we have found no real evidence, except in Christian circles, of the idea of his birth from a virgin or divine mother, nor have we yet found proof to the expectation of a final eschatological king. 1

Something must be said of the possible influence of Zoroastrianism. 2 Here, again, we would at once admit a general influence in the sphere of eschatology. 3 Monlton allows this, though to a less extent even than Clemen. He draws attention to Bousset's 4 admission that Parthian influence must have come to Israel by way of Babylon, 5 when strongly tainted with Babylonian elements, 6 and argues, further, that Zarahshtra himself had very little influence in the West. Hence, all that the Jews can have known was Parsism in a comparatively debased form, as represented by the Magi (q.v.), and this compels us to regard most of the parallels between the higher doctrines of the two religions as pure coincidences. We are concerned here mainly with two points.

(1) A great deal has been said of the connexion between Yima, the first man, and the Messian. It is held 4 that this lies behind the idea of the 'Son of man' (see above, III, 2 and 3 (ii)), which, Clemen argues, 7 comes ultimately from Parsism. 8 There is, no doubt, some connexion between Yima and the fall story, though Monlton 5 holds that Parsism is the borrower. Further, as Bousset allows, there is the important difference that, while Yima is king of Paradise, der Urzeital, the Messiah is king der Erdezeit, and there is no trace of this transformation in Iranian legend. We may add that there is also no trace in Hebrew legend of the Messiah as original king of the first Paradise (see above, (c)).

(2) There is undoubtedly a remarkable similarity between the Messian and Saoshyant, which is originally an epithet rather than a title. The renovation of the world 'is accomplished by the present labours of those that will deliver,' the saoshyant, in the Gathas these are simply Zarathushtra and his disciple. 9 Hence the Prophet's faith pictures as assuredly loading on an immediate regeneration. 10 The hope failed, and Zarahshtra himself was to return as Saoshyant. This is certainly the one real parallel with the Messian proper, but it seems impossible to suppose any direct influence. Monlton 5 dismisses it among those 'certain fortuitous coincidences,' while Bousset 6 holds that the connexion is that between the Saoshyant and the forerunner Elijah, rather than with the Messian himself. At the same time however there may have been some reaction between the two, affecting details of the conceptions, especially in the idea of the Messiah coming from the morning star. 11

We must also allow for the influence of Greco-

Roman ideas 3 affecting at any rate the periphery of the Messianic hope and its development under Christianity. After Alexander the title saviour ('Saviour') became common, with designation of kings and emperors, accompanied by hints of their wonderful origin. We find it in the important inscription, with the legends connected with Augustus. But here, again, it is doubtful whether we really have proof of the existence of a belief in a final world-Saviour who is to appear in a new era, or only the inevitable court flattery which regards each king as greater than any of his predecessors.

The single exception is Vergil's famous Messianic Eclogue. 2 Here, whether the child who is to be born be the son of Octavian and Scribonia or not, we have a remarkable and almost unique agreement with OT conceptions—the era of Paradise and its king, the Golden Age following on his conquests, plenty without toil, animals sharing in the regeneration, together with the ethical note. Whether through the Sibylline Books or directly through the LXX, Jewish teaching may have penetrated to Roman literary circles of the 1st B.C. in the form of Zoroastrianism. 3 On the other hand, the parallel may point to an independent spread of something like a Messianic hope in pagan circles.

(b) Interpretation of prophecies. A feature of this period is the habit of working on earlier prophecies—a tendency which we have found as early as Ezekiel and Zechariah; for a later example see 145. 1 In the apocalyptic books there are certain prophetical passages and ideas which became part of the stock-in-trade and are constantly referred to in dealing with the Messianic hope. The chief are Dn 7, Is 11, 15 used continually (e.g., Psa 89, Sol., Ps 2 (see fn. 12), Ps 5 (e.g., Test. Jud. xxiv. 1), Ne 21, 16; the star of the Messianic was in Messianically in Test. Levi xviii. 3, Jud. xxiv. 1, but understood of the Teacher of Righteousness in Zad. Prov. ix. 13.

We have in this use of prophecy many examples of the scribal methods 3 working mechanically on the data and fusing the old and new into a single picture, of course not without contradictions. The application of a passage does not decide its historical meaning, but only the interpretation which had come to be put upon it. The vagaries of later Rabbinism had already begun—e.g., the interpretation of Am 7 and of Ps 118 in Zad. Prov. ix. 5 ff., or the way in which an interesting example of independence in 4 Es 12, 18 where the interpretation of the fourth kingdom as given in Dn 7 is definitely rejected. It is important to ask in this connexion whether by the first century A.D. the OT was in any circles interpreted as pointing to a Suffering Messiah. It is almost certain that it was not. The conception in 4 Es 7 is the quite different one of a human Messiah who is to die after a reign of 400 years (cf. the Samaritan Tact). There is no evidence that Is 53 was interpreted Messianically until a later period, and, when it is, the verses which speak of suffering are applied not to him but to the nation. 2

11 Rel. des Juden, p. 559.

The most decisive proof of this position comes from the NT. It is clear that the death of the Messiah was not expected in any particular, and that the crucifixion of Jesus was the great stumbling-block, while it was not easy to find proof of its necessity from the OT. The story of the Ethiopian eunuch (Acts 8:26) seems to call attention to an interpretation of Is 53 which is evidently not that generally accepted. The admissions of Tryphon (Justin, Dial. 68, 89 f.) do not express the Jewish belief but rather put the case mouth under the stress of the argument, while the NT does not refer to his personal sufferings, but to the woes which are to precede his coming.

The Messiah ben Joseph, who does, in fact, die, in contrast to the Messiah ben Judah, appears clearly only after A.D. 135. According to Bousset, he is the Messiah of the ten tribes, slain in the battle by Gog and Magog: the conception seems to be derived from Dt 33; Zec 13, and certainly has no connexion with Is 53. It is possible that this figure is connected with the failure and death of Bar Kokhba, explaining them on the lines of the expectation of a preliminary Messiah who was to fall in battle against the enemies of Israel (Rome).

V. DEVELOPMENT UNDER CHRISTIANITY.— The starting-point of the evidence of the NT, and especially of the Gospels, is the way in which the Messiah was considered as a representative of the messianic expectation of the OT. As we have seen, it is taken for granted in the Apocryphal writings where it occurs, but it is still sporadic in its appearances, and the future can be pointed without reference to the NT. But in the Gospels the expectation of the Messiah is common to all. It appears, indeed, to be taken more seriously by the common people than by their leaders; but Pharisees, priests, and Sadducees all accept the hope without questioning its validity. The point at issue is only whether Jesus is really the Messiah. As regards the nature of the hope, it would appear, as against A. Schenk, that it was at least as much political and national as transcendent, corresponding closely to what we find in Ps. Sol. The Messiah is to be a king descended from David, and his rule will be opposed to that of the Romans.

A full discussion of our Lord's own attitude towards His Messianic claims will be found in art. JESUS CHRIST. We may here emphasize the salient points.

(a) As against W. Wrede, it is certain that He did regard Himself as in some sense Messiah. He did not, indeed, proclaim Himself as such in His public teaching; it was His 'secret,' discovered by St. Peter at Cesarea Philippi, and first avowed to the world at His trial. (b) His favourite designation of Himself in this connexion was 'Son of man,' the title being chosen as containing in it elements of transcendence and mystery, and as free from the political implications of Messiah, and still more of Son of David, a title which He avoided. The difficulty is to reconcile His use of this phrase with the absence of any public proclamation of His claim, since from its use in Engish we should infer that it would, at once be recognized as a synonym for 'Messiah' itself. The difficulty is increased, on literary grounds, a certain number of the passages in which it occurs (e.g., Mt 5 with Lk 6, or Mt 10 with Mk 6) and its use is ambiguous, since it might be supposed to refer to some other unnamed person (Mk 8). It is not, however, possible, except by some drastic criticism, to eliminate all passages where it is used publicly of Himself or privately to the disciples before St. Peter's confession.1 We must, therefore, remember that the term 'Messiah' is regarded as Messianic only in certain circles, and that it could still be used, as in Ps 8 and Ezekiel, in a wider sense.

(c) He did not regard Himself as the Messiah merely in the strict sense in which we have used the term, but as gathering up in Himself the various lines of OT hopes and promises. It does not, however, appear that direct argument on the basis of the OT plays any part in this process of interpretation, except as recorded in the Fourth Gospel. The proofs from the OT in the NT seem rather to reflect a later stage of controversy between Jew and Christian, in which each adopted the same scribal methods of interpretation.

(d) Christ added considerably to the content of the Messianic hope, especially in His teaching as to the necessity of the death of the Messiah. It is not possible to decide with any certainty as to the lines by which He was led to this conviction, though it was, no doubt, helped by a growing recognition of the hostility of the ruling powers to His claims and of the inevitable results of their attitude. Further, He must have meditated on the deeper teaching of the OT as implying, especially in Ps 22 and Is 53, that the means of redemption and the character of Messiah are to be found only in suffering, and this quite independently of whether such passages technically applied to the Messiah or not. Though in Acts 1 Peter the Servant passages are directly quoted, they are used but little in the Gospels, and hardly at all in Christ's own teaching (see Lk 22, Mk 10 12-16). It would seem, then, that as the ultimate source of His conviction we are forced to fall back on an intuition which the Christian will regard as a revelation from the Father.

In the light of the expectation of the Parousia, the idea of a twofold advent of the Messiah was introduced, assuming that Jesus was not merely 'the Messiah of the future' during His lifetime. There is no trace in earlier literature of any belief in two comings of the Messiah.

(e) It follows, finally, that the title 'Messiah' or 'Christ,'2 as used in the NT and in Christian literature generally, has a far richer meaning and content than any that we have felt justified in ascribing to it in the OT. It involves itself the ideas associated with the Wisdom and Logos,3 and came to include the whole work of redemption from sin and spiritual regeneration accomplished by Jesus. He has become the sum of history and the inaugurator of a new age in a way which both differs from and transcends anything that we find in the OT or Apocalypses as associated with the future Deliverer. He is the mediator of a new covenant and the bearer of a new revelation to a world of which the outward conditions remain unaltered, while with the passing of the Jewish State the national element dropped away once for all. At the same time, the title 'Christ,' with its historical associations, is a reminder, even to those to whom the promises of the OT may mean little in themselves, that the coming of the Messiah is a thing new and unexpected, but was the true climax of the long preparation of the chosen people. In particular, the fact that functions which in the OT are reserved for Jahweh and not for the Messiah

1 But see Balman, Words of Jesus, p. 206 f.
2 It must be admitted that the title 'Christ' tends to become a proper name and to lose its technical Messianic implications; the distinctive title of Jesus in Hebrew Christology is 'Mesch.' (Lord). See Bousset, Deutero-Christos, p. 21, 45 f.
3 Note that in Philo the Logos largely takes the place of Messiah; in 1 Cor 1:14, 2 Cor 1:14, the 'branch' of Zec 6 is applied to the Logos. Cf. also art. Loos.
are in the NT transferred to Christ is of the deepest significance. The real desire of the highest spirits of Israel was not so much for a representative of Jahweh, however exalted, as for a revelation of God Himself. Christian belief finds this satisfied in the Incarnation, and we shall not be disturbed when we find that the OT says comparatively little about the Messiah. The vital question is whether the hopes which it entertained with regard to the coming of God did find their fulfilment in the Messiah.

VI. THE MESSIAH IN LATER JUDAISM. — From the end of the 1st cent. A.D. a belief in the Messiah was an integral part of the Jewish creed—a proof that the representation of the universality of the hope which we find in the NT is substantially correct. The Messiah is indeed strangely absent from the Mishna, possibly owing to fear of Rome, but he figures both in the Palestinian and in the Babylonian recensions of the Sh'monich 'Ezech—a fact which indicates that his presence therein must date from the 1st cent. A.D. and appears constantly in the Talmud. The failure of the Bar Kokhba rising in A.D. 135 marks an important stage. Attempts to anticipate the Messiah's coming were then abandoned, the principle being 'a plague on those who calculate the end,' and the political situation that remained of it was transferred to a temporary Messianic Kingdom, in which Israel was to be restored to Palestine, this national kingdom being, generally speaking, the answer of the world to come, where universalistic features are found. The Messiah is Son of David and an earthly deliverer, though in some sense pre-existent and appearing mysteriously (see above, p. 2 (c)—features which need not imply divinity. With the fall of Jerusalem apocalyptic fell into disfavour, and with it the belief in a transcendent Messiah. Polemic with Christians also worked in the same direction, and to this we may attribute the disuse of the title 'Son of man'; the form of the Beatitude in Lk 6:2 may be a hint of such controversies. The spiritual side is strongly emphasized in the Rabbinic teaching by its insistence on the need for repentance as the condition of the coming of the Messiah, while we also find considerable detail as to the features of the Messianic era, the Messianic king to be.

The twelfth article of the present Jewish creed as drawn up by Maimonides, is as follows: 'I believe with perfect faith in the coming of the Messiah, and though he tarry I will wait daily for his coming.' Liberal Judaism, however, would seem to have abandoned the hope of a personal Messiah, though it still retains the Messianic hope in a wider and spiritualized sense—a sense in which it may fairly claim to have the general trend of the OT on its side.

MESSIAHS

all of whom, after an existence more or less brief, passed away. Prominent among them were Simon the Galilean, who endeavored to win the exclusive adherence of the Christians to his movement, but who is said ultimately to have become converted to Christianity, together with many of his followers, and Dositheus of Samaria, the leader who, in the course of restoring the Hebrew State, founded a Samaritan sect that survived until the 6th century.

The destruction of the Temple led for a time to a cessation of pseudo-Messianic activity. For sixty years or more, however, the memory of Bar Kokhba, who had attempted to secure for himself the sovereignty of Judaea, was kept alive. A rebellion broke out and a leader was immediately at hand in the person of Bar Kokhba or Bar Kozibah (probably from the name of his birthplace). Of the personality of this leader little is known. His original name is even doubtful. It is conjectured that he was one Simeon of Cozeba (1 Ch 42) or Chezib (Gn 38). The name Bar Kokhba, or 'son of a star,' was given to him by the fanatics who called themselves with the designation of Messiah himself. This dignity was attributed to him by R. Akiba and other sages. On the outbreak of the rebellion, the whole province, composed of Judaea, Samaria, and Galilee, was evacuated by the Romans. The army of the Jews at this time has been estimated at as many as from 400,000 to 500,000 fighting men. Unfortunately, little is known of the knowledge that the Roman garrison and the generals in command at the time of the outbreak proved respectively inadequate and incapable. The services of Julius Severus, the greatest soldier of the age, were requisitioned from Britain, where he had been waging an arduous war with the native tribes, to recover the prestige of the Roman arms. But even he, with unlimited resources, was at first compelled to remain on the defensive, and trusted to his tactics of cutting off detached parties and supplies to wear out his formidable enemy. In the course of the operations 50 general engagements were fought with every victory enjoyed by numbers of Bar Kokhba's followers increased. From the most remote of the Jewish colonies men came to fight under his banner. Recruits were not drawn solely from Israel; Bar Kokhba's army included non-Jews in its ranks. Those who could not fight helped to fill the rebel coffers. At first the campaign proved a series of successes for the pretender. Jerusalem was soon captured, and served as a capital for Bar Kokhba, who was proclaimed king, and duly carried out the duties of sovereignty. For three years the Holy City remained in his possession, and during that time his armies succeeded in taking 50 walled towns and 985 villages. At length the tide turned. After a desperate struggle, Jerusalem was captured by the Romans, and two of its buildings were left standing in ruins. The town was occupied by the same hands until, of all the territories of Bar Kokhba, the town of Bither alone remained. Here the hero made his last stand, but not with the undivided support of the inmates of the fortress. Dissensions broke out among the garrison, and on the 9th of Ab, already the blackest anniversary in the Jewish calendar, Bither was stormed, Bar Kokhba killed, and his body brought in triumph to the Roman camp.

During the pacification that followed the males were slain by the thousand, and the women and children sold into slavery. Unheard of and unspeakable tragedies were enacted. In Bither alone more are said to have been slain than those who took part in the Exodus from Egypt. The number of dead was counted by hundreds of thousands. All those who were able escaped from a country laid waste, which offered them the only alternatives of slavery and death with torture. Many fled to Arabia, and the considerable Jewish population of that country, even to this day, may be reckoned one of the results of Bar Kokhba's abortive insurrection. R. Akiba, who had not even lived to witness the outbreak of the rebellion, died under torture at its conclusion. The war led to the final breach between the Jews and Judeo-Christians. The latter suffered severities at the hands of Bar Kokhba and his followers, in consequence of their refusal to join in the national uprising.

The fatal results of the Bar Kokhba movement discouraged for some centuries personation of the Messiah. In fact, an attractive opportunity did not occur again until the 5th cent., when, in accordance with a Talmudic computation, the day of the Messiah was supposed to be at hand. It was at this juncture that such a one, self-styled Moses, appeared in the island of Crete. Of his origin or his subsequent fate nothing is known. He induced the Jewish population of the island to support his pretensions, and had at first the good fortune to promise them dry-land to the mainland. On the appointed day the Jews gathered round him on a promontory and at his direction some threw themselves into the sea, expecting a path to be opened for them through the waters. The miracle did not occur. Many of the enthusiasts were drowned; others were rescued. The Messiah himself disappeared, but it is certain he was Isaac ben Yâ'qeb Obadiah Abû 'Isâ al-Îshâhānî, who flourished at Isfahan at the end of the 7th century. There are two estimates of his claims. The one was that he was merely the forerunner of the Messiah, the other that he was the Messiah Himself. His call came to him through a sudden and miraculous cure from leprosy, and in support of his divinity his disciples pointed out that, although an illiterate before his call, he was able after that event not only to read and write, but even to compose books. The affairs of the khalifate were a reality which rivaled the success of a military movement, such as Isaac's soon became, had good chances of success. The pretender and his followers met the army of the khalif in battle at Isf (Rhagae), but Abû 'Isa was defeated and slain, and with his death the rising came to an end. The movement, however, did not die with its founder. It survived among the Isavites, the earliest of the Jewish sects of the Diaspora, who did not disappear until a couple of centuries later. Abû 'Isâ's influence on 'Anân, the founder of the Karaites (q.v.), and on his ritual was, however, more enduring.

Abû 'Isâ is at least one disciple of influence. Yudghân of Hamadân, called al-Râfî ('the shepherd'), did not himself claim to be more than a prophet, although his admirers, in accordance with his doctrine that history showed undoubted traces of Şîfîslâm, then at the opening of its career; they were opposed to anthropomorphism, and to a great extent resembled those of his master Abû 'Isa. After Yudghân's death his disciples adopted an additional doctrine—that of the immortality of their master, who, they contended, was not dead, but would appear again.

Contemporary with Yudghân al-Râfî was Ser-ennus, a Syrian, who was both a political and a religious reformer. He promised to restore the Jews
to the Holy Land, and, perhaps in consequence, his influence spread as far as Spain. His career commenced in A.D. 720, but in very short time. He was speedily captured and brought before the khalif Yazid II., to whom he excused himself by stating that he had never been serious in his claims; he had merely been amusing himself at the expense of his contemporaries. He was accordingly handed over to the latter for punishment, while his followers, repenting of their hardships, were re-admitted to the fold.

For the next three centuries, a half no Messiah arose in Israel. Then there was in the West a small group of unimportant pretenders: in France (c. 1057), at Cordoba (c. 1117), and at Fez (c. 1127). Of these there are practically no records beyond the mere mention by Maimonides. About 1160, however, one of far greater importance arose in Kurdistan. David Alroy (or Airuj) came from the north of Persia, probably Adharbajan, being a member of one of the free Jewish tribes which claimed descent from the Ten Tribes, and to which the Aghdas, the Afrids, and Pathans of to-day trace their ancestry. The period was again one of political disorder; and the great element of disturbance was the efforts of the Crusaders to recover and to keep possession of the Holy Land. Moreover, intertribal warfare was incessant, and the Persians, especially to a paralyzing degree, of the Government. It was in these circumstances that Alroy visited Baghdad, and on his return to his own people he raised the standard of revolt. A large following immediately collected, and Alroy, who had meanwhile proclaimed himself the Messiah, determined to break the yoke of the Muhammadans and to lead the Jews back to Palestine. From this point truth and legend have so intermingled in the story of Alroy that it is impossible to disentangle them. His command of the magic arts led to the acceptance of his mission far and wide. Only the Jews of Bagdad were sceptical, but his hold on the others was so strong that those in Bagdad were quite incapable of suppressing the movement. Alroy is said to have been summoned by the Sultan, to have appeared in answer to the summons and proclaimed his divine mission, to have been cast into prison, and to have miraculously escaped. Despite his magic powers, Alroy's movement was undoubtedly a failure. In all probability he was killed in an unsuccessful attack on the stronghold of the city. After his death the governing powers, unable to overthrow the Messiah by fair means, bribed his father or father-in-law to put him to death. On the death of Alroy his followers, in order to appease the Sultan, had to pay a considerable fine. In Alroy's instance also the pretender's death did not mean the end of his cult. The sect of Memhenites, named after Memhen, the traditional designation of the Messiah, adopted by Alroy, continued for many years.

A century passed before the next prominent pseudo-Messiah appeared upon the scene, but before that period, in 1172, a minor prophet arose in Yemen. His course lasted but a year, at the end of which term he was beheaded, it is said at his own request, in order to show by his return to life that he was indeed the Messiah.

Abraham ben Samuel Abulafia was born at Saragossa in 1210. While still a youth he was attracted to kabbalistic studies, and it was as a kabbalist rather than as a pseudo-Messiah that his career commenced. His life was spent in wandering from town to town and country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. He died very short-lived. His death was an improvement to the government, from which he is said to have escaped miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced that the year denoted came and went, but the millennium still tarried. Abulafia continued his picturesque career for one more year and then disappeared from history. He also, however, left his spiritual descendants, for, according to his legend, he was succeeded by two of his disciples, Joseph Jikatilla and Samuel, both of Medinaceli. Where Abulafia had failed, they were little likely to succeed, and it was but for a moment that these two meteors flashed in the firmament.

Immediately following them came Nissim ben Abraham of Avila, who pointed to 1295 as the year of the millennium. There were sufficient believers to fill the Synagogue on the appointed day, there eagerly to await the divine manifestation; but again disappointment was the prevailing emotion, and, when the watchers found mystic little crosses on their garments, many, accepting them as heavenly manifestations, embraced Christianity. The fate of the prophet, as of many of his predecessors, is unknown.

A century later, Moses Botarel of Cisceros appeared. As a prophet he was of little consequence. In 1502 Asher Lammlein suddenly arose in Istria and announced that, if the people would prepare themselves for a general war of the godly, a Messiah would come the following year. At his suggestion fasting, prayer, and almsgiving became general throughout the empire. Jews and Christians alike accepted his teachings and prepared for the advent of the Messiah and the return to the Holy Land. Here again the precedent was followed: no Messiah appeared; the prophet disappeared.

At the close of the 14th cent. Jacob Carson (or Caroscel), a minor prophet, appeared in the north of Spain, and David Rubeni, the picturesque emissary of his brother the mysterious king of Kashbar, or the East, also came upon the scene. Kashbar, according to the generally accepted locality of the kingdom, was a district in S. Arabia inhabited by nomad tribes of Israelites, although the view has been put forward that Rubeni came from India (see E. N. Adler, in Aspects of the Hebrew Genius, p. xxii, and Auto de Fe and Jews, p. xxx).

Rubeni arrived at Venice in 1324 after having visited Palestine and Egypt. He immediately proceeded to Avignon and in presence of the governing powers, unable to overthrow the Messiah by fair means, bribed his father or father-in-law to put him to death. On the death of Alroy his followers, in order to appease the Sultan, had to pay a considerable fine. In Alroy's instance also the pretender's death did not mean the end of his cult. The sect of Memhenites, named after Memhen, the traditional designation of the Messiah, adopted by Alroy, continued for many years.

A century passed before the next prominent pseudo-Messiah appeared upon the scene, but before that period, in 1172, a minor prophet arose in Yemen. His course lasted but a year, at the end of which term he was beheaded, it is said at his own request, in order to show by his return to life that he was indeed the Messiah.

Abraham ben Samuel Abulafia was born at Saragossa in 1210. While still a youth he was attracted to kabbalistic studies, and it was as a kabbalist rather than as a pseudo-Messiah that his career commenced. His life was spent in wandering from town to town and country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. He died very short-lived. His death was an improvement to the government, from which he is said to have escaped miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced that the year denoted came and went, but the millennium still tarried. Abulafia continued his picturesque career for one more year and then disappeared from history. He also, however, left his spiritual descendants, for, according to his legend, he was succeeded by two of his disciples, Joseph Jikatilla and Samuel, both of Medinaceli. Where Abulafia had failed, they were little likely to succeed, and it was but for a moment that these two meteors flashed in the firmament.
claims were needed, his existence as a Jew unmolested at the court of one of the most relentless of the persecutors of Jews and Jewadis was considered sufficient. The people looked eagerly towards him and expected, not a material palliation of their tortures, but a final release.

By no means the least of those who were dazzled by the appearance and favour of Reuben was his fellow-Khaim, Diogo Pires (c. 1501-32), an official of the Government, of Jewish descent. Pires, who was a young man of great promise, aroused by the stir caused by Reuben's mission, abandoned Christianity, adopting his ancestral Judaism in place of it, and endeavoured to attach himself as a disciple to the newcomer. The latter, however, severely discouraged all conversions to Judaism, fearing probably lest in consequence of them trouble might react on him and his mission, and Molkho found little or no favour with him. Molkho's conversion to Judaism had placed his life in great jeopardy; and, deprived of the protection of Reuben for which he had hoped, he left Portugal for Turkey. In the East Molkho, although hitherto supposed to be quite unlearned in Jewish lore, is said to have become a rapid student, acquainted with that subject, and by his eloquence and learning, and the mysterious manner in which he had acquired the latter, he soon collected around him a number of disciples to proclaim him almost a divine. His teachings went without dispute far into the domain of mysticism. By him the advent of the Messiah was foretold for 1540, and the sack of Rome in 1527, an oft-foretold precursor of the millennium, seemed to confirm Molkho's prophecies.

The one ambition of the prophet was to earn a martyr's crown, and in pursuance of this aim after a brief sojourn in Turkey he returned to Christendom. As was expected by Reuben, the conversion and flight of Molkho, added to other incidents, shook the position which Reuben had acquired at the Portuguese court. The royal promises, although made apparently in good faith, lacked fulfilment, and the undoubted excitement of which he was the cause among the Neo-Christians of the kingdom rendered his continued presence among them most undesirable; and, after having spent a year at the Portuguese court, Reuben was asked to withdraw. The ship in which he sailed was wrecked on the coast of Spain, and for a time he was in the hands of the Inquisition. His release was, however, ordered by the Emperor Charles V., and he settled at Avignon, then under the sovereignty of the pope. From Avignon Reuben removed to Italy, preceded everywhere by the mysterious reputation which he had acquired, and followed by a host of believers, who hailed him as the precursor of the Messiah and even as the Messiah Himself.

Meanwhile Molkho had also come to Italy with the reputation which he had acquired in Turkey, enhanced, if possible, and a following that grew in numbers from day to day. In Rome Molkho, imbued with Messianic tendencies, had visions and foretold floods and earthquakes, which, it must be added, subsequently occurred. More valuable to him, however, were the favour and protection which he had obtained from the pope, Clement VII., and from some of the cardinals. With their assistance he was able to defy his enemies, who were drawn not only from among the emissaries of the Inquisition, but also from the Jewish community, which had long been sorely tried by its misfortunes; and his influence and pseudo-Messiahship harmful rather than beneficial to Jewry. His critics among his own community were, however, numerically insignificant. His influence among the Jews increased until he became indeed the accepted prophet. By Graetz Molkho has been described at this period of his career as 'the Jewish Savonarola' (Hist. ix. 274). In order to avoid the flood which he had foretold would overtake Rome, Molkho repaired to Venice, and here he met once again the first inspirer of his enthusiasm, David Reuben. His position in regard to Reuben had, however, undergone a change since their previous meeting; he had professed himself to him now, not as a disciple, but as an equal.

Reuben was still endeavouring to obtain assistance for his brother, the king of Khaibar, and from the authorities in Venice he received some encouragement in his mission. After the flood Molkho returned to Rome, where he was received with enthusiasm as a successful prophet. The pope, the cardinals, and the ambassadors of the Powers vied with one another in their flattering attentions to him. His influence was so great at this period that he was able to secure the indefinite postponement of the introduction of the Inquisition into Portugal, but his Jewish enemies, especially Jacob Mantin of Venice, were unyielding, and they ultimately succeeded in securing his arrest by the Inquisition as a renegade Christian, and Molkho said to him, 'I will not yield a step in length of substituting another victim, and that Molkho himself was safely hidden within the papal apartments. In the circumstances it is not surprising that Molkho was smuggled out of Rome at the first opportunity.

Molkho thereupon rejoined Reuben, and the two decided to journey to Ratisbon to plead with the Emperor the cause of the Jews of Khaibar. There is a tradition that advantage was taken of the interview with Charles to endeavour to convert him to Judaism, and it was possibly this attempt that led to the arrest of both the ambassadors. They were put into chains and carried to Mantua, where at the Emperor's request Molkho was again tried by the Inquisition and sentenced to be burned. At the last moment pardon was offered him on condition that he returned to the Christian fold, but he rejected the offer with scorn. He had only one cause for repentance, was his reply, and that was that he had been a Christian in his youth. Molkho's ambition was thereupon gratified and he earned a lawful title, Charles V., and he settled at Avignon, then under the sovereignty of the pope. From Avignon Reuben removed to Italy, preceded everywhere by the mysterious reputation which he had acquired, and followed by a host of believers, who hailed him as the precursor of the Messiah and even as the Messiah Himself.

Concerning the existence of Reuben there can be no legitimate doubt. His mission, however, is not so well authenticated, and there are those, no mean authorities, who consider him to have been merely a charlatan and impostor. Graetz (ix. ch. 8), for instance, judging from the language of Reuben's Journal, expressed the belief that it had been written by a German Jew, and Neuber published the whole of it in Medieval Jewish Chronicles, ii.

His mission, however, is not so well authenticated, and there are those, no mean authorities, who consider him to have been merely a charlatan and impostor. Graetz (ix. ch. 8), for instance, judging from the language of Reuben's Journal, expressed the belief that it had been written by a German Jew, and Neuber published the whole of it in Medieval Jewish Chronicles, ii.
From Smyrna Shabbathai is believed to have gone to Constantinople, supported in every sense by his disciples and strengthened in particular by two of them — Messiahs and their own scientific knowledge and of mature years, and Abraham Uchini, a distinguished preacher, who, by means of an alleged ancient MS of very doubtless authenticity, rendered Shabbathai still more steadfast in the belief in his own divine mission. It is doubtful whether Shabbathai, if he ever intended to visit Constantinople, did so on this occasion, but it is certain that he tarried at Salonica, where mysticism was likely to find a sympathetic atmosphere, shortly after his banishment from Smyrna. In Salonica Shabbathai showed himself even more intoxicated with the consciousness of his new rôle than he had been at Smyrna, and his acts led here also to his practical expulsion by the Rabbis. After leaving Salonica the new Messiah spent some time wandering about the Orient, promulgating his views and his claims in every city that he visited and gaining adherents in all parts. In 1660 he was in Cairo, where he remained for about two years. There he gained a valuable supporter in the person of Joseph Chalebi of Aleppo, a mystic who had long awaited almost with impatience the coming of the Messiah, and whose wealth and influence were both extensive.

The approach of the apocalyptic year, 1666, attracted Shabbathai to Jerusalem, where, suppressing temporarily his extravagances, he built up an influence over the people on less theatrical bases. As the representative of the people of the city, he was sent abroad to obtain funds for their relief from an impending calamity, and the success of his mission rendered him all the more popular among the grateful people in whose midst he was sojourning. While in Cairo, Shabbathai succeeded in yet another mission. A Polish Jewess, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time in Leghorn, where she was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai, much to the astonishment that she was his divinely appointed spouse.

Shabbathai thereupon returned to Palestine. Passing through Gaza, he met there Nathan Benjamin Levi, otherwise known as Nathan Gazit, who immediately became the leading advocate of the new Messiah and took unto himself the rôle of Elijah, the forerunner of the Anointed. One of his first steps was to announce the opening of the Messianic Age for the following year, 1666. This prophecy, together with many subsidiary ones, was promulgated far and wide, spreading even to the shores of the North Sea. These claims were, however, not by any means encouraged by the authorities at Jerusalem, and Shabbathai thought it well to find a more congenial centre for his activities. He returned to Smyrna, his journey thither taking the form of a triumphal progress which culminated in a reception at his destination, remarkable for its enthusiasm. At Smyrna, overwhelmed by his reception, he put the final touch to all the rumours that were current regarding the Messianic age and his Messiahship. He was forthwith entrusted with absolute power as the sole ruler of the local Jewish community. Wherever Jews were to be found, the rise of the new Messiah absorbed their attention, and the exchanges of Europe were neglected in order
that the latest of miracles might be discussed. The merchants of the North Sea ports wrote to their agents in the Levant for information. Tribute poured in upon the 'King of Kings.' Em-

bassies were sent to him from the four corners of the earth. In the synagogues he was publicly haled as the Messiah, and those who doubted went in danger of their lives. Even among the Christians believers in Shabbathai were to be found. In Hamburg Protestants went to their pastor and said: 'We have almost certain accounts not only from Jews, but also from our Christian correspondents in Smyrna, Aleppo, Constanti-

topole, and elsewhere in the East that the new Messiah of the Jews does many miracles, and the Jews of the whole world flock to him. What will then become of the Christian doctrine and the belief in our Messiah?' Prophets, male and female, in accor-

dance with Joel's prediction (Ji 2:28), arose and exclaimed in Hebrew, a language with which they were supposed to have no acquaintance: 'Shab-

bathai Sebi is the true Messiah of the Race of David; to him the crown and the kingdom are given!' The daughters of R. Pejima, Shab-

bathai's bitterest enemy, blessed the name of the pretender, one male and one female, of a Persian Jewish agriculturist refrained from work on account of the advent of their deliverer who would lead them back to the Promised Land.

At the year 586 Shabbathai left Smyrna forConstantinople, but before doing so he distributed the kingdoms of the earth among his principal followers. As soon as he had landed on European soil, he was arrested by an officer of the Sultan and placed in prison. It was in this condition that Shabbathai approached the capi-

tal. Despite his undignified landing, Shabbathai's popularity in no wise languished, and he was received by hosts of believers in his divinity, who, by the gifts which they brought, enabled the 'Messiah' to secure a considerable alleviation of the lot that would otherwise have fallen to him. Shabbathai's courage was, however, equal to his popularity; and, when questioned by the authorities regarding his claims and intentions, he replied that he was merely a Rabbi sent from Jerusalem to collect funds for charitable purposes. Despite this fallacy away, the influence of the pretender remained, instead of waning, grew stronger, and in his prison in Constanti-

nopole Shabbathai held a court which was attended by Muhammadans and Jews who all shrewdly suspected his thinity. The ruler of the prison was removed to Abydos, and there his court was continued, if possible, even greater success than in the capital. His renown and ex-

aggerated reports of the royal manner in which he was treated spread throughout the civilized world.

The castle of Abydos became a place of pilgrimage to Jews far and near. In parts of Europe the Jews made preparations for the return to Palestine under Messianic guidance. In innumerable syna-

gogues prayers for the pretender's welfare were regularly offered; and with every day the excite-

ment both within Abydos and throughout the world increased. Shabbathai, in order apparently to justify his existence, arrogated certain of the Jewish fast days.

Shabbathai's fall was due to the appearance of a rival, one Nehemiah Has-Shemon, who posed as a forerunner of the Messiah. Shabbathai, learn-

ing of Nehemiah's prophecies, summoned him to Abydos. After a long journey Nehemiah arrived. An interview between Shabbathai and the former was followed by dissatisfaction on both sides. Nehemiah, fearful of assassination by the Shabbathians, fled to Con-

stantinople, where he embraced Muhammadanism and denounced to the authorities the treasonable intentions of his master. Removed to Adrianople, Shabbathai at length realized the critical position in which he was placed. Hoping thereby to save his life, he also embraced Muhammadanism, and was followed in this course by his wife and some of his adherents. The Sultan was much pleased at this act and appointed the pretender one of his doorkeepers. Shabbathai, in order to retain his hold upon the Jews, annexed: 'God has made me an Ishmael for the sake of the adherents of this new Messiah!' The ninth day of his regeneration. His apostasy, despite the loyalty to him of many of his adherents, shattered his influence in Jewry, and hosts of it, believes at 136th leaving, by the last act of their prophet, repented bitterly of their support of the movement. For a time, in consequence of the schism caused by Shab-

bathai's apostasy, Turkish Jewry was in great danger of extermination, the fear of wholesale conversions to Muhammadanism being accom-

panied by that of the massacre of those who refused to follow Shabbathai's example. Power-

ful influences, however, warded off the latter danger.

Shabbathai seems never to have abandoned his Messiahic claims. He managed to found a Judaeo-

Muhammadan movement in the lands where the Jews had dispersed to, especially in Salonik, to the present day. After a time he fell into disgrace, was deprived of his office, and banished to Dulcigno, where he died. It is believed at 136th leaving, behind him a controversy which long continued in Israel. The Dümme are in a sense crypto-

Jews, inasmuch as, while outwardly conforming to Muhammadanism, they practise certain Jewish or debased practices. But, however, in practice little secrecy concerning their difference from the Muhammadans, from whom, although they mix in commerce, socially they keep carefully aloof.

Shabbathai was succeeded by quite a shool of petty Messiahs. The first of the line was Jacob Querido, or Jacob Sebi, who was the real founder of the sect of Donim. He was, so to speak, the brother of Shabbathai's fourth wife, who for her own purposes pretended that he was her son by the Messiah. Querido's principal doctrine was that the redemption could not come about until the world was either entirely good or entirely wicked, and, as the latter state was by far the easier of attainment, he preached and practiced licentiousness in order that the day of the millen-

nium might be hastened. Two months after his death, the latter was put to death by the Sultan of the 17th cent., and was succeeded in due course by his son Bereish (c. 1655-1740). Other Shab-

bathai Messiahs who flourished at this period were Miguel (Abraham) Cardoso (1630-1708), a Marrano, Mordcas Mokiah (c. 1650-1729) of Eisenstadt, Löbele Prossnitz († c. 1750), and Judah Hasid. These were all, more or less, pro-

phets of Shabbathai so long as he survived, and they endeavoured to step into his place when he died. Mokiah flourished and preached in Italy and Poland. Prossnitz was of the class of clumsy conjurers; nevertheless he attracted many ad-

herents in Poland, where he died. He was a leader of the sect of Hassidim, the 'Ultra-

holy,' traversed Europe at the head of a consider-

able following whom he led to Jerusalem. He died, however, immediately after his arrival in that city, and with his disappearance his followers were left leaderless and destitute.

The last of the most prominent of the successors of Shabbathai who flourished at this period was Jan Koci (c. 1650-1729) of Eisenstadt, who was born in Podolia, where his first occupation was that of distiller. His original name was Jankiev Lejbovicz, but he obtained the new surname of Frank from the subjects of the Sultan in whose court he sojourned for a long time. An
undisguised charlatan and an apostate from more than one faith, he pursued a career of unceasing warfare against Rabbinical Judaism, and in the peculiar view of events which he held, he pictured himself as the re--incarnation of all the prophets and Messiahs who had preceded him. In Turkey he obtained considerable renown on account of his kabbalistic learning, and on the return to his birthplace the remnants of the Shabbathian party, who were known as Zoharites, appointed him their prophet. The Talmudists, however, disapproved most vehemently of his doctrines, which were leading directly to the destruction of Judaism and of morality in Poland. Frank and the Frankists were excommunicated, but they found a powerful friend in the bishop of Kamnotz, whom they ingratiated by pretended points of strong resemblance between their faith—which was bitterly opposed to Rabbinical Judaism and Christianity. With his assistance the tables were turned, and for a time the upper hand was gained over the orthodox element in Jewry. With the death of the bishop, however, another change came over the fortunes of the parties. The position of the Frankists became precarious, and order was required to secure the safety of his followers. Frank instructed them to accept baptism, he himself setting the example. Conversions to Christianity followed on a large scale; but, when these converts were discovered to be leading double lives, and, while outwardly Christians, to be following Jewish practices in secret, the attention of the ecclesiastical authorities was directed towards them. Frank was himself arrested in 1760 on a charge of heresy and imprisoned in the castle of Czentschow, where he remained for thirteen years. This imprisonment did not by any means put an end to his movement or his teachings, and his name became a centre for the promulgation of his doctrines. The invasion of the Russians in 1772 led to his liberation, and he was then free to make a triumphant progress through Poland, Bohemia, and Moravia. He lived in state until his death in 1791, latterly as the Baron of Offenbach, in various continental capitals, always with an immense retinue and a vast treasure, derived from his infatuated adherents, at his command. His later history, however, hardly belongs to the annals of Jewry, for his influence on Judaism had ceased long before his death. His followers, the Frankists or Frankists, as they called themselves apart as pseudo-Jews of a peculiar description, were ultimately absorbed into the population in whose midst they lived.

Frank was the last of the series of pseudo-Messiahs to be accepted seriously by any considerable section of Jewry, but there is one other who deserves mention, before the catalogue of these actors on the world's stage is brought to a close. Moses Hayyim Luzzatto (1707-47) differed considerably from most of his predecessors in the rôle in which he also essayed to live. With most, if not all, of them there was a spirit of charlatanry manifest. Not even Luzzatto's most determined enemy could sincerely suggest any such charge against him. One might almost say that he was merely a victim of his own delusions; his predecessors had at least part found the victims of their delusions outside of themselves. Luzzatto, the cultured son of wealthy Italian Jewish parents, was a poet by nature as well as by profession. Early in life, however, he fell under the influence of the Kabbalah and the Zohar, and soon the mysteries of this literature took complete possession of him and he firmly believed himself to be divinely inspired. He even went so far as to create for himself a copy of the works of his own hands and mind he was convinced of his divine mission. A circle of young devotees soon settled round him, and his fame began to spread to the confines of Jewry. The leaders of orthodox Judaism in Germany gave him the description of a madman, and with some difficulty, brought pressure to bear upon the newly arisen prophet to undertake to refrain from teaching, by means of either the spoken or the written word, in the expectation that he would outlive the desired promise, but was unable to observe it for very long, and, when he once more reverted to the forbidden studies, he was excommunicated by the board of rabbis, whose address he ignored, and Luzzatto wandered to Palestine, where he died of plague shortly after his arrival.

LITERATURE.—On the general subject of pseudo-Messiahs relatively little has been written. The principal reference to the subject appears to be in Abrahams, The History of the Jewish Messiah in Liberal Judaism, 1877; M. Gaster, in Jewish Chronicles, Feb. 11 and March 11, 1898; and A. M. Bendt, in Der ersten zweystelligen Jahresheft der Monatschrift, Volkesbiographische Studien, 1908, pp. 9-47. Luzzatto's personal life has been treated in a work by B. B. Fabricius, Luzzatto, Leipzig, 1885, 1896, 1897; M. Gaster, in Jewish Chronicles, Feb. 11 and March 11, 1898; and A. M. Bendt, in Der ersten zweystelligen Jahresheft der Monatschrift, Volkesbiographische Studien, 1908, pp. 9-47. Luzzatto's personal life has been treated in a work by B. B. Fabricius, Luzzatto, Leipzig, 1885, 1896, 1897.
METALS — 1. Metals.

Fire and metalurgy may be regarded as the two major phases of material culture. The results of the modern applications of steam and electricity have been described as "pungent and insignificant when compared with those which followed the discovery of metals by the men of the stone age;" and with the finding of the art of extracting metal from ore "human culture was revolutionised." Possible the first attempts at utilizing metals were made by applying a modification of hammer-work on stone to fragments of surface-ore. Copper and its alloys, especially a native bronze, would naturally be observed first; but the usual order of discovery of copper, bronze, iron—is not absolute; the order varies from case to case. For instance, it is unlikely that the West and Central Africans found any metal earlier than iron, which is so abundant in their country.

One of the greatest importances to humanity of the discovery of metals and the invention of metalurgy, philosophers have inclined to attribute them to some remarkable cause. Lucretius, e.g., imagined a mighty configuration; this, in consuming forests covering metalliciferous ground, would reduce the outcropping ore to a metallic state. But, with the discovery of fire-making, there are many possible implications and variations of discovery may have converged. Gowland suggests that the origin of metalurgy is to be found in the camp-fires of the Neolithic age. When these were made on metaliferous soil, the lamps of metal melted out would at once attract the attention of a stone-working people, and the blows of the stone hammer on the hot and malleable mass would indicate its possibilities. The camp-fire may thus be regarded as the prototype of the most elaborate modern furnaces.

Naturally, a feeling of the importance of metals, and a primitive appreciation of the "marvels of science" in connexion with the working of them, and their chemical properties, rectified upon early man with the results usually found of superstitious meditates on critical things. The body of beliefs about metals and, in a less degree, minerals, is enormous, but reducible to a few simple types which are found everywhere and survive in peasant psychology to this day. Special properties of this or that metal or mineral are taken into account, and cultural reactions of all kinds modify the various beliefs and usages. These may be typically exemplified without unnecessary multiplication.

In common with all skilled crafts in early culture, the miner and the worker in metal are regarded with wonder, and often with its entails superstitious feelings.

Among the Bangala of the Upper Congo no one is allowed to step over a smith's fire or blow it with his mouth; such acts would pollute and end the workmanship. The spirit is supposed to use witchcraft in order to perform his smithing well. Neighbouring peoples simply regard the smith with respect. Some African smiths form sacred gids; the mythical Wesigah Smith of Scandia is a natural deification, as is part at least of the lore of the great kamba analites.

4 Since the first iron used was not meteoric or telluric, in spite of cases among the Eskimos.

5 W. Gowland, op. cit., p. 17.

7 L. Wellman in JRAI xxxv. (1909) 468.

The usual tabus and animistic beliefs are attached to the working of metals, to mining, and to the ore and metal themselves.

The divinities of Malaysia have a remarkable code of tabus and body-purification, both for men and for animals, but they are outnumbered by the Chinese workers, who, however, as will be seen, have a similar faith. Often they are keener, more curious, to connect the operations of mining in such a way that the tin-ore may, as it were, be obtained with its own knowledge. The valued acts observed by the miners, the chief are that no living creature may be killed in the mine; that the cangor may not be put on; that those ships may not be worn, or an umbrella used. Numerous charms are employed by the 'mining wizards' for the purposes of clearing a way for the spirits and to keep the ore from flying itself. The Malay penangkens ('medicine-men'), or mining wizards, used to enjoy an extraordinary reputation, some of them having the power of bringing ore to a place where it was known that no ore existed, . . . to possess the power of etching such ore as existed, and of turning it into mere grains of sand. No one but him was allowed to wear a black coat at the mine. He used a special language (badut pura) and wore a red cap, and he had a wonderful "cone" for tin. Sometimes each separate grain of ore was credited with personality; it was believed that tin could announce its presence by a peculiar noise heard in the stillness of the night. Sometimes the personality of the tin is described as a buffalo, in which shape it presumably appears underground; this being perhaps a sophistication of the lode.

In Sumatra the divinities of the gold mines make a much difference as the spirits of the tin-mines in the Malay Peninsula. There, and the like, came, as it were, the breath by the miners to the scene of their operations, for at the scent of such things the spirits of the mine would cause the gold to vanish. In some cases, for example in the case of tin, a mark of the gold, a deep silence must be observed; no commands may be given or questions asked, probably because the removal of the precious metal is regarded as a theft, which the spirits would punish if they caught the thieves in the act. Certainly the diviners believe that gold has a tendency to avenge itself on men who dig the precious metal.

In Sumatra the tin-ore deposits are under the protection of an amang lati ('great god'), who is propitiated before the iron is worked. He capriciously moves the iron about. His symbol is a piece of wood, a few inches long. ("pleasing the god") is a sanul festival. The first thing to be done is to take the god into a state of calm, and then uttering speeking he is supposed to remain inert, unless offended in any way. He 'particularly affects two plants called Leisang Leal and Lalan, and when he is about to be pleased the Leisang, a specially selected hali, khe to fetch him.' The plants are placed in the house of the tin, and then taken in a brass vessel by an old lady to the river, she washes about, suddenly stumbles, and then emerges with a vessel full of water. The god has appeared. A procession with music is made to the hali-plaza ('god's place'), where his image (the pictures of iron) is placed. By them is placed the hali-stone, which is a service of prayer and praise is celebrated, after the lighting of a sacrifice for the god. The god's servant, a magician, knesses down two old women, termed matibs, who are often inspired by him and babble incomprehensibly. If a man is similarly possessed by the god, he is known as a mine 'sorcerer,' and during the ceremonies of the god he wears a dress of a matib. Dramatic performances and the list of events.

The last example is a perfect one for showing the development of a ritual, from an organized cult to a ceremony and the processes of its acquisition. There is some vagueness, which is worth noting, as to whether the metal itself is personified. As for its being deified, this is hardly to be inferred here or elsewhere.

The god appears to be rather the owner of the site, resembling the Hebrew Baals.

The Malays regarded gold in a similar way. The god 'spirit' is believed to be under the care and in the gift of a deus, or god. It has the form of a golden roc-deer. The thermorphisms alludes to that of its.
An interesting detail with regard to the personality of metals is supplied by Malay superstition. The Malays believe that so long as gold is in the earth it has a soul. When the gold is taken out by man it loses its soul, and the soul flies away. 1 The idea is parallel to those found in agricultural lore; presumably the corn-spirit leaves John Barleycorn when he is ground, if not when he is reaped. The idea is elaborated in Celebes, on the principle that the soul of the metal has been removed and weight assists the usefulness of the implements when made.

Among the Alkores of Celebes iron-working is a prominent industry. The Malays believe that a spirit is connected with iron, and that when an iron implement is dropped it is because the soul has taken flight. 2 A particular development is towards the Scandinavian idea of gnomes. The Chinese have tales of silver men and of 'women in silver clothes,' who when struck and knocked down, disappeared, and silver mines were found on the spot. 4 The same kind of analogy connects various metals with the human figure, according to their colour or other properties. The Greeks of to-day call jannides 'the golden disease,' and heal it on the homoeopathic principle with a decoction from an English sovereign, English gold being the best. 5

One or two examples of the miscellaneous wonders which have gathered round metals may be cited.

Ferrous itself, itself a mythical vegetable gold-dust, guides to hidden treasures. 6 A Malay recipe for turning brass into gold is to kill a wild pig, and sew up in it a quantity of scrap-brass; then pin the longer over it, and burn it; when brass has grown over the remains, 'dig up the gold.' 7 Panama once made a sensation of all metals, because of certain constellations, 8 and Van Helmont connected a ring of magic metal, which cured diseases. 9 An obvious connexion is practically universal between gold and the sun, silver and the moon. Silver is the lunar metal; hence peasants like to have silver in their pockets when they see the moon new, and to turn it for luck, i.e. doubling. 10 Throughout the world magnetic iron and copper have excited wonder.

The relative value of the familiar metals is the same in superstition and ordinary usage. It is interesting to note that the Hindus regarded alloys as impure, and never used them for religious purposes. 11 Here may be inserted the notion of mixture, adulteration, as a component of the idea of impurity. Another popular division of metals is into 'precious' and 'base.' The Chinese consider gold and silver genuine matter. 12 All the analogous estimates found in every age would seem to show that aesthetic ideas supersede economic. Clearly the aesthetic value of gold and silver rather than their importance as currency is to the fore, and either view preponderates over the mechanical importance of iron.

A similar predilection is shown in the genealogy of the metals.

Man is said to have consigned gold and silver away from the union of water and fire. 13 In Chinese philosophy tin is produced by the influence of the feminine principle in nature, being changed between silver and lead. The metal arsenic generates itself in two hundred years and after another two hundred years is converted into tin. 14 When a product of the earth has gained tenor qualities, it is said to have been transformed into man, which proves that the arsenic had not been completely transferred into a metallic state. 15

This notion of transmutation of metals is a curious parallel to modern discoveries of the degeneration of radium into a series of filial metals. The research of the alchemists for the philosopher's stone included a similar hypothesis.

According to the Pahlavi Bundakšin, gold, silver, iron, brass, tin, lead, copper, and pewter, are all derived from the various members of the dead Goyiman; 16 and an account of the perfection of gold it is produced from the life and seed. 17 The Pahlavi Sūrat in-Sūrat speaks (v. 12) of the duty of 'purifying' melted metal, i.e. practising 'habits of the heart so unmixed and pure that, when they shall drop melted metal upon it, it does not burn.' But the ordeal slays a stainer. Metal, especially gold and silver, is a 'counterpart of Shatvān himself in the world.' 18 From the divided body of Indra, according to the Satapatha Brāhmaṇa, metals arose, as well as all kinds of substances and living creatures; e.g. from his navel came lead. 19 The five elements in Chinese natural philosophy are water, fire, wood, metal, and earth. Water produces fire, fire earth, earth produces metal water, and water. 20 The idea of animal souls for metals already referred to has probably no cosmological import.

In the multitudinous superstitious relative to the protective, curative, or dangerous properties of metals or metallic implements, the analogy of their relative value and efficiency—e.g., between gold and steel—seems to predominates. The Satapatha Brāhmaṇa lays down that the slaughtring-knife for the horse should be of gold, that for the perry-thangs of copper, and that for the other sacrifices to Prajapati of iron. Gold is symbol of the nobility, copper of heralds, messengers, and the like, iron of the peasantry. 21 The intrinsic value of gold, its brilliance, analogous to fire and the sun, connect it with vitality. Hence its extraordinary popularity as a regal insignia. To the Chinese, in the form of leaf, dust, decoction, or grease. It is placed in the mouth of the dead to assist re-vivification and to delay decomposition. The Chinese also put mercury in collins in order to preserve the body. 22 With no knowledge of embalming they endeavour to insulate, as it were, the coffin against decay. The use of quicksilver may be referred to the analogy of a moving and apparently living metal of worth and organic life. British folklore advises rubbing ringworm with silver. 23

Metals, in virtue of their various properties, are used both as medicines and as amulets, in either case dependent on magical notions. The Burmese believe that the wearing of silver and gold is itself protective, and base metals may be used in default of precious ones. 24 Lamps to diffuse light and to protect the skin to secure invulnerability. There is a common practice of covering amulets with gold-leaf to add to their efficacy. 25 For a person to wear something, as if a part of himself, which has a value of its own, adds to his own value and resisting power. On the same line of reasoning, metals of worth are the more useful in warding off ghostly enemies. In Europe as in Semitic folklore, the most efficacious bullets were those of all sorts of crooked sixpences; 26 but all metals have efficacy in this direction.

The property of resistance is common to most metals; the property of metals to generate heat is characteristic of some. Among the properties of beauty and value, the strength and hardness of iron make it a favourite charm.

To keep off evil spirits, mountans in India carry a piece of iron—a key or a knife or any iron object. In Scotland a death a piece of iron was placed in all the provisions in the house to prevent death from entering them, and similar customs obtain in Ceylon and Morocco. 1 When Chinese fisher- men catch a fish, they do not take the name of God in vain, the first man who heard him call out "Cold iron," at which every man of the crew grasped the nearest bit of iron and held him tight, in order that the fisherman might save him from the "pride" or "sick" or "pig" when fishing; if you hear a man do so, you must shout "Cold iron." 2

It is a mere coincidence that in modern medicine iron is used as a tonic and that in early culture its strength was ascribed by men. The people of Nias wear iron arm-rings to keep off evil spirits or witchcraft; and they place iron by the side of sleeping infants for the same purpose. In Sarawak biting a piece of iron is a similar protection. The Torres believe that iron strengthens one's soul, and hold ceremonies at smithies for this purpose. The tossing of water in which iron has been dipped. 3 In Bermuda iron arm-rings are supposed to strengthen the wearer. 4

Several Malay states have in their regalia a sacred hump of iron, a piece of old scrap-iron with supernatural powers. 5 Large iron nails are used by the Malays to protect new-born infants, hut-out scissors to drive away evil spirits from the dead, and a sword is put in a strange river before a man will drink of it. When fighting abroad in the forest a man will sit on his sword, not only to drive away evil but to "confirm" himself. Streets are marked by iron representatives of iron. 6 Scraps of iron are used in ointments for curing the sick. 7

The supernatural power of a sharp instrument is, of course, to be added in many cases to the idea that iron lessens the "evil eye." Lead appears but rarely in superstition. The Atharvaveda speaks 8 of a charm against demons and sorcerers by means of lead. Here, as in modern times, and even in the latter, the solids and liquids of the material and malleability of the metal, and perhaps its weight, were connected with ideas of image-making, for which it is as convenient a form. The presence of a person who was "dippering" his image or effigy is world-wide. Curses inscribed on leaden tablets were common objects of Greek and Roman superstition; a leaden arrow, in classical belief, destroyed love. 9

The virtues of metal may be enhanced, as is seen in the last-cited cases, by the form and purpose of the manufactured article. The ring has the additional advantage of enclosing and keeping safe; the coin has the further value of currency and of the personality of whose head is stamped on the obverse. British folklore adapted the royal "touch" for King's Evil by using crown-pieces broken and used as such. Sufferers from paralysis or rheumatism collected copper from the charitable at the church-door, and these were commuted into silver rings which were worn to cure insanity. 10

The acoustic properties of metals have also been important in popular religion. 11 The idea that the sound of brass or iron has power to put spirits to flight prevailed also in classical antiquity, and from which it may have been inherited by mediaval Christendom. 12 In the Far East the virtues of the gong as a repeller of evil are well known. Brass is considered by the Chinese the most effective metal for repelling demons; 13 the sound of a brass instrument is the most terrifying. 14

A remarkable set of beliefs and practices has a strong tabu against the use of iron and the substitution of other metals or substances, previously 15 Pw, iii. (1866) 60; W. Gregor, Folk-lore of the North-East of Scotland, London, 1831, p. 301; PO A i. 140; W. Lieberknecht, Germanen von Thibury, Hanover, 1856, p. 90 f.; G. C. Thompson, Some Early Wicca, London, 1858, p. xiii. 16 In those cases, and in the Atharva-Veda, to the idea that iron is sacred, to the idea of a similar character. 17 In the Far East it is used as a charm against demons and sorcerers by means of lead. Here, as in modern times, and even in the latter, the solids and liquids of the material and malleability of the metal, and perhaps its weight, were connected with ideas of image-making, for which it is as convenient a form. The presence of a person who was "dippering" his image or effigy is world-wide. Curses inscribed on leaden tablets were common objects of Greek and Roman superstition; a leaden arrow, in classical belief, destroyed love. 8 In the Atharva-Veda, to the idea that iron is sacred, to the idea of a similar character. 9

used o, not. These rules usually apply to critical circumstances and persons.

Iron was not allowed to touch the body of the king of Korea. The Archon of Plato was forbidden to touch iron. Tools of iron might not be introduced into Greek temples, and the Archers offered an expiatory sacrifice when an iron graving-tool was introduced. Roman priests of Apollo restricted the use of the hair of the Flamen Dialis might be cut only with a bronze knife. It appears that the Greeks ascribed purifying properties to iron, and used it to purify the body. When the British occupied the island of Ramallah in the Holy Land. Against this, the Hammer must be done with a stone. Similar tabus were observed in ancient Palestine and Italy. No iron tool was employed in making Hebrew altars or in the building of the Temple at Jerusalem. The Roman Punk Subiucius, a sacred bridge, was made and repaired without any use of iron or even bronze. Hindus have believed the use of iron for buildings to be productive of epidemics. 3

Frazier considers that the tabu against iron in ceremonial perhaps dates from that early time in the history of society when iron was still a novelty, and as such was viewed by many with suspicion and dislike. In the Chinese tradition iron ploughs were introduced in Poland, some bad harvests followed, and the farmers reverted to the wooden implements. 4 The hypothesis is inconclusive. Iron and steel are used in virtue of their death-dealing and tiughty properties to replace the tabu of supernatural (physical) evil, and weapons made from them are essentially dangerous weapons. Now, ceremonies practised at critical seasons or with reference to mediaval persons or things. In Morocco, the last sheaf of harvest is regarded as an incantation of the barren of the crop. It may not be cut with a sickle of steel or iron, but is plucked with the hand. Compare with this the Moroccan custom of placing steel and salt underneath the stack of wheat in order to keep off the attacks of maize. 6

In the first case, steel is evidently too dangerous a weapon to serve as a substitute for the iron. "Iron," as the Bride of the Fields; in the second, its very dangerousness makes it an ideal defence. It is quite possible that in certain sacred operations—e.g., cremation and cutting the initial phenomenon of rest, indicating decay, may also have been a deterrent from the use of iron. This, or the general notion of the dangerousness of hard metals, may have inspired the Chinese rule that metal buttons may not be used on grave-clothes. They would give trouble to the dead by injuring his body while it is decaying in the grave. 7 On the other hand, the Chinese use gold, jade, and mercury to signify the decay and facilitate the future revival of the dead.

2. Minerals. — The religious associations of minerals in general are fewer and less marked than those of metals, except in the case of salt. The use, however, of stones of various sorts and shapes is a fact of far-reaching physical and psychological significance. The physical properties of a stone may be utilized for religious purposes, and the stone itself utilized for religious purposes. A stone may be considered as a religious object because of its Shape or size, because it is painted or inscribed, or because it is placed in a holy place, or because it is used in a religious rite. In some cases, the stone is used as a weapon, as a boundary stone, or as a grave marker. In other cases, it is used as a talisman, or as an amulet, or as a charm. In still other cases, it is used as a symbol of the deity, or of the gods, or of the stars.

The use of stones in religious ceremonies is widespread, and is found in all parts of the world. In some cases, the stones are used as offerings to the gods, or as tokens of devotion to the gods. In other cases, they are used as tokens of love or friendship, or as tokens of fidelity or integrity. In still other cases, they are used as tokens of fealty or obedience, or as tokens of trust or confidence.

The use of stones in religious ceremonies is not confined to the use of precious stones, such as diamonds, rubies, sapphires, or emeralds. The use of common stones, such as quartz, feldspar, or granite, is also widespread. The use of stones in religious ceremonies is not confined to the use of natural stones, such as those found in the earth, or those that are found in the sea. The use of stones in religious ceremonies is also found in the use of artificial stones, such as those that are made from glass, or those that are made from metal.

The use of stones in religious ceremonies is not confined to the use of stones that are fixed in place, such as those that are set in temples, or those that are set in altars. The use of stones in religious ceremonies is also found in the use of stones that are portable, such as those that are carried by priests, or those that are carried by pilgrims.

The use of stones in religious ceremonies is not confined to the use of stones that are used alone. The use of stones in religious ceremonies is also found in the use of stones that are used in combination with other objects, such as those that are used in combination with incense, or those that are used in combination with candles.

The use of stones in religious ceremonies is not confined to the use of stones that are used in religious ceremonies. The use of stones in religious ceremonies is also found in the use of stones that are used in secular ceremonies, such as those that are used in weddings, or those that are used in funerals.

The use of stones in religious ceremonies is not confined to the use of stones that are used in religious or secular ceremonies. The use of stones in religious ceremonies is also found in the use of stones that are used in scientific or medical ceremonies, such as those that are used in the preparation of medicines, or those that are used in the preparation of poisons.
Salt has been much used in sacrifices, indicating the analogy between sacred and ordinary meals. *Mola salis* was offered by the Latins to the *lares*, and salt was sprinkled by Greeks and Latins on the head of the sacrificial animal. On the other hand in India, the Cinnabar, in the 20th century, stated that *in all salt there is some portion of the salt and sulphur of Sodom, which blinds the person whose eyes it touches.* We thus get the two poles usually found between sacred substances, positive and negative, optimum and pessimum.

Salt has been widely used in protective and curative magic, and the association of ideas may be the same as is seen in the word *preserve.*

Loa and Slavonic women after childbirth washed themselves daily with salt and water, salt being a protection against witchcraft.** Moors carry salt in the dark to keep off ghosts,** and in Teutonic countries it is placed near infants to protect them. In *Morocco it is put in the wheat stack to guard it from mice,** and is sprinkled on the hands-mill before grinding the corn.** British folk-custom has the charm of carrying salt with round balls before it, so as not to be haunted.**

Salt is a source for many sicknesses, and procures disencumbrance.** Like blood and iron, it is a favourite medium for the oath; in early Teutonic custom the swearer dipped his finger in salt, and then took the oath.

As with other trades, sacredness has attached to salt-mining.

In Loa salt-miners observe continence and other tabus. In ancient Egypt, the production of salt was a sacred business.** The peoples of Central America worshipped a 'godess,' Huichotlizintli, of salt, who was believed to have invented the process of salting.

Prohibitions against the use of salt are instructive for the theory of taboo. Certain professions, and prohibitions in certain states, are forbidden to use salt, as they are forbidden other critical substances.

Mourners may eat no salt among Hindus, Africans, and other peoples. Priest and medicine-men (as among the Egyptians, the Dards, and Central and S. Americans) may eat no salt throughout their lives.** In the temple of the Egyptian priesthood, especially emphasised.** When travelling, the Central African might not eat salt. If he did, and his wives were not beholding well, the salt would act as a corrosive poison. During the ceremonies of frost from the Yuchi Indians of California continence and abstinence with regard to salt is ordered, as is also the case after a solemn communion with a god by the Huichol Indians.** No salt may be used in cooking the flesh of the beast or any food at the Gilyak Bear Festival.** Some Days after taking heads may not eat salt, or touch iron, or have intercourse with women. Egyptian fishermen have the same combined taboo.** In Indian ritual the young student, after being brought to his teacher, and the newly-married pair must abstain from salted food for three days.

The following is a luminous instance of the aetiology of the associations of salt.

Among the Nyambo-speaking tribes of British Central Africa the wife: who has not salted food may eat no salt. After the seclusion she is married. On the wedding-night she puts salt in the eating bowl, and this is the custom of the wife, and relatives for relatives to rub on themselves, though not if the husband is impotent.**

On this and similar customs, viz. that women at their periods may not put salt in food, lest husband and children contract a disease, Frazer says:

6. Westernrock, pp. 27, 31, 47.
7. Robert, p. 133.
8. Grimm, 111. 1294.
we live is iron. The principle behind this is aesthetic.

In Italy Saturn and in Greece Cronus was believed to have been a king who reigned in heaven or on earth during the twilight of the gods, and when men passed through days like gods without toil or sorrow, when life was a long round of festivity, and, as it were, a holiday, that was the season of Cronus. But his son Jupiter was a king of another kind, a king who gives men their work as well as their play, and who, though in some of his old companions, the alemists and informants of ages,

LITERATURE.—To the authorities cited add R. Andrea, Die Metamorphosen der Naturvölker, Leipzig, 1884; O. Schrader, Sagenbuch von und über Indien, Jena, 1897, II. 3-99; K. E. Hofmann, Das Blit bei den Vätern des Alterthums, Berlin, 1859; V. Henn, Das Saiô, do. 1903; R. Garie, Die ind. Mythologie, 1892, A. E. Crawley, II.

METAMORPHOSIS.—Evidences for the belief. Metamorphosis, transformation, or shape-shifting is a power universally believed in at low levels of culture. It survives at higher levels, especially among the masses, though it is also found in myths which are current among the educated or where popular belief tends to take the form of dogma, as when 17th cent. theologians accepted the werewolf superstition as a fact. The evidence for this universal belief is copious, and is found in myths, legends, and sagas, as well as in poetry from all lands; in folk-tales, of which it is one of the commonest themes or the most important incident, as, e.g., in the ‘Transformation Combat’ or the ‘True Brute Combat’ in the Irish cycle, in the ‘Wolf Man’ among savages or the peasantry; in the writings of modern travellers, explorers, and missionaries, as well as in older literature—Egyptian, Babylonian, Hindu, Greek, and Celtic.

2. Varieties of metamorphosis. Metamorphosis is asserted of every order of beings and even of inanimate things. (a) As far as men are concerned, where the belief is current, all men do not equally claim the power of transformation, but any man will readily admit that others have this power. Hence we have beliefs in the existence of distant tribes or groups possessing the power of transformation. Generally those who are credited with this power are medicine-men, shamans, sorcerers, witches, and wights. To multiply instances is unnecessary; suffice it to say that, wherever such a class of people is found, shape-shifting is always one of their magical powers. No European peasant believes that he can change his form, though his savage ancestors did so; with him the belief survives only in the proverb that every witch can do so (see Lycanthropy). Among certain peoples, however, every one is believed to have some connection with an animal form. Thus among the natives of W. Africa the bush-soul, one of the souls which each man possesses, exists in an animal; in Indo-China one of the souls of a man has the power of appearing as a man or as a wild-animal. This aspect of the subject is fully discussed under Lycanthropy.

While metamorphosis into animal form is more general, that into tree, plant, or flower is also found here and there. Besides this, numerous myths and tales from all parts of the world explain the origin of some tree or plant by saying that it sprang from the body—the arm, leg, head, or blood of some human being. Similarly, men are sometimes held to have shape-shifting power by the common opinion that every witch can do so (see Lycanthropy). When a tree springs from a dead human being the identity of the two is obvious, and here the stories may be based on the fact that trees often do grow from the barrows of the dead. They are supposed to be tenanted by the dead man’s spirit or are identified with the man himself. The medicine-man or wizard has also the power of transforming others. He may supply them with a magical means to change their form, but more usually he himself casts a spell upon them and transforms them. This is usually done through incantation—and no incident is commoner in folk-tales than this—but it is sometimes meted out as a punishment. Though transformation for this reason is generally the act of the gods. In such cases transformation may be for a longer or shorter period, but it is often of a permanent character.

Instances are found at all levels of culture. Mythology knew many such punishments for impiety. The incident enters also into Christian tradition, though it is derived from earlier sources. The sorcerer is represented often as the man who is refused food or on whom a trick is played by a peasant or a Jew, and the reward for them is the punishment of transformation to animal form. In many cases groups of magicians are said to be human beings changed to stone for some act of impiety—the idea perhaps originating in the belief that the stones embody ghosts of the dead buried beneath them. Other instances of petrification, in some cases also for a punishment, are found in all mythologies—Australian, American Indian, Greek, Hebrew, etc. The idea of petrification may be connected with the fact that many rocks bear some resemblance to human form. In folk-tales the power of petrifying is usually in the hands of witch or wizard, and a touch with a wand, binding the victim with the witch’s hair, or the repeating of a spell suffices. Cf. Johnson.

(b) The power of transformation on the part of men was reflected back upon the gods in all mythologies, from the lowest to the highest—Bushman, Australian, Polynesian, Peruvian, Celtic, Greek, Hindu, Egyptian, etc.; whether the gods were beings of human form or not, the powers and the actions of the gods were such that they could, animal or human, in order to serve their purposes—to escape danger, to benefit men, to carry on amours, and the like. As in Egypt, men looked forward to the time when they could assume any form in a future life, like the gods. The gods, too, as has been seen, had the power of causing metamorphosis as a punishment to men.

(c) Demons and other beings met with by travellers were also believed to have similar powers. The fina of Arabia, the bhâts of India, the devils of early and mediæval Christianity, the water-horses and other monstrous beings of popular belief, can assume any shape to carry out their evil ends. The idea is that of an attractive girl or youth who lures away a human victim to destruction. Ghosts of the dead may appear as animals, or project themselves into animal form temporarily, but there is a wide-spread belief in their more permanent assumption of animal forms (see ANIMALS, vol. 1, p. 498).

(d) Animals themselves are sometimes believed to be capable of self-transformation. This is true of the fox in Japan and China and of the tiger in Malaysia (see Lycanthropy), and the seal and similar animals are well known in folk-belief to have the power of changing into human shape.

(e) Inanimate objects are also changed into other forms by magical power. The best instance of this occurs in the Transformation Flight group of Mârchen, in which, e.g., a girl escaping with her lover throws down small objects which become a forest, a mountain, or a lake, and impede the progress of the pursuer (see MacCulloch, CL, p. 171 ff.). Examples of this are found not only in European and Asiatic folk-tales, but in Samoan, American Indian, and Basuto stories.

3. Origin of the belief in metamorphosis. An examination of the enormous mass of evidence for the belief in animal metamorphosis suggests that man’s idea of personality, or perhaps rather the ramus in which personality may lurk, is an exceedingly fluid one. There has everywhere been a stage of human thought when no clear distinction was drawn between himself and the rest of nature, between human and animal, between animate and inanimate.
inanimate. In this stage of thought animates and inanimates are equally believed to be alive; men, animals, and things have the same feelings and passions; each speaks in the same manner. Or, when the idea of soul or spirit is attained, all are equally alive by virtue of the possession of such a soul or spirit. Such beliefs in the underlying similar species, have given rise to various myths which are rooted in this primitive stratum of thought, and in turn have served to deepen it. Thus it is sometimes thought that at first 'all animals are men,' as the Algonkins say, and only later took animal form. As the Hareskin Indians think, in the beginning men were animals and animals were men, but afterwards changed their roles; or, according to the Zulus, all things were originally animals, but now men, trees, etc., are degenerate animals with souls which can leave their bodies. Again, men were once animals who became men—a common Polytheistic belief. Where a clan of one totem dislike the animal which is the totem of another distant clan, they may come to regard the men of that clan as possessed of its nature and liable to assume its form. In all such cases, whether totemistic in origin or not, it is easy to see that men and animals might be supposed to revert temporarily to the other forms which ones were theirs.

It is also possible that an analogy between the habits of certain animals and those of human beings, in life or after death, may have aided the belief in metamorphosis. Thus, where ghosts of men are believed to return to the house in which they lived and which is also the home of such animals as snakes or rats, it is easy to imagine that these are forms of the dead man. This is the case in Zululand with the snake. Night-roaming animals like the cat, tiger, or wolf might be identified, as they were, with witches, who also roamed in darkness.

Hallucination might be a potent factor in aiding the belief. Savages have often declared that they have witnessed such a change of shape. The pre-conceived idea suggested the hallucination, and it in turn gave support to the belief. Or persons to whom drugs had been administered might have hallucinations of themselves as animals, as in classical and medieval instances (see Lycaon, § 2). Madness, again, has also had its part to play. Its victims, especially where the belief in metamorphosis prevails, often imitate the cries, motions, and actions of animals, and this could only serve to establish the belief more securely. The werewolf superstition was largely moulded out of such cases (see Lycaon, § 3).

3 T. Turner, Scenes a Hundred Years Ago, London, 1884, pp. 296, 330.

The custom of dressing in an animal skin at sacred dances, or before a hearth, hunt, or of wearing animal skins in war dance, will aid the belief in metamorphosis. The frenzy of the dance and self-transformation to the dancer, while the onlookers or the enemy would imagine that they saw human animals. There is no doubt also that medicine-men have often strengthened the belief by exploiting it—e.g., dressing as an animal, initating its howls and its actions. In practice the belief in the power of metamorphosis of men is generally limited to the medicine-man, sorcerer, etc., who transforms his victimus usually by a spell, talisman, or potion. Self-transformation is caused in many ways, most of them magical. Sometimes, however, it is the result of a divine, supernatural, or demonic gift.

See, for a further discussion and examples, the art. Lycaon; cf. also Transformation.

LITERATURE.—A. Lang, Myth, Ritual, and Religion, London, one. Thus, knowledge is frequently distinguished from those modes of apprehension which are called sensation, perception, and imagination. It is thus confined to those modes of apprehension which involve definite thought or conception. Again, it is common, especially since the time of Kant, to contrast knowledge with belief. It is now customary to use the term 'cognition' to include all these modes of apprehension. Cognition is a more limited sense that the term is hereby employed. But even cognition is generally distinguished by recent psychologists from other modes of consciousness, which are called thinking, feeling, or affection, and willing, or emotion. There are valid grounds for these distinctions, but it is important to remember that, so far as we are directly aware of these distinguishable aspects of our consciousness, they are, in the widest sense of the word, known or cognized. We apprehend pleasantness and unpleasantness and the fact of striving just as truly as we apprehend sounds or colours, trees or stars, triangles or systems of philosophy. There are, however, some differences in our ways of knowing which it is very necessary to bear in mind. The most fundamental are those that have been expressed by the terms 'empirical apprehension and judgment', 'immediacy and mediate', 'acquaintance and description', 'enjoyment and contemplation', 'experiencing and experienced'. It may be well to take the last of these first. Whenever there is knowledge of any kind, there is some kind of acquaintance or description. See M. Dobrinshoffer, Account of the Abipones, London, 1822, ii. 77; R. M. Dorman, The Origin of Primitive Superstitions, Philadelphia, 1895, p. 249; C. Lévi-Strauss, Les Planètes, New York, 1941, Intro. p. ix.

2 These are the antitheses that are especially emphasized by G. F. Stout, Anthropology, B. Russell, S. Alexander, and O. Lloyd Morgan respectively.
and something that is known. Knowledge does not exist in the same sense, but at some particular centre and that centre is not primarily aware of itself, but of some particular object. Whenever any one reflects upon his knowledge, however, he at once becomes aware of this double aspect and that the general fact can hardly be disputed. Now, when any one reflects further upon his knowledge, and especially when by intercourse with his fellowmen he is able to compare his own knowledge with that of others, he very soon comes to realize that some of the things that he apprehends are more closely connected with his particular way of apprehending them than others are. He finds that some things are cognized by others in substantially the same way in which they are cognized by him. To this class belong especially facts relating to number, to spatial and temporal order, to the forms of objects in space and time, to the general conditions under which such objects occur. Such things come to be regarded as being in a special sense objective, i.e., as being independent of the particular nature of the being by whom they are apprehended. But we may easily come to doubt in this respect. There is not the same amount of agreement about colours as there is about forms; and there is still more difference of opinion with regard to the extent to which beauty and ugliness, agreeableness and disagreeableness, are to be ascribed to particular objects that we apprehend. Thus we are led to distinguish some of the things that we know as not specially belonging to ourselves, but being simply objects that we contemplate; and others as being more peculiarly our own, things that we have or enjoy, things that are not merely experienced, but that are bound up with our attitude as experiencing. The things that appear to be most emphatically in the latter class are such characteristics as pleasantness and unpleasantness, beauty and ugliness, emotional experiences, values; but the division between these and such experiences as those of taste, smell, colour, etc., is not a very sharp one. Hence, instead of placing objects in one or other of these divisions, we may perhaps rather to recognize a subjective and an objective aspect in all modes of apprehension.

Once this important distinction has been duly recognized, the next that claims our attention is that between immediate and mediate apprehension. Some things are known to us in a quite direct way, and cannot be doubted. When any one has an experience of pain, he may be very uncertain with regard to its source and even with regard to the part of his organism to which it is to be referred; but he may also have some difficulty in distinguishing clearly between the pain that he is experiencing and some other fact that is experienced by him; but he cannot really doubt that he has this experience, whatever he may be, and however the object of his experience is to be described or interpreted. Every man is in some degree 'a man of sorrow,' and acquainted with grief, and he cannot have any doubt about the grief which he is acquainted with, though he may be quite unable to analyze or describe it, or to explain how it has arisen. As soon as we begin to analyze, to describe, or to explain, we realize that he realizes not only that something is apprehended, but that he apprehends it. What exactly he is, and what the something is that he apprehends, are matters for which he has no adequate solution, and which he cannot with certainty recognize as any fact which can be clearly defined. Even the naming of an experience may involve some error; for to name it implies that we class it along with some other experiences, and that it is thus in some way a conglomeration of experiences, and in supposing that it is essentially the same as, or similar to, it may be that what I call my grief should be more precisely characterized as simple unpleasantness or as resentment or remorse; and, when I think that I am grieving over my neighbour's misfortunes, I may in reality be considering rather the way in which they affect myself. Knowledge ceases to be immediate as soon as it ceases to be the simple apprehension of something and becomes, implicitly or explicitly, a judgment about something. Here also, however, we have to recognize differences of degree. Though we may conceivably be in error in thinking that grief is the right name for what we are experiencing, yet, if we are really acquainted with grief, we can hardly be mistaken in thinking that what we are experiencing is of the same general kind as what we have experienced before. But we may easily come to doubt whether it is not so immediately known. When Lady Constance says, 'Grief fills the place up of my absent child,' we are not likely to be ignorant of what she means by grief, and we can partly apprehend what the rest of her statement means; but, if we have never had any similar experience, our apprehension has very little immediacy. We may even be inclined to doubt whether it has any real meaning at all. It is a description of something that might be apprehended, but with which we do not happen to be acquainted.

Now, the various theories of knowledge turn largely on the distinction between what is immediate and what is mediate, and between what is subjective and what is objective. One theory of knowledge which, in different forms, has played a very conspicuous part in the history of philosophy is the theory that we have no immediate knowledge of anything but what is essentially subjective. One of the most extreme forms of this theory is found in the doctrines of Descartes, according to which the only thing of which we are immediately certain is the existence of the self as a conscious or thinking being. What he really brings out, however, is rather that everything of which we are immediately conscious certainly exists as something apprehended. What thus certainly exists is a complex, including certain objects that are apprehended and the fact of their apprehension. But Descartes considered that the objects thus apprehended might be properly described as being 'in the mind,' and that the individual mind should be regarded as a persistent thing within which such objects are contained; and he called the objects 'ideas.' He was thus led to think that the individual mind exists both as something known, i.e., as an 'idea,' and as something that persists in a way that is independent of its being immediately known, whereas the other objects that are known only are known only as having what he calls 'objective reality,' i.e., the kind of reality which consists simply in their being immediately known. But he recognized that some of these other objects carry with them the suggestion of a more complete reality than that which belongs to them in the simple fact of their immediate apprehension; and he sought, by various arguments, to give grounds

---

1 The lack of words to distinguish properly between the subjective and the objective aspects of cognition has been a great defect in philosophy. Sensation, e.g., is generally supposed to do duty both for sensing and for what is sensed; and it is only very recently that it has been common to distinguish between perception and conception. Even now philosophers do not readily grasp what Geach meant when he said that all the 'objects of the field of subjective activity which are not brought to thought (the apprehension of an objective concept) it is largely the failure to realize this distinction that makes it so difficult for most people to understand aspects of what is called 'ideationalism' as that of Plato or Hegel, in which 'ideas,' or 'thoughts,' mean concepts. The 'Subjective Realism' has greatly helped to make this distinction clearer.

2 The difficult subject of error, its nature and conditions, cannot be here discussed. But see the references given at the end of this article.
to justify the belief in this more complete kind of reality. In doing this, he founded the doctrine which has been referred to as that of ‘representative ideas,’ which had a great influence on subsequent speculation. According to this doctrine, the individual mind may be compared to a picture-gallery, the pictures being ‘ideas.’ One of the pictures is the picture of itself, and that must be supposed to have been always in it. Some others, such as that of God, must also be supposed to have belonged always. Many others must have been painted by itself. Some are даные of no particular significance. But there are some that appear to be portraits; and these may be supposed to be the portraits of other beings outside the mind, and to have been, as it were, handed in by them. This is, no doubt, a somewhat crude way of stating it; but it appears to be substantially what Descartes sought to maintain; and, with some modifications, it reappears in the writings of several other philosophers. Berkeley dealt it a severe blow by contending that, if we see pictures only in a gallery, we have no ground for supposing that they ever exist in any other way than in a gallery; and Hume improved on this by arguing that, if we see only the pictures, the gallery is an unwarranted supposition. The modification he uses is that on a stage in which we see the actors only, and have no reason to suppose that there is a stage. This reduced the whole doctrine almost to an absurdity; and the concept of ‘representative ideas’ was denounced with considerable force by Thomas Reid. What he had to put in its place, however, was not very clear. Kant took a more fruitful line by urging that we cannot without absurdity regard our knowledge as being ever complete, though the impressions be apprehended by us at any time. We have to recognize certain fundamental orders, such as those of space, time, and causation, which carry us beyond our immediate data and initially suggest a coherent system of connexions. In his ‘Refutation of Idealism’ he urges, against Descartes and Berkeley, that the recognition of such a coherent order is more deeply involved in the apprehension of objects distinct from the self than in the apprehension of the subject; and that our knowledge of the persistent reality of the self must, consequently, be regarded as derivative. He contends, however, that the order that we are led to distinguish in the objects which we apprehend is an order that can never be completely systematized, and must, consequently, be treated as ‘phenomenal’ and distinguished from the real order, which may be supposed to belong to ‘things in themselves,’ and which we are led to postulate chiefly on moral grounds. But Kant’s doctrine carried conviction at least with regard to the necessity of recognizing that some kind of reality belongs to the more mediate forms of apprehension as well as to those that are more immediate. When the significance of this is fully realized, it leads to the doctrine that may be characterized as that of ‘epistemological realism,’ i.e. the doctrine that everything that we in any way cognize has a kind of reality which is not simply to be identified with the fact that it is immediately apprehended at a particular moment.

The acceptance of a doctrine of this kind gives a new interest to the study of the objects of cognition. So long as these objects are regarded merely as a flow of presentations, the interest in them tends to be almost purely psychological—i.e. it is directed simply to the way in which they come to be apprehended, by the individual conscious mind. When they are regarded as things possessing permanent characteristics and permanent orders of their own, they become the subject-matter of an independent study, and may almost be said to have given rise to a new science. This is the science that has been called by Meinek Gegenstandstheorie. It is the attempt to distinguish and arrange the different kinds of objects that we apprehend. It is obvious that there is a very great variety of sense-data—sounds, colours, pains, strains, and so forth; and we apprehend three kinds of these: perceivable objects, animals, etc.; we apprehend sounds, plants, etc.; we apprehend sounds, and the difference in their properties. This variety is understood in its most comprehensive sense. We apprehend, e.g., a very great variety of sense-data—objects, colours, sounds, and so forth; we apprehend objects, animals, plants, etc.; we apprehend objects, and the differences in their properties. This variety is understood in its most comprehensive sense. We apprehend, and when it is approached from this point of view, it becomes very much more comprehensive than any of the lists of categories that are commonly set forth; and, in fact, it has a rather different aim from that implied in any of these lists. The problems raised by any such attempt to distinguish and arrange the various types of objects are evidently of a fundamental character, and seem, therefore, to belong properly to the subject-matter of metaphysics. It is not impossible, however, that an attempt to arrange the objects of our acquaintance in a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here.

2. Reality. Kant’s system of the theory of knowledge and Gegenstandstheorie leads to the recognition that, in one sense at least, there is no meaning in the antithesis between the real and the unreal. As Parmenides and Plato urged, pure non-being is not to be thought or spoken of. But there is still a sense in which the things that we apprehend may be said to be more or less real. Sometimes our apprehension of things is very incomplete; and, indeed, when we gain a fuller apprehension of them, we may be said to know them more truly. Again, the things that we know are in many cases parts of larger wholes; and, so long as we do not apprehend the wholes of which they are parts, we cannot be said to have a full apprehension even of the parts. This is at least the case when they are parts of an organic unity. We could not be said to know many things if we do not recognize it if we do not understand the function which it fulfills in the life of the organism. Our apprehension of the part, in such a case, is not the apprehension of what is unreal; but it may be said to be less real when it is thus apprehended than it is when its relations to the whole are understood. And, if the universe is an organic whole, this distinction will apply to the apprehension of all the objects in it. Hence there may still be a sense in which it is legitimate to speak of a correspondence between appearance and reality, or of different degrees of reality, though both these expressions are open to some objection. Now, in apprehending and arranging the various objects of our cognition, we are at least trying to regard them as forming a complete cosmos, such that every object has a definite place in the total order; and constructive metaphysics, as distinguished from Gegenstandstheorie, tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism; such as the doctrine of Hume, no doubt, is effectively removed by a more thorough doctrine of knowledge, such as that of Kant. But even Kant ends with the view that our knowledge is a consciousness of appearances, and we can never hope to apprehend things as they are in themselves; and such an agnosticism is defended, in different ways, by a considerable number of
philosophical writers. If it is strictly pressed, it means that we have to content with the theory of knowledge, supplemented by Gegenstands-theorie. The early Pragmatists, e.g. Kant, Hume, are in this way unusually broad and hard to define exactly. This is because, on the one hand, he had not fully reached the point of view of Gegenstands-theorie, not having completely freed himself from the metaphysical dogma; and, on the other hand, he recognized that, though we cannot know anything about things as forming a real cosmos, we are justified in entertaining certain beliefs with regard to such reality, chiefly on moral grounds. This view of belief, as contrasted with knowledge, has been developed by the Pragmatists, who maintain that the ultimate ground of belief is not knowledge, but rather practical need. In general, the Pragmatists hold, further, that there is no real need to think of the world as a complete cosmos; but this is not an essential part of the Pragmatists' point of view. Bergson, again, while agreeing with them in the principal features of the intellectual beliefs, are based on practical needs, thinks that it is possible to reach a more perfect knowledge by means of intuition—a view which to some extent connects him with such earlier philosophers as Plato and Socrates. In these ways of thinking, and perhaps some others as well, tend to discredit the attempt to form a constructive doctrine of the objects of knowledge as constituting a cosmos. Yet the attempt continues to be made; and Kant at least recognized that, however futile it may be, it is hardly possible for the human intelligence to refrain from trying it, when the scientific interest has been fully developed. All that can be done here, however, is to indicate some of the chief ways in which this attempt has been made.

The earliest attempt at a constructive theory of the cosmos, and certainly one of the most interesting and remarkable, is that which is set forth in the Upaniṣads. The difficulties of the subject, especially at so early a stage of human thought, prevent it from being dealt with in a perfectly lucid way; and it relies, in consequence, partly on poetical metaphor and partly on vague paradox; but the doctrine that the cosmos is to be conceived as an unchanging spiritual unity, manifesting itself, especially in the forms of slow development, appears to be definitely indicated; and this view, showing itself most clearly in the conception of a long series of successive embodiments, gained a firm hold on Eastern thought. It is a view to which Western thought also has returned from time to time; but in general Western thought starts rather from the multiplicity of existing things, and makes only very tentative efforts to apprehend the central unity. Among the Greeks the earliest attempts to frame a theory of the unity of the cosmos took the form of a somewhat crude hylozoism, such as that of Thales. Pythagoras is supposed to have introduced conceptions more akin to those of the East; but, if so, they became gradually modified among his followers through the influence of the more materialistic ways of thinking that were current around them, and eventually through the growing interest in mathematico-conceptions. In the end their speculative doctrine became largely in a barren formalism and a rather fantastic play with numerical analogies. The early representatives of the Elatic school were perhaps more faithful to the conception of the unity of the cosmos; but in the poems of Parmenides it is difficult to distinguish what is to be taken literally from what is only metaphorical. He sometimes seems to deny altogether the reality of multiplicity and change; but perhaps he meant only that the cosmos as a whole has to be thought of as one and unchanging, though change and multiplicity are contained within it. In any case, a view of this kind would have been very difficult to set forth clearly with such technical language as he had at his disposal; and it is probable that his views were not well understood by his followers. Anaxagoras recognized very definitely the essential unity of the cosmos and connected it with mind or reason; but he does not draw any clear distinction between mind and matter, and, in attempting to contrast the order that he finds in the pre-existing disordered, he makes use of an antithesis which is as difficult to justify as that between the real and the unreal.1 It is with the philosophy of Plato that we first come upon a really coherent attempt to set forth a conception of the cosmos; and, in many respects, it may be doubted whether that attempt has ever been surpassed. His main conception is that of the Good as the principle of order; and he combines this with the recognition of a number of subordinate principles, all regarded as universal types in accordance with which the particular objects of our experience are formed. This view was made possible by the Aristotelian conception of a hierarchy of forms leading up to the perfect intelligence; but, on the whole, Aristotle's main interest lay rather in the establishment of special sciences on the basis of this conception of fundamental forms. Plotinus, at a considerably later time, working largely under the influence of Oriental sources, but helped by the Platonic doctrines, succeeded more fully than any one else in ancient times in arriving at a conception of a cosmic system unfolding itself by a process from unity to multiplicity and returning into unity again; but his views are difficult to disentangle, and to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recalls Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy, between the unity of the spatial world and that of the world of thought, and his attempt to represent these two forms of unity as essentially identical. This results in a quasi-mathematical conception of the universe, and makes it appear as what James calls a block universe.2 He aimed at removing this defect by his conception of monads, which has served as the basis for subsequent theories of spiritualistic Pluralism. Yet he combines the conception of the cosmos as complete and independent of the monads with the recognition that they are parts of a world-order, the nature of which is definitely 3 The meaninglessness of any conception of a world-order, such as Spinoza's conception, appears to start, is well brought out in Bergson's Creative Evolution, Eng. tr., London, 1911.

1 Kant's view of its finitude is mainly based on the difficulties which he brings out in his 'antinomies.' The solution of these is one of the main problems of constructive metaphysics; but the attempt to set forth a larger and difficult to be discussed because Hegel's dialectic is the most elaborate attempt to deal with such difficulties. Attempts have also been made by H. Bergson, K. Russell, and others.

2 The philosophical conception of the continuity of spiritual being was obviously to be distinguished from the older forms of the doctrine of reincarnation; but this is a subject that can only be touched on here.

3 The mention of modern philosophy is for the sake of immediate historical connection only; but the reader of modern philosophy will find the subject best brought out by J. Margaret, Some Doxsts of Religion, London, 1890, and B. Bosanquet, The Value and Destiny of the Individual.
determined, and which is selected as the best from an infinite number of possible world-orders. How possibility is to be distinguished from actuality is one of the most difficult problems that are raised by his philosophy 1 but, on the whole, it must be confessed that his philosophy in general, notwithstanding its great ingenuity, is much more remarkable for the number of problems that it suggests than for the conviction for character of the solutions that are proposed. His attempt was followed by a great deal of critical work, especially that done by Hume and Kant; and the constructions that followed on this critical work are deserving of more careful attention.

The most important is that of Hegel, and it is also one of the most difficult to interpret. What can be said with confidence is that, by means of a more definite interpretation of the Platonic dialectic, he made a very thoroughgoing attempt to arrange all the fundamental concepts involved in thinking about the world in a definite order from the simplest to the most complex. By this means he sought to show that a certain conception of spiritual unity is the most comprehensive of all conceptions, and the only one by means of which a definite and coherent doctrine can be obtained. He then proceeds to interpret the non-human world ('nature') and the world of human life ('spirit') as an order of growth through which the spirit or unity of the whole is gradually unfolded. It is generally recognized that a considerable part of the working out of his dialectic carries conviction, but that there are several places in which the movement is difficult to follow. The treatment of the non-human life is generally recognized as being highly instructive, while the interpretation of 'nature' is much more open to criticism. No subsequent writer, however, has succeeded in making a substantial improvement on the general view of the cosmos that Hegel has presented.

Most of those who have made attempts at definitely constructive work are chiefly distinguished from Hegel by the more tentative character of their doctrine. They seem to provide, at most, only the disjecta membra of a more complete system. Some of them may also be criticized on a subjective conception of knowledge, in a few cases approaching even to the point of view of Berkeley. But into the details of their work we cannot here enter.

It may seem disappointing, after so many centuries of more or less continuous philosophic endeavour, that it should not be possible to refer more definitely to results that are generally accepted as conclusive. But it is hardly surprising that the interpretation of the whole should present more difficulty than that of some special parts. It is probably necessary that we should have a fairly thorough appreciation of the kinds of order that are contained in the parts before we can have any definite conception of the order that is involved in the whole. By the help of mathematics we are getting a more and more thorough insight into the relations that are involved in the orders of number and space. The Platonic conceptions of God have been made more definite by modern discussions of orders of valuation. Physical science is helping us to interpret the causal order with more and more definiteness. Such dialectical discussions are those of Bradley, and such attempts to determine the various kinds of objects as those that are made by Meinong, may be expected to throw fresh light on the most fundamental concepts, and thus supply new instruments for the reinterpretation of the whole. But probably our interpretation must always remain, to some extent, tentative.

3. Bearings of metaphysics on other subjects.—It would be a great mistake to suppose that the value of metaphysical speculation is to be measured exclusively by its contributory role in the coherent doctrine of the cosmos. Any one who thinks seriously about the ultimate problems of knowledge and reality is almost bound to make some attempt to think about the universe as a whole; but the discussion of these problems may be treated as an end in itself, and the value of such discussion is to be found largely in the light that it throws on other subjects that are commonly and conveniently regarded as distinct. The debt of the special sciences to metaphysical discussion could not easily be over-estimated. Almost all the special sciences, especially those that are concerned with human affairs, were first established on a firm foundation by Aristotle, who used in their establishment his fundamental conceptions of form and matter, potentiality and actuality, that he presents in general categories and causes. The atomic theory was mainly due to Leucippus and Democritus, working on the foundations that had been laid by the Eleatics. Mathematical physics, and astronomy owed much of its growth to the Ptolemaic systems, to the metaphysical analyses of Descartes, Leibnitz, and Kant. Some of the most important ideas of modern biology were anticipated by the early hypotheses. The foundations of almost every department of knowledge and action can be traced to metaphysical analysis. This tends to be forgotten owing to the fact that, once the general principles have been established, they are incorporated in the body of the special sciences and arts and habits of life, and the work of clearing up the fundamental principles is largely ignored; just as, in our more ordinary life, we are sometimes apt to forget the labours of those by whom the means of living are provided. Hence it may be worth while to make some reference here to the fundamental conceptions that are to be involved in several of the most important subjects.

(a) Psychology.—The fundamental aim of psychology appears to be that of studying the growth of the mind and the laws of its development. More or less continuous philosophic effort, strange to say this in view of some recent attempts to produce a 'psychology without cognition,' which does not appear to differ very markedly from other forms of psychology. But in general the results of any subject, like those of a plant, may often with advantage be kept out of view. We may have 'psychology without a soul,' because we can take the soul for granted; and it is certainly not the business of psychology to consider the soul except as cognizing or cognized. We may even have 'psychology without cognition,' just because it is entirely concerned with that, and consequently need not single out one of the special things with which it has to deal. So we may study wealth without welfare, though apart from welfare wealth would have no meaning. Naturally, in studying psychology, it is the means of apprehension, rather than the fact of apprehension, that chiefly call for attention. But, whether we are considering sense-data or objects of perception or feeling or desire or action, or states of special order, that is, general questions of the primary question for psychology is, What is it that we apprehend? That there are very many modes of apprehension seems clear, but they are all forms of cognition. The recognition of this ought to guard us against any attempt to divide
up our conscious life into separate faculties, though it leaves us free to recognize many distinctions and makes it necessary with physiology the conception of infinity. On this point reference may be made to the art. INFINITY.

(b) Logic.—The fundamental conception of logic appears to be that of implication. It sets itself to consider the conditions under which one bit of knowledge may be taken to imply another. In order to discover this, it is necessary to determine the precise significance of the knowledge from which we start. Hence the importance of definition and of what are termed the ‘laws of thought,’ the aim of which is to ensure fixity of meaning. Originally, if A fluctuated in meaning, its implications could not be determined. Formal logic is concerned simply with the attempt to tie down meanings and to discover what they imply. In many cases, the notion of logic in the chief instrument for the discovery of implications. Hume did much to clear up the general significance of causation by doing away with the obscure conception of efficiency and substituting that of a definite order of sequence. Kant urged that the sequence is essentially logical rather than temporal, and that the general principle of implication—if A, then B—has to be accepted as expressing a necessary order among phenomena. More recent discussions have given still more definiteness to the conception.1 The dialectic of Hegel is another way in which implications can be developed. According to this, every conception implies its opposite. The value of these methods cannot be discussed here; but it seems clear that the general significance of implication is one of those ultimate problems that concern metaphysics.

(c) Mathematics.—The mathematical sciences are closely connected with formal logic. As soon as the general characters of the orders of number and space have appeared, and the nature of their implications requires no extrinsic considerations. The relations contained in these orders are, however, more complex than the relations of a subject and a predicate, or of an individual to a class. But there are many orders from which implications can be directly drawn—e.g., the order of time and that of value. Hence it seems possible to regard mathematics as one of several ways in which the general principle of direct or formal implication can be developed. It may be well to notice one caution that is suggested by metaphysical reflection with regard to the application of mathematics. The conclusions reached by the study of the two orders of number and space are so precise and convincing, and some of them can be so readily applied to spatial and temporal objects, that there is a considerable temptation to regard all of them as being directly applicable to such objects. Such an assumption does not appear to be legitimate. It may be doubted, e.g., whether some of the speculations with regard to possible dimensions of space, in excess of three, have any direct application to existing objects. A similar caution is necessary with regard to the conception of infinity. Hence psychology is best studied genetically; but it is important to guard against the misconception that, in studying the order of growth in our cognition, we are either examining objects or anticipating for them special modes or giving an account of the genesis of the objects that are cognized. The order of the growth of cognition is one thing; other things have order. There are perhaps the chief ways in which the consideration of the fundamental problem of psychology may help to guard us against misconceptions in its study.

(d) The natural sciences.—The natural sciences have nearly entered a new era in the way of metaphysical construction. This is due chiefly to the apparent lack of definite order in what are sometimes called the ‘brute facts’ of the natural world. Newton has not been able to apply the classical dance. For Plato also, and for many others, it has tended to appear as a falling off from the unity and intelligibility that are postulated by the conception of a complete cosmos. The objects of nature seem to differ in kind and no continuity in the ordering of kinds is readily discoverable. This applies to the objects of sense as well as to the objects of perception. There seems to be a gap fixed between colours, sounds, smells, pains, etc., as well as between mechanical systems, chemical combinations, and organic bodies. Hence it has been sought to bridge these gaps by teleological conceptions—i.e., by the view that differences of kind are to be interpreted by reference to the conception of value, as in some way required for the constitution of the ‘best’ objects. It appears, however, that the notion of value is not sufficiently definite to apply in any direct way in the scientific study of natural objects. Apart from this, the chief forms of order that are available are those of time and space, extensive and intensive magnitude, causation, and the general law of continuity in the quantity of what is called energy (a conception that is perhaps still in need of more precise determination). No doubt the doctrine of evolution supplies, to some extent, another principle of order; but it is erroneous to suppose that the earlier stages in this order can be defined, in the way of applying the later. Epigenesis, or, as Bergson has called it, ‘creative evolution,’ has to be, in some form, recognized—i.e., the doctrine that what comes later is distinct in kind from what comes earlier. It does not follow from this, however, that there is not a definite and intelligible order. But there are still fundamental problems in the study of nature for which metaphysics can as yet offer no very trustworthy method of working out. We have at least the suggestion that a solution might be found in the conception of value. Evolution, in particular, is very naturally thought of as a progress, though a somewhat discontinuous one, towards what is intrinsically better.

(e) Aesthetics.—In aesthetic at least the conception of value becomes prominent; and its legitimacy within this sphere, where it is applied very largely to objects that can be perceived or imagined, is hardly open to dispute. It is true that sometimes what is described as beautiful may have little claim to be regarded as more than pleasant, and even pleasant only to certain individuals. In this case the valuation is highly subjective, and may hardly deserve to be described as a definite valuation at all. But in the higher forms of art at least an effort is being made to produce something that has intrinsic value; and in some cases it is difficult to resist the conviction that something that is intrinsically valuable—something that may properly be described as ‘a joy for ever’—has actually been secured. But the science of aesthetics is still largely in the making.

1 Cf., e.g., what is said by Aristotle in Met. xii. 10, where the lack of order in nature is likened to the life of a slave to whom, on account of his servitude, a certain religious conception of the Fall appears to be closely connected with this. See H. E. Chamberlain, The Foundations of the Nineteenth Century, London, 1909, ii, 54.
(f) Ethics.—It is in ethics rather than in aesthetics that the conception of intrinsic value comes definitely into prominence. Ethical writers may differ in their views of what is intrinsically good and bad; whether it is the good will or pleasure or some form of perfection or completeness of self-conscious life—but almost all recognize that in the moral life and the moral act a third thing is involved, a thing that is intrinsically good, and in the end, what is intrinsically best. Yet it is difficult to make the conception of such an ultimate good pervasive; it is a thread of consciousness which is involved in the validity. It must be confessed that we seem to begin with valuations that have little conscious ground. Our primitive likings appear to be based on organic needs; and it is only gradually that we are led to regard them as means to ends that have a truer and more lasting value. We begin with organic impulses, and advance through the pleasant to the beautiful and good. Hence the moral life is still, on the whole, as it was in the time of Socrates, a struggle towards a good that is very imperfectly apprehended, and sometimes even not very consciously pursued. It tends to be guided by custom, convention, primitive law, and generally recognized opinions rather than by any clear apprehension of a good that can be either defined or attained. Yet, in the ethical science, such a conception, and the inverse of it, are sometimes developed to a discussion of a kind that may properly be called metaphysical. The discussion of its attainability seems even to involve a general theory of the cosmos.

Apart from the fundamental conception of intrinsic value, the most important problem that concerns ethics is that of freedom. This is closely connected with the conception of value and also with that of causation. It is difficult whether any definite meaning can be given to moral freedom except that which may be expressed by saying that choice has a real place in the chain of causes; and choice can be interpreted only as a mode of valuation. It is essentially preferential, i.e. the regarding of one thing as essentially more valuable than another. Thus the problems of value and causation are those that chiefly connect ethics with metaphysics.

Ethical valuations have important bearings on economics and politics; but these cannot be considered here. Nor can we attempt to appraise the whole of what is described by Nietzsche as the 'transvaluation of all values' (Ümouerung aller Werte).

(g) Religion.—A chief element in the higher forms of religion consists in a certain intensification of the moral consciousness by its more definite concentration on the conception of intrinsic value—as in such sayings as 'What shall it profit a man, if he shall gain the whole world, and lose his own soul?' Or what shall a man give in exchange for his soul?' (Mk 8:36). This intensification is generally combined with the conviction that the object of ultimate valuation is real and attainable. A conviction of this kind is sometimes based on a definite metaphysical doctrine. At other times it is based rather on some form of intuition or of revelation, or on the authority of some great teacher, or stated by the force of moral principle itself.

The founders of religions and their most influential prophets have generally connected their teaching with some doctrines of a more or less explicit metaphysical character. Buddhism, which is perhaps the most purely ethical form of religion that has ever had an extensive influence, seems to be rather intimately connected with those Indian forms of philosophy that have their origin in the Upaniṣads. It conceives of what has ultimate value as the realization of the higher self, to be achieved by the control of the lower, and especially by the suppression of the lower forms of desire—a process which is supposed to be, in general, attainable only through a cycle of rebirths.

The doctrine of the Platonic and the Pythagorean, largely religious, had a somewhat similar character; and the influence of Plato, so far as it can be described as religious, tends, on the whole, in the same direction, to realize some thing that is intrinsically good, and in the end, what is intrinsically definite. Christianity was perhaps in its origin less definitely metaphysical; but it has been to a large extent interpreted, in the course of its historical development, by means of Platonic and more or less kindred conceptions, and in some of its more recent phases is hardly distinguishable from the more esoteric forms of Buddhism. The relations have been thus expressed by Holmes:

Plato reasoned about God. Buddha kept silence about him. Christ made him the theme of his poetry. ... As a speculative thinker he does not compete with Buddha. But as a source of spiritual life, 'there is no rival.' (Creed of Buddha, p. 200.)

The gospel of love is the most inspiring, because it implies, when its meaning is fully developed, that everything has value—a more thorough optimism than anything that is involved in the Platonic Good or the Buddhist Nirvana (whatever the exact interpretation of that may be). It is sometimes urged that metaphysical and religious views of the moral ideal, by representing the attainment of the moral ideal as involved in the nature of things, have a certain tendency to weaken the moral motive, by making it appear that individual effort is unnecessary. No doubt some metaphysical systems have claimed to define the good and evil; and the same may be said of some forms of religion. But, on the whole, none of the deeper forms either of metaphysical construction or of religious insight has represented the ideal as attainable in any other way than through the individual choice of what is best.

LITERATURE.—The literature of the subject is so vast that only a selection can be made. A. E. Taylor, Elements of Metaphysics, London, 1903, gives a good general survey. F. H. Bradley, Appearance and Reality, do. 1908, supplies the most remarkable and recent attempts at metaphysico-construction. L. J. Walker, Theories of Knowledge, do. 1910, should be consulted. On the special subject of error, the essay by G. F. Stout in Personal Idealism, do. 1905, is very valuable; and it should be supplemented by reference to B. A. W. Russell, Philosophical Essays, do. 1910, and F. H. Bradley, Essays on Truth and Reality, Oxford, 1914. A. Meinong's views about Gegenstandstheorie may be found in his Abhandlungen zur Gegenstandstheorie und Psychologische, Leipzig, 1904, and his Gesammelte Abhandlungen, do. 1913. His important book Über Annahmen, do. 1910, throws much light on these matters. On the various attempts at metaphysical construction the histories of philosophy must be referred. Of more recent date, on the History of Ethical Theories and Works of the Greek Philosophers, Glasgow, 1914, and R. Adamson, The Development of Modern Philosophy, Edinburgh, 1913, should be specially consulted. On the various kinds of the metaphysics of evolution, S. Schur, Les grâdas filosofes, Paris, 1913, and A. J. B. Chester, Essays in Logic and the Philosophy of Religion, London, 1912, contain much interesting, though perhaps some of his statements are too conjectural and lack evidence. A. Drews, Platon, Jena, 1913, is a valuable book on a philosopher who is too little known. G. F. Stout, Analytical Psychology, London, 1900, indicates the most fundamental problems in that subject. On formal logic J. N. Keynes, Studies and Exercises in Formal Logic, do. 1908, and F. C. S. Schiller, Formal Logic, do. 1912, may be consulted. On the foundations of mathematics, B. Croce, What is a Science? translates his famous book by the title of What is a Science? translated into English, London, 1919, gives perhaps the most searching examination of the Hegelian method. B. A. W. Russell, Principles of Mathematics, Cambridge, 1903, should certainly be consulted. The Principia Mathematica, London, 1913, by the same writer, together with A. N. Whitehead, may be referred to as showing the way in which the fundamental foundations of mathematics have been worked out. J. Ward, Naturalism and Agnosticism, do. 1913, discusses the foundations of mathematics. J. H. V. E. Ostwald, Vorlesungen über NaturpH. Leipzig, 1905,
may also be especially referred to. B. Cross, *Aesthetica as Science of Supplementary Sense Perception* and *The Terms of Ethical* (Eng. tr., Oxford, 1909), is particularly the most instructive of recent works on the subject. His treatment of the theory of ethics is the most defensible of the art. Evans (by J. H. Muirhead). The conceptions of value and freedom are well discussed by C. E. Moore, in his *Ethics*, Oxford, 1903. The philosophical significance of the conception of value is brought out with great wealth of illustration by Brough, *The Term* (ibid.), 1912, and *The Value and Destiny of the Individual* (Gifford Lectures, 1912), 1913. A. Meimong, *Psychologisch-ethische Universaltat*, Berlin, 1896; and C. Ehrenfel's, *System der Wettbewerbslehre*, Leipzig, 1897-98, are also important. Descartes's ideas of empiricism and rationalism are shown the metaphysical foundations of religion. Perhaps E. Caird, *The World and the Individual*, London and New York, 1900-01, is of especial interest, and J. Ward, *The Range of Ends*, Cambridge, 1911, are the most noteworthy, in addition to those already mentioned. H. Hollding's emphasis on 'the conservation of values' as the fundamental aspect of religion in his *Philosophy of Religion*, London, 1906, has also a very special interest; and so has the characteristic of 'the free man's worship' in B. Russell's *Philosophical Essays*. The general views expressed in this art. are further developed in the art. Erasistracy and Empi- rism, in the writer's articles in Mind, new ser., xxii. (1913), 'A Sketch of a Philosophy of Order', and xxiii. (1914), 'The Meaning of Reality', and *A Manual of Ethics*, London, 1915, esp. bk. ii. ch. vi. Reference may also be made to art. Existence and Epoch and Truth.

**METHOD** (Logical).—Besides the ideals proper to the concept, the judgment, and inference, there are certain secondary ideals for thought in general. The logical ideals are no way comparable with that in which, according to the etics of Butler, the 'adaptations of human nature to virtue' supplement the 'eternal fitnesses of being and thought and being' (Clair). The secondary ideals should be stated with definite reference to the order and process of thinking, whereas the primary ideals are descriptions of truth in general.

A wide licence has been taken by logical writers in articulating method, methodology, and applied logic; and it is here proposed tentatively to name as secondary ideals systematization, reform, and development. The term 'systematization' must be such as to approach reality in the subtility of its constituents and the complexity of their interconnexion; to reconstitute concepts, judgments, and inferences, in correspondence with it; and to realize the mutual support that these give to each other, as dealing with the same cosmic.

Method emerged from an outward analytic and dialectic of Aristotelian origin, and won a place in modern logical theory, chiefly through the use of the topic made by Descartes in introducing his reformation of philosophy, and through the canonic of empirical science introduced by Bacon; and Kant's subsequent definition of it was in fair accordance with the Cartesian tradition:

> Just as the doctrine of elements in logic has for its aim the conception of the diversity of knowledge, so is the object . . . so, general methodology, as the second part of logic, ought to treat, in contrast with it, the form of science in general, or the way to evolve science from a diversity of knowledge' (Logik, § 90).

An even more explicit reference to the course of our thinking is desirable, because only in some relation to ordered sequence can the ideals of concept, judgment, and inference become a personal discipline, and give not a mere consciousness of 'validity' or of judgment of our natural 'sense of method' (cf. J. Brough, *The Study of Mental Science*, London, 1903, p. 5ff.). The sense of method is an estimate of the extent to which the several faculties proper to a conviction have actually played their part.

1. Systematization. The progressive impulse of thinking is to make a double approach to reality, by analysis and by synthesis. The impulse has been recognized in various logical contexts; in Aristotle's distinction between reality or essence and problems of fact or of existence; in Descartes's rule of method to divide the difficulties of an investigation, and his rule to conduct our thoughts in the order of simple to complex; in Newton's requirement that natural philosophy should proceed from compounds to ingredients, from motions to forces, and, in general, from effects to causes, before explaining phenomena by causes as principles. The impulse follows, as it were, an indefinably receding horizon. There is neither simplicity nor complexity that is final, whether in the world of possible perceptions or in the extensions which scientific imagination may make into the imperceptible.

> *Scientists have tried to find it* (the 'simple fact') *in the two extremes, in the incredibly great and in the infinitely small*. *The astronomer in distances so great as to reduce a star to a point, the physicist in the atom, the biologist in the cell* (H. Feinseck, *Science and Method*, Eng. tr., London, 1914, p. 19).

Even simplicities so laboured as these are provisional, if only because the structure of systematic science based on them is provisional.

> *In the . . . advance of science an uninterrupted, but progressive series of mental constructions . . . gives us an approximate idea of the inter connexion of the homogeneous material of the actual world* (H. Lobe, *Mcgnaudn*, Eng. tr., London, 1885, bk. ii. ch. iv. § 4 (l. 26)).

The perception of the 'issues' of thinking will lead to the actualization of the primary ideals of concept, judgment, and inference, but does not in itself commit our whole nature, as they do, to expectation, submission, and reaction. Its most immediate end is reform within the informational content.

2. Reform.—Analysis and synthesis provide for structural revision and reconstitution of such informational contents as have previously been available for actualizing the primary ideals.

> *Only inasmuch as we are set free from the accidental associations of ideas formed through single perceptions, by a happy variety of observations and a steady attention to their distinctions and resemblances do we gradually become cognizant of the more general and essential connections,* and our conception of things ever more and more adequately *shows the necessary pre-suppositions of the understanding* ('to hold good in the heterogeneous materials of the actual world' (H. Lobe, *Mcgnaudn*, Eng. tr., London, 1885, bk. ii. ch. iv. § 4 (l. 26)).

The perceptions of the 'issues' are 'already permeated with the results of sifting critical energy of mind,' but the spirit of reform, more expressly than that of systematization, claims to pass by any warnings from ancient realism as to the sanctity of universals and equally by those of our modern pure logic as to identities, necessities, and systematic coherencies. Its claim is among the inevitable paradoxes of permanence and change.

(a) Individualisation.—Even the unity of the individual, of 'that which is neither said of any subject nor contained in any subject' (Aristotle), 'the "I" without anything added' (Oecum), 'the point in the tissue of reality where it accepts the predicate' (Bosanquet), may be newly isolated and identified. This unity is more directly imposed in perception and is more firmly sustained by social reference and consent than the conceptual, yet there still continues scientific controversy on the more optional identities, such as independent organs or organisms in botanical or zoological classification; and even as to whether units are possible at all within the flow of psychic life, or whether a distinction of persons should be made when consciousness has become pathologically discontinuous.

(b) Classification.—The special store of concepts embodied in the language of a people or in technical
terminology may be seen in course of reform, as needs and circumstances without methodological analysis_meth.
METHODISM.—1. HISTORY AND POLITY.—In this article we shall confine ourselves to a description of the leading features of the Methodism which is connected with the name of John Wesley. The Methodism within the Church of England which resulted in the rise of the British Methodism is not within our province (see EVANGELICALISM).

1. The rise of Methodism.—According to Wesley, the first rise of Methodism was in Oxford, in November 1729; the second, in Savannah, Georgia, in April 1733; and the third, in London, on 1st May 1738. We pass over the Methodism that found expression in the 'Holy Club' at Oxford, and in the 'Society' formed by Wesley in Savannah, and strike the path which leads to the origin of Methodism as an existing organization. The date, 1st May 1738, is significant. Wesley had returned to England, having learned many bitter lessons in Georgia. By his contact with the Moravians he had been enlightened and disheartened concerning his religious experience. He had learned that, although he had 'followed after the law of righteousness,' he had not attained to it. His disappointment at discovering that he had been pursuing a wrong path was intense. The Moravians explained his failure by showing him that he had not sought righteousness 'by faith, but as it were by works.' This left the unanswerable question, What is the faith that leads to salvation? Waiting in London for a solution of the problem that baffled him, he assisted in forming one of the Religious Societies so numerous at the time. His instinct for ‘fellowship’ was one of the dominant forces of his life, and explains much that happened in his career. The Empress's Society which he joined met in the house of James Hutton. It owed much of its character to the advice of Peter Bohler, a Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on cultivating a deeper religious life were divided into smaller companies called 'bands.' The Society grew, and its meeting-place was changed to a room in Fetter Lane. At first the Society, like the other Religious Societies, was in connexion with the Church of England; but ultimately it was dominated by Moravian influences, and this connexion was broken.

2. Wesley's spiritual crisis.—Methodism, as it now exists, can be understood only by realizing the facts concerning the progress of Wesley's religious experience. By much conversation, by close study of the NT, by prayer 'without ceasing,' he advanced from an intellectual understanding of the meaning of 'saving faith' to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of 'salvation by faith' in many of the London churches. He taught it as it stands in the Hymnals; but it was resisted by clergymen and their congregations, and the churches were closed against him. In this way a policy of exclusion from the churches was commenced, which, after a time, profoundly affected Wesley's relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a 'burden' which was to him 'intolerable' — the burden of unpardonable sin. That load was lifted on 24th May 1738, in a 'room' in Aldersgate Street, the meeting-place of one of the Religious Societies.

'If I felt I did trust in Christ, Christ alone for salvation; and an assurance given me, then I took that load and laid it at my own, even mine, and saved me from the law of sin and death'(Journal, l. 470).

In that decisive hour he entered into an experience, new so far as he was concerned, but an old experience notable among Christians, especially among many Churchmen and Dissenters. It is an extraordinary fact, however, that it had become unintelligible to the mass of English Christians. Wesley's 'conversion' filled him with the utmost joy of the evangelist. He would gladly have borne his testimony in the churches, but he was compelled to wait until a wider sphere opened before him.

3. Beginning of field-preaching.—In April 1739 Wesley found his opportunity, and his evangelistic work. George Whitefield, a member of the Oxford 'Holy Club,' had entered into the experience of 'conscious salvation' before Wesley, and had made a deep impression in Bristol by the preaching of the 'new doctrines.' Being excluded from the churches, he went into the open air, and addressed great crowds of people in Bristol and at Kingwood. Having to leave England for America, he wrote to Wesley asking him to take his place; Wesley consented, and on 2nd April 1739 he commenced his famous campaign of 'field-preaching.' In addition to preaching in Bristol and to the Kingwood colliees, he got into close touch with the Religious Societies in the city. His genius for administrative reform found scope in them. He divided them into 'bands.' The Societies in Bristol and at Kingwood were so increased that it became necessary to build a 'room' for their accommodation. A site was secured near the Horsefair, and the 'room' was opened on 3rd June 1739. Afterwards Wesley went to London to assist in composing disputes which had arisen in the Fetter Lane Society. He again met Whitefield, who, being detained in England, had spent his time in London, where they met in Moorfields, on Kennington Common, and elsewhere. Wesley joined him in his field-preaching. On 11th November 1739 he held a service amid the ruins of the King's Foundery of cannon, a building near Moorfields, which had been shattered by an explosion. Wesley acquired the site and built a 'room' upon it, which became famous in Methodist history. Some who indulge in regrets concerning the separation of the Methodists from the Church of England point to the building of these 'Rooms' as 'the parting of the ways'; Methodists maintain that it was the closing of the local churches that had represented the new movement within the established Church. By that time Wesley was still a member of the Fetter Lane Religious Society, Wesley formed a Society of a different type at the Foundery. It was started, probably, in the latter end of the year 1739, and is looked upon as the Mother Society of Methodism. In July 1740 Wesley was practically excluded from the Fetter Lane Society. Those who left with him joined the Society at the Foundery. By that time the Societies, under the special direction of John and Charles Wesley, existed in London, Bristol, and Kingwood. In 1742 Newcastle-upon-Tyne was visited by Charles Wesley, who formed a Society there on the new pattern. These Societies are called by John Wesley, in the 'Rules' which he drew up for them and published in 1743, 'The United Societies,' and they were the nucleus of the Methodist Church. In the 'Rules' a Society is described as 'a company of men, having the form and seeking the power of godliness; united in order to pray together, to receive the word of exhortation, and to watch over one another in love, that they may help each other to work out their salvation.' In these new organizations the 'band' system was a prominent feature; but, in addition, the Societies were divided into 'rooms,' each containing about 12 persons who were placed under the care of a 'leader,' not only for their
own spiritual edification, but also that Wesley might be assisted in his pastoral supervision. At first the leaders visited the members at their houses; but, that method proving inconvenient, the members were expected to meet their leader at some fixed place, week by week. The 'Rules' mentioned above are still, with slight alterations, the 'rules' preached with. His 'particulars rules,' passed in after years, being contained in the disciplinary 'codes' of the different Methodist churches. In the classes contributions, usually a penny a week, were made for the poor. At a later date these contributions were given for the support of the ministry, a special poor-fund being raised from other sources. Stewards were appointed to manage matters of finance, and the leaders met the ministers and stewards of each Society once a week to pay in the moneys that they had received, and to give information concerning any member who was sick or might need special pastoral attention. Out of these arrangements the Leaders' Meeting arose, which became an integral part of the Methodist organization. The oversight of his Societies weighed heavily on Wesley's mind. He was satisfied with the order of his business; he was not content to gather together a miscellaneous crowd of people of whom he knew nothing. He supplemented the work of the leaders by visiting the members himself in their homes, and met them out of the classes for conversation on their religious experience. If satisfied, he gave them tickets in recognition of the fact that they were members of the Methodist Society.

7. Institution of the Lay-Clergy. — Those who have studied the constitution of the Religious Societies will note the allinies and divergences between them and the United Societies. One line of divergence was opened by divergences which Wesley deeply regretted. The Religious Societies were in close connexion with the Church of England, and many of their members were frequently ministers at the churches. Wesley would have gladly preserved this connexion and practice; but such a course was made impracticable by the conduct of the clergy. In some places they arranged among themselves to repel the Methodists from the Lord's Table. In Bristol, on 27th July 1740, Charles Wesley and a company of Kingswood Methodists were sent away from the sacrament in Temple Church. Charles Wesley, accordingly, sent resolutions to the Methodists in the school at Kingswood which had been built for the training of the colliers' children. In Newcastle-upon-Tyne a similar crisis arose. It is significant that in Newcastle the difficulty was aggravated by the fact that three of the dissenting ministers of the town agreed to exclude from the communion all who would not refrain from hearing the Methodists. The effect of these exclusions, and of Charles Wesley's action, was speedily seen. The Methodists were diverted into a path which gradually but decisively diverged from the Church of England.

6. Enlisting of lay-preachers. — Another line of divergence from the practices of the Religious Societies must also be noted. John Wesley's conversion made him an evangelist. He longed to proclaim the gospel not only to select companies but to the world. His heart responded to the counsel of Lady Huntingdon: 'Attempt nothing less than all mankind' ('Journal', ii. 48, 53). He received this advice and he followed it, if a man in his circumstances? His work taxed all his strength. Charles Wesley helped him, especially in the opening years of his mission, and a friendly clergyman gave him occasional assistance, but his task was a double task of the pastoral care of his Societies and the evangelization of the country was too great for a single man. But the way opened. He had great skill in discovering and using the lay-preachers. He was particularly fond of the men that worked with him, and he found himself at the head of an order of lay-preachers who shared with him the hardships and the successes of his work. In 1738 and 1739 laymen had been called upon to preach in local churches. Each brother preacher is usually considered to date from 1740. The importance of this step cannot be exaggerated. The lay-preachers were divided into 'itinerants,' 'half-itinerants,' and 'local preachers.' They first abandoned their business and gave themselves entirely to the wandering life of the evangelist, under Wesley's personal supervision. For that work, at the beginning, they got no pay; later on a small sum was given them; but many years elapsed before they were rescued from the pinch of poverty. Assisted by them, Wesley went out 'to reform the nation, particularly the Church, and to spread Scriptural holiness over the land' ('Minutes of Conference', i. 446). Wesley's work as an evangelist, an educationalist, a philanthropist, a social reformer, and a pioneer in the nether world, was a national providence and the salvation of the nation must be passed over here. Some idea of the toils of himself, his preachers, and those who were associated with them in his Societies may be gathered from the fact that, when he died, in 1791, 36,028 preachers were engaged in the Methodist Societies in Great Britain and Ireland, in other parts of the British Dominions, and in the United States of America.

The Conference in Wesley's day was more than...
a consultative assembly. It took complete over-
sight of preachers and people. It kept an eye on
the moral character and doctrinal beliefs of the
preachers, and stationed them in their Circuits.
We shall accentuate only one part of its functions.
In 1765 Wesley ordered for the settlement of
chapels then called 'Preaching Houses,' published
first in 1763, a clause appears which con-
stitutes Wesley's Notes upon the New Testament
and his other treatises as the standard by
which trustees were to judge the orthodoxy of
the preachers appointed by the Conference.
We may also add that the rights of trustees were
strengthened by the clause in Wesley's Dead Poll
which provided that, with the exception of clergy
of the Church of England, the Conference might
not appoint a preacher to the same chapel for more
than three years successively.

8. Provision for the sacraments.—One other
point remains to be considered at this stage.
The question of the administration of the sacraments
to the Societies had to be settled. The bulk of
the Methodists would not go to the parish
churches for the sacrament of the Lord's Supper,
and provision for its administration in their own
chapels was urgently desired. In November 1778
Wesley issued a letter specifying the London.
In that chapel the sacraments were admin-
istered as they had been in some of the other
Methodist chapels in London and the country.
Wesley was pressed to extend similar privileges
to the rest of his Societies. He said, however,
that, if he yielded, he would have to qualify and
appoint some of his lay-preachers to administer
the sacraments; and, in his opinion, such appoint-
ment necessitated ordination. Time and circum-
stances led him to a solution of the problem. In
1799 be had sent two of his lay-preachers to New
York to direct the work which had been begun
there by certain Methodist local preachers. The
work in America proved very successful, but the
War of Independence gave it a new complexion.
The Anglican clergy were scattered, and many of
the Methodists had been without the sacraments
for years. The Americans would have solved the
difficulty by ordaining a sufficient number of their
lay-preachers, but Francis Asbury, who had been
sent out as a preacher from England by Wesley,
did not ordain them. Nor did Wesley insist that
the conference should be consulted. Wesley had satisfied
himself that he, as a presbyter, had the power to
ordain other presbyters; but he hesitated to do so.
He thought the Church of England was not so
theologically advanced, and, after much thought, he appointed Dr. Thomas
Coke, a clergyman who acted with him, and Francis
Asbury as 'superintendents' in N. America, and
two other preachers as 'elders.' With the ex-
ception of Asbury, who was in America, these
preachers were set apart by Wesley, assisted by
other presbyters of the Church of England, by the
imposition of hands. In this way the American
difficulty was met, and the Methodist Episcopal
Churches, which now number their membership
by millions, entered on their remarkable career.
Wesley afterwards ordained preachers for Scot-
tand and for Foreign Mission stations. At last
he took a still more decisive step in this direc-
tion. In 1788 he ordained Alexander Mather
'deacon,' 'elder,' and 'superintendent,' and in 1789
he ordained Henry Moore and Thomas Rankin
'preachers,' empowering them to administer the
sacraments in England. He exhorted them to
maintain as close an association as possible with
the Established Church; but, when that associa-
tion was no longer practicable, they were by
order of the Conference to confer on other preachers the 'orders'
which they had received (see Proc. Wesleyan Hist.

9. Influence of Charles Wesley.—John Wesley
is justly considered as the founder of the Methodist
Church, and we have, in the main, dwelt on his
actions in describing the origin and development
of the United Societies. It would be unjus-
tifiable, however, to omit noticing the services
of his brother, Charles Wesley. During the
early days of the 'Revival' he was a daring and
successful evangelist, facing the violence of mobs
and rivaling his brother in the activities of the
wandering preacher's life. Later he settled down
in Bristol, and then in London, and his itinerant
work was restricted. But his influence as a hymn-
writer was strong, and it is still felt not only
in Methodism but throughout the Protestant
Churches. He died on 29th March 1788.

10. Events following Wesley's death.—John
Wesley died on 2nd March 1791. His death pro-
duced a dangerous crisis. Many thought that
the time had come when the Methodist Societies would
fall in pieces. Their stability had been secured,
in great part, by his firm and reasonable auto-
cracy. Was that autocracy to be exercised by a
successor? The answer was in the negative.
Then how was the supervision to be maintained
which he had exercised over preachers and people
who were forming the basis of the local church,
and the relations of the Conference? The Conference gave
the answer by dividing the kingdom into Districts,
each containing a small number of Societies, the
preachers in which, being formed into committees,
were answerable to the Conference for the main-
tenance of Methodist discipline. The functions
of these Committees were enlarged from time to
time, and chairmen, appointed by the Conference,
were placed over them. This arrangement has
been greatly developed in modern times. The
Committees have grown into District Synods,
which exercise great influence in the administration
of Methodism.

After Wesley's death the demand for the sacra-
ments became urgent. The party most favourable
to the Church of England was first in the field
and issued manifestos against the ordination by
the preachers. These provoked replies, and a
controversy on the subject was continued until
1785, when an arrangement was made between
the Conference and the representatives of the
Church. It was agreed that the Conference should
ordain the clergy in the 'Plan of Pacification,' led to the administra-
tion of the sacraments in all Methodist chapels.
As to ordination, it was decided that the reception
of a preacher was the right of the Conference.'The
Conference' should carry with it the right of ad-
ministration without ordination by imposition of
hands. In the case of Foreign Missionaries an
exception was made, and they were ordained as
the time of Wesley. In 1836 the Conference
determined that all its ministers should be ordained
by the imposition of hands.

11. The Plan of Pacification.—Another subject of
cardinal importance pressed for settlement. The
question had to be answered, Who shall possess
the predominant ruling power of Methodism? The
country, at the time of Wesley's death, was agi-
tated by the discussions which had accompanied
the American War of Independence and the French
Revolution. The doctrine of 'the sovereignty of
the people' fascinated many minds, and led to a
strong wish on the part of some to interpret
Methodism a democratic form of government. But
the most serious contest was between the claims of
the Conference and of the trustees of chapels. That
contest was settled, for the time being, by the
Plan of Pacification, and certain regulations
that were passed at the Leeds Conference of 1797.
In these documents we find the fundamental prin-
ciples which still govern the Mother Church of
Methodism. The pastoral power of the preachers was safeguarded by a limited giving to the Leaders' Meeting additional rights, as representing the Societies, while matters of finance were placed more completely under the control of the Circuit Quarterly Meetings in which laymen predominated. Thus, in 1795 and 1796, it was instituted that remarkable 'balance of power' which is a peculiarity of the system of Methodism. The settlement was almost universally approved. Only a minority of the whole 100,000, about 5000, persons who were desirous of a democratic form of government united themselves into a Society under the leadership of William Thom and Alexander Kilham, and became the Methodist New Connexion.

12. Connexional system of Wesleyan Methodism.—Speaking of Methodism in the present time, we may say that the Wesleyan Methodist Church, the mother church of the Methodists, has pursued its course along the lines laid down by John Wesley. The Connexional system is intact. The Circuits consist of the several Societies within their boundaries, the Districts are composed of the Circuits in their areas, and 'the Connexion' is the aggregate of all the Societies, Circuits, and Districts in those countries in which Methodism is established in association with the Conference. The Conference consists of the Denomination as a whole by the unifying power of the Conference. Every attempt to introduce the principle of 'Circuit independence' has been successfully resisted. It is impossible here to describe minutely the organization of the Wesleyan Methodism. It is the result not only of the work of Wesley, but of the continuance of his work, done in his spirit, for more than a hundred years since his death. We may briefly note some of the acts of the Conference since the Deed Poll was signed in 1784. The specific naming of the 100 preachers who composed the Conference produced excitement and ill-feeling, especially among preachers who were not nominated in the Deed. In 1791 the Conference, in accordance with Wesley's request conveyed in a letter, resolved that all preachers who were 'in full connection' should enjoy every privilege that the members of the Conference enjoyed. That resolution almost completely allayed the ill-feeling that had been excited.

13. The action and the constitution of the Conference.—The action of the Conference in 1786, however, is of still greater interest. Although no alteration can be made in the composition of the Conference created by Wesley's Deed Poll, save by process of civil law, it has been found possible to associate laymen, as well as ministers, with the 'Hundred.' The Conference, which assembles annually towards the end of July, now meets in two Sessions. Its representative Session is held first, and consists of 300 ministers and 300 laymen. The resolutions they pass are made valid by the confirming vote of the 'Legal Conference.' Some of the lay-representatives are chosen by the ministers and laymen present at the preceding Conference; but the greater number are elected by the separate vote of the laymen in the representative Sessions of the District Synods held in May. Those Sessions have been much enlarged, not only by the inclusion of many laymen who are members of District sub-Committees, but also by the addition of the representatives of the Circuit Quarterly Meetings, which, in their turn, have been greatly enlarged through alterations made in the composition of the Leaders' Meetings. The most striking of the alterations in the Leaders' Meetings was the addition of 100 persons elected by the Society Meeting in each place to represent the members of the Society. The votes for the laymen and the duly qualified women chosen to attend the Conference represent a wide constituency, and a permanent element in the Representative Session of the Conference consisting, for instance, of members of the Hundred, there is also a permanent lay element. It is composed of the lay-treasurers of certain funds, along with 48 laymen elected by the votes of ministers and laymen present at the Conference. One-third of this number retire annually, and are not eligible for immediate re-election. In addition to it there will be nearly 60 members of the Hundred will be present, a quorum of 40 being necessary for the transaction of business, according to the Deed Poll. To these are added several ministerial officials, such as chairmen of Districts who are not members of the Hundred, 8 representatives of foreign missionaries, and others. The rest of the 300 ministers are chosen by the votes of the ministers in the Pastoral Session of each Synod in Great Britain, the number of ministerial and lay-representatives being governed by the principle of proportion of members of Society in the several Districts. The Representative Session of the Conference deals with all questions in which the expenditure of money is involved, and reviews the work done by the committees of ministers and laymen that have managed the affairs of the Connexion during the year. New legislation may also be proposed on subjects within the province of the Session, but such new legislation is not confirmed until it has been submitted to the Representative Sessions of the Districts for consideration and report.

At the close of the Representative Session the Pastoral Session is held. This consists of the 'Legal Hundred,' the ministers who are members of the Representative Session that year, and other ministers who have received the permission of their Synods to attend. When the scheme of lay-representation was adopted, it was agreed that all questions of doctrine, discipline, and the stationing of ministers should be reserved to the Pastoral Session, as also the management of the Book Room, the great publishing department of Methodism. The Pastoral Session exercises strict discipline over the ministers of the Connexion, and also considers all appeals in cases of discipline affecting members. The Circuit Quarterly Meetings have a right to memorialize the Conference, in both its sessions, on Connexional subjects, and to propose alterations in Methodist rules and regulations. When 'provisional legislation' is passed by the Conference in its Pastoral Session, that legislation has to be submitted for the consideration of the ministers of the Districts when assembled in the Pastoral Session of the Synods.

14. Home and Foreign Missions.—The work of Methodism has always been deemed of greater importance than its machinery. The wide-spread character of that work may be judged from the Minutes of Conference annually published. The work of the Home and the Foreign Missionary departments is worthy of special consideration. In recent years the evangelistic campaign has been quickened by the erection of large Mission Halls in many of the principal towns of England. The example of renewed evangelistic enterprise in Wesleyan Methodism has made a deep impression on the Churches of Great Britain and other countries. The Foreign Missionary work of Methodism dates from 1799. The work gradually increased. In 1785 appointments in the United States, Nova Scotia, Newfoundland, and Antigua appear in the Minutes of Session. In 1799 the Conference, Coke was the leading spirit of Methodist Foreign Missionary enterprise until his death in 1813. In that year the work became
more completely organized, and the present Wesleyan Methodist Missionary Society was formed.

In estimating the importance of the work done by that Society, it must be remembered that its operations are carried on in a field that is only a fragment of the area once occupied. Independent and affiliated Conferences formed in the United States, Canada, France, S. Africa, and Australia have taken over almost all the work which was begun by the British Conference in the several countries mentioned.

15. Statistics of world Methodism.—It is only at the decennial meetings of the Ecumenical Conference, when representatives of the Methodist Churches in both hemispheres meet, that an idea of the wide spread of influence of Methodism can be gained. Those Conferences were instituted in 1881, the latest being held in Toronto in 1911. The carefully compiled statistics presented to that Conference speak for themselves.

It was estimated that the members and adherents of the Methodist Churches, in 1910, numbered, in the Eastern Section, 6,704,471, and, in the Western Section, 25,934,076, making a total of 32,729,547.

The statistical tables show that there are many separate Methodist Churches in the world. It must, however, be understood that the divisions that have occurred have not been caused by doctrinal differences; in almost all cases they have arisen from varying opinions concerning ecclesiastical constitution and administration. In the Western Section the ‘colour question’ has had an influence on the number of churches.

There is one Church, bearing the Methodist name, which is not represented in the Ecumenical Conference—the Welsh Calvinistic Methodist Church. Its history and organization should be studied in Williams’s valuable book (Welsh Calvinistic Methodism). The Church is closely connected in origin with Whitefield’s work in Wales. The doctrinal difference, indicated in its title, suggests a reason for its unique position among Methodist Churches.

16. Methodist Episcopcal Churches.—The success
of Methodism in the United States of America has been remarkable. We have mentioned some facts concerning its origin in 1769, and the action of Wesley in ordaining Coke as a Superintendent, and two other preachers as presbyters, in 1784. When Coke arrived in America, he ordained Francis Asbury as a Superintendent. Asbury's work and influence have left a deep mark on Methodism in the United States. Like Wesley, he was a man of high spiritual tone. He rivalled Wesley in evangelistic enterprise, and gathered around him men who possessed the courage and devotion of the pioneer preacher. The War of Independence had made the whole country the sphere of the most enterprising Evangelism. In settled towns, in clusters of huts, in lonely backwoods, the Methodist preacher became a familiar figure, as he preached and formed and visited his little Societies. The growth of the churches in the immense areas in which the pioneers worked necessitated the helpful supervision not only of the Superintendents but also of 'Presiding Elders,' who rode hither and thither, constantly giving inspiration and guidance to the scattered evangelists and churches. For a considerable time the work was carried on in close connection with the British Conference, and on lines similar to those followed in England. A Conference was held in the States in 1773, at which time there were 6 Circuitits, 10 preachers, and 160 members. From these small beginnings American Methodism has advanced to its present position.

The Methodist Episcopal Church and the Methodist Episcopal Church (South) occupy the chief positions among the Methodist Churches of the United States. Three separate bodies, they were separated in 1844, in consequence of discussions which involved the question of slavery. We may refer to some of the constitutional arrangements of the Methodist Episcopal Church. The members of the Church are divided into local Societies, one or more of which constitute a 'pastoral charge.' A quarterly conference is organized in each 'pastoral charge.' The travelling preachers throughout the States are members of their several Annual Conferences, the sessions of which they are obliged to attend. In addition to the ministerial Annual Conferences, a General Conference is held every four years composed of delegates from all the Annual Conferences in the States. It consists of pastors and lay-delegates, the admission of the latter into the General Conference dating from 1872. The ministers are elected by the conferences, each of which is entitled to one delegate at least. The General Conference fixes the ratio of representation and the manner of election. Every four years a Lay Electoral Conference is constituted within the bounds of each Annual Conference for the purpose of voting on constitutional changes to be submitted to the General Conference, which is the supreme legislative assembly. The Lay Electoral Conference is composed of lay-members, one from each pastoral charge, chosen by the lay-members of each charge over twenty-one years of age, in such manner as the General Conference has determined. Each Lay Electoral Conference is entitled to elect as many lay-delegates to the General Conference as there are ministerial delegates from the Annual Conference. In the General Conference the 'General Superintendents,' as the bishops are called in the Discipline of the Methodist Episcopal Church, preside in such order as they determine; but, if no General Superintendents are present, the General Conference is presided over by any of its other members to preside pro tempore. The presence of two-thirds of the whole number of delegates constitutes a quorum for the transaction of business. The General Conference elects by ballot as many General Superintendents as it may deem necessary from among the 'Travelling Elders,' as the former Presiding Elders are now called. The Conference has full power to make rules and regulations for the Church, under the limitations and restrictions laid down in the Discipline. The principal restrictions are that it cannot revoke, alter, or change the Articles of Religion, which were prepared by John Wesley, and which are still approved by the Methodists. In addition, it cannot change or alter any part or rule of government so as to do away with episcopacy or destroy the plan of General Superintendency. It is also unable to revoke or change the 'General Rules' of the Church. These 'Rules' are, with slight variations, the 'Rules of the Society of the People called Methodists,' as drawn up by John Wesley in 1743. As to the procedure of the General Conference, the Discipline shows that, in voting, the ministers and laymen vote together; but it is provided that a separate vote 'by orders' may be taken on any question which has taken place in the order of delegates present and voting. In all cases of separate voting the concurrence of the two orders is required for the adoption of the proposed measure or any amendment to the constitution, a vote of two-thirds of the General Conference is required. Such, in bare outline, is a sketch of some of the outstanding features of the organization of the Methodist Episcopal Church, as established by a study of the book of Doctrines and Discipline (1912). In J. H. Rigg's Comparative View of Church Organizations there is a chapter on American Episcopal Methodism which contains important information enabling the student to compare the constitution of the Mother Church of Great Britain with that of the Methodist Churches in the United States. For many years the wishes of fraternal delegates, representing the Conferences of Great Britain and Ireland and America, have served to strengthen the bond of union between the Methodists of the two continents. An American Methodist holds a conspicuous position among the Churches devoted to the work of Foreign Missions.

17. Early secessions.—We have mentioned the first important Methodist secession in England, taking place out of the Annual Conference which is now part of the United Methodist Church, it is not necessary to describe its original constitution. In 1810 a small Society, numbering 10 members, was formed by Hugh Bourne in Darwen, and in 1823 he founded a similar Society in Staffordshire, and became the germ of the Primitive Methodist Church. In 1815 a Society, consisting of 22 persons, was formed by William O'Bryan in Devonshire out of which arose the Bible Christian Church. The reasons for the institution of these two Societies were similar. In the former case Hugh Bourne and William Clowes, two earnest evangelists, were disregarded by the restrictions of the Connexion and formed a Church of their own. They sought and found a sphere in which they could have a larger freedom. They made no attempt to agitate the Church from which they were separated. They gathered their members out of the neglected classes, and displayed in their work much of the spirit of ancient Methodism. The same may be said of William O'Bryan, the founder of the Bible Christian Church. The constitution bears, in several points, a strong re-
seemance to that of the Wesleyan Methodist Church, but there is a marked difference in the composition of the Conference. H. B. Kendall, in *Principles of Primitive Methodist Church Principles and Polity* (London, 1913), says: 'The Primitive Methodist Polity provides that members shall be formed into Districts, Circuits, and Districts, that Societies shall have their Leaders' Meetings, and Circuits their Committee and Quarterly Meetings' (p. 63).

Next, it is to be composed of other persons not exceeding 4, whose appointment is to be made by a by-law of the Conference. These may be ministers or laymen, official or unofficial members. Lastly, the Conference is also composed of delegates, who have been elected thereto by their District Meetings, one-third of whom must be travelling preachers and two-thirds laymen, and no layman is to be appointed who is not a local preacher, or a class leader, or a Circuit stewards. After long consideration and much discussion it was decided by the Conference of 1876 that the number of the Conference and highest court should be determined by the number of members in the district, 3000 being made the unit for one minister and two laymen (p. 61 f.). It has been held that the Methodist polity is a 'modified Presbyterianism,' one evidence of the fact being that the Churches are jointly governed by ministers and lay-officials, and that all ministers are in theory equal, the Superintendent differing from his colleagues only in function and responsibility (p. 62). Up to the present the Primitive Methodists have not shown any strong desire for corporate union with other Methodist Churches, their Foreign Missionary work is confined to Africa.

19. United Methodist Church.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from various controversies concerning questions of government and administration. The first was occasioned by the introduction of an organ into one of the chapels in Leeds. In its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of candidates for the ministry roused strong opposition. The controversy was quickly silenced and nearly forgotten, and the controversy turned into an attack on the constitution of the Wesleyan Methodist Church. The agitation was elaborately organized and vigorously conducted in all parts of the country, and brought about the secession of several thousands of members, who formed themselves into the Wesleyan Association. The Association held its first Annual Assembly in Manchester in 1836. The Leeds reformers of 1827 joined the new Church.

The largest of all the secessions from the Wesleyan Methodist Church took place in 1849. Its cause was the Conference's decision to hold the Conference in dealing with certain anonymous publications in which the personal character of ministers holding high official responsibility was attacked. The controversy soon involved the question of the constitution and, especially, of the power of the Conference. It is difficult to state the number of persons lost to the Wesleyan Methodist Church through this agitation. The decision of the Conference was paralysed for several years. When the strife subsided, it was found that the number of members in the Wesleyan Methodist Church was nearly 100,000 less than when the agitation began. The 'Reformers' of 1849–52 formed themselves into a distinct community, which, by union with the Methodist Association, became the United Methodist Free Churches.

In 1907 an Act was passed by Parliament authorizing the union of the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches, under the name of 'The United Methodist Church.' The constitution of the Church shows the usual indications of compromise; but it retains the strong marks of original Methodism. The Conference, which is composed of members and laymen, is held once a year. It includes the President and Secretary, the President-designate, 12 ministers and 12 laymen, who form, in a sense, a permanent nucleus, the Connexional officers, the representatives of District Meetings, and such representatives of Connexional Funds and Institutions as the last preceding Conference has determined. The whole number of the Conference, exclusive of the Guardian Representatives and Connexional officers, is about 500. The Conference appoints a General Connexional Committee which exercises a general oversight over the affairs of the United Methodist Church during the interval between Conferences. The authority of the Church Meeting, the Leaders' Meeting, and the Circuit Quarterly Meeting is, of course, to a considerable extent, independent. The United Methodist Church has certain rights which it can exercise in cases calling for its interference. The constitution of the United Methodist Church may be studied in the *General Rules*, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missionary work is being done by this Church in China, Africa, Central America, and the W. Indies.

20. Smaller Methodist Churches.—The Wesleyan Reform Union consists of those Churches and Circuits which held aloof from the amalgamation producing the United Methodist Free Churches. In 1839 a constitution was formed which is fully described in a pamphlet published by the Wesleyan Reform Union Conference, the latest edition being issued in 1896.

In 1896 several small Churches formed a union which held its first Annual Meeting in Manchester. The distinctive characteristics of the churches so united are an unpaid ministry, conjoined with the free church-life of the Quakers and the doctrines of the Independents. The second methods of organization and membership which resulted from this union are known as the Independent Methodists (Wigan), 1910, p. 3. In 1898 this union assumed the name of the Independent Methodist Church. Its churches are situated chiefly in Lancashire, Yorkshire, and the northern counties, with some outlying churches in Nottinghamshire and Leicestershire, and a few besides in Bristol and the south-west. The Independent Methodists excel in Sunday School work. Although sharply divided by constitutional distinctions, the Methodists of England have so much in common, especially in their practical work, that they are being drawn nearer together. The Ecumenical and other Conferences have done much to promote the spirit of fraternity among them. In Canada and other countries the Methodist Churches have united, and Methodist reunion in England is often sympathetically discussed.

Literature.—I. Pollett, W. T. —Minutes of the Yearly Conference of the People called Methodists, published annually, 1744–1914; Reports of Preparative, Quarterly, and District Conferences, 1851, 1891, 1901, 1911; Rules of the Society, etc., with Statements of Discipline. London, 1913; Minutes of Conference, 1913: C. Wansbrough, *Handbook and Index to the Minutes of the Conference*, London, 1890; *The Last Annual Conference of the Methodist Society, 1891*; *The Book of Public Prayers and Services for the Use of the People called Methodists*, do. 1903; *Doctrine and Discipline of the Methodist
II. DOCTRINE.—Let us look into the soul animating the body which has been described. Methodism was the offshoot of the Evangelical Revival that took place in England during the 18th cent.; its doctrine was molded under the religious conditions of that age.

1. Methodism and deism.—A rationalistic deism then largely prevailed amongst educated men—a system of thought which feit itself God off from behind the laws of nature and bounded human knowledge by the limits of sense-perception and logical reason. The Deity was treated as an absentee from His world; man and all his generations became godless in practice as in thought. The Revival swept down these artificial barriers. God was realized in living contact with His children. The sense of sin and the abhorrence of sin, and consequently the idea of personal guilt, came to be regarded as inherent in human nature. Accordingly, the 'life of God in the souls of men' was Wesley's definition of religion; 'the work of God' was the habitual Methodist designation for the Revival; 'a new birth' and 'a new and instantaneous act of human nature was discerned. Hence the emphasis laid in the teaching of the Wesleys on 'the witness of the Spirit' (Ro 8). The doctrine of assurance—the personal certainty of the forgiveness of sins and of restored sonship toward God—was the outstanding feature of original Methodism. To most Churchmen of the time professions of this kind appeared a strange 'enthusiasm.' (see G. Lavington, The Enthusiasm of Methodists and Papists considered, London, 1833) that a man might know his sins forgiven was deemed a dangerous presumption. Along with the Fatherhood of God, the Deity of the atoning Saviour and of the witnessing and sanctifying Spirit came to be freely recognized; an arrest was made of the Socinianism which had been the middle of the 18th cent., was rife amongst both Anglicans and Dissenters.

2. Methodism and Calvinism.—The Methodist forces were soon divided on the question of predestination. Predestinarianism, like deism, magnifies the transcendence of God at the expense of His immanence, reducing finite will to an illusion and making man, even in his acceptance of divine grace, the passive creature instead of the consenting child of God. The Puritan theology, in its prevailing strain, was intensely Calvinistic; and to it Whitefield, with the Welsh Methodist leaders and the Evangelical clergy generally, adhered while the Wesleys espoused Arminian views upon election and grace, in this respect inheriting the High Anglican tradition, but the spring of their universalism lay in its sphere of mercy to mankind rests within their own hands and interpreted in the broad light of the NT; they sang:

'The boundless grace that found out me'

Psalms 118:19, 1871: F. W. Robertson, RibbonIMPORTANT:

They could not preach that God 'willeth all men to be saved' under the reservation that He has dooned some of His mere pleasure, to perdition; as Christ's ambassadors, they cried, without any misgiving, 'Ye all may come, whoever wilt! The
Wesleyan teaching lifted a cloud from the character of God, it brought salvation to thousands who had deemed themselves predestined reprobates. Wesley vehemently contended against another tenet of Calvinism, maintained by contemporary Evangelicals, that the doctrine of sin in the redeemed. The current orthodoxy limited the salvation of Christ in the degree of its attainability as well as in the persons by whom it is actually attained. In justification, in the conviction that the man who is ‘in Christ’ may become even on earth a thoroughly ‘new creature,’ that it is possible to be actually ‘cleansed from all sin’ through ‘the blood of Jesus’ (1 Jn 1)—‘fired’ (as he was spoken from the last commandment of sin’); on the strength of God’s promises and the warrant of experience, he taught his people to seek and expect the power to keep continually the Two Commandments of Jesus and so to become altogether holy and happy. To this effect he used to quote the Communion Prayer, ‘that we may perfectly love thee, and worthily magnify thy holy Name,’ insisting that this is to ask from God no boon beyond His giving. From the moment of conversion the Methodist was set at war with ‘inbred sin,’ inspired by the prospect of its extinction. The Class Meeting, with its final annual examination, was a school of holiness. The ‘glorious hope of perfect love’ proved an abiding spring of spiritual ardour and a powerful spur to moral endeavour. Sometimes the extravagancies and self-delusions of unbalanced minds discredited the doctrine of Perfect Love; to such abuse all earnest religious teaching is liable. But the sight of the goal of faith given to Methodism quickened and sustained the race for multitudes. The end of the Wesleyan Revival is due to the spiritual breadth and sanity of its programme. In this sense Wesley defined the object of Methodism as being ‘to spread Scriptural Holiness throughout the world.’ The thought of Charles Wesley are the best exposition of Methodism in the fundamental respects which we have stated; they served as its keenest weapon in the arduous conflict which it waged with Calvinism. Along with the hymns, the doctrine which inspired them has seasoned the whole Methodist Church.

3. Methodism and Moravianism.—Methodism owes a peculiar debt to the Moravian Brethren; their Church was one of the first to undertake the imitation of the New Testament. Moravians and Wesleyans were, in some respects, united in the cause of Säkularisation. But there came here also a parting of the ways. Leading members of the Unitas Fratrum in England, and others of Wesley’s early associates, were infected with the mystical tendency to despise the external duties of religion. Regarding the Inner light and the Holy Spirit’s witness as the sum of Christianity, men of this persuasion treated fellowship and Church order as superfluities; some of them verged in theory, if not in practice, upon Antinomianism. Among the latter the maxim was current, which Wesley denounces as an enthusiastic doctrine of devils, that ‘we are not to do good unless our hearts are free to it’—in other words, that we should leave disagreeable duties undone (this was a temporary, but widely operative, aberration in Moravianism). In this outbreak Wesley took the pen of the Revival; he raised a barrier against it in the ‘Rules of Society’ (dated 1st May 1743), which bear strongly upon private and social duty, and by the mutual oversight secured through the Class Meeting. Thus the experimental in religion was what Paul stood for, and Wesley agreed, ‘inward holiness found in outward holiness its complement and safeguard. Methodism recognized that, while salvation is ‘through faith’ alone, a true faith ‘works by love’; it enforced the teaching of St. James side by side with that of St. Paul, and found the two entirely consistent. Their home-training and Anglican schooling stood the Wesleyans in good stead at this crisis.

4. Methodism and the Church of England.—John and Charles Wesley were sons and ministers of the Church of England, and taught (as they supposed) her true doctrine. John Wesley quoted the Articles and Homilies in vindication of his most oppugned tenets. For the guidance of his people he revised the Thirty-nine Articles, reducing their number by omission and abbreviation to 25 (so printed in the Wesleyan Methodist Service Book); the changes are in many instances significant. There disappear, with others, artt. viii. (‘Of the Three Creeds’), xiii. (‘Of Works before Justification’), xv. (‘Of Christ alone without Sin’), xvii. (‘Of Indulgence and Election’), xx., and xxii. (‘Of the Authority of the Church’), and (‘Of the Authority of General Councils’), xxxiii. (‘Of Ministering in the Congregation’), and xxxiv. (‘Of Excommunicating Persons’). The title of each, xvi. becomes ‘Sin after Justification’ instead of ‘Sin after Baptism,’ and ‘Ministers’ is substituted for ‘Priests’ in xxxiii.; ‘Traditions’ is paraphrased by ‘Rites and Ceremonies’ in xxxiv.; the substance of the art. being preserved, without not infrequent vagueness in detail. ‘The Civil Magistrates’ (xxxvii.) Wesley turns into ‘the Rulers of the British Dominions,’ adding ‘his Parliament’ to ‘the King’s Majesty,’ merging ‘Ecclesiastical and Civil’ in ‘all Estates,’ and concluding with the first paragraph of the art.; he ignores the Royal Supremacy over the Church. The art. on ‘the Sacraments’ and ‘the Lord’s Supper’ are reproduced almost verbatim; but the ‘Baptism of young Children’ is retained. Art. ix., ‘Of Original or Birth-Sin,’ is also cut down materially; the Wesleyan teaching on Sækulisation appeared to conflict with the assurance that ‘this infection of nature doth remain, yea in them that are regenerated.’ The reference to ‘flesh’ and ‘bones’ is dropped from the art. ‘Of the Resurrection of Christ.’ The general effect of the book is to replace the formalism of the Church with the Evangelical character of the formulary, to set aside the principle of State-establishment, and to eliminate Calvinism.

5. Doctrinal standards.—Neither the Articles of Religion nor any other Anglican document or dogmatic creed was laid down by Wesley as the ground of Christian fellowship. The revised Articles of Religion were, however, from the first incorporated, with certain necessary local adaptations, in the constitution of the Methodist Episcopal Church of America (see Doctrine and Discipline, etc., of this Church, pp. 21–26). There is only one condition previously required, ‘the Rules state, ‘in those who desire to enter these [the Methodist] Societies, viz., a desire to flee from the wrath to come, to be saved from their sins.’ This ‘narrow gate’ leads into the true way; the earnest seeker of salvation at the foot of Christ and the gospel as the sick man his remedy; a deep repentance affords the best guarantee for orthodoxy. To his preachers, however, Wesley prescribed his Notes on the NT and the first four volumes of Sermons (ed. 1787–88, containing 45 Discourses) for the basis of a common understanding. These standards are introduced into the Model Creed regulating the trusts upon which Wesleyan Methodist church-funds are secured and the ordination vows of the ministers. Every Local Preacher also declares his assent to ‘the general doctrine’ contained in the above writings as being
MEXICANS (Ancient)

‘in accordance with the holy Scriptures.’ While they present, from conversion or dogmatic selection, the Ateotls and Serenities of the J.A. Mexico, they retain its first sense of the full evangelical creed in solution; they are a working standard framed for a preaching ministry, and have proved a sufficient regulative canon for a Church that retains its first sense and to some extent is concerned above all things to preserve the life-conveying spirit of these authoritative documents.

A Conference Resolution of 1897 forbade the tenure of offices. The Societies to any person who will not adopt these opinions contrary to the total depravity of human nature, the Divinity and Atonement of Christ, the influence and witness of the Holy Spirit, and Christian Holiness, as believed by the Methodist.

6. Four salient points. —The characteristic features of Methodist teaching may be summed up as follows.

(1) Universal redemption. —Wesley and his preachers professed in the name of Jesus Christ ‘a free, full, and present salvation ’ to every sinner —a salvation based on the Sacre of the Cross, bestowed on condition of ‘repentance toward God and faith toward our Lord Jesus Christ,’ and certifi- 

(2) Entire sanctification. —Methodism holds the gospel to be as large in its extension as in its inten-

(3) The fellowship of believers. —Methodism stands for Christian brotherhood. It honours the ministry and cherishes the two sacraments; but, in its view, the proof of Church-membership lies essentially not in observance of sacraments, nor in obedience to priests, nor in subscription to creeds, but in the fulfilling on the part of Christ’s brethren of His law of love by their seeking one another’s company and bearing one another’s burdens.

(4) Ordered Christian service. —This is the love of God which keeps His commandments: the Wes- 

LITERATURE. —John Wesley, Works, 14 vols., London, 1829-40. (Letters important for doctrine are Sermons, Doctrine of Original Sin, Preaching the Gospel, and Ecclesiastics, Pt. I., and the United Methodist Church; the undistinguished names are Wesleyan Methodist.

The Spanish, the Aztecs, the Toltecs, and the Mixtec, were the peoples who lived in Mexico before the Spanish Conquest. The Maya, who lived in the Yucatan Peninsula, were a people of great culture, and left behind many impressive architectural works. The Aztecs were a powerful empire that controlled much of central Mexico, including Mexico City. The Mixtec were a people of the south, who built the city of Monte Alban.

The Maya were a people who built many of the great cities of Mesoamerica, including Palenque and Tulum. They were skilled astronomers and had a complex system of writing.

The Aztecs were a people who built the city of Tenochtitlan, which became Mexico City. They were skilled farmers and had a complex system of agriculture.

The Mixtec were a people who built the city of Monte Alban. They were skilled farmers and had a complex system of agriculture.

The Maya were a people who built many of the great cities of Mesoamerica, including Palenque and Tulum. They were skilled astronomers and had a complex system of writing.

GEORGE G. FINDLAY.
by the name of Yaqui, which seems to be but another name of the Toltecs, who were commonly designated by the Mexican name Tonatiuh, meaning 'the sun, or the face of Yaqui, those who went to the rising sun.' For all these tribes, undoubtedly, a long succession of ages of cultural development must be taken into account, since their civilization, at the time of the Conquest, might have been in many respects, that of the ancient nations of the other side of the globe. Their religion had reached a correspondingly advanced stage of development, and, as such, was elaborate, while their pantheon was unusually rich.

1. Religious ideas. — As with all the other nations of the world, the religious faith and the metaphysical ideas of the Mexicans had in part developed from attempts to grasp the connexion between the things of this world according to the principle of causality; in part they were the outcome of religious practices, and the crystallization of magic ceremonies, intended to produce certain effects by way of imitation. The great problems that presented themselves to the human mind because of the movement of the sun, the changes in the agricultural seasons, and the varying weather of the two great stars—the morning star—have been treated by the Mexicans in a great number of mythical tales and mythical personifications.

The sun, as the widely worshipped Mexican god, of whom the largest number of names and myths were reported, Quetzalcoatl, the 'feathered snake,' the creator of men, the wind-god of the later priestly school, was, in fact, nothing else than the mythological personification of the moon, who in her decrease travels to the east, i.e., draws every day nearer to the sun, and finally dies away in the rays of the rising sun. It was believed that, when dying, this god, or his heart, was transformed into the morning star. The counterpart of this deity, Tzetzalipoca, the young warrior, who was regarded as the watching eye, the god who sees and punishes all kinds of sin, and the sorcerer who roams about in the night, is, in reality, the new, morning moon who makes her appearance in the evening sky, and will travel on in the night, as the star of the night. On the other hand, deities like Centeotl, the 'maize-god,' have developed from certain religious practices—e.g., the placing of maize-stalks or young maize-ears in the houses, in order to get rich crops. Kipe Totec, the 'flourishing sun,' the face of a sacrificed man, who has probably originated from well-known ceremonies celebrated in the beginning of the year in the time of sowing, in order to bring about the rebirth of vegetation. The two classes of deified beings met in the great idea that the celestial powers, the sun, the moon, and the god of thunder and lightning, were at the same time the promoters of the growth and ripening of the fruit, and in the conviction that the new-born god (the rising sun) and the increasing agency (the waxing moon) were the causes of all birth and growth and of all that maintains and keeps up human life, and that they were the sources of human life itself.

The spirits of the dead are to be added to these two classes—the ancestors, the founders of the tribe who had died in ancient times, and who had lived when the sun had not yet made its appearance in the sky. These deified ancestors were believed to awaken and to live in the night and, consequently, were identified with the stars. Xintecatl, the god of fire, who had likewise existed in the 'time of darkness and night,' before the birth of the sun, and was, accordingly, named Uentecatl, the 'old god,' became in some way the prototype of the early ancestral gods.

2. Origin of the world. —The Mexicans believed that heaven, earth, and the sun had not been created at once, but that four ages of a somewhat imperfect creation were pre-coenomic to the present world. The first of these pre-coenomic creations was named Ocolotonatiuh, 'jaguar-sun.' This was the sun of darkness, or sun of the earth, for the jaguar was considered to be the animal that swallowed the sun at the time of the creation of the world, as the earth was the realm of darkness, the jaguar was identified with the earth. This first period came to an end by darkness, when the jaguars were eating men. The second period was called Ecotonatiuh, 'wind-sun.' This period came to an end by great revolving storms, and men were transformed into apes. The third period had the name Quinatlonatiuh, 'rain-sun,' meaning 'fire-rain.' In this period fire rained from the sky, volcanic ashes and lapilli were strewn over the earth, and reddish lava-cliffs arose. Men were transformed into birds. The fourth period was called Atonatiuh, 'water-sun.' In this period a great deluge took place, men were transformed into fishes, and the sky fell down upon the earth. The fallen sky was raised by the joint action of the gods Quetzalcoatl and Tzetzalipoca, and the earth was then in the condition of the 'great star.'—As with the present world, this period was also to be brought to an end by earthquakes. One year after this creation, in the year one acatl, 'two reed,' the god Mixcoatl, 'cloud-snake,' the god of the North—or Tzetzalipoca in the form of Mixcoatl—drew fire out of the wooden sticks, kindled fire by means of the fire-drill. Then men were created, and war was begun, in order that there might be human hearts at hand for nourishing the sun. The first who was killed in war, i.e., was captured in war and offered on the sacrificial stone, was Xochiquetzal, the goddess of the moon, for it is the moon who rules every month in conjunction with the sun, and by her death gives life and strength to the rising sun.

Men being created, and war being commenced, there was opportunity for the creation of the sun. At the end of the first half of the first Mexican cycle of 52 years, in the year thirteen reed, the sun was created.

The gods assembled in Tonatiuh, the ancient city of the sun, and took counsel, asking each other who should take the charge of lighting the fire. The god of the eagle, the god of Teotihuacan, the moon-god. Again the gods asked which other deity would take charge of lighting the fire. When all were satisfied, the gods requested Nanaman, the 'bisonian,' the instinctive god, to undertake it, and he consented. The gods kindled a great fire in the footstep, the 'divine stove,' and Tzetzalipoca tried first to throw himself into the fire, but he was afraid and drew back. Then Nichtli, that his eye might be refreshed, danced at once into the fire, and after him Tzetzalipoca did the same. This took place at midnight. Then the gods conjectured in what direction the sun was to rise. It was in the east, where the sun rose at day-break, followed by the moon. The chronicles relate that originally the moon possessed the same splendor as the sun, but the gods struck her in the face with a rabbit, so that her splendor was darkened, and now the figure of the rabbit is seen on the face of the moon. After having risen, the sun and the moon stood still for four days and four nights, whereupon the gods resolved to sacrifice themselves in order to give life to the sun. After the gods had killed themselves, the sun commenced to move, and ever since has made his regular courses, alternating with the moon.

3. Origin of men. —When heaven and earth were created, the gods took counsel and asked where to get beings to dwell on the earth. Then Xolotl, the dog who jumps down from the sky—the god who caused the setting sun to go down—went to the kingdom of the dead to fetch a bone of the dead. When he had given his message to Metlatlcantecatl, the king of the dead, he took back the bone which was lying at the bottom of the well. He gave the bone to the king of the dead, who gave it to the hunter, who gave it to the hunter, who gave it to the hunter, etc., until Xolotl met the hunter. The king of the dead gave the bone to him, but ordered his vessel to follow him and to dig a pit in his way. There the god stumbled and fell, the bone behind him, fell to the ground, and was broken in pieces. The god was much grieved, but he picked up the bone, put it in the mouth of a crocodile, and brought them to Tamoanchan, a region situated far to the west.
MEXICANS (Ancient)

There the goddess Ciscaocatl or Quetzaliztl ground down the fragments on the grinding-stone, and put the pulverized material into the chalchihuitlicue, the lord held out of a precious stone, and set with gems. On this pulverized material Quetzalcoatl sprinkled blood drawn by piercing his penis with a knife. In this way men were generated, and food was found for them in the same region of the west. It was the maize, whose place the red ant showed to the god.

4. Heaven, earth and under-world, and the abode of the dead.—The Mexicans were of opinion that from the earth (tlaltlicpac) upwards there were thirteen regions or heavenly spheres (tlalocati), and from the earth downwards there were nine regions or under-worlds (mictlan). The second, third, and fourth of the heavenly spheres were the regions where the moon and the clouds, the stars and the sun moved, while the uppermost or thirteenth region was the abode of Quetzalcoatl, Omecluatli, or Tonacatecutli, Tonacaucnati, the gods of generation. The second of the under-world regions was the Chiennahapan, the ‘nine streams,’ the water that encircled the realm of the dead and was in a way identified with the ocean of the western region. The third under-world region was the tepoztl iomanasquia, the gateway by which the dead entered the under-world region. The undermost region was the abode of Mielantlantecuhtli and Mictlanecuhtli, the lords of the dead. To this under-world region there went, however, only the men and the women who had died in their homes from natural causes, and the women who had borne children. Men who were drowned, struck by lightning, or carried away by malignant fever or contagious diseases were believed to be taken by Tlaloc, the rain-god. Their corpses were not burned, but buried, blue colour—the colour of water and rain—having been put on their foreheads. They went to Tlalocan, the home of the rain-god, situated on a plateau mountain in the eastern region, a paradise of vegetation, in order to serve them there. Men killed in war or sacrificed on the sacrificial stone and women who had died in childbed belonged to a third region, and went to heaven, to the house of the sun. The warriors went to the east, to receive the rising sun and to accompany him up to the zenith. The women had their dwelling in the west, in the region of the setting sun. In the morning they climbed up to the zenith, where, at noon, they received the sun from the hands of the warriors, and accompanied him on his downward course. At sunset they delivered the sun to the dwellers in the west world. In the night the sun, illuminating the whole world, and the dead awake and live.

5. Principal deities.—A detailed study of Mexican mythology and the character of the Mexican gods leads to the conclusion that the forefathers of the Mexicans worshipped the sun, the moon, the morning star, the heath-fire, the maize-god, and the other deities of vegetation, the god who pours down the beneficial rain, and a host of ninimia and spirits who were believed to dwell in particular places, as mountains, caves, water-holes, etc. In the course of time those cosmic potencies assumed various different shapes in the mythopoetic imagination of the people, coalescing in part with a deified ancestor, or being merged in certain regional festivals, thus giving rise to certain well-defined deities in the differences, while the regions, tribes, towns, and villages were acknowledged as the altepoyolotli, the ‘heart (or living principle) of the town.’

The Tlaltecuhtli, the war-god, the particular protector of the citizens of Mexico (Tenechitlan), must originally have been the rising sun, or the morning star. His mother conceived him from a feather-bell coming down from the sky. Her other children, the Centzon Uitzaba, the ‘four hundred Southern’ (the stars), and their elder sister Coyolxauhqui (the moon), seeing their mother pregnant, wished to kill her, but just at this moment Itzilopochtli was born. Armed with shield and spear, holding his mother in his hand, he killed his elder sister Coyolxauhqui, and drove the ‘four hundred Southern’ from the ‘Snake-mountain’ (the sky). The other war-god Camaxtli, or Mixeactli, the god of the Tlaecatl, the ‘feathered serpent,’ was probably a mythic conception of the morning star. Tlaloc was the rain- and thunder-god and the god of the mountains. He had his residence on the top of a mountain in the east, where he owned four chambers and four barretes, from which his servants, dwarf-gods, bailed out the water and poured it down on the earth. Stone images of this deity are to be found all over the country. Tezcatlipoca was the god of the Tezcoecs and of the tribes dwelling on the slopes of the volcano. He was the sorcerer who roamed about in the night, the god who sees and punishes sin, and the patron of the tezcohcuhtli, the club-house of the young warriors; and certainly developed from the conception of the new, waxing moon. Xiuhtecuhtli, the ‘lord of the turquoise,’ or Ixcoacuhtli, the god with the turquoise colur, was the tutelary deity of the citizens of Tlatelolco and their brethren on the western mountain slope, the Tepeanas of Tamaulco and Coyoyuzcan. Tonantin, the sun, and Metztli, or Teciecacuhtli, the moon, being in another part of the heavens, were not in the region of the gods. The gods of the north, of the region north of the valley of Mexico, and two great pyramids dedicated to them are still to be seen in that place. The moon alone was the principal deity of the inhabitants of Totonacan and the province of Mixtitan, on the borders of the Huaxteca. Quetzalcoatl, the ‘feathered snake,’ the creator of human life, the wind-god, was another conception of the wind-god. He was the great god of the merchants of Cholula and all the Mexican commercial colonists, down to the provinces of Guatemala and San Salvador. Xipe Totec, ‘our lord, the flayed,’ the god of the sewing-time, the god of vegetation, was generally worshipped in the whole country; but it seems that the Nahatl tribes on the borders of the State of Oaxaca, the inhabitants of Tehuacan, Coacatan, and Tecuitlan del Camino were particularly addicted to his cult. He is also called god of the goldsmiths, because the goldsmiths, located in the town-quarter, or clan Yopico, regarded him as their town-god. He is a god of rain and of the sky, and his image on the green maize, the god of food, had his worshippers all along the Atlantic slope. He was believed to be incorporated in the Quetzalecoautli, the wild fowl that chants in the morning. He had a brother called Macuilxochitl, ‘Five flowers,’ or Anioteotl, ‘the god of voluptuousness,’ who was the deity of pleasure, of music, dancing, gaming, and debauchery. One toochtli, ‘two rabbits,’ the palque-god, the Mexican Bacchus, was the town-god of Tepoztlán, in the State of Morelos.

Female deities were Coastliene, the mother of Utzilozohiti, worshipped in Mexico City; Ciscaocatl, the female warrior, the goddess of Colhuacan; Itzpepalticatl and Quetzaliztl, the earth-goddess and the fire-goddess of the towns and as their town-gods, the ‘mother of the gods,’ or Toi, ‘our grandmother,’ also called Tlazoiloteotl, ‘the goddess of ordeals,’ or Tlacluani, ‘miito-ester’ (i.e. sinner); she was generally worshipped as a harvest-goddess; Xochiquetzi, the goddess of flowers and of love, had her worshippers throughout the country, and a magnificent pyramid dedicated to her is still to be seen in Xochimilco, south of Cuernavaca. All these goddesses were once moon-goddesses, but developed into goddesses of...
fertility and generation, into earth-goddesses and patroneses of women's art. Chichihuitlicue, the 'goddess whose garments are precious stones,' was the impersonation of running water, brooks, and lakes; Uxtochtliat of the salt water, and accordingly the patroness of the salt-makers. Centeotl, the maize-god, was represented either as a female or as a male deity, and as particularly related to the gods of generation, the authors of life.

6. Religious practices.—The Mexicans were penetrated by feelings of absolute obedience on their gods. They regarded them as the givers of all things and as those who inflicted punishments upon them, and they were convinced that most of their punishments were brought down on them by their sins. In order to obtain the favour of their gods or to appease their wrath, they used to address them with prayers, to present offerings to them, to humble themselves in their presence, and to torture themselves in their honour. In the work compiled by Bernardo de Sahagun, the original of which was written in Aztec, he has preserved many prayers directed to several gods, distributed through his book, and has composed a wonderfully refined and poetic language, while another chapter of the same work contains twenty ancient and very curious songs, which they used to sing in the course of the harvest festival ceremonies (text, Ger. tr., and commentary in E. Seler, Gesammelte Abhandlungen zur amerikan. Sprach- und Altertumskunde, Berlin, 1902-03, ii. 859-1107).

The offerings which the Mexicans were accustomed to bring to their gods consisted of food and garments, flowers and green twigs (acoyollotl) to adorn their altars, copal, rubber, and different kinds of aromatic herbs to burn, and piles of wood to heap up and kindle on the top of their temple-pyramids. They humiliated themselves in the presence of their gods by eating earth (tlaltlayacatzli), i.e. by touching the earth with the finger and putting it to the mouth. When they requested something from their gods, and before every festival dedicated to them, they fasted, eating only once in the day, avoided red pepper sauce and every kind of spices, abstained from sexual intercourse, and did not wash their heads. When the request which they had made to be a very earnest one, they tortured themselves by piercing their tongues, or by passing sticks or threads through the hole made in the tongue, and offering the blood issuing from their wounds, collecting it on agave leaves. If they had committed a sin such as intercourse with the wife of another man, and wished to atone for it, they went to the priests of the goddess Tlaloc, and made confession, and the priests, after having heard the confession, imposed some penance—e.g., to go naked in the night to some shrines of the 'women-goddesses' (cuitlatetel), there to deposit garments made of the common bark-paper. By performing this penance they were believed not only to have got rid of the sin committed, but also of the punishment for it enjoined by the law. A Mexican religious practice that excited the curiosity and even the amazement of the Christian priests was the so-called 'eating of the god' (tezozunamiento). At a certain festival a number of devotees assembled, and, after having made an image of the god from the paste obtained by grinding certain seeds, the high priest sacrificed the image and cut it into pieces. The assembly then seized these pieces, and those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

Finally, the Mexicans felt compelled to bring living beings as an offering to their gods. They sacrificed to the fire-god by casting into the fire all kinds of animals that could be found in the fields, and they also offered human prisoners in the same way. The warriors who had captured their enemies, cut them, their limbs tied together, and hanging on a pole, like captured game, for the fire-god was the god of war and of the chase. The Mexicans killed quails by decapitating them, and offered to the sun and other deities such as Uitzilopochtli, for the quail was the spotted bird, the image of the starry sky. They fastened prisoners with extended arms and legs to a wooden frame, and shot them with arrows. This was a sacrifice for the earth-goddess, and was intended to fertilize the earth. There is no doubt that it was originally meant as an imitation of the sexual act. They decapitated a woman as an image of the 'mother of the gods'—the moon-goddess, the harvest-god—and flayed her, for the old moon, the waiting moon, is cut into pieces, and her splendor is stripped off. Yet she would revive, and therefore the flayed skin of the victim was donned by a man who, in the following ceremonies of the feast, represented the goddess.

The Mexican practice of putting up a temple to represent the offering of human hearts, torn out of the bodies of living men. They used for that purpose a sacrificial stone of a rounded pyramidal shape. The victim was thrown between the different anniversaries of festivals (text, Ger. tr., and commentary in E. Seler, Gesammelte Abhandlungen zur amerikan. Sprach- und Altertumskunde, Berlin, 1902-03, ii. 859-1107).

7. Annual festivities.—The Mexicans divided the year into eighteen sections of twenty days each and five remaining days. On each of these twenty sections they had a feast with many elaborate ceremonies, dedicated successively to various special deities, all having the aim of appeasing and appeasing and appeasing the deities of the yearly plantings and the exigencies of the different sections of the year with regard to the culture of the soil, sowing, and harvesting, and with the changing aspects that in the different years those important affairs presented to the anxious eye of the labourer. They commenced with the ceremonies early in the year—in the time of our February. At that time, in the houses and on sacred spots—mountains, caves, water-holes, and localities considered as the abodes of the rain-gods—they set up poles to which papers painted with the emblems of the numina of these localities were attached; and they carried children, who were bought from their parents, to the same localities and sacrificed them to the rain-gods, in order that these divinities might grant rain in sufficient quantity for the crops of the new year.

In the second twentieth they celebrated a great feast to Xipe Tote, the god of vegetation, a form of the ancient moon-god. This was just before sowing, and it seemed to those ancient philosophers to be necessary to fertilize the earth, that she might not receive the germinating pieces, for those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

They took a prisoner of war, the most gallant whom they had at hand, and with him performed a ceremony that was in a way a testing. He was fastened by a rope to the central hole of a
stone of the cylindrical shape, these so-called temascalotli (spinning wheel of stone). There he had to light with four other men until the wood was burned, after which they bound him, with extended arms and legs (metamortalique), to a wooden frame, with which they tied him. In the end he could neither wind the arrows, so that the arrowhead might drop on the earth and fertilize it. This was the original form of the ceremony, as it is seen in the pictures, and as it was performed in certain ancient towns up to the time of the conquest.

In Mexico City, however, when the prisoner was exhausted and nearly dead, the husband himself, as before, was invested in the regular way, by cutting the breast and tearing out the heart; and many prisoners were sacrificed in the same way after him. The bodies of the dead were burned, and the ashes were collected by certain men who represented the god in the following ceremonies, to ascend with the prisoner to the earth-hood on a new cloud. From this custom the second annual feast was called Toxcatl, 'sweeping,' "sweeping the earth." This feast concluded with a great ceremonial dance, where priests disguised as maize-ears, maize-stalks, and other vegetables, or as beings connected with the fire, dispensed the abundance of food which the new year was expected to bring.

In the third and fourth twentieths, called Tecoxtli, 'awakening,' the temples and shrines were adorned with green stalks, and the gods destined for sowing were brought to the temple of the maize-goddess to be consecrated. The fifth feast, called Toxcatl, fell at the time when the sun, shifting to the north, came to the zenith. This was regarded as the real feast of the new year, and the present writer has shown, in his explanation of the Humboldt Codices, that the days of the month which the Mexicans designated to the different years correspond to the days with which the feast Toxcatl began. In this feast a living image of the god Tezcatlipoca, i.e., a prisoner who had died in the disarray of the troops, was represented, all the year round, was sacrificed, and immediately replaced by another prisoner, who, invested with the paraphernalia of the god, had to represent him in the new year. The sixth twentieth, the time when the rainy season set in, was celebrated by a general and severe fasting of all the priests of all the temples, including the little boys in the priestly schools. The fifth and sixth twentieths were called Tlacozohuanitl and Xocotl uctli, 'when the Xocotl comes down (or is born),' or Miccahuilhuil, the 'feast of the dead.' At these festivals living prisoners were thrown into the fire as a sacrifice to the god of the fire, and the image of Xocotl or Otontecuili, the 'god of the Otomi,' the 'soul of the dead warrior,' having the shape of a bird, a butterfly, or of a dummy packet, was placed on the top of a high pole, and brought down by the male youth,rying with each other in climbing to the top.

The eleventh twentieth, called Ochpanitzli, 'sweeping the roads,' was the harvest feast, and at the same time a great exaltation ceremony, by which evil was taken out of the town.

A woman representing Tetec Inman, the 'mother of the gods,' having been degraded at midnight and shaved, a priest put on the skin and represented the goddess in the following ceremonies. From a portion of the skin of the thigh, a mask was made and worn by the son of the 'mother of the gods,' Centecotl-Tlalocaltontli, the maize-goddess, the 'curved obsidian knife,' who is described as the god of evil and punishment, and is, in fact, only another form of the morning star, the son of the moon-goddess. The principal ceremony consisted in a ceremonial impersonation of the goddess by Uitzilopochtli, and, on the way to meet the god, Tetec Inman was accompanied and preceded by four other men called Quetzalcoatl (~men of the province of the Huasteca). Ceremonial dances followed, and at the end the gods were represented by large masks, and called Teteo. At the end of the feast warriors, riding with each other, took the mask out of the town, and buried it somewhere in the territory of their enemies. The goddess herself, i.e., the priest wearing the skin of the victim, was likewise driven out of the town, and the skin was hung up, beyond the bounds of the state, as a fortunate gift to Teteo Inman, being her sanctuary.

In the twelfth twentieth, called Teotleco, the Mexicans celebrated the return of their gods, i.e., of the fire-gods, who were reputed to have gone out of the country during the rainy season. The feast may also be called the 'birthday of Uitzilopochtli.' It was celebrated by an annual feast, in which living prisoners were thrown into the flames. The thirteenth feast, called Tepetlihuitl, the 'feast of the mountains,' was another harvest feast, when the pulque-gods—the gods of fecundity—were honoured by sacrifices, and offerings were brought to the rain-gods, i.e., to the gods of the mountains. The fourteenth feast, called Quechollli, was dedicated to Mixcoatl, the god of hunting and war, and was celebrated by a great ceremonial hunting. Arrows and other weapons were made.

The fifteenth feast, called Pamquetzaliztli, 'raising the banners,' was the great feast of the god Uitzilopochtli, when the pulque-gods—the gods of fecundity—were honoured by sacrifices, and offerings were brought to the rain-gods, i.e., to the gods of the mountains. The sixteenth feast, Teteo Tziunlli, was dedicated to Teteo, the mind of the bird, and the victory which he obtained over his brethren, the Centzon Uitztli (the stars), were dramatically represented by a combat between the warriors designated to the gods, and the prisoners selected for sacrifice. The fire-snake, the weapon with which Uitzilopochtli had killed his sister Coyolxauhqui, came down from the upper platform of the temple, and consumed the offerings placed on the great cylindrical stone at the foot of the staircase leading up to the platform. The seventeenth feast, Atemoztli, was dedicated to the rain-gods. The seventeenth, Tlaloc, was the feast of the god of the dead, at which the cuititztli, the 'women-goddesses,' i.e., the deified women, the spirits of the women who died in child-bed, and their patroness Itamatecultli, the old goddess, the goddess of fire, were worshipped, and an important religious ceremony was performed by the priests. The fourteenth and last feast was called Izcalli, 'increasing,' and was dedicated to Xiuhtecuhtli, the god of fire, who was honoured by offerings of all kinds of animals thrown into the fire. The god was represented in this feast by two different figures—at one time as a god of vegetation, clothed in green quetzal-feathers and wearing a mask of turquoises and green stones, and at another time as the god of the burning fire, clothed in feathers of the red macaw and wearing a mask of red and black stones. The five last days of the year, called nemontemi, were devoted nightly. No feast was celebrated on them, nor any business of importance taken in hand.

Other ceremonies were performed to the deities who were believed to rule certain days, according to the name of the day in question, those names being composed of one of the numbers one to thirteen and of one of the twenty-day-signs. As these names, in the different years, were not assigned to a fixed date—the initial days of the years bearing different names—the feasts of the rulers of the days were denominated 'movable feasts.'

8. Priests.—For the performance of all these ceremonies, filling out, in the true sense of the word, nearly the whole year, and for the regular service of the different gods, many priests were employed, each of these priests being divided into different classes, such as the temamaques, 'incense-burners,' the tenequies, 'guardians of the idols,' the quauquemiltli, 'old priests,' and the otmeteocli, 'polque priests,' who were at the head of the other priests and singers. At the head of all these priests there were in Mexico City two high priests, called Quetzalcoatl Tetzec tlamaququi and Quetzalcoatl Tlahoc tlamaququi, a. e. the priests representing the two great gods, Uitzilopochtli and the rain-god
MEXICANS (Modern) — An intimate knowledge of the religion of the ancient peoples of Mexico is necessary in order to understand the religious life of the present native population of the country. On first acquaintance with the people an impression is given that the Roman Catholic religion is everywhere present, yet many of the pre-Columbian religious ideas remain. Too much cannot be said of the energies and the fervour of the Roman Catholic priesthood in their attempts to Christianize the natives. The originality of their methods and their enthusiasm for the work resulted in a marked success. They learned the native languages, and collected much data upon the customs and religion of the people, and to these early accounts we owe practically all our knowledge of the pre-Columbian life.

As proof of the ability of the people to read in pictures, and this was turned to account in their teaching of the Roman Catholic Catechism. Figures were drawn on large pieces of cloth representing most ingeniously, in a series of pictures, the various teachings of the Church. These pictures were also made in books, some of which, according to N. Leon (Am. Anth., new ser., ii. [1900] 726), are still used among the Mazahuas of Michoacan. A more ambitious attempt was made by the priests to teach the natives the Latin words of the Lord's Prayer and other Articles of the Church. A native monosyllabic word was selected, the sound of which was similar to a syllable of the Latin word, and this word was represented by a picture. The first syllable, po, of pater, was shown by a picture of a flag, which in Nahua was ponti, and the second syllable, ter, was represented by a drawing of a stone, telt, in Nahautl. In this way, picture by picture, the native word was known, and each word recalled a similar word or syllable in the Latin.

Don Jose Torquemada tells us (Monarquia Indiana, Madrid, 1728, xv) that the Christian priests illustrated the vices and virtues and the instability of life by pictures representing a great expanse of water with floating islands, and a cross with the word Christ at the top, attended by devils receiving glasses of wine from devils. According to J. de Acosta's statement (The Natural and Moral Hist. of the Indies, ed. C. R. Markham, London, 1880), in illustrating the doctrine of the Trinity, God was pictured with three carved heads, and St. Peter and St. Paul were drawn as two carved heads with keys and sword. As Sauer remarks: "It is easy to suppose that this sort of picture must have been absolutely incomprehensible to an Indian, but there is little doubt that the effect of these pictures was extremely favourable to the spread of Christianity." (Globen, XXX, 130).

The Spanish padres were not content with these mnemonic and symbolic methods of teaching the Christian religion, but soon learned the languages of the country, translated the Catechism into the various dialects, and preached in the native tongues. Priests taught the Indians how to record their languages phonetically by the use of the Spanish characters, and from the early days of the Conquest there was a constantly increasing amount of printed and written material in the languages of the different peoples of Spanish America.

With a knowledge of the native languages, together with the names and attributes of the various gods, the Spanish priests had a wonderful asset in their teaching, and they used it to good effect. Their explanation of the native pantheon was an earnest attempt to incorporate it, as much as possible, into their own religion, and, accordingly, we find many of the ancient myths turned into a new setting, with the saints now figuring as the actors in the ancient tales. It is difficult to determine how much of this transformation was due to the initiative of the priests of the new faith, and how much may be attributed to the Indians' own attempts to reconcile their old religion with the new. Knowing the tendency of primitive man to explain everything in terms of his own mental fabric, we may suppose that many of the strange metamorphoses which came about were the natural result of implanting ideas upon an older foundation, but a result not recognized or authorized by the Church. In many cases the gods of the ancient religion were incorporated into the new, as when the three most important gods were sometimes turned into the Trinity, while the lesser deity of the Church was given a place that one already had a counterpart in the Mexican religion; among the Mayas he was Kisin, the earthquake.

The present population of Mexico may be divided, for the purposes of this article, into four classes as regards their religion; (1) those of Spanish descent who are true Roman Catholics; (2) those of mixed descent who are nominally Roman Catholics, but still retain some of the ancient pre-Columbian religious ideas; (3) those of mixed blood who are fundamentally pagans from the Christian point of view, with religious rites coloured by Roman Catholic teaching; and (4) those who show no trace of the Roman Catholic teaching, and still continue to practise the ancient religion. It is, of course, impossible to draw a hard and fast line between any two of these classes; the two middle divisions are differentiated only by the degree in which the Christian or the native religion predominates.

Class 1.—In the large cities and towns there is a numerous population of Spanish-speaking people who have little or no Indian blood, and these carry out the rites and ceremonies of the Roman Catholic Church as practised in Spain. The festivals of the Church are celebrated with great pomp and ceremony. An infinitude of valuable objects of the early Franciscans is seen in the Nacimientos,
the Pastorales, and the Mystery Plays performed at Corpus Christi and at other times. Soon after the Conquest the sacred dramas, so popular in Spain at that time, were introduced into Mexico, and were regarded as an important means of propa-
ganda.

Class 2.—The casual observer seldom sees any of the native element among the peoples who have been described in this division, but he considers the population good Roman Catholics. In fact, it is only after close intimacy extended over a considerable period of time, together with a knowledge of the nature of the native practices, that one gradually finds that the underlying principles of the religious ideas are based on the native ideas rather than upon the Christian faith. The veneer of Roman Catholicism is removed, and the native religion stands out clearly. The greater part of the population of Mexico are of mixed blood, with a strong pre-
ponderance of the Indian over the Spanish strain. This type of native is present even in the large cities and towns, where a great proportion of the people fall into Class 2, whose religion is Roman Catholic, with an undercurrent of the old ideas. The gente de Mexico City, e.g., are of this class.

Holy Week is perhaps the most religious time of the year. In addition to the Passion Plays which have already been mentioned, there is a constant round of festivals, many of which are strongly flavored by the native elements. The season of prayers and fasting appeals to the natives, some of whom wear the crown of thorns and flagellate themselves. From Holy Thursday until the Gloria of Saturday the bells of the churches are struck, and the priest and Kale take their place. Each child and adult has a ratle, and the streets are full of vendors, each selling some sort of noisv toys. On the Sabado de Gloria new fire is kindled, and the burning of the belief figures is a Judas is a common sight in every Mexican town; figures of Judas, representing him as a man or woman, a negro, a soldier or a knave, a devil or a gentleman, are burned in every village plaza. Many of these figures contain jars filled with vari-
ous objects, and, when the container is broken, the contents fall into the struggling crowd. Fire-
crackers and rockets often form the hands and feet of these Judas figures. It is a time of much merriment. In Mexico City on Viernes de Dolores, the eve of Palm Sunday, there is a long procession of devotees dressed in the costumes of old time, and small shrines, and altars are displayed everywhere, the native love of flowers and their varied use of them as decoration being seen at this time at its best. These religious festivals play a very im-
portant part in the life of the people.

The custom of erecting wooden crosses along the roads and trails is very common in Mexico. The traveller, in passing one of these crosses for the first time, usually deposits a stone or a flower before it. It is on the magical side of the religion that we find the greatest number of survivals at the present time. Symbolic and conspicuous objects abound among all strata of the population. Some of these ideas are, of course, derived from the Spanish element, but the greater number are purely native. Hypostatic suggestion is the important feature in all the ceremonies which deal with healing the sick. The air is full of evil spirits, which linger round the entrances of the villages, and precautions must be taken before the native can enter.

Class 3.—This class is represented in the small pueblos in the country districts, where the head-
man of the village performs the offices of the Church, except at infrequent intervals when the priest of the district makes his visit to celebrate Mass and to perform marriages and baptisms.

The native religious ideas are much in evidence, for the visits of a priest of the Church are often too infrequent to make much headway against the presence of the strong native religious element. This cannot be stamped out among the people, and it remains a sturdy growth unless persistent and energetic efforts are made to counteract its influence by Christian teaching. It is among people of this class that the beliefs of the pre-Columbian and Christian ideas may best be studied.

The native elements come to the front especially in connexion with agriculture and the burial of the dead. Incense is burned and offerings are made to the gods of fertility at the time of sowing; other gifts are presented to the gods of rain; in some cases offerings are given to the wind-gods when the burning of the maize-field is under-
taken; and abstinence from sexual intercourse before the planting is another of the survivals. Among the Otomi an idol is buried in the maize-
field, another is kept in the domestic house, and a third in the granary. The hunter may burn incense for a successful hunt, the traveller for a prosperous journey. Every house has its auto, or wood spirit, and the first fruits of the harvest are usually placed before this shrine; in time of sickness and death many offerings are made and incense is burned. It is the nature of the gifts and the spirit in which they are made which is more important than the act itself, that show the pre-Christian ideas.

In many of the prayers the native element is seen. Sapper tells (Das nord. Mittel-Amerik., p. 241) that in a speech of Kei take there is the word Sapp, mother, than art my father, 'a form common in the Popol Vuh (q.v.). The Indian origin of many of the prayers is seen in the poetical form, the parallelisms and the repetition of single words and phrases. Selor tells of a stone idol discovered in a cave in the State of Puebla before which offerings of flowers, eggs, and wax candles were found. In another case the visitor, padre saw, to his indignation, a stone idol occup-
ying the place of honour beside the crucifix, on the altar of the village church. In a cave in Oaxaca a pottery incense pan and two turkey feathers were discovered; the feathers having undoubtedly been used in connexion with the sacrifices of human blood, so common a part of the religious ritual of the ancient Mexicans. These definite examples of ancient survivals will show that old magical and religious ideas have been upon the people, who are nominally good Roman Catholics.

Class 4.—The number of individuals who have been placed in this division is comparatively small, and, as might be expected, they are found only in the most unsettled and inaccessible portions of the country. They show practically no influence from the outside world in their customs, their languages, or their religion. Spanish is seldom understood, and the native languages show little change from those portions which were recorded by the early Spanish conquerors. It is among these people that one can obtain magic among the aborigines. The polytheistic ideas are still main-
tained, and many of the gods now worshipped may be identified with the ancient deities of the people —Sakainkia of the Mexicans, e.g., is recognized as the old rain-god, Tlaloc. It is seldom that the ancient gods of the sun, the moon, the morning star, and other planets can be noted in the present cult, but, although among the Seri of Lower California the sun and moon find a place among the gods, and among the Tarahumaras there is a 'father-sun' and 'mother-moon. Among the present-day Mayas the sun and moon are servants of the gods.
Worship by means of prayer, divination, and sacrifice takes many different forms. Human sacrifice has been abolished, although there are a few instances where it has been reported within the last century. Blood sacrifice is not uncommon among people of this class, the ear and other parts of the body being cut with a stone knife, and the blood allowed to drop upon the idols. Offering of food and drink forms the main portion of the religious practices of the population, although burning of copal or other incense to the gods is also very common. Compulsory intoxication—by the use of drugs from the plant hallucinogenic—carried out by means of the psyché of the Mexicans, the hikuli of the Huichols, the tozumo of the Tarahumara, and the batche of the Lacandon. Divination is practised in many forms, and among many peoples there is a class of soothsayers who look into the future by means of the movements of sacrificed animals, the smoke of the incense, the crystal, the image on the surface of a basin of water, and many other ways. The prayers of the Cora, collected and translated by Preuss (Die Nympf-Expedit), furnish an excellent criterion of the native point of view towards the gods and religious practices. The godkins are often held for magical purposes. Among the Tarahumara, e.g., the dance is a prayer, a petition for prosperity for the harvest, or for health and freedom from ill-fortune.

The idea of renovation, the renewal of the incense-bearers and the cleansing of the houses and of the places of worship at certain times of the year, is an ancient practice. Among the Lacandones, at the main ceremony of the year, when the firstfruits are offered, the entire collection of incense-bearers is renewed. The old ones are ‘dead,’ and new ones are made to take their place. Priests no longer form a distinct class by themselves in Mexico, but the head-man of the village or the head of the family now performs the priestly functions, and among some of the tribes the class of shamans still remains. It is claimed that one-fourth of the Huichols (g.e.) of Northern Mexico are shamans; the name of the tribe signifies ‘the doctors or healers.’ It is they who have the power to look into the future and who understand and interpret the will of the gods. Religious temples, so common a feature of the pre-Columbian culture, no longer play a part in the religious life, though the Lacandones still make pilgrimages to the ruined temples. Among the Huichols, the gods reside in the fire, carrying with them incense-bearers and other offerings. The religious practices are usually carried on either in the domestic habitations or in a house set apart for the purpose, this house being called topina, ‘the house of all,’ among the Huichols. Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offerings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish ideas are the Lacandones, who live in the State of Chiapas on a tributary of the Grijalva River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spanish to Christianize these people met with failure, and they have remained undisturbed for three hundred years. The customs, and especially the religion, of this people are important as an aid in understanding much of the life of the early Maya tribes, and many of the ceremonies are comparable to those represented in the pre-Columbian MSS.

A geographical survey of the principal religions of the native Mexico shows an interesting change from north to south. From the religious point of view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the south-western portion of the United States. The religion of the Pueblo peoples and of the Navahos and Apaches shows striking similarity to the religious ideas of the Huichols, the Cora, and other peoples of Northern Mexico. The rain and the importance of rain are the prime factors in the rituals of all these peoples. In the symbolism of the Huichols centres in the phenomena of nature. In Central and Southern Mexico the religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly cultured peoples belonging to the Nahua, the Maya, and Kindred civilizations.

MICHAELMAS.—1. The origin of the festival and the Michael churches in Italy.—The Burseippe in Englysh-Mis M. R. Cole, ‘The Burseippe in Englysh,' in the Westminster Misal of Robert Whytoft of Wyynkyn de Worde in 1526, records the Roman and Sarum tradition of the origin of the festival:

‘The xxix day of September. In the morning of garnage the reserued memory of saynt Mykeshall the archangelle where a chalice of ymn is consecrate that is bose of holyguyng yet notwithstanding it is adoured with many gret veners' (Henry Bradshaw Society, ii. [1911] 153).

The rubric in the Leonian Sacramentary throws still further light on the origin of the festival. It stands alone in assigning it to 30th Sept. and not 29th Sept., but it adds a note of locality which differs from that of the later Roman tradition: 'Prid. Kal. Oct. N Basiliae Angeli in Salaria (C. L. Feltoe, Sacramentarium Leonitam, Cambridge, 1896, p. 106). Feltoe refers to a 9th cen. MS (Add. 2959) and a MS of St. C. Dedic. basil. S. angeli Michaelis in Salaria (ib. p. 203), Martin Rule, in his 'Analytical Study of the Leonian Sacramentary' (JThSt ix. [1903] 215 ff., x. [1896] 54 ff.), traces the materials of this Verons MS: 'In the third and last book of 12th cent. during the pontificates of Leo i. (440-461), Hilarius (461-468), and Simplicius (468-483). This carries the evidence of the rubric to the 5th century.

The festival is, therefore, in its origin the dedication festival of a church. The evidence is not confined to the liturgical books of the Roman rite. The early Mozarabic rite is represented in a MS of the 11th cent., at Paris (Bibl. Nat. nov. acqu. lat. 2171). In a short treatise, Actumatius Festi- vietatum, the festival is announced thus: 'Adveniente diae ii. festivitas erit dedicatio sancti Michaelis in Castel Romano' (p. 29). And in the Martirium Legumin, a calendar in the same MS under Sept. 29, is: 'iii. (Kal. Oct.) dedicatio sancti Michaelis angeli regni' (G. Morin, 'LibriComicus, Anecdota Moriboliana', i.[1883] 362, 402). A coin of the same Spanish monastery of Silos in Old Castile (Brit. Mus. Add. MS 30851) has two inscriptions: 'in die sancti Michaelis Angeli', where reference is made to the 'sacred'. The first hymn has the line: 'ut glorietur in deo cern consorts socios'; and the second: 'Urioel Gabriei Rafael sacrii' (Mozarabic Hymnal, H. Brunshaw Soc. xxx. [1905] 554). The latest hymn has the line: 'et Michaelis et Michaelis in monte Gurgo' (Beroldus, ed. M. Magistrati, Milan, 1894, pp. 11, 17).
